The Success of True West Magazine

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. JOHNSON of Texas. Mr. President, when a new magazine succeeds, it is big news in the publishing world; someone has beaten the odds. When the successful magazine is published outside New York or the larger cities on the eastern seaboard, it is even more remarkable. But there has never been anything like True West—a regional magazine published in Austin, Tex. True West is successful even in the East.

True West is published in an old two-story frame house in Austin by Joe Small, a young man with new ideas. Such outstanding writers as Walter Prescott Webb, J. Frank Dobie, and Fred Gipson are among the contributors. A friend has remarked that while many publishers start with a million dollars, and go broke, Joe Small started broke, and hopes to wind up with a million dollars.

I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article, written by Hart Stilwell, on the success of True West magazine, which appeared in a recent issue of Texas Parade.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRUE WEST GOES EAST

(By Hart Stilwell)

Early this year the magazine True West published in Austin, Tex., by Joe Small, went East.

That is, the magazine went on newsstands from coast to coast, becoming the first magazine published in Texas to attempt this feat.

There are some other firsts about True West.

It is the first western dedicated to telling the true story of the old West.

And it is the first slick western, in contrast to the pulp paper of the typical western.

Joe Small in his magazine ventures—and this is not the first—has amazed the publishing world in many ways. He has moved contrary to most of the approved procedures.

But what he has done more than anything else is this: He has proved that in our highly industrialized, concentrated, and competitive society, the little man can still compete successfully with the giants.

But in order to do that, the little man must have some rare qualities—qualities of the true rugged individualist—that serve as a substitute for cash.

In fact, Joe Small is in the process of reversing a saying in the magazine field that has taken on significant meaning in recent years.

The saying is that you start a magazine with a million dollars and go broke.

Joe Small started with peanuts and is well on the way toward building a magazine property that might be worth a million dollars.

And he has built in while such giants in the magazine field as Collier's, Woman's Home Companion, and the American magazine were fading out of the picture.

You ask Joe Small to explain what has happened, and Joe is likely to grin and say, "It's just that promise I made to those chickens way back there when I was a boy. A man likes to keep his promises, even if they are made to chickens. I've tried to keep mine."

Of course the story of Joe's rise in the magazine field is infinitely more complex than that. Still the story of his promise to the chickens is typical of him and might well be told as a starting point toward analyzing his character and ability.

That promise to the chickens was made way back, about 34 years ago, when the Small family lived on a farm near Caldwell. When Joe was 9 or 10 he had already become a dedicated person—when he grew up he was going to publish a magazine.

The boy began telling everybody about his plans, and finally he noticed that nobody would listen any more. Even his kindly mother grew weary of it.

"Yes, yes, son—of course," she would say, in answer to Joe's speech about publishing a magazine.

"She said it about the way she would have said, 'Yes, yes, son—of course you're going to be President,' " Joe said.

Well, the boy was determined to have an audience, so he went out in the yard and climbed on a fence and began explaining his plans to the chickens.

And he had a way of holding his audience—he used corn. Whenever the chickens showed any sign of losing interest and wandering away, Joe would toss out some more corn.

He's been doing that ever since—holding his reading audience by tossing out a little corn at critical moments. The corn is paying off.

Joe began selling articles to magazines when he was only 14. When he was 20 and a freshman in the University of Texas he sold a magazine article for $25. That was in 1935, when $25 was a lot of money.

Joe's roommate, Eugene Arrington, was tremendously impressed by the sale, and was much more impressed when Joe explained that he was going to start a magazine.

"Gene was reading a book," Joe says, "when I began telling him about my plans to start Southern Sportsman. Before I got through he closed the book. He never opened it again. We pooled our money, a total of $125, quite college, and started Southern Sportsman."

The times were against Joe, even though he demonstrated at the age of 20 ingenuity and enterprise and ideas that were certain to bring success eventually. In particular he began developing an uncanny knack of "hoss trading," as he calls it—trading advertising space for merchandise, then selling the merchandise.

When Joe couldn't pay his secretary, Elizabeth Berry, he solved the problem by marrying her. She has been his partner ever since, and continues as the other half of the Small Publications, with the three boys, Robert, Joe, Jr., and Jim, taking a hand now and then.

After a hitch in the Army in the last war, Joe returned to his home in Austin and began building up a nest egg writing for magazines, while Elizabeth worked. Finally he bought the defunct Western Sportsman, correctly figuring that the West was due for an outdoor boom ahead of the South, and revived it.

He was carrying out his promise to the chickens again.

For years Western Sportsman was published out of the small home in Austin, a feat that other magazine publishers would not believe. It was pretty much a family project, and the two, or occasionally three, office workers Joe hired could hardly move in the one room that served as publishing headquarters.

But Joe knew that the way to go broke in publishing a magazine was to start spending a lot of money for what he considered extras.

Finally, when Western Sportsman became pretty well established and was making a living for the family—much of that living through hoss trading—Joe rented an old two story frame house and moved his magazine headquarters there.

Western Sportsman was doing all right. But it had certain limitations that bothered Joe, and he began dreaming of another magazine, one that he could promote more.

And one day when he walked into the office of a banker the light struck—the idea crystallized.

The banker took a magazine off his desk and hid it, remarking, "I wish somebody would publish a western magazine that a man didn't have to hide."

Why not do that?

So the idea of a western filled with true stories of the Old West and printed on slick paper began churning in Joe's mind. And what better title was there than the simple "True West"?

Joe Small started Southern Sportsman with $125, started Western Sportsman with $5,000, and started True West with $7,300, about half of which he borrowed.

Spurred on by the enthusiasm of his friends and coworkers, Joe started True West a "little too big," as he puts it now, and had to sort of suck in his horns to keep from going bankrupt.

But he finally whittled his costs to fit his intake, then he began building and True West began taking hold.

Sure, it was a little magazine venture as magazines go. Joe started with a press run of about 50,000, and the increase was painfully slow for a time. But by the beginning of 1958 he was printing more than 100,000 copies, and True West was definitely taking hold.

The magazine is a bimonthly, and people kept urging Joe to make it a monthly.

Joe decided to take a step in that direction, but not the step people expected. He knew the value of keeping each issue of the magazine on the news stands 2 months instead of 1 month.

So in 1958 he brought out Frontier Times, which is simply True West with a different

AUTHENTICATED
U.S. GOVERNMENT
INFORMATION
GPO

title. It fills the gap—and it also stays on the news stands 2 months instead of 1.

Then came the big step—the bid for national distribution, instead of cautiously nursing the distribution in the central and western parts of the country.

And by the middle of 1958 the big national distributing companies, which had previously looked upon True West with scorn, definitely became interested. Joe made a deal with the Kable News Co., which ranks near the top.

And in the spring of this year True West hit the newsstands of the entire Nation with a total circulation of 240,000, a jump of 100 percent in the press run, and it was a dolled up True West with a four-color cover and an additional 16 pages and stories of the old west by such outstanding writers as J. Frank Dobie and Fred Gipson.

So True West has gone big time—and Joe Small is keeping his promise to the chickens.

It isn't easy to explain the success of Joe Small, mainly because many of the things he does seem to run contrary to sound business procedure.

Imagine a dignified top executive of a company in New York getting a letter that starts, "Howdy, Podner, you ole polecat."'

Joe does that—part of tossing corn to the chickens. His letters and promotion material in general are utterly fantasic in the minds of the conventional businessman.

But, surprisingly, they produce exceptional results.

"There's too much of the stuffed shirt in business," Joe explains. "I like to get down to a hoss tradin' basis."

And he does, which trading kept him alive in the lean years.

Then Joe has ideas. He's always bursting with them—and this is still a land in which a man with ideas can move forward.

Another factor is Joe's uncanny ability to get things done for a fraction of what others would spend on the job. His publishing headquarters in Austin illustrates the point.

A visiting big shot magazine executive from New York commented on the ramshackle old frame building.

"How can you maintain prestige in that place?" the man asked.

"The surest way I know for a magazine to lose prestige," Joe replied, "is to cease publication."

Joe can practically publish his magazine for what an office layout in New York would cost. Let others have the prestige—and fold, he says.

But probably Joe's greatest asset in the publishing business is his ability to judge what the public—or a certain segment of the public—wants and to give the public that.

And in the process his folksy, often downright corny approach to his readers somehow brings them right into the family and makes much more than mere readers out of them. They respond by becoming ardent, sometimes almost rabid, supporters.

"Hi there, ole Podner—I see you're a hittin' some rough goin' so here's my old dirty dollar bill to keep that howlin' wolf away from your door."

Incredible as it may seem, the Joe Small mail is crammed every day with just such stuff.

And Joe dishes it right back, with "Farewell, ole podner * * * we've cried and we've struggled * * *" and so on.

Still True West itself, with Fred Gipson as editor and Walter Webb as historical adviser, is far from corn. It does a bang up job of telling a lot about the Old West that ought to be told—and it's told in a solid way.

Joe Small may dish out the corn—but there's good commonsense behind every business move he makes.

On Preserving the Wild

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES

Thursday, March 26, 1959

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD portions of an excellent address "On Preserving the Wild" which was delivered at the 24th North American Wildlife Conference in New York City on March 4, 1959, by Mr. David Brower, executive director of the Sierra Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ON PRESERVING THE WILD

(Excerpts from statement by David R. Brower, executive director, Sierra Club, before the 24th North American Wildlife Conference, Statler-Hilton Hotel, New York City, March 4, 1959)

In this century the world has used up, and has lost forever, more natural resources than has all previous history. And there are now alive, with an unprecedented appetite for resources, 10 percent of all the men who ever lived on this earth. Twenty-five billion people in the long million years since the dawn of man. Two and a half billion since Yellowstone National Park was created, people using up more resources, including space, than all the rest, and at greater speed. Yes, using up all the resources available to mankind except the resource of restraint.

While the ushers pass out the sackcloth and ashes, contemplate these figures. But please don't take time to check my arithmetic. It comes from a good source, but the accuracy of the source doesn't really matter. Time is running out. Whatever the time left, we can do better with it than we are doing. I agree with Allen Morgan, who says about wild open spaces that "what we save in the next few years is all that will ever be saved."

The important opportunity is to accept the fact that we are confronted with a problem the likes of which our predecessors hardly dreamed of; that it is a problem that man created and that men can solve, but not by reaching for a tranquilizer and curling up with the slick magazine that reassures us, with charts and diagrams in three colors, that science will save us—science, unaided by people.

If you feel the need, about now, for a draft of fresh air, be assured that I do, too, and that is what I'm here to talk about—about wildness—and wilderness where the best of wildness lives. Wilderness is fairly close to the best place of all in which to find a draft of fresh air, in which to take stock, in which to find yourself, discover the you that so many distractions have kept you away from so long that the life you lead is not your own.

What about wilderness? What is it? Where is how much of it? For whom and why? And if so, how can we keep some for a still more crowded world than ours, a world that will probably need the raw materials of wilderness more than we think we do, and that will need the spiritual resources ever so much more than we do?

We could easily devote an hour's discussion to each of these questions. But let me assure any of you who is tempted to rush for the exit that I shall limit myself instead to no more than a few minutes' musing on all the questions put together. * * *

Mrs. Malaprop might have said that wilderness is a place where the hand of man has not set foot. But she didn't. She has not heard of the kind of wilderness, as a concept, that we are talking about. Not that it's exactly a new concept. The prophet Isaiah seems to have had it in mind when he wrote what was translated as "Woe unto them that join house to house, that lay field to field, 'till there be no place, that they may be placed alone in the midst of the earth." * * *

Moses found opportunity for his people in wilderness—wilderness much of which was turned to desert before the Sermon on the Mount admonished man to consider the lilies of the field—the natural field, I assume—and how they were arrayed. That wilderness was subsequently utterly stripped of its verdure by man, including the exploitation of the cedars of Lebanon, which went down to the sea in ships.

To compress the history of wilderness into a few lines: The Middle Ages, and nothing. Then the Renaissance, and Conrad Gesner finding reason for the admiration of mountains. Then very little until William Blake worried about those dark Satanic Mills. More recently Olmsted, Emerson, Thoreau, and Muir. Finally the explosion of man across the earth, and here, in the United States, wilderness vanishing with such velocity that we knew, inescapably, that man alone was responsible for the loss. The 1920's and the Forest Service trying hard, under the leadership of Aldo Leopold and Robert Marshall, to define wilderness in terms of what should not happen in wilderness. In 1930 Robert Marshall defining it in terms of what man should find in wilderness, ought to find, had to find if the spirit that has stood him upright was not to perish in an overcivilized lukewarm world.

Marshall used the word wilderness "to denote a region which contains no permanent inhabitants, possesses no possibility of conveyance by mechanical means, and is sufficiently spacious that a person crossing it must have the experience of sleeping out." Survival in it, he said, is up to you. Find environment in it; don't bring one with you.

This idea of wilderness, new though it is, is now quite widely accepted. It isn't yet underwritten by Federal law, but it does appear, strangely, in an international treaty on nature protection and wildlife preservation in the Western Hemisphere which was signed by the United States 17 years ago. In this treaty wilderness is defined as "a region under public control characterized by primitive conditions of flora, fauna, transportation, and habitation wherein there is no provision for the passage of motorized transportation and all commercial developments are excluded."

Let me add one more definition and then move on. This one comes from the wilderness bill: "A wilderness, in contrast with those areas where man and his own works dominate the landscape, is hereby recognized as an area where the earth and its community of life are untrammeled by man, where man himself is a visitor who does not remain." This is a lot of detail about definition. Why? Because when someone is about to be tempted to cash in on a priceless heirloom rather than work a little harder for the money instead, it is high time that he look hard at that heirloom, find out what it means to him, whether he should let it slip away or pass it on to his son instead, as it was passed on to him.

My analogy isn't very good, for wilderness goes far beyond being a mere heirloom. There is no sentimentality about wilderness.

As Howard Zahniser, of the Wilderness Society, has put it: "We work for wilderness preservation not primarily for the right of a minority to have the kind of fun it prefers, but rather to insure for everyone the perpetuation of areas where human enjoyment and the apprehension of the interrelations of the whole community of life are possible, and to preserve for all the freedom of choosing to know the primeval if they so wish."

And we need work hard, with a sense of urgency. The wilderness we now have is all the wilderness we shall ever have in America. There is little left—less than one-third acre per person in the United States if you count all the wilderness that has any administrative protection in our national parks and forests and wildlife refuges and on Indian lands. One-third acre per person today; less per person as our population expands still further; all of it subject to being struck out by the Administrator's pen.

So wilderness can no longer be abundant enough for every man to walk on it. But, after all, only the small child must handle a thing to know it; adults need only look. Those in between need a little of both. So some people will be able to walk on it and most of them will be the better for it. Some may wish to but never make it—especially when the bulk of our wilderness is far to the west as it is from you. Some people may not care to go there at all. But their sons may wish to. And wilderness must be there or the world's a cage.

I say all this about wilderness because it is the essence of the wilds we need around us. Since it lives but once, there should be ample opportunity to review the death sentence so many people in the chambers of commercialism would like to inflict upon wilderness.

Many of us feel that wilderness should have an automatic stay of execution, and that Congress should provide it.

Hence the wilderness bill—the proposal to establish a national wilderness preservation system.

Reintroduction of the remarkable wilderness bill in the 86th Congress is an occasion for looking at the hurdles which many interests are hurriedly trying to place in front of it—almost all of them apparently manufactured at the same source. Here is a look through the eyes of an observer who believes this legislation to be of vital importance.

Several months ago the New York Times commented editorially that the bill was running into opposition that its mild terms did not deserve. The revised bill is, if anything, milder still; the opposition more vociferous.

A recurrent allegation is that wilderness is only for the selfish, rugged, single-interest minority. Wilderness advocates may well reply that the black pot is seeing its own black reflection in a shiny kettle, for the allegation comes from a series of single-interest groups—lumber, mining, oil, cattle, sheep, and road- and dam-building interests—who dislike barriers to what they may hope to develop for their own single use in the remaining fragment of wilderness.

There is a recurrent attempt also to depict the proposed Wilderness Council as a monster, and then to be frightened by the creature so depicted. The Council actually could collect and disseminate information and make recommendations, but would have no administrative authority. In short, opponents are attributing monstrous powers to a Council which has no power.

Finally, the opponents attempt to assign the consideration of permanent protection of wilderness to a temporary group, the National Outdoor Recreation Resources Review Commission, that was not created to protect anything, but rather to study and recommend.

Wilderness protection must not be delayed. If you will remember your first-aid course, you will remember these priorities: Breathing, bleeding, shock. It does little good if a patient is bleeding to death to sit down and study objectively what kind of bandage will be needed on the wound. You get in there and stop the bleeding. Otherwise you'll have nothing to bandage but a corpse.

The best way to help the Commission in its study is to keep some living wilderness for it to count upon. The wilderness bill can check the bleeding.

For all the opposition furor, there is an amazing body of public opinion supporting the wilderness bill and its provision for an automatic congressional stay of execution of moves to obliterate designated wilderness. That opinion was represented in a 50-to-1 ratio of letters sent to the Senate Interior Committee for inclusion in the record of last fall's field hearings on the bill.

Support comes from no hastily organized battalion of rugged hikers, no wilderness lobby; it reflects broad public concern about direction. It reflects growing conviction that "the Nation does not exist to serve its economy"; that there must be more public participation in the treatment of the single heritage of land that must serve all the generations (hence the added role for Congress in wilderness protection and military withdrawals), and that to leave these things to the experts is to resort to absentee citizenship.

It also reflects the dawning realization that growth without end is soon monstrous, then malignant, and finally, lethal—that an economy based upon incessant growth may well turn out, in the long run, to have been a chain-letter economy, in which we pick up the handsome early returns, and either our children or theirs find the mailbox empty, their resources having been expended by us.

I was trying to make this point in Berkeley a short time ago and a question came up from the floor: Could we afford to do anything less than keep growing incessantly inasmuch as that was what the Russians were doing? While I struggled ineptly with a reply a conservationist chemist came to my rescue. "You've heard of the game of 'chicken,' haven't you?" he asked. "It's sort of a Russian roulette on wheels. Two juveniles head directly toward each other at high speed on the highway, and the first one who turns to avert the crash is chicken. We frown on such behavior in adolescents, but we seem to accept it as national policy."

Supporters of wilderness—and of the restraint that is inherent in preserving it—also like civilization. They like it well enough not to want it to take too many steps, with the bland leading the bland, down the road paved with good inventions, on which there may be no turning.

Whoever should look for the words, "Wilderness Lobby" on the door of some office near Capitol Hill would be looking in the wrong direction. He should look instead at the land—all the land the country is ever going to have for all the U.S. citizens ever to be born—and the rapidity with which many of its nonrenewable resources have been used up for so few. (He should resist reiterating "Science will save us" until he has counted the ever-more-perplex problems the saving has already brought us.) And he should look at a few recent books that cannot be isolated from a common concern about an uncommon threat to civilization: Brown's "The Challenge of Man's Future"; Galbraith's "The Affluent Society"; Packard's "Hidden Persuaders"; Whyte's "The Organization Man" and "The Exploding Metropolis"; Keats' "The Insolent Chariots"; Huxley's "Brave New World Revisited"; Gary's "The Roots of Heaven"; Callison's "America's Natural Resources"; and Leopold's "A Sand County Almanac." The list ends too soon and is almost humorously disparate. Yet it has a common denominator of substantial uneasiness about what we are letting happen to us, about things that are forcing us into a corner where we must choose to live with less or not at all, witnessing instead, in that last blinding flash, the final glimpse of struggle between economies seeking to out-exploit one another.

The connection between the ability of civilization to protect wildness and the ability for civilization to survive is not so tenuous as we might wish. It is worth energetic scrutiny, and at length. For the kind of thinking that motivates the grab for what's left on the bottom of the barrel—the pitiful fragment of resources in the remaining wilderness—is the kind of thinking that has lost this country friends it cannot afford to lose. The ultimate in selfishness is evidenced in those opponents of wilderness preservation who have demanded an open door for exploiting wilderness while they slam another door in the face of friends needed overseas and north of the border. Don't import oil, wool, plywood, lead, zinc, the opponents say, whatever such restriction may do to the economy of our friends. Don't import them because we have more than enough of our own. And concurrently opponents urge that nothing interfere with their looking for still more of their own—anywhere in the public's dedicated wilderness.

The international economic and political difficulties the wilderness opponents would thus aggravate are serious. The difficulties may not stem from their opposition to wilderness, but there is certainly guilt by association. They stem from what could be called a philosophy of last things first.

It has remained for a physicist to single out the biological peril. As Dr. J. A. Rush put it: "When man obliterates wilderness, he repudiates the evolutionary force that put him on this planet. In a deeply terrifying sense, man is on his own."

As a handy example, I have beside me as I write a small object, about the size of the letter "o," which the evolutionary force has built. Within it is embodied a direct living connection all the way back through all the aeons to the very first appearance of life on this planet. Against that space of time man's life span is insignificant, his kin is barely significant, the entire duration of mankind is hardly noticeable. The object, of course, is a seed. Packed in a fragment of its space is all the know-how needed to perpetuate redwoods on earth, even if every other seed and existing redwood were to be wiped out. Included in that know-how is the ability, should a once-in-a-century flood bury the base of the mature tree in silt, to activate the pushing of new roots—out through bark two feet thick, and out at just the right level below the new surface of soil in which the tree now stands.

I know of no research to determine in just what gene area this particular know-how exists, or what its biochemical formula is. Fortunately, no scientist has to know this. But the tree has to know it to survive, and it does know it. Man did not have to steady the Teacher's hand when it found out, or when all the other forms of life found out how to perpetuate themselves, through good times and bad, in the wilderness they are designed to live in together, in equilibrium.

Does man dare be so arrogant as to assume that he must take it upon himself to steady the omnipotent force, throughout the land, even to the last 2 percent of wilderness? Perhaps Dr. Rush had some question like this in mind when he spoke of wilderness, the evolutionary force, and the terrifying prospect if man tries to stay on this planet without it. And Thoreau, too, when he wrote: "In wildness is the preservation of the world."

The wilderness bill is a needed step toward the recognition of this truth. Not just any

bill, but a strong one, recognizing as national policy that wilderness is where you find it and keep it. There is little left to find, and scant time remaining in which to resolve to keep some of that little—to rescue it from the raw materialism which threatens not only wilderness but survival, too.

A Republican Challenge: Keeping Ours the Party of Freedom

EXTENSION OF REMARKS
OF

HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. KUCHEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me last week before the Wayne County Republican Central Committee, at Detroit, Mich.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A REPUBLICAN CHALLENGE: KEEPING OURS THE PARTY OF FREEDOM

(By THOMAS H. KUCHEL, U.S. Senator from California, before Wayne County Republican Central Committee dinner, Detroit, Mich., April 2, 1959)

I am honored by your invitation to speak to my fellow Republicans in this great city of Detroit. Your magnificent State of Michigan and her people, over a century ago, helped to create the forward-looking Republican Party as a political instrument devoted to the liberty of man. Today, Republicans in this modern era face an equal challenge to keep our party the forward-looking advocate of human freedom at a time when that noble concept all too often is destroyed by slavery as in Tibet and East Berlin.

A few weeks ago I told my fellow Republicans in California that the strength of the traditionally American two-party system is pretty much of a question of what we Republicans, in and out of Government, now do and now say. Nobody in his right mind wants innumerable splinter parties with their invariably weak coalition governments. God forbid that we shall ever have in this country the one-party system of Communist Russia. Yet, the sad fact is that we were hurt in the last election. I can speak with some knowledge of Republican damage in 1958. We suffered a political holocaust in California. I am glad to say we are taking forward steps to rebuild our party. To begin with, I think there is a little less cannibalism among our members now. Republicans of varying shades of political ideologies saw first-hand how disagreement over a few columns of the Republican temple gave the Democrats sufficient enthusiasm to succeed in demolishing the whole thing.

The Republican Party is big enough and it ought to be strong enough to have some divergence of views among its membership. Indeed, from such divergence should come the stimulus to produce more constructive public policy. I suggest to my fellow partisans in Michigan that the less fighting you do among yourselves the better. It will give us that much more time to devote to the development of constructive policies for our States, and for the Nation, to which the wise and honest may repair.

One enterprising and provocative bit of political philosophy in the economic field came the other day from a Democratic Member of the House of Representatives who frankly alleged that he could balance the whole Federal budget, if people would only listen to him.

"What we ought to do," he said, "is get all this money that's in savings accounts all over the country out into circulation. I believe the answer to all our financial troubles is in getting that money into circulation. It doesn't do anybody but the bankers any good where it is now. I say let's spend it, live the golden life. What's the sense of just piling it up?"

"Does it bother you," he asked rhetorically, a few weeks earlier, "that our Nation now has a debt of $280 billion? It doesn't bother me. What I want to know is, who does the Government owe this money to? That's a question I've never been able to get anybody to answer."

Well, let me answer. Our $280 billion debt bothers any American who thinks about our Nation's future. Our Federal Government borrowed another $12 billion last year. That's not merely bothersome, it's worrisome. It's deadly serious. And I assume that it is bothersome and worrisome and serious to the people of Michigan to reflect upon the evil fiscal situation which has befallen your State government.

By the way, I understand your Governor is available for his party's presidential nomination next year. I am told that he points with pride to the good things which may have come to the people of Michigan this last decade but, with equal vigor, directs an accusing finger at Republicans in your State legislature and elsewhere and charges them with every single bad thing which in that period may have affronted your Commmonwealth. I am not here to pass judgment on your State's political gains or losses. That is not my business as a Californian. But I can say that during the long years of Republican success in California our party gave the people of my State constructive forward-looking government. It tried, if you let me say so, to determine what course was best for all the people along the lines of the old textbook maxim: "The greatest good for the greatest number." That is the approach which has been vindicated at the ballot box. The Republican Party has been successful in the past. It will be successful in the future, in California, across the Nation, and—I hope—in your own great State in next week's elections.

Republicans, we have an excellent record of accomplishment on the homefront. We abandoned wartime wage controls and price controls when some of our Democratic colleagues were demanding that they be continued in peacetime. We scrapped the unfair excess profits tax on business over partisan opposition. We reduced individual income taxes by 10 percent and we cut most excise taxes in half. We adopted a $33-billion interstate highway construction program. We overcame bitter opposition to enact the first civil rights legislation since Lincoln's time. We fulfilled our national platform pledges for Alaskan statehood and Hawaiian statehood on the basis of bipartisan support. White House foreign policy, these last 6 years, has been approved by a bipartisan majority on every rollcall in the Senate. The farm problem is still a mess because a few Republicans and a lot of Democrats love high rigid price supports. As a symbol of progress by free men, the President's atomic peace ship was authorized. And the courageous leadership of our President, in the Middle East, in Asia, in Africa, in Europe, and in the Americas, unquestionably has contributed greatly to deterring aggression and to preventing war.

The tragically difficult recommendations which the President has been required to make to the Congress find their origins in the events which marked the close of World War II. At that time, the United States, in accordance with our traditional practice, began to demobilize our Armed Forces and to turn again to peacetime pursuits. We devotedly believed that with the creation of the United Nations we could look hopefully forward to an era of peace with justice in our conflict-weary world. We undertook through the Marshall plan generously to assist in rebuilding war-ravaged nations, whether they were allies of ours or not, in what will stand as one of the great unselfish acts of any government, anywhere, and at any time.

How soon the disillusionment came. Historic, freedom-loving European nations began to disappear, as, one by one, they went down the Communist drain. We began in chagrin to realize that the Soviet Union never had any intention of honoring its treaty obligations, but to the contrary, it was bent on pursuing the program laid down by Marx and Lenin with the single objective of communizing the world.

As these foreboding breaches of faith were occurring, the American State Department said:

"The instability of peace the world over is due, in large measure, to deliberate Soviet policy and actions, and to wholesale Soviet violations of basic agreements. Because of the U.S.S.R.'s record in ignoring its international pledges, the faith of the world in Soviet signatures has been badly shattered. Whether it be the Yalta Agreement, or a treaty of friendship, the U.S.S.R. has chosen to ignore its sworn commitments whenever it found such actions advantageous for its own purposes."

And, Mr. Dulles thereafter said: "It is now the policy of the United States not to exchange U.S. performance for Communist promises."

It is significant to recall that while America was rushing to return to a peacetime economy, the Soviet Union never did demobilize its own vast military forces but, to the contrary, maintained approximately 175 Russian divisions which was the Red army strength at the end of World War II. And, during the intervening years, these military resources have been greatly increased in their effectiveness through modern weapons, modern training, and improved leadership. Similarly, the Soviet has added to the strength of its Air Force. It has amassed a fleet of over 400 submarines, far in excess of Hitler's undersea fleet in the beginning of World War II. At the same time, the Kremlin strengthened its hold on the Soviet industrial machine, it sequestered the scientific brains available to it for the single purpose of producing a nuclear arsenal of ballistic missiles, international in scope, bringing the American continents within their range.

Your great Senator Arthur Vandenberg led this Nation into a clearer recognition of its modern responsibilities when, a little over a decade ago, he introduced the justly famed Vandenberg resolution which successfully led our Nation to a new landmark of American diplomacy. The U.S. Senate adopted your great Senator's proposal which "advised the President to seek security for the free world through U.S. support of mutual defense arrangements, to operate within the United Nations Charter, but outside the Security Council veto. It also advised the President to attempt to strengthen the charter through curbs on the veto, itself, and by providing a United Nations police force together with the regulation and reduction of armaments under dependable guarantee against violation." Vandenberg papers.)

Those continue to be sound and solid policies for the United States to follow. The Senate, on June 11, 1948, overwhelmingly

adopted the Vandenberg resolution, and on that splendid foundation, the American doctrine of collective security formally replaced the outworn policy of pre-World War II isolation.

It is particularly appropriate to recall that resolution tonight as our President and our country join in celebrating a monumentally successful decade of the North Atlantic Treaty Organization, an outstanding example of our country's membership in effective security pacts under the Vandenberg resolution. Prior to NATO, 17 sovereign nations were engulfed by the Soviet, as I say, one by one. Since NATO, no nation in the Atlantic community has either lost her independence nor has been attacked. There is the strong proof of its effectiveness. NATO is a modern adaptation of the old American colonial cry: "In union there is strength." The member states of NATO standing together, solemnly agreeing that an attack on one will be deemed an attack on all, brought Soviet destruction of free states in Europe to a close.

When Red aggression against Korea came, America once again was required to mobilize its military strength to combat Communist imperialism which broke out within our defense perimeter, this time in Asia. The actions of the Soviets from and after Korea have imposed new requirements on the people of our country and our Government, as the acknowledged leader of the free world. It is now unhappily necessary, for the first time in our history, to maintain a large military establishment in time of peace. There appears to be little, if any, possibility of relief from this costly necessity so long as the Kremlin maintains its present course toward world domination.

The American people are dedicated to peace. The American Government has most earnestly striven to attain peace with justice in the world. The President's proposal at Geneva in 1955 for a nuclear disarmament on the basis of an adequate mutual inspection gave hope to every peace-loving human being as a real possibility of the beginning of a new era. The President's open sky aerial inspection was almost summarily rejected by the Soviet. Since that time, at London, at Geneva, and elsewhere, American representatives together with those of our NATO allies have tried, and tried, and tried to find a mutually acceptable formula by which disarmament could be honorably agreed upon and, thereafter, effectively assured. Our Government continues, most earnestly, to find an honorable prescription which the Soviets might accept.

Meanwhile, the difficulty over Berlin continues. Our position, and that of our allies, the British and French, has been made clear to Mr. Khrushchev, both in the public utterances by our heads of state, and in the private statements made to him by Prime Minister Macmillan and others. God knows what the true feelings of the Soviet leader are, but we do know that it is Mr. Khrushchev, and he alone, who lays down the Soviet line, aided and abetted, it is unquestionably true, by thoroughly competent staff personnel and by the most skilled propagandists. The President once again has indicated his own availability for a summit conference, contingent upon the effectively logical proviso of a prior meeting of foreign ministers, which would clear the chaff from the wheat, and would specify in clear language the decisions necessary to be rendered by the heads of state.

And the Soviets continue to zig and zag. After belligerently indicating that world war III was inexorably on its way over Berlin, Mr. Khrushchev now tells a press conference that the "notion" that he had given the West an ultimatum to get out of Berlin by May 27 was "an unscrupulous interpretation of our position."

Our Government is faced with the problem of determining how best to design and build a military defense establishment capable of responding to the hazards of conflict whatever the size of the conflicts may be. The solution is found in the doctrine of deterrence and in the continuing application of the principle of collective security. An unerring adherence to this doctrine and to this principle is the indispensable partner of our peace-inspired diplomacy, most particularly if that diplomacy is to receive deserved consideration by Moscow, where there is a wholesale respect for military strength.

The people of our country, regardless of party, are prepared to underwrite whatever the cost of an adequate defense may be, and the cost of its concomitant, our mutual security program. In the field of defense, professional military skills must be the basis on which initial estimates for each branch of the services are made. And then, the professional military members of the Joint Chiefs of Staff give their collective estimate. From there, civilian heads of the Pentagon pass their judgment, and, finally, the President makes his recommendations to the Congress.

As a lay U.S. Senator, and neither as a partisan nor as a self-styled global strategist, I am glad to tell you that I shall support the President in his military recommendations which he has made to the Congress for the sole and single reason of deterring or, if necessary, of combating any aggression against us, and of preserving the freedoms which we know.

I do not quarrel for a moment with the right of a Member of Congress, or, for that matter, of any citizen, to disagree with the President in matters of defense or anything else. But I trust they will not quarrel with me when I discard their opinions in this field as inaccurate and when I determine, once again, on the basis of the record, to vote for the Eisenhower proposals for America's defense.

And now, some who earlier were using rather inflammatory language in speaking of our Defense Department have conceded, however belatedly and reluctantly, that our strength and our planning are adequate for our country's safety. Indeed, there have just been made public some excerpts from the testimony of our military Chiefs of Staff two of whom say that we have too many nuclear weapons rather than too few.

May we not recall that, in World War II, President Roosevelt made Dwight Eisenhower supreme commander over all military personnel in the European theater. After World War II, he took over the military responsibilities of the North Atlantic Treaty Organization. As President, he'll be guiding us down the road for another 2 years. We can gratefully salute his almost entire lifetime of dedictated devotion to the people of the United States.

Republicans, be proud of the accomplishments under the Republican label that have taken place in our Nation's Capital. We came into being in the 1850's as the American party of freedom. We intend to keep it the party of freedom in its second century of existence.

Michigan: Sportsman's Paradise

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. McNAMARA. Mr. President, few States in the Nation can match Michigan as a year-around paradise for lovers of sports and recreation.

This aspect of Michigan, coupled with the State's industrial power, provides the foundation for Michigan's greatness.

An article in the Detroit Times of Saturday, March 28, described the sports and recreation assets of Michigan. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRUTH ABOUT MICHIGAN: FEW PEERS IN SPORTS, RECREATION

(By Edgar Hayes)

"All work and no play" applies as much to the executive, the professional man and the factory worker as anyone else.

Daily hundreds of doctors tell thousands of patients (or about to be patients) "Get more exercise, develop a hobby, enjoy more outdoor living."

At one time this advice could be heeded only by the well-to-do. Now the best facilities for sports, recreation, and exercise are available to all.

With the shorter workweek becoming increasingly more popular, recreation facilities are assuming greater importance.

When an owner decides to buy or establish a factory he makes a careful study of the facilities to keep his employes and executives busy during their nonworking hours.

Recreation has now become a year-round proposition.

Winter sports have boomed in the last decade, far beyond the wildest dreams of those who own and promote winter resorts.

Out of season vacations at one time were the luxury of the wealthy who could go to Florida or some other sunshine climate.

Now skiing, skating, ice fishing and tobogganing have given the resort owners a 12-month business and the enthusiast a year-round full program of events.

Lucky is the State that can offer a year-round schedule.

Few States can match and none surpass Michigan in this respect. Winter wonderland or water wonderland, Michigan is tops.

If you have a big bankroll there are fine, exclusive clubs and lodges.

If you have more modest resources there are fine motels, hotels, and resorts.

If your financial problem is acute but your love of the outdoors keen, there are hundreds of grand camping sites which provide excellent vacation possibilities for a very few dollars.

Name a sport, recreation, or exercise and Michigan is the ideal spot for it.

IF YOU LIKE TO FISH

Michigan has about 12,000 lakes, almost all well stocked with fish. There are 33,000 miles of streams, some of them world famous for trout.

Great Lakes fishing provides all the thrills and excitement usually associated with deep-sea fishing.

Many of these lakes freeze over during the winter, ideal for ice fishing. Michigan has about 1,800,000 anglers wetting lines during the seasons.

IF YOU LIKE TO HUNT

Shooters come from all over the Nation to hunt deer and bear in Michigan's woods and prairies. More than 1 million take to the forests each fall.

The bird season is popular and good hunting can be found within an hour's drive of any spot in the State.

The new Mackinac Bridge opened that vast territory to hunters and fishermen, many of whom shunned the long wait at the straits.

IF YOU LIKE SWIMMING AND BOATING

The lakes, both inland and Great Lakes, provide the best possible swimming and boating.

The Great Lakes give Michigan the world's longest shoreland (except for Australia), almost every foot of it grand beach for bathing and sunning. The lakes are ideal for swimming.

Any sailor will tell you the Great Lakes are a paradise for those who love the leisurely sport.

Only one State in the Union, New York, has more powerboats registered than Michigan. And none has more fine waterways for the enjoyment of those who own these craft.

DO YOU LIKE GOLF?

Michigan has hundreds of courses, some like Oakland Hills, Meadowbrook, Birmingham CC, world famous. No matter where you locate in Michigan or where you go for a vacation you're always within a few miles of a good course.

MAYBE YOU'RE A SPECTATOR

No matter what your sport is, you'll find a major league team representing it in Michigan. At all times you are within a couple of hours' drive of Detroit, Ann Arbor, and East Lansing, site of huge stadiums for all sports.

Detroit and New York are the only cities in the world with major league teams in all sports, baseball, football, hockey, and basketball.

Summed up, all this means if you believe as most people do that a happy, active work is a better one, Michigan is perfect for employees.

So good are the opportunities for outdoor activities that Michigan leads the Nation in issuing hunting and fishing licenses, maybe a quarter of a million more than California, often mistakenly called the ideal vacation land. That title belongs to Michigan.

America's Gravest Crisis and Our Response

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. JOHNSON of Texas. Mr. President, I have always felt that the American people have the will and courage to surmount the gravest crises if they know the facts and what they must do to insure the triumph of their cause.

One of our great religious leaders resigned several years ago as rector of Washington's largest Episcopal parish, in order to devote his full time and energy to providing such facts and alerting the free world to what he believes is its greatest threat—the challenge of atheistic communism.

He is Dr. Charles Wesley Lowry, chairman of the Foundation for Religious Action in the Social and Civil Order, an organization which is trying to unite men and women of all religious faiths in a great spiritual counteroffensive against communism.

Last month, Dr. Lowry delivered at Wake Forest a forceful and inspiring address setting forth the issues we face in this life-or-death struggle between freedom and slavery. He called on America to respond to this greatest challenge in a way which will be worthy of the dreams on which our Nation was founded, and he stated magnificently how we must have a "will to greatness" in this hour of crisis.

Mr. President, I ask unanimous consent that his great message be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA'S GRAVEST CRISIS AND OUR RESPONSE

(An address by Charles Wesley Lowry, Ph. D. (Oxon.), delivered to the student body of Wake Forest College, Winston-Salem, N.C., on March 17, 1959)

The dominant memorial in our Nation's Capital is the severely simple yet magnificently towering granite shaft called the Washington Monument. It commemorates one who is known in history and to us all as "the Father of his Country."

This matchless title indicates that the lines fell to George Washington in a time of crisis. For 7 years he was first in war—slow, slugging, indeterminate, painful, Revolutionary War, fought under the most trying and vexatious circumstances. The winning of American independence was a victory, above all, of patience, fortitude, wisdom, manliness embodied superbly in a character—the character of Washington.

In 1783 we became a free people. The next 15 years were the testing time for peace, order, and nationhood. First we had to get a Constitution; then we had to try it out and see whether the novel and pioneering experiment in self-government would work. By the unanimous instinct and decision of his peers Washington was made President of the Constitutional Convention in Philadelphia in 1787. By a similar instinct the first presidential electors of the American people made him President of the young Republic. For 8 years he kept to the helm, guiding, testing, seasoning the new ship of state.

Then, by his own free volition, this extraordinary man and patriot, his honor immaculate, his character of disinterestedness untarnished, stepped aside, leaving office and power to other Americans, likewise freely chosen by the people.

Thus George Washington became "first in peace" and in a second manner "the Father of his Country." His successor, John Adams, served one term and then with the election in 1800 of Thomas Jefferson, America was launched upon the 19th century, the age of peace, expansion, and progress on a world scale.

Early, however, in the seventh decade of this century a terrible storm broke and descended in fury upon the Nation that had fastened upon it the eyes of a hard and skeptical world. On the 11th of February 1861 a tall, gaunt figure stood on the rear platform of a train to say farewell to his friends and fellow citizens of Springfield, Ill. "I now leave, not knowing when or whether ever I may return, with a task before me greater than that which rested upon Washington." Two days later in Columbus, Ohio, the same man, Abraham Lincoln, said: "I cannot but know what you all know; that without a name, perhaps without reason why I should have a name, there has fallen upon me a task such as did not rest even upon the Father of his Country."

There followed 4 years of ferocious war—war and carnage and shedding of blood and pouring out of treasure such as the world had not witnessed up to that time; a war that is today recognized as in a real sense the dress rehearsal of world war and total war.

Our Nation was saved. I, as a descendant of men who fought heroically to divide the Nation, acknowledge this with humility and thanksgiving. Deep scars were left, and some of them are still with us. But the United States is one and will remain one. Together despite all sectional tensions we will solve the problems that history has placed on her domestic agenda for this Nation.

Today, 2 years less than a century since Lincoln traveled to Washington to be inaugurated President of the United States, we are engaged in another civil war. This time it is not a war within America. The scene is no one nation but the world. The struggle we are engaged in is a planetary civil war.

The stakes are higher, the issues are more momentous, the crisis is graver than in 1776 or 1787 or 1861. Today the question is our survival. The issue is whether we shall remain a free people in a free world, or whether a new form of slavery shall become worldwide.

In 1858 Lincoln, though he was a prudent man and an intuitive politician, never a firebrand, had spoken prophetically of the future of Negro slavery. "'A house divided against itself cannot stand.' I believe this Government cannot endure permanently half slave and half free. I do not expect the Union to be dissolved; I do not expect the house to fall; but I do expect it will cease to be divided. It will become all one thing, or all the other."

Today, exactly 100 years later, we are asked to believe that a world made one by the miraculous annihilation of time and space can exist indefinitely half free and half slave. We are even invited jauntily by our adversary to engage in a competition of social systems, to see which one is better.

Such talk is highly unreal, as unreal as the oratory of men before America's Civil War, who considered that proslavery and antislavery forces could coexist peacefully for an indefinite time.

It will work out the same in our day. The world will not stand still. Indeed it is only too evident that it is doing anything but stand still. It is characterized by very rapid motion, and this motion sooner or later will speed mankind toward freedom or carry it backward to slavery based on technology.

This is what I mean by saying that the present crisis is the gravest in our history or in the world's history. The issues are survival and slavery. If our only choice is slavery, it were better not to survive.

Fortunately this is not the case, and I believe that we as a people must determine that we will survive, that we will use our incomparable wealth and power to be a leader nation, and that we will defeat the men who design a world made one in subjection and bondage.

This will not be easy, for we are up against two things that are powerful. One is an idea: the idea of communism." Communism is a construct with two faces; one a bloody, brutal, cruel, cynical reality; the other a fair, shining, splendid ideal in which selfishness is overcome and all men are at last equal and truly free. With this dual social personality, the Communist is able to appear to the unwary as Dr. Jekyll, while he acts in real relationships like the criminal Mr. Hyde. Thus he is able to make the most of two worlds, until found out by those whom he enslaves.

The second thing we are up against is the energy and vitality of the Russian people. This is a great and gifted people. It has been made strong and ambitious because it has suffered much and expected little over the centuries. Today a part of the long-submerged Russian peasant masses has clambered to the top of the social pyramid. Opportunities have widened for others. The result is a drive, vigor, passion, and restless energy alike in scientific technology and in unconventional diplomacy such as the world has never before seen.

In the path of these new barbarians galvanized and directed by the Communist ideology is the United States of America. We and we alone block the march of the Soviets to world conquest and world rule. We are less ambitious and less vital than we were, because we have been very successful materially and have entered the luxury arc of the cycle of a great civilization. This vastly increases our peril, for it means that we have powerful foes both within and without.

Yet man is free as an individual, and freedom is still the form and privilege of our national existence. This means that we are not shut up to an inevitable fate. We are free to respond, decide, act, fight with moral weapons, and win, if we choose.

What shall our response be, to this gravest crisis in the history of America and the world? By this I mean our mental and spiritual response, not the particular means we shall use to achieve the end of victory in the least frigid cold war in history. The means exist and can be found, if we have the will.

This brings us back to the all-important question of our responses as Americans and the response of our great and mighty civilization. Three factors are primary in this response, if it is to be vital, affirmative, and persisting.

The first is faith in God. We talk a good deal about faith and about religion in modern America. We have more church members proportionately than ever before in our history. Statistics on church building are astonishing—almost overpowering. But are we not neglecting the most important thing—God and His grace and power? God and His divine will and purpose for history in our time?

If we look back to the times of Washington and Lincoln, we cannot miss the religious quality of their response. They could not see the future; it was veiled from their eyes, as it is from ours. But this did not weaken them or lead to any failure of nerve or will. On the contrary, they put their whole trust in God and committed the future to Him. We must do the same. God is greater than atomic energy or Soviet technology or 650 million Chinese. Our times are in His hand. His will shall not fail. We can say with the early Christians and with our Founding Fathers: "The Lord God omnipotent reigneth."

This is the first duty of the churches in America today—to lead and teach Americans to believe in God and to love Him and serve Him for His sake.

The words of Washington in his first inaugural address can incite and help us do this very thing: "No people can be bound to acknowledge and adore the invisible hand, which conducts the affairs of men, more than the people of the United States. Every step, by which they have advanced to the character of an independent Nation, seems to have been distinguished by some token of providential agency."

Secondly, our response must be one of realism. The great believers in God have not been fatalists. They have not kept to their tents in the day of battle, saying "Let the Lord do it." On the contrary, they have been men like Moses, St. Paul, Mahomet, St. Francis, Martin Luther, Ignatius Loyola, Cromwell, George Washington, Thomas Jefferson, William E. Gladstone, Stonewall Jackson, Abraham Lincoln, and Woodrow Wilson. The great figures in religion, in war, and in statecraft have been realists, men and women having a strong sense of what is, and a high respect for facts.

This is certainly our second greatest need as Americans in this gravest of all our crises. We need to shake hands with what faces us, walk around it, get acquainted with it, and adjust our lives accordingly. In war we do this. What we have so far failed to accept is the fact that cold war is not peace, but war. It must be fought, with appropriate and effective weapons, and must be won. Otherwise, we may not survive, and if we survive it will be as slaves.

The third factor in a vital response to the present crisis is what I like to call a will to greatness. This, I believe is the meaning of America. Our forefathers considered that the temple of liberty and social peace they built on these shores was no common edifice. They thought of it as something momentous for all mankind. In Washington's own words, "the preservation of the sacred fire of liberty, and the destiny of the republican model of government, are justly considered as deeply, perhaps as finally staked on the experiment to the hands of the American people."

As Washington and his colleagues felt, so all true Americans have felt. In the great crises of our past this sense of universal value and will to greatness nerved the efforts of Americans and held them to their best. It is the one motive that can renew our souls and make us ready today for sacrifice and selfless dedication.

Yes, a nation too has a soul. It is a spiritual reality. It is more than commerce and machines and highways and heavens filled with airborne argosies. It is an idea, an aspiration, a loyalty, a rising above individual self, an affirmation of life, or other human selves, and of God.

"And what shall it profit a nation, if it shall gain the whole world and lose its own soul?"

That is the central point. Our true greatness is of the mind and soul, and it concerns others. It involves the whole world which is in a vast and exciting transition. With this world our destiny is wrapped up. As soon as we truly realize this and become self-reconciled in the knowledge of our marvelous destiny, there will be no problem about the response of American civilization to the challenge either of Communist totalitarianism or of worldwide social revolution.

That response will be so real and so vibrant and so dynamic and so irresistable that the world once again will be turned upside down—or, shall we not say? turned right side up.

Has Anyone Mentioned the U.N.?

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial by Norman Cousins entitled "Has Anyone Mentioned the U.N.?" which appeared in a recent edition of the Saturday Review.

This editorial urges that the offices of the U.N. be utilized in attempting to resolve the Berlin crisis. I believe this is a sound and sensible suggestion and have also urged that the Berlin summit conference be held within the framework of the U.N. with the Secretary-General, Dag Hammarskjold, participating in these deliberations. I hope that this editorial will receive the serious attention of all of the Members of the Senate.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HAS ANYONE MENTIONED THE U.N.?

The Senate Preparedness Committee has been listening to testimony about the nature of the Berlin crisis. The high point of the hearings came when Gen. Maxwell D. Taylor, Army Chief of Staff, warned the Congress against expecting military victory as the result of a nuclear war over Berlin.

The decisive part of a nuclear war, General Taylor said, could come quickly, but "it might take 100 years to end the desolation and to restore some form of order."

"In my judgment," General Taylor said, "any dogmatic prediction of what will take place after an initial nuclear exchange is beyond the human capability. However, there is no reason to believe that peace is going to ensue at once, except, perhaps, the peace of the dead."

Having made it clear that a military showdown over Berlin could not exclude the possibility of nuclear war, and having dramatized the fact that victory in a nuclear war is a proposterous concept, General Taylor proceeded to declare that the United States must be prepared to wage nuclear war, if necessary, to maintain its forces in Berlin.

It was up to the Soviet leaders, he said, to back down and thus prevent the danger of a nuclear showdown over Berlin. There was a clear inference that the Soviet leaders were not so foolish or irresponsible as to go through with their plans to withdraw from Berlin and turn the problem over to the East Germans. After all, he intimated, the Russians understood the meaning of a nuclear war.

Meanwhile, Premier Nikita Khrushchev, who precipitated the crisis with his demands, has warned the United States to back down on the Berlin issue. He has expressed the hope that the United States would not be so irresponsible as to risk war over Berlin. As for the Soviet Union, he added, it is determined to go through with its plans. If nuclear war is to be averted, it is up to the United States to do the averting.

It is plain, therefore, that both the United States and the Soviet Union believe it would be monstrous and irresponsible if a war were to break out over Berlin. And each side is calling on the other side to be wise enough and responsible enough to prevent the nuclear war by backing down. But each declares its own readiness to let fly with the bombs rather than alter its position. In short, if wisdom is to prevail, each side expects the other one to furnish it. We say, in effect: "We're ready to launch a nuclear war because we can't possibly change our stand, but surely you can't be so stupid not to see that your failure to change your own stand will result in annihilation of all concerned." And the Russians, almost to the comma, are saying the same thing to us.

It becomes plain, therefore, that both sides are ready to go to war, agreeing with each other that if they should do so Berlin and all its people would be pulverized into a radioactive rubble pile in a matter of hours, with the rest of the world likely to follow in a matter of days. In short, military measures cannot possibly provide victory, but it is only the other fellow who is expected to know this.

That the fully sovereign state should be capable of this kind of logic is no surprise. It is in the nature of unfettered sovereignty to see no answer except force or the threat of force. But what is surprising is that the human beings who inhabit the planet are not splitting the sky with their indignation over the kind of ghastly nonsense that can put a torch to the world itself. A Dreyfus case can animate and arouse a whole civilization; a Hall murder case will cause excited debate from Kobe to Kalamazoo; a pyromaniac in Utah can produce concerned headlines in Tennessee. But the possible murder of a whole civilization, with pain that would

pursue men for generations to come—all this the world can take in its stride.

And no aspect of the current crisis over Berlin is more significant or tragic than the fact that the one world agency created to prevent war has hardly even been mentioned. The United Nations, which makes its appeal for the support of the world's people on the basis of its ability to keep the peace, has yet to be regarded as a factor in a possible resolution of the German situation. The problem of Berlin is inseparable from the problem of Germany. The problem of Germany is inseparable from the problem of world peace. The United Nations is the world agency charged with world peace. The United Nations, therefore, is the proper means, rather than nuclear war, or the threat of nuclear war, for attempting to resolve the Berlin crisis.

The Berlin crisis, however, gives dramatic visibility to the fact that the United Nations was never given the authority to tell the large states what to do. But if this is the case, must the world be consigned indefinitely to the peril of unanimous consent? Why shouldn't the United Nations have the power to tell the large states what to do? How else is peace to be created and maintained? If, for example, the large states insist on making and testing the weapons that can destroy all states, themselves included, then it clearly becomes the obligation of the world organization to step in and define a basis for sanity and security.

Far better to have the U.N., with all its weaknesses, wrestle with the problem of Berlin than to have the major nations attempt to resolve it with all their strength. And if we ask, how can the large states be expected to propose or accept this kind of authority, the answer is that they probably won't. But the ultimate authority and power reside with the citizens—at least in a free society. Therefore, this now becomes the first order of business for free citizens everywhere.

Man's natural habitat is now threatened. The fully sovereign nations cannot deal with that threat. The U.N. might, if enough people believe it should.

George Killion: Bay Area Profile

EXTENSION OF REMARKS
OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, it has been my privilege to know George Killion for more than 20 years. My first contact with him came when I was an assemblyman in the California State Legislature and he was one of Governor Olson's secretaries.

Sheer ability, determination, and a genial personality are among his many fine characteristics.

I think that Hugh Russell Fraser in the March 26, 1959, issue of the San Francisco Daily Commercial News has done an outstanding service in selecting George Killion as the subject for his "Bay Area Profile":

BAY AREA PROFILE

(By Hugh Russell Fraser)

So many people have tried to analyze George Killion—to find out what makes him "tick"—that I decided to take a hand at it myself.

As president of the longest steamship line in the world, the American President Lines, he has been somewhat of a mystery.

In fact, he is the only man in all recorded history, so far as I know, who has entered the select circle of a major business success by the back door of politics.

That alone puts him in a class by himself.

Also, who ever heard of a man entering a strange, new business—new to him—by starting at the top.

George Killion did.

But the story doesn't end there. When President Truman appointed him to head the then Government-owned American President Lines, many a top APL executive wasn't the least bit worried or surprised. "He won't be here long," was the consensus.

In fact, one APL staffer was working on a song to be titled "Watch the Presidents Go By!" Several executives, knowing nothing about the steamship business, had come and gone, and nobody expected any different result on the appointment of Killion. The prophets, however, were in for a jolt.

In going to see him to get a clue to his success, I knew it was improbable I would get it by just talking to him.

Sure enough, the first inkling of the answer came not by anything he said—for as a matter of fact he seemed to be trying to throw me off the track by interviewing me instead of my interviewing him—but the first valuable clue came from a piece of paper he handed me and then started to take back. He remarked there was nothing of any value, just a newspaper clipping of a news story he had written when a newsman back in 1927. However, I insisted on reading it and so he let me borrow it.

THE CLUE

There, about the 10th paragraph down, I found the clue. And suddenly, the man's amazing success became as clear as crystal to me.

The newspaper clipping, now yellowed with age, was from his days as a reporter for the San Diego Sun. He was covering the departure of the then unknown Charles A. Lindbergh in his little Ryan monoplane for St. Louis on the first leg of the historic flight to Paris.

This Killion-written story in the San Diego Sun started off ordinarily enough: "Capt. Charles A. Lindbergh, who hopes to be the first to blaze the air trail across the Atlantic from New York to Paris, took off for St. Louis from Rockwell Field at 3:45 o'clock yesterday afternoon while a crowd of several hundred people cheered him on his way."

Then Killion described exactly what Lindbergh said before he took off, exactly what letters he carried to distinguished people, spelling out all the names. Then he gave an exact, almost minute description of his route to St. Louis, noting that he would be flying "14 miles south of Prescott, Ariz., thence over New Mexico about 10 miles south of Gallup. Then out over the northern tip of Oklahoma and straight over Kansas. * * * Today his course will carry him 10 miles south of Wichita, Kans., and about 50 miles north of Emporia, and about 11 o'clock he hopes to fly over Jefferson City."

You never saw such detail in your life. Not only did Reporter Killion describe the route to St. Louis in blueprint fashion, but he went on for 10 more paragraphs to outline the route to Paris, stating exactly where at what time Lindbergh expected to be flying over Ireland, and how his route would take him 10 miles south of Plymouth, England, all this followed by a technical discussion of the risk the flier was taking in not carrying pontoons, and how empty gasoline tanks might be used to keep him afloat in case of disaster, etc.

THOROUGH

In all my 40 years of newspaper experience, I never saw a more thoroughgoing story in my life.

So here was the secret of the man—thoroughness.

It shouted at me from every page.

In every task he undertakes he insists on knowing as much as possible about it. This I now knew.

Ordinary knowledge won't do. He must have extraordinary knowledge.

"When the boss turns up missing," said one of his colleagues, "we know where to look for him. He is probably down in the engine room, checking on something." In his mania for thoroughness, I discovered Killion has a double-edged technique. This I got not from anything he said, but from a close examination of his result-getting APL methods.

First, search for ways to hold down costs.

Second search for ways to get more cargo.

And underlying both objectives, the frank recognition that, while there are a surprising number of cost items that can be cut, there are some that actually have to be increased to bring in more cargo. It is as simple as that.

The man is a born salesman. But salesmanship alone does not explain his success. The fun he gets out of examining a thousand facets of the same problem explains his remarkable buoyancy. He never seems to be working. He seems to be exploring.

No wonder he reads a book or two a night, mostly in the field of history. (When he heard Tom Wheeler was reading my book on Andrew Jackson, he said he was going to borrow it. He'll probably read it in 2 hours.)

Of course, speed of reading has little to do with his amazing talent for thoroughness, but the way he has applied the latter as the key to success is shown at every step of what would be otherwise a mysterious career.

Let's start at the beginning.

FIRST JOB

George Leonard Killion was born at Steamboat Springs, Colo., April 15, 1901. His first job worth mentioning was as a reporter for the San Diego Sun. There he covered the waterfront, subsequently met Lindbergh, then an airmail pilot, who taught him to fly.

His preparation for all this was rather curious. As a lad of 15 he worked in the gold mines of Nevada and California. In fact, one of the mines he worked in is still operating—the Empire, as it is called, and is one of California's largest gold producers.

Those who say today that Killion "has a way with money" (and I heard the remark on Montgomery Street) might remember he first dug it out of the earth. The amount of formal education he had was not much. He studied law for a year at the University of Southern California and then a year in a business course at the University of California. Most of his real education at this time he got from reading.

The first brilliant thing he did at this time was to observe one day a stunning looking brunette on a beach near San Diego. He thought up reasons on the spot for getting acquainted with Grace Harris, and led her to the altar on Christmas Day 1922.

From the job on the San Diego Sun he went to others on the Los Angeles Examiner, the San Diego Independent, and finally the Sacramento Union. Then he opened a public relations office in the capital, and soon became legislative consultant for Safeway Stores in Oakland. This led to meeting California's future Governor Olson, then a State senator. The two became good friends and when Olson stepped into the executive mansion, he named Killion finance director.

PRUNED

Olson told Killion he wanted the budget balanced. Killion took him at his word. While the bureaucrats howled, Killion pruned and pruned.

He made a thorough-going study of every phase of the State's business. When he found, for example, the State was paying $3 to $7.50 a thousand for surety bonds, he cut the maximum to $2.50 a thousand.

He did such a good job in cutting expenses that the $80 deficit he encountered when he took office changed to a $100 surplus when he left office. Never before in California's history has such a record been made. Yet he also expanded services the State needed.

No wonder on several occasions he has been boomed for California's Governor. In Washington, D.C., the then Petroleum Administrator for War, Ralph Davies, was so impressed he insisted on getting him for his assistant. This was Killion's first national break. In 1944 he became treasurer of the Democratic National Committee.

It was the time of the Truman-Dewey campaign, about as tough an assignment as one could have. But Killion raised the money to help put Truman over.

Prior to this, of course, and unrelated to it, the American President Lines (the former Dollar Steamship Line) had been taken over by the Government. The owners were not able to repay a $7 million loan.

This sad state of affairs, however, was reversed during World War II. Then there was such a sudden upsurge of business that the Government recovered its money, whereupon R. Stanley Dollar, son of the late Capt. Robert Dollar, waged a long legal fight to regain control. Things were going from bad to worse when APL President Henry F. Grady resigned to become an ambassador. So Truman was getting ready to nominate Davies for the post when Davies demurred and suggested George Killion. Knowing something of Killion's thoroughness, Truman agreed immediately, although not without the amused observation that he would be accused of handing out a political plum to a former Democratic national treasurer. Of course, he knew he was actually doing nothing of the kind, but in shipping circles on the west coast the appointment was construed as one more example of "that bungler in the White House."

BEGUN TO HUM

However, when George Killion walked into the APL's president's office on August 12, 1947, things began to hum. And I don't mean maybe. At that time Killion knew as much about running a steamship line as I do about running an electronics firm. But he decided to learn—and fast.

He knew he was walking into a mess, and that it would take thorough knowledge, in addition to his own demonstrated financial acumen, to reverse a decided downward trend. Morale of its 4,000 employees was at a low ebb. Key executives were quitting to establish rival lines. The appointment of Killion looked to them like the last straw. This man, who came in by the back door of politics, would really put the finishing touch to the whole debacle. Or so they thought.

The first thing Killion insisted on was a new look at industrial relations. Strikes were the big threat. When Pacific Maritime Association negotiators and union leaders glared at each other during the 92-day strike, Killion made an exhaustive survey of previous maritime tieups. He did it himself. Then he tossed his statistics at the 16 other steamship operators. "We are paying a higher price for labor peace at the end of strikes than would have been necessary before the walkouts. We can get terms by settling first," he announced.

Several other operators saw the light, came to his side when they couldn't controvert his statistics. Together they reorganized the association, decided to settle beefs before they grew into issues, and began signing 3-year contracts. There was peace until 1952 when the die-hards again gained control of the group. A minor dispute over wages led to a 60-day tieup. When it was all over, Killion was proved more right than ever. It is difficult to argue with thoroughgoing statistics.

CURIOSITY

Meanwhile, Killion was dipping into what others considered the routine affairs of the company. He appeared to have an insatiable curiosity. Nor was he satisfied with pat answers. He talked directly with skippers, first officers, and pursers when their ships were in port. Soon he was showing them how to cut costs in fuel, supplies, port fees, overtime. At the same time he was expanding sales items that would make the line more attractive and interesting to shippers and passengers alike. These smart tactics began to pay off. Cargoes increased.

Bucking the tradition that nobody works in downtown San Francisco on a Saturday, Killion was at work early in the morning. He didn't insist that his staffers be there, too, but when they weren't he had a habit of calling them at home—on business. Finally, they all took the hint and came down to work. One staffer, off the record, blew up; "God damn these politicians," he exclaimed. "They are supposed to lay down on the job, and look at this ——— 5 days a week and now 6."

But there was more to come. Killion hadn't started yet. Said one vice president: "When he had us there New Year's Eve and New Year's Day, working and not celebrating, that did it. Nobody doubted any longer he meant business."

Killion is not the kind to take credit for anything, however. Even the settlement of the long legal fight with Dollar over the ownership of the company is usually credited to him. Killion denies it. "Giannini did it," he says. He called me in one day and said: "Why don't you work out a compromise between the Government and Stanley Dollar? If this suit goes on, a great San Francisco institution will be impaired beyond recovery."

A MEETING

So Giannini arranged a meeting between Dollar and Killion. The next step, of course, was a meeting between Dollar and the Attorney General of the United States, J. Howard McGrath.

Dollar said he would be damned if he was going to ask for such an interview. After all, he might be turned down. No; he wasn't going to take that risk.

At this point Killion had an idea. He wrote out a wire for Dollar to send to the Attorney General. Then he wrote out a wire for the Attorney General to send to Dollar agreeing to the meeting. He persuaded McGrath to send such a wire if Dollar sent his telegram.

This prearranged exchange of wires, rigged by Killion, did the trick. The two men met and agreed to a 50–50 compromise, later ratified by the Secretary of Commerce. And thus ended the long lawsuit.

The company was reorganized. Ralph Davies became chairman of the board and George Killion president.

Killion's tenure was now secure. He made it more so by continuing to pick able assistants.

Some of the outstanding ones he inherited from the old Dollar Line, the most notable being former Chicago ace newspaper man, Gene Hoffman. From the Atlantic coast he picked up a man who is probably the world's top passenger traffic manager, J. M. Diggs. Killion's present special assistant, Jack Berryman, was in the Orient when Killion sent for him. To get an able man, he will go halfway around the world, if necessary. Picking an efficient staff is a Killion trait.

ROMANCE

Killion himself, for all his cold appraisal of statistics, is fully conscious of the romance of his job. "We sail," he says, "some glamorous routes. Think of ports like Singapore, Calcutta, Alexandria, Naples—yes, and of attractions like Bali, Fujiyama, Taj Mahal and the Valley of the Pharoahs. All on our shipping lanes—indeed, with 90,000 miles of trade routes, we do business in more languages, more currencies, more religions than any other steamship line on earth."

It is not surprising that the newly formed World Trade Club chose Killion as its first president. An enthusiast for world trade, he will talk with anyone who will help it along. He sees the new club, located in the sumptuous quarters of the World Trade Center in the Ferry Building, as a focal point for all those interested in world trade and global good will.

"Members will come from the ranks of industry, trade, government, labor and the professions," he says. "We are all bound together by mutual interests. The motto of the new club is 'World Peace Through World Trade.'"

The more I observed George Killion the more I was convinced he gets a lot of fun out of his job. Perhaps that is back of his passion for thoroughness. He seems to thrive on problems—and, what is more uncanny, getting answers to them.

What Changes in Demand for Milk May Be Expected?

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. WILEY. Mr. President, recently it was my privilege to address the Midwest Milk Marketing Conference, at Madison, Wis. My subject was the impact of the St. Lawrence Waterway upon the economy of the Midwest.

At that meeting Louis F. Herrmann, head of the dairy section marketing organization and costs branch of the marketing research division, of this city, addressed the conference. The subject of his address was "What Changes in Demand May We Expect in the Future in Relation to Milk?"

His was a very illuminating address which is well worth reading. I ask that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT CHANGES IN DEMAND MAY WE EXPECT?

Ask different kinds of economists to tell you how demand for milk may change in the next 10 years and you can expect to receive answers that differ according to the specialization of the people you ask. A price analyst would base his answer primarily on incomes and the elasticity of demand. He probably would make some assumptions about any changes in future price patterns and then fall back on what he knows about the influence of changes in personal income on consumption. A specialist in market development would stress the influence of promotional activities, with reference to advertising budgets, mass media, point of sale materials, and so on. Another student of factors affecting demand might base his analysis on what he knows about the way consuming habits vary within the population.

To be practical, I would concede that each point of view would contribute something to our understanding and ability to foresee

what may happen in the next decade. Yet this morning I should like to center attention on the population aspects of the problem. When I was invited to talk to you it was suggested that it might be useful and interesting to discuss demand from the population point of view. The idea intrigued me.

You may have heard expressions of an optimistic outlook for milk, based on the increasing numbers of babies born every year. You may have heard it said that increasing proportions of people over 65 years old would bring heavier milk consumption, since this age group consumes more than those between 25 and 65. You may have heard that consumption of dairy products is higher in the West, and that population out there is increasing faster than in the rest of the country. Let's look at the facts. I think you will find them as interesting as I did, when I began digging into them for this talk.

Four features of population growth and composition may have a bearing on what milk consumption is likely to be by 1970. The first is total population; second, composition of the population by age; third, the geographic distribution; and fourth, degree of urbanization.

We might detour for a moment and consider the way in which population developments may have an effect upon milk producers and the dairy industry. Obviously, changes in the total numbers of people have an important bearing on total consumption of milk. Total population determines in some measure whether dairy farmers and milk distributors will have an expanding market or a stationary one. Next, changes in the composition of the population by age and sex also may affect total consumption. Finally, the distribution of population among regions and whether on farms, in cities or in suburbs affects the kind of a market structure that will be required within any given total demand for milk.

Now to return to the trends in population and their effect on demand.

The total population of the United States is now about 176 million. It is growing at a rate of almost 3½ million persons a year. Changes in this rate of growth, and consequently, the expected size of the total population by 1970, depend on birth rates, mortality, and migration to and from the United States. None of these rates can be predicted accurately, although they vary only within narrow limits. The Bureau of the Census recognizes the uncertainty. It suggests that by 1970 the population may be 203 million, 208 million, or 214 million—or it might even be somewhat larger or smaller than these figures. Taking the 208 million figure, it represents an increase of 18 percent.

Eighteen percent more mouths to feed, everything else remaining unchanged, would mean that in a little more than 10 years dairy farmers would need to turn out 147 billion pounds of milk a year, as compared with the 125 billion pounds produced last year. That is, everything else remaining unchanged except that the 7 billion pounds that moved under Government programs last year is figured as moving through commercial channels by 1970.

It may be that the figure of 147 billion pounds of milk is as dependable a figure as we are likely to get for expected demand by 1970. But if one has to give odds, it would be necessary to take in a range, just as the Census Bureau does in making forecasts of population. Furthermore, where the population forecasts show a range of about 6 or 7 percent, I would want a range of 10 percent or more to have the same degree of confidence about the expected demand for milk.

Among the things that are assumed unchanged in the 147-billion-pound calculation are the rates of per capita consumption. It would be astonishing if these rates did remain unchanged for the next 10 years, and quite a contrast with the past 10. In the past 10 years, butter declined 15 percent, on a per capita basis, but cheese rose 22 percent. Consumption of nonfat dry milk doubled, and cottage cheese rose 80 percent. Overall, with some other offsetting changes, per capita consumption declined only 3 percent from 1948 to 1958. This suggests that total demand for milk probably will be governed more by changes in total population numbers than by changes in eating habits.

Suppose we divide the population into groups according to age, and place of residence. Then some interesting changes appear.

In the age categories, the Census forecasts show an increase in the numbers of persons 65 years of age and older—4½ to 5 million more than today. There is more uncertainty about the persons under 18 years of age. By 1970, children may be a lower percentage of total population than today.

These age shifts would have a small effect on total demand. Under 15, nearly everyone drinks milk, and daily consumption by those who do use some milk is higher than in later years. The proportion of persons using milk drops by half after the midteens—earlier for girls and later for boys. Altogether, the small shift in age makeup of the population by 1970 seems likely to tip per capita consumption downward.

Another factor which would tend to change the U.S. average per capita consumption is geographic location. For example, the southern region now has about 31 percent of the population of the country. This proportion will drop to about 29.5 percent by 1970. In 1955, the consumption of dairy products per person in the southern region was about 16 percent lower than the U.S. average. With relatively fewer people in this area, the national average per capita consumption would rise. Taking account of all the interregional shifts expected by 19970, these alone would tend to raise per capita consumption by about 2½ pounds.

The fact that consumption is now very low in the South brings up a question about the assumption that rates within regions will remain unchanged. Households with annual incomes of less than $3,000 in 1955 made up nearly 50 percent of all households in the South, and their consumption of milk was well below average for the region. Families with incomes over $3,000 had approximately 50 percent higher rates of consumption. There is reason to expect substantial improvement of incomes with increasing industrialization of this region, and the effect of this on milk consumption should be very beneficial.

One other factor to be considered in the changing population picture is the shift from rural farm residence to urban and suburban. Farm population is declining. Rates of milk consumption are high on farms—more than 40 percent higher than the U.S. average (about two-third of it being home produced). A rough estimate of projected populations among urban, rural nonfarm and farm categories could be made assuming that farm population may remain about constant. If the increase in population by 1970 is divided proportionately among urban and rural nonfarm places, the result would be a decline in average per capita consumption of about 7 pounds.

One must conclude that of the four features of population growth and composition that I have talked about, change in total population far outweighs all the others as a factor for change in the demand for milk in the next decade. The composition of the population by age and the degree of urbanization portend very slight declines in per capita consumption, possibly 1 percent. Changes in the geographic distribution of population might tend to raise the total but by less than enough to offset the age and urbanization factor.

The 30 million, more or less, additional people to be fed by 1970 will not be found in equal proportions in all parts of the country. In the Northeast, 6 million additional persons will amount to a 14 percent increase. Eight million additional in the north central region represents an increase of 15 percent. The South, on the other hand, will increase only 13 percent. The biggest change will be in the West where 9 million additional persons will raise the population by 32 percent from its present level. These figures tell us something about demand and some of the shifts that will take place in dairy marketing.

The people on the west coast, who are facing the biggest adjustment, have already begun to consider the changes that will need to be made in their region. In California, the needs for fresh milk for the growing population have already curtailed the output of manufactured dairy products sharply. Simmons and Bressler expect population pressure to crowd dairying out of some of the more important dairy areas in California and to force the development of dairying in the northern part of the State, particularly in the Sacramento Valley. Similar developments throughout the western region will mean an increasing reliance on the Midwest for manufactured dairy products.

An analysis by Snodgrass and French of interregional competition in dairying suggested that production in the East and South may decline, relatively at least, thus expanding further the demand for manufactured products, if not for fluid milk, from Minnesota and Wisconsin. These changes would have significant effects on prices if efficiency in milk production should not continue to increase as rapidly as in recent years. If, on the supply side, there should be difficulties in going from 125 billion pounds a year to 147 billion pounds a year over the next 10 years, then the rising population and the associated demand for milk might be expected to bring about a more satisfactory price level relatively early in the decade.

Welcome to the Most Reverend John J. Wright, New Bishop of Pittsburgh

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 17, 1959

Mr. FULTON. Mr. Speaker, we in Pittsburgh, Allegheny County, and western Pennsylvania heartily welcome the Most Reverend John J. Wright, D.D., as the new bishop of Pittsburgh.

Bishop Wright comes to us after a distinguished career in our sister Commonwealth of Massachusetts. The Diocese of Pittsburgh, the second largest in the United States, is honored, and the whole community will benefit by the addition of the high level and dedicated service of Bishop Wright.

Bishop Wright has given a distinguished address at his first public appearance at the Pittsburgh Press Club on March 30, 1959, and was warmly received by the local officials and representatives of our newspapers, radio, television, and various civic organizations.

I submit to the Congress Bishop Wright's address:

THE COMMON GOOD

(Address before the Press Club of Pittsburgh, Pa., by the Most Reverend John J. Wright, D.D., bishop of Pittsburgh)

THE NEED FOR NEW EMPHASIS ON ITS NATURE AND CLAIMS

In a society divided as ours so often is—divided horizontally by lines of class, creed, and color within national communities, divided vertically by lines of race, nationality, and conflicting interests in the world community—the press and the pulpit share a kindred duty of helping form an enlightened public opinion that will ultimately favor the forces which reconcile and unite divided mankind.

On every press and every pulpit, whatever its legitimate, conscientious, and necessary partisan commitments, the needs of the hour impose a sense of responsibility toward the promotion of those values which unite men and groups. An example of the way that good men are pitted against one another at the moment, and of the most likely way out of the resultant tragic divisiveness in the community, will perhaps illustrate the task I suggest that press and pulpit share.

One of the most basic questions in all social philosophy is this: Does society exist for each one of us, or does each one of us exist for society? Which, if either, of two goods provides the criterion of right or wrong, of morality and legality: the good which the individual needs and seeks for himself, or the good which the state requires and seeks for itself?

It is largely by their answers to these questions that many in our generation aline themselves to the left or to the right on the social, economic, and political questions which agitate our times. Moral and legal philosophies at the moment tend to polarize around one or the other of seemingly contrary and sometimes conflicting goods: the good of the individual and the good of the collectivity. Those who are preoccupied with the primacy of individual good tend to take their stand or find themselves accounted with the parties of the right in our era of state socialism. Those who opt for the collective good, and consequently give place of primacy to the rights of the state, turn up in our day in the ranks of the left.

Unfortunately the social philosophies to the left and those to the right have polarized at their extremes, with a consequent antagonism, bitter in its sharpness, between those in both camps who might normally be reasonable moderates. This antagonism is reflected in the spirit of suspicion with which men approach one another who disagree, however slightly, on social legislation. It is reflected also in the intemperate name-calling by which men of conservative instinct or judgment find themselves dismissed as Fascists or reactionaries, while those of more liberal impulse or adventurous vision find themselves decried as revolutionaries or anarchists.

Hence, it comes to pass, to the very great hurt, I repeat, of all concerned, that upright men find themselves unable to meet with one another on questions of either public or personal good, while they appear compelled to associate with evil companions almost fatally acquitted in the pursuit of good: individual good in the case of the political conservative, the collective good in the case of the social liberal. Conscientious citizens find themselves discredited because they sought to liberalize where a broader, more generous mood in social legislation was clearly necessary, or to conserve where a more cautious or critical spirit was the manifest need of the hour. And so, high-minded, so-called liberals are too often associated in popular opinion, if not always in fact, with actual or potential traitors; while great-hearted conservatives are frequently distressed to find themselves tarred with the same stick as bigots, misanthropes, and the hard-of-heart generally.

What to do? How find a formula which can reconcile goods which are apparently in conflict, a formula under which we can rally to the service of America and of civilization the spiritual energies and intellectual resources which are now dissipated by polarized divisions disastrous alike to personal interest and to collective well-being.

What to do? The time-tested philosophy of Christendom, blending the hope of Hebrew prophecy, the wisdom of green speculation, the sanity of Roman law, and the charity of Christian revelation, had a phrase which provides the saving word. That philosophy spoke of a third good, a good wider than that of the individual and more warm than that of the collectivity; a good with richly personal elements, yet truly public in its nature. That third good, conciliating and unifying, is more humane than the mere good of the State; it is more generous than the mere good of the mere individual. It is, to repeat, both personal and public, though not merely individual on the one hand nor merely political on the other. It is what the scholastic philosophers of Christendom and the Founding Fathers of America called the common good. Perhaps it is time to seek a reaffirmation of its nature and its claims.

What is this common good devotion to which would rally in collaborative effort generous conservatives and thoughtful liberals? It may be briefly and summarily identified as the cultural, economic, political, and spiritual heritage which is shared by the group, as opposed to the heritage particular to any individuals within the group. It is difficult to analyze the elements of this heritage, impossible to do so in a half hour. But every now and again someone speaks out above the general din of dissident individual voices and utters ideals common to us all, words expressive of our heritage of common good. When such a one so speaks, his individual characteristics fade out completely; his words sum up a good that all deeply cherish; only the utterance is his alone, that and perhaps the beauty of the particular words by which he gives expression to the common thought.

For example, Abraham Lincoln was a Republican; he lived in a specific period of American history; he presents strongly individualistic traits; he was a partisan of the northern cause in the War Between the States; it is difficult sometimes to appreciate that millions of sincere Americans profoundly disliked some of his ideas, deplored many of his policies, distrusted him personally. But when he spoke at the second inaugural and at Gettysburg he spoke for us all; for all Americans, for our citizens in every epoch, every political party, every part of the country. There is no American who does not sense that the very stuff of our national common good—all its elements, its spiritual fiber, and its political pattern are woven into the things that Lincoln said at Gettysburg.

Woodrow Wilson was a Democrat. He, too, lived in a particular period of our national history and a specific phase of our emergence into the international community. He had marked individual traits, many of which his friends found amiable, others of which his critics found distasteful. Whole areas of his political philosophy were unacceptable to millions of his fellow citizens, and some of his policies provoked the resentment of many. Yet in his public pronouncements he frequently transcended the inevitable limitations of himself, his times, and his political context. There is no one in this land who does not feel the tug of a common chord which runs through the hearts of us all when he reads the magnanimous phrasing of Wilson's declaration of war against the German Government and not the German people; or the exalted address to the Military Academy at West Point in which Wilson summarized so many of the elements of our common good and linked them, as the common good must always be linked, to the benign purposes of God and to the secrets of God's providence. Do you remember his words?

"America came into existence for a particular reason. When you look about upon these beautiful hills and up this stately stream, and then let your imagination run over the whole body of this great country from which you youngsters are drawn, far and wide, you remember that while it had aboriginal inhabitants, while there were people living here, there was no civilization which we displaced. It was as if in the providence of God a continent had been kept unused and waiting for a peaceful people who loved liberty and the rights of men more than they loved anything else, to come and set up an unselfish commonwealth. It is a very extraordinary thing. You are so familiar with American * * * history that it does not seem strange to you, but it is a very strange history, nonetheless. There is none like it in the whole annals of mankind—of men gathering out of every civilized nation in the world on an unused continent and building up a polity exactly to suit themselves, not under the domination of any ruling dynasty or of the ambitions of any royal family; doing what they pleased with their own life on a free space of land which God had made rich with every resource which was necessary for the civilization they meant to build upon it."

So the common good is all the heritage from the past and all the hope for the future which good men share under God. Common to many, it is therefore public; perfective of the individual, it remains somehow personal. It calls the individual out of himself to share things with the general community, but it puts the resources of the general community at the service of the things closest to the personality of the individual. That is what Cicero meant when he defined the common good, the res publica, in terms of a nation's altars and hearths, of the spiritual and domestic values which center about these and which serve personality: in aris et focis est res publica.

It was out of this concept of the common good that our forefathers derived their notion of the great object of the state's existence. Hence, their fine old phrase "the common weal," a phrase perpetuated in the name by which they designated their civil communities, not by the cold, collective name so dear to the totalitarian, "the state," nor with any name of special interest or partisan emphasis as "the duchy" or "the realm," but "the commonwealth" as in "the Commonwealth of Pennsylvania."

It is the concept behind warm words like "mutual" in the preambles of so many State constitutions, and in other phrases so frequent in the texts of our basic laws, as that which provides "that all shall be governed by certain laws for the common good."

It is the good which is preserved and promoted by the nurse who braves individual infection in order to serve the common good; by the scientist who forfeits individual convenience in order to increase that good; by the parent who foregoes individual advantage in order to rear future citizens to enhance that good; by the saint who renounces individual pleasure in order to sanctify the common good; by the soldier who disciplines individual preference in order to defend the common good; by the party or regime or even the National State which abdicates particular claims or prerogatives in order to conciliate those who share a common good.

It is the good which King St. Louis of France loved when he subordinated both the instincts of self and the claims of his state

to a higher common good shared with others. Perhaps you remember the incident; one thinks of it with wistful admiration as he reads the daily news. His counselors unanimously rebuked St. Louis for excessive generosity in giving to the English King land which the French had regained from British conquest. King St. Louis did not concede the English claims and he could easily have vindicated his own by force, but still he freely yielded the land. He said: "My lords, the land that I give him I give not because I am under obligation either to him or to his heirs, but so that there may be mutual love between my children and his. And it seems to me that I am making good use of what I give him, since it makes us join hands in common love who were at odds."

It is the good which another Catholic saint meant when he lamented those frozen words "mine" and "thine"—frigida ista verba meum et tuum—and rejoiced in the warm word "nostra": the things that are ours.

The common good: it is the mutual bond of all who love the good, the true, and the beautiful; who seek good things, not evil; who seek the private good of persons and the collective good of the state, but the good of both in and under and through the supreme good, which is God. It is the good which God gives us all in order to keep us together, as opposed to the good that He gives us each to keep to ourselves. It is the good before, on due occasion, both individual and state are obliged to bow: the common good.

Out of a reaffirmation of the reality and claims of the common good there would come many results greatly to be desired. A quickened appreciation of the common good would turn the tide against the wreckless setting of class against class, the irresponsible incitement of group against group. It would coordinate anew the interests and the efforts of labor plus management, tradesmen plus intellectuals, statesmen plus generals, as against the present so frequent pitting of good men against the other good men in the conflicts of labor versus management, intellectuals versus tradesmen, statesmen versus generals within the same nation and presumably seeking the same common good.

Such an appreciation of the common good which unites, as against—or, rather, as above—all particular or factional or partisan goods which divide would make possible the vital center for which certain political philosophers are pleading; a vital center which can exist only when honorable moderates of right and left prefer working with each other in behalf of the common good to working with extremists of their own respective camps, extremists who seek only the particular good after which their side aspires. Thus, the present polarized condition of society would be eased and social conservatives, anxious to preserve the heritage out of the past, would have a common ground on which to meet and work with social liberals anxious to enlarge the hope of the future. The common good includes, in the phrase of Scripture, "nova et vetera": the old heritage beloved by conservatives and the new hopes cherished by liberals.

A clearer concept of the reality and the claims of the common good will hasten general acceptance of plans for a better international order, an order which will conserve the values of the established nations, but be enriched by other, perhaps more basic and more humane supranational values, as little by little the peoples of the divided nations come to appreciate how much, how very much of our heritage out of the past and our hope for the future are shared within other nations by millions who seek the true common good of mankind.

Finally, a new emphasis on the nature of the common good will reorient the minds of men toward other goods, higher goods which transcend mere private advantage or even temporal common weal. The longer men meditate the nature and the notion of the common good, the more surely will they come to understand that there is no true good so secular, so of the earth and earthly, but what it comes from God and has been hallowed by His Christ so that, by its consecrated use, it can be a means to heaven. There is no common good, no truly human heritage or valid hope of any people which lies outside God's providence and which is not bound up with His purposes. There is no valid good which is not somehow predestined, however natural it be in itself, to find its place in the supernatural order which God has revealed and through which all things created are finally brought back to Him.

Problems of Civil Defense in Event of a Nuclear War

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. JAVITS. Mr. President, there has been much public concern with problems of civil defense in case of a nuclear war. Present-day nuclear bombs have more than a million times the explosive power of the blockbuster, the largest bomb used during World War II, in addition to dangers of fallout. In the light of this public concern I believe that my recent exchange of correspondence with the Office of Civil and Defense Mobilization on the question of our civil defense program would make for greater understanding of how civil defense affects our security.

I ask unanimous consent that the correspondence be printed in the Appendix of the RECORD.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

MARCH 6, 1959.

OFFICE OF CIVIL AND DEFENSE MOBILIZATION,
17th and Pennsylvania Avenue NW.,
Washington, D.C.

GENTLEMEN: Section IX of the Rockefeller Report on the Problems of U.S. Defense dealt with civil defense problems. Among the observations and recommendations made by the report were the following:

"In the age of the ballistic missile the known capability of a society to withstand attack will become an increasingly important deterrent.

"Difficulty does not mean impotence, however, while it may be impossible to protect the population against the blast and heat of an atomic explosion, protection against radioactive fallout and other contamination appears to be much more feasible. Equally important is increased understanding on the part of our people about the effects of modern weapons. This will enable us to respond with discipline and effectiveness to a surprise attack and it will discourage such a move because an aggressor would no longer be able to gamble that a sudden attack might disorganize our society.

"It is impossible to state certain general principles in relation to the development of any civil defense program:

"'1. Civil defense must be considered as part of the overall U.S. strategic posture. It must be faced forthrightly. It should be part of our defense planning and included in our overall strategic plans. Cadres charged with supervising civil defense activitives, both in possible preattack and the postattack phase, must be developed and trained immediately. The expense involved should be in addition to existing military outlays.

"'2. The American people need to be told more clearly the dimensions of the damage that would be inflicted on us by a sudden attack and about the measures to reduce its effects. Any civil defense program must have as a prerequisite a program of public information supported by the Federal Government and carried through at all levels.

"'3. A civil defense program should be integrated with the construction program needed for the normal development of our expanding population and economy.'

"It would be too costly to disperse existing industrial installations but tax incentives could be provided for the location of new facilities away from main concentrations.

"The main feature to note with respect to civil defense is that it is overdue. It does not make sense for the free world to engage in a major military effort without at the same time protecting its most important resources: its civilian population."

I would very much appreciate the comments of your office regarding these obvervations and your plans and proposals to effectuate the several recommendations cited.

While the Gaither report in 1957 has not yet been released publicly, nevertheless certain of its recommendations have been reliably reported in the press, among them the following:

A civil defense shelter program at a cost of around $5 billion annually for 4 to 5 years. These shelters would be designed to save lives against the perils of radioactive fallout and only incidentally to help the Nation's industry recuperate after an enemy attack.

As you will recall the Gaither report was the result of recommendations for a shelter program presented by the Federal Civil Defense Administration to the President in the Spring of 1957.

I would very much appreciate your comments regarding the aforementioned recommendation.

Sincerely,

JACOB K. JAVITS.

EXECUTIVE OFFICE
OF THE PRESIDENT,
Washington, D.C., March 13, 1959.

Hon. JACOB K. JAVITS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JAVITS: Thank you for your inquiry of March 6, 1959, in which you asked for comments on certain recommendations of the Rockefeller report on the problems of U.S. defense.

In general, I may say that this report represents a thoughtful analysis of an extremely important problem. I find myself in substantial agreement with its conclusions. As you will note from the enclosed statement of the national policy on shelters, issued on May 7, 1958, our own staff studies and analyses have led us to substantially the same conclusions.

With respect to the specific principles which you quote in your letter of March 6, please note that—in somewhat different words—the President in his promulgation of the national plan for civil defense and defense mobilization supported the concept of civil defense as part of the overall U.S. strategic posture when he said: "Civil defense and defense mobilization are vital parts of the Nation's total defense."

The responsibility for supervising civil defense activities, under the national plan, is clearly assigned to (and in fact inherent in the responsibilities of) the chief execu-

tives of all levels of government, assisted by their civil defense staffs. An important implementing measure to strengthen these State and local staffs will, I hope, be provided in the appropriation for fiscal year 1960 to permit carrying out the administrative support provisions of Public Law 85–606.

This fact, of course, underscores the importance of assuring continuity of Government at all levels in order to provide leadership, direction, and service in the event of attack. We have been working in close cooperation with the Council of State Governments, the American Municipal Association, the U.S. Conference of Mayors, and the National Association of County Officials and have received gratifying support of our recommended program for continuity of Government.

The second principle referred to in the Rockefeller report is concerned with the important requirement of a public information program. The importance of public information in a civil defense program can hardly be exaggerated. As you will note, the first element of the action program in the enclosure on shelter policy concerns itself with this important area of activity.

In 1956, the Federal Civil Defense Administration had the benefit of the advice of a panel composed largely—but not entirely—of social scientists, who had the following comment:

"We share a firm conviction that the American people do not have nearly enough knowledge of the consequences of a successful nuclear attack. We recognize that there have been widely held and voiced opinions that necessary information has been withheld from them on grounds of security. We have satisfied ourselves that sufficient information has been made available to them—but it has not been successfully conveyed to them and incorporated in their feelings and actions. Thus the information has not become knowledge, and this, in our opinion, is the crux of the problem.

* * * * *

"In our opinion, the keystone of the program is knowledge, not merely information made available, but information—both frightening and hopeful—so successfully conveyed as to become useful knowledge, translated into plans, procedures, and the capability for constructive action. It has been wisely said, we think, that courage is based on knowledge of the grounds of fear and hope."

In my view, the undertaking is as difficult as it is vital. It will require a many-pronged attack. We are currently devoting a substantial share of our resources to reaching a growing segment of the American people. In addition to the usual mass-media efforts (radio, TV, magazines, newspapers, etc.), we have recently distributed approximately 36 million wallet cards, which contain simple instructions for preparedness and for proper reaction to warning signals, and over 3 million pamphlets entitled "What You Should Know About the National Plan for Civil and Defense Mobilization." A few months ago the Boy Scouts of America distributed to virtually each household in America (a total of 42 million copies) our "Handbook for Emergencies."

We have also distributed over 6,000 radiological defense training kits to high schools throughout the country and plan an additional distribution of 9,000 kits by the end of the present fiscal year. These will serve the double purpose of familiarizing high school students with the radiation phenomenon and placing, on a fairly well distributed basis throughout the country, instruments that could be used in the event of emergency by science teachers who are familiar with them.

As a part of its emergency assignment, the U.S. Office of Education is initiating a nationwide adult education program on the hazards of nuclear attack and on effective defensive measures and preparations. This will be a substantial undertaking and will require increased financial support over the next 2 years.

As you will note in the enclosed "National Policy on Shelters," the third principle cited in the Rockefeller report—that the program should be integrated with normal construction development—is included in our program. The Federal Government will itself set the example in its new construction by incorporating fallout shelters in appropriate civilian Federal buildings.

With respect to the cited recommendation from the Gaither report, as reported in the press, the enclosed policy statement makes it clear that we do not contemplate a massive federally financed shelter construction program. There is so much fallout protection in the United States to be had for only minor modification cost in private homes, apartments, commercial and industrial buildings, and in other places that I believe is not unreasonable to call upon our citizens to undertake these modest expenditures.

I appreciate very much this evidence of your interest in our program and stand ready at any time to furnish additional information should you require it.

Sincerely,

LEO A. HOEGH.

The Story of Cooperation in Boulevard Village, Kansas City, Mo.

EXTENSION OF REMARKS

OF

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 18, 1959

Mr. BOLLING. Mr. Speaker, I should like to report a success story on a housing project in Kansas City, Mo. This project had failed under rental operation. A housing cooperative purchased the project and has achieved remarkable results with mutual home ownership by the residents.

I. SUMMARY OF COOPERATIVE ACHIEVEMENTS

There are striking contrasts in every aspect of this project "before" and "after" cooperative ownership. These may be summarized as follows:

First. The success of cooperative ownership and the prompt payment of mortgage and other obligations, in contrast with the previous failure as a rental project where repeated defaults led to foreclosure.

Second. The achievement of full occupancy under cooperative ownership, in contrast with substantial vacancies under rental operation.

Third. The improvement and excellent maintenance of the housing under cooperative ownership, in contrast with its previous state of disrepair.

Fourth. The reduction in monthly housing costs by more than 20 percent under cooperative ownership in contrast to charges under rental operation.

Fifth. The new spirit of neighborliness and the stimulation of community and recreational activities under cooperative ownership, in contrast with previous attitudes where renters were strangers to each other.

II. DESCRIPTION OF PROJECT UNDER RENTAL OPERATION

The project was originally financed with an FHA-insured mortgage under section 608. It was completed in 1950 and contained 192 apartments in 48 buildings of 2-story height. After its initial period of operation, it became involved in serious financial difficulties. Vacancies increased to a point where only about 60 percent of the apartments were occupied. With reduced income, the properties fell into a state of disrepair. The owners failed to meet their mortgage payments and FHA was compelled to acquire the property by foreclosure late in 1956.

After FHA acquired the property, it made a survey of its physical condition. FHA determined that extensive repairs and improvements were necessary which would cost more than $75,000. These included repairing steps, walks, roofs and downspouts; refinishing all buildings and halls, replacing hot water heaters and improvements in grading and landscaping.

Normally, when FHA acquires a project through foreclosure, it makes these repairs and then advertises the property for sale through public bids. The purchaser then tries again to make the project into a successful rental operation. Ordinarily, the purchaser makes a downpayment of about 5 percent and FHA accepts a 95 percent purchase money mortgage, payable over a period of 40 years. In such cases there is, of course, the hazard that a project, having once failed as a rental project, may again face a failure during the 40-year mortgage period. If this should occur and the project ceases to be a profitable operation, the purchaser would not be likely to invest additional money to keep the project and meet mortgage obligations, particularly since he makes only a limited equity investment in the purchase.

Instead of following this normal course, FHA responded to requests to convert the Kansas City project to cooperative ownership. Let us now examine the results achieved under cooperative ownership.

III. RESULTS ACHIEVED UNDER COOPERATIVE OWNERSHIP

In March of 1957 a program was launched to achieve cooperative ownership. The cooperative program was aided by the FCH Company, Inc., a subsidiary of the Foundation for Cooperative Housing—a nonprofit organization with headquarters in New York and Washington. As part of the cooperative purchase program, the coperative and its advisers undertook the responsibility for directing the management and improvement of the project prior to the passage of title. It carried out a program for necessary repairs and improvements. In addition to the improvements originally contemplated by FHA, some basements of the walkout type were fixed up for use as community meeting, recreational and

hobby rooms by the members. Play areas were provided for the children. The residents began to serve on committees and participate in programs to improve the livability of the community. In these ways the project has now been physically transformed into an attractive community typified by the bright new colors in exterior painting.

Occupancy increased steadily as the program continued, so that when the cooperative took title in February of 1958, after 51 percent of the apartments had been purchased by residents, occupancy had reached 95 percent. Since that time full occupancy had been achieved. Today 80 percent of the residents are cooperative owners. By the end of this year it is expected that almost all residents will be members of the cooperative, sharing in the ownership of their homes.

As to rents prior to cooperative ownership, tenants paid $80 a month for a typical 2-bedroom apartment. The monthly carrying charges under cooperative ownership are now only $62 for such a 2-bedroom apartment. On a typical 3-bedroom apartment, monthly charges were reduced from $94.50 to $72 under cooperative ownership. These lower carrying charges were made possible because of the following favorable factors:

First. The cooperative purchased the property under a 40-year mortgage of $1,100,000 with level payments of $4,770 per month for principal and interest. This reduced monthly carrying charges for each member. Under cooperative ownership it is recognized that the homeowners take better care of property, so that such long-term mortgages are appropriate and justified.

Second. The operation of the project on a nonprofit basis eliminated profits and other charges that the former landlord had to include in the rents.

Third. Cooperative owners do some of their own work, such as interior decorating to suit their own tastes.

Fourth. Vacancy and collection losses are largely eliminated.

Even though the monthly payments by the members were lower, they included substantial reserves. Thus, an operating reserve of 3 percent of all income is set aside as a protection against contingencies. In addition, a reserve for replacement is provided so that moneys will be on hand to make necessary replacements of roofs, hot water heaters, and other things in the buildings by the time their useful life expires.

Under the cooperative ownership all mortgage and other financial obligations have been fully met each month, with payments having been made on time for principal and interest on the mortgage, taxes, insurance, replacements, and other reserves.

Besides this record of financial responsibility, the physical properties now constitute a sound mortgage security. This is not only due to the fact that they have been repaired and improved, but also because the apartments are now fully occupied.

IV. COOPERATIVE FINANCING TO HELP MEMBERS WITH THEIR DOWNPAYMENTS

Many of the tenants and other persons who wanted to become cooperative purchasers did not have enough money to make the required cash investment of $560 for a 1-bedroom apartment, 690 for a 2-bedroom apartment, and $840 for a 3-bedroom apartment. With the approval of FHA, a plan was developed under which purchasers obtained financing from the cooperative for the payment of the balance of their downpayment in monthly installments over a period of 3 years. The notes executed by the purchasers were deposited by the cooperative as security for its supplemental note of $55,000 delivered to FHA. This supplemental note represented the balance of the payment on the purchase price and closing adjustments.

The supplemental note to FHA was to be paid off by the cooperative within 3 years. During the first year a total of $27,551 has been paid to FHA on this note, so that the balance has now been reduced to $27,449. At this rate the FHA supplemental note will be fully retired in 2 years instead of the prescribed period of 3 years.

Payments on this supplemental note are derived from collections on the notes of the cooperative members. They have been completing their downpayments by meeting the monthly installments on their notes when due. This was facilitated because the amount of the monthly payments on their individual notes equals the savings which the members enjoy under cooperative ownership. Thus, on a 2-bedroom apartment, where the member formerly paid a rent of $80, he now pays $18 less each month. This sum of $18 is the monthly payment on the note of the member. In about 3 years, when the member has completed building up his cash investment of $690 on his 2-bedroom apartment, monthly payments will be only $62.

V. NEW COMMUNITY SPIRIT AND ACTIVITIES OF MEMBERS

The cooperative community now has a new spirit of neighborliness. Members are active in many clubs and recreational functions for children of all ages and adults. To express this change in attitude, the name of the development was changed to Boulevard Village. Instead of referring to their residence as the Van Brunt project, cooperative owners now say they live in the village. It is no longer a project. It is a community of friendly neighbors.

Before the cooperative took title to the project, it held a meeting of its members to elect a board of directors from among the membership living in the village. This elected board of directors has full control at all times of the program and activities of the cooperative. Membership meetings are held frequently. In addition, members of the cooperative serve on various committees, such as house and grounds, membership, publications, and social. A monthly newspaper, the Boulevard Villager, is published by and for the residents of the village. Reading through this community newspaper, one is impressed by the growing spirit of neighborliness and group endeavor that characterizes this entire program.

VI. RECOGNITION BY FHA AND RESIDENTS OF CONTRIBUTION MADE BY COOPERATIVE TO BETTER COMMUNITY LIVING

The cooperative members have a sense of pride in their community and its accomplishments and are fully aware of their responsibilities. This attitude on the part of the members was eloquently set forth in a letter to Mr. Norman P. Mason—then Commissioner of FHA and now Administrator of HHFA—signed by the board of directors of the cooperative at the time they took title to the property. I quote that letter in full, as it represents a direct expression from the people who participated in the transformation of this community from a rental project to a community of cooperative homeowners:

BOULEVARD VILLAGE, INC.,
Kansas City, Mo., February 20, 1958.

The Honorable NORMAN P. MASON,
Commissioner, Federal Housing Administration, Washington, D. C.

DEAR MR. MASON: As members of the board of directors elected by the membership of Boulevard Village, Inc., we are writing to express our sincere appreciation and gratitude for your notable accomplishment in achieving cooperative ownership for our housing development in Kansas City with all of the benefits for the people which this entails.

By common admission, this project was deficient in construction, in a state of disrepair, and generally unattractive. As a result, occupancy had fallen to a point below 60 percent. The Government had been compelled to foreclose on the property which faced an uncertain and hazardous future.

Through conversion to cooperative ownership and the use of income to make much-needed improvements, Boulevard Village has been transformed into an attractive community. Major construction deficiencies have been corrected and repairs made. Exteriors of the buildings have been repainted in attractive colors, along with the repainting of halls and interiors.

Even more significant than the physical transformation of the properties, there has been a change in the character of the community and its occupancy. The rate of occupancy has been steadily increasing until we are now above the 90-percent level and shortly expect to achieve full occupancy. A majority of the dwellings are occupied by members of the cooperative corporation which owns the property and we look forward soon to occupancy solely by cooperative owners. Above all, we and other members of this community are proud to live here and count ourselves as owners responsible for the future improvement and development of our community.

There is a new spirit of neighborliness which accompanied our cooperative efforts. Many of the residents have served on committees to promote the welfare and improvement of our community. We have held social functions for people who had been strangers. Our members have developed a sense of belonging to a community which is their own. We are making plans for other cooperative activities, including a nursery school, teenage and adult recreational rooms, playgrounds, and buying clubs.

We are making this report to you about our activities and progress because you have

made this program possible. On behalf of all of the members of our cooperative, may we express our everlasting gratitude for your leadership, initiative, and foresight in enabling us to achieve cooperative ownership of this housing community.

Respectfully yours,

ROBERT LE HEW,
President.
REUBEN D. SINEX,
Vice President.
B. R. DEYDEN,
Secretary.
NEIL THORNBURG,
Treasurer.
FRIEDA PROVINCE,
Assistant Secretary.
JOSEPHINE KLEIN,
Assistant Secretary.
GLENN L. ANDERSON,
Assistant Treasurer.

Equally significant is the reply sent by Mr. Mason to the president of the cooperative. I quote that reply in full as showing a recognition and appreciation by FHA of the contribution which cooperatives can make to better housing:

MARCH 6, 1958.

Mr. ROBERT LE HEW,
President, Boulevard Village, Inc.,
Kansas City, Mo.

DEAR MR. LE HEW: I want to thank you for the fine expression of appreciation contained in the letter signed by you and the other six members of the board of directors of Boulevard Village.

We all had our moments of concern during the pioneering days of your project. However, we had no doubts that the cooperative technique would serve a good purpose here, since it has so well proven its worth in cooperative housing elsewhere. The question is always present, Will people make the proper use of it, and will there be good leadership which will develop good communities?

Judging from all reports I have received, your group has risen to the occasion and is giving a good account of itself. We thank you again for your letter and assure you it is a real pleasure to have been of service to you. One of the jobs of the FHA is to help people help themselves. In this, both your group and FHA can take pride in Boulevard Village.

May you long enjoy your community of cooperative homes.

Sincerely yours,

NORMAN P. MASON,
Commissioner.

VII. CONCLUSION

It is gratifying to observe an agency of government which was prepared to take leadership in encouraging cooperative ownership of a distressed property. FHA's action made sense as a matter of good business, since a property which was in grave financial difficulties was converted into a sound investment. The mortgage of the cooperative is adequately secured by improved properties which are occupied by cooperative homeowners. The record of prompt fulfillment of mortgage and other obligations demonstrates the business wisdom of the transaction. Moreover, the properties were sold by FHA for the full market value as appraised by FHA, so no subsidies were involved.

FHA's action also made good sense as a matter of public policy, since cooperative ownership provided better homes for less money. It also produced a community with a wholesome environment for families with children, who participate as friendly neighbors in many educational and recreational activities in their village.

The National Archivist

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, the National Archivist is the custodian of the past. He preserves the records that spell out the history of our country.

Evan Hill has written about the great work done by the National Archivist and the department of government he heads in an article that appeared in the Saturday Review.

A condensation of this article was publish in the Reader's Digest of March 1959, which I extend as part of these remarks and commend to your reading:

STRONGBOX FOR THE NATION'S HISTORY—THE RECORDS OF THE PAST SERVE THE NEEDS OF THE PRESENT AND FUTURE

(By Evan Hill)

(Condensed from Saturday Review)

Here, behind 6½-ton bronze doors, protected by concrete and steel from heat and cold, dampness and sunlight, the collected experience of a Nation is preserved for the ages.

Here you can see the three great charters of the United States: the Declaration of Independence, the Constitution and the Bill of Rights. Here are the original 507 bound volumes, firmly quill-penned from 1774 to 1789, that record the birth struggles of a Nation; the Treaty of Paris, which formally ended the American Revolution; Admiral Perry's reports on the opening of Japan; Lincoln's Emancipation Proclamation.

Here are Gen. George Custer's last report before the Little Big Horn massacre; the receipt for the Alaska Purchase; the Japanese and German surrender documents which ended the fighting in World War II.

This is our inspiring National Archives Building, whose huge limestone columns reach high above Constitution Avenue in Washington, D.C. Here Dr. Wayne C. Grover, Archivist of the United States, and a staff of 250 guard a priceless heritage—the permanently valuable documents of almost every U.S. agency that ever existed. In the building's 196 air-conditioned, humidity-controlled stack areas, filed in hundreds of thousands of specially designed boxes and thousands of rows of steel shelving, are the letters of Presidents and Kings, the hopes of Senators, the worries of our consuls abroad.

But the great building is far from being a dead-storage loft. This strongbox for the Nation's history is constantly used. Each year the National Archives answers more than 400,000 questions.

When the U.S. Coast Guard wanted to study air and ice conditions that threaten navigation in the Bering Sea, it went to the Archives to read through half a century in the logs of U.S. vessels that have plied the Arctic. General Eisenhower's weather experts pored over thousands of Weather Bureau records in the National Archives to suggest dates for the Normandy invasion. In 1944 when Pentagon planners were preparing for General MacArthur's return to the Philippines, they were able to study the islands from 150 Spanish-made maps taken from Spain in 1898. Some were so finely detailed, even tracing jungle trails, that for certain areas they were superior to any other maps available.

Almost half of the Archives' aid goes to ordinary citizens. Daily it supplies records—passenger lists, census takers' information sheets, masses of corresponednce—to at least 100 individuals who just walk in seeking information. In a single year it may receive as many as 10,000 requests for proof of age or citizenship. Recently an 80-year-old Swedish-born South Dakota farmer decided to renew his application for social security benefits. For months he had been trying to prove that he was a U.S. citizen, but in the records of the Immigration Service and his district court he simply did not exist. Finally he wrote the Department of the Interior, which sent his letter to the National Archives. There a young archivist found documents attached to the old man's turn-of-the-century homestead application that proved he had been naturalized for more than 60 years. His social security check now arrives regularly.

In California a 29-year-old Japanese-American wanted to go to college, but could not produce a high-school diploma. Interned during World War II in a west coast relocation center, he had completed his secondary education in a school that no longer existed. The National Archives searched the files of the defunct War Relocation Authority, mailed him a transcript of his record.

Thanks to the work of Herman R. Friis, Chief Archivist in charge of cartographic records, a San Diego sea captain was able to prove to a court's satisfaction that he was not guilty of navigating from outdated charts when his ship rammed an offshore freighter. The skipper was returned to his command.

It was not always so easy to find Federal documents that suddenly became vital. For more than a century and a half the majority of the Government's noncurrent records were scattered helter-skelter, often stored inaccessibly in musty, damp cellars or dusty garrets. Thieves mutilated valuable papers to get at rare stamps or the autographs of the Nation's heroes. One Government official blithely sold 400 tons of Federal records to a junk dealer because he needed office space. Finally, after a succession of Presidents had warned about the slovenly care, President Herbert Hoover laid the cornerstone for the $9 million National Archives building.

Even before the building was completed, records by the ton began arriving from the War Department, the General Land Office, the Census Bureau, the Veterans' Administration from hundreds of almost forgotten dead-storage rooms. And experts faced up to the prodigious task of sorting, discarding, fumigating, and cataloging the Nation's history—a process that still goes on.

The winnowing of the valuable wheat from the chaff of bureaucracy is done by specialists in the inner workings of specific Government agencies, who discard routine housekeeping records, cull out papers duplicated elsewhere. They place some documents on "disposal schedules"—to be destroyed after time has made them of no further interest. Always the goal is to preserve material that shows how Federal policy was formed, that may be of value to scholars and historians.

The United States accumulates about 4 million cubic feet of Federal records each year. Of this, only 20 percent is of any permanent value; the rest is eventually destroyed. But even with such severe winnowing there is always the problem of space. Although microfilm could be an answer, the Archives has on file only about 75,000 rolls of such film—less than 1 percent of the building's volume. Storage space is less expensive than microfilming, so only selected documents are filmed: fragile papers that would crumble with handling, documents in frequent demand by libraries and universities, records such as original census schedules that are in constant use and take up immense space. Microfilm of some of the Nation's most valuable records has been shipped to secret storage areas as insurance against

a disaster that might destroy the originals in Washington.

Most of the half-million Americans who visit the Archives building each year are sightseers, come to view the great charters of U.S. freedom in the domed Exhibition Hall, and to wander through the sweeping corridor gallery lined with parchment and paper treasures. But, while they look, other Americans in search rooms and stack areas throughout the huge building are seeking the answers to questions that cannot be answered any other place in the world.

Among the most frequent users of the Archives are professional searchers hired by industry and individuals on personal quests. Petroleum companies are constantly exploring the records to validate land titles before they lease and drill. A Wisconsin construction company studied regional snowfall depths for the last 50 years so it would know just how strong to construct house roofs. A worried citizen called before a loyalty board was cleared when he proved through World War I Government employment records that the board had confused him with another man of the same name.

When the State of Ohio was planning the Ohio Turnpike, highway engineers knew that the proposed route cut across a region pocked with abandoned mine shafts. No one knew exactly where they were, however, for they had been sealed years earlier by WPA workers. If the shafts could not be pinpointed, the area would have to be detoured—there could be no risk of collapse. The Archives produced microfilmed records of the WPA project.

Scholars and authors flock to the Archives to authenticate historical settings, or to refresh memories. Carl Sandburg probed through Civil War photos in the famous Matthew Brady collection for his volume, "Storm Over the Land." Margaret Landon spent more than a month in the Archives, reading 1862–67 Siamese consular records to get background for "Anna and the King of Siam."

A writer wanted to pinpoint the 1849 burial date of Edgar Allan Poe. Literary historians agreed that the day had been gloomy, but split on whether it was October 8 or 9. The National Archives reported Baltimore weather was sunny on October 9, overcast the previous day. The controversy was settled.

Many movie producers use the Archives to guarantee the historical accuracy of their films. In the vaults are miles of film ranging from World War II movies captured from Germany and Japan to shots of Orville Wright flying Army trials at Fort Myer in 1908.

Dr. Grover and his assistants operate their trust as the memory of a nation, a library for scholars, and an inspiration for intelligent citizenship. They give meaning to the inscription at the building's Pennsylvania Avenue entrance: "What Is Past Is Prologue."

Equal Pay for Comparable Work

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, April 7, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Mrs. Ruby Poole, national chairman of legislation, National Federation of Business and Professional Women's Clubs, on S. 3145, which I joined in cosponsoring. The support of this national organization is a matter of particular interest and deserves consideration.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY MRS. RUBY POOLE, NATIONAL CHAIRMAN OF LEGISLATION, ON FEDERAL EQUAL PAY BILLS

The National Federation of Business and Professional Women's Clubs, organized in 3,355 clubs in the 49 States, Hawaii, the District of Columbia, and Puerto Rico, with a membership of almost 175,000 business and professional women, supports in its national legislation platform, equal pay for comparable work.

The national legislative steering committee has studied the bills introduced in the House and has voted in favor of H.R. 3866 introduced by Mr. KEARNS of Pennsylvania, and all other bills identical to it, including S. 3145 introduced in the Senate by Senators COOPER, CASE, JAVITS, and PROUTY.

Our members hope that hearings will be held on bills to prohibit discrimination on account of sex by employers having employees engaged in commerce or in the production of goods for commerce and to provide procedures for assisting employees in collecting lost wages. We believe that all of the equal pay bills that have been introduced in the House, and those other than S. 3145 that will be introduced in the Senate, require the favorable attention of the House or Senate subcommittee, charged with the responsibility for such hearings.

Alumnus of Harvard Business School Finds Senatorial Campaign a Rich Adventure

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Tuesday, April 7, 1959

Mr. BUSH. Mr. President, in the Harvard Business School Bulletin for February 1959, one of the alumni of the school wrote a story concerning the campaign of Senator HUGH SCOTT, of Pennsylvania. I found it to be not only an entertaining story, but a highly instructive one. I believe it will be of interest to all who read the RECORD and all who are interested in what is involved in a senatorial campaign. I ask unanimous consent that the article, which is entitled "I Go Into Politics," and which was written by Thomas H. Nimick, Jr., be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

I GO INTO POLITICS

(By Thomas H. Nimick, Jr., 1950, assistant to senior vice president, the Shenango Furnace Co.)

Propelled by one of the speakers at the 50th anniversary conference, I went into politics last fall. For 6 weeks I traveled all over the Commonwealth of Pennsylvania, careened at top speed from strategy conferences to plant gates, from beauty contests to taverns as an advance man in HUGH SCOTT's successful campaign for the U.S. Senate. Out of it I gained a sense of real satisfaction, a firsthand education in an unfamiliar field, and an exciting, refreshing—if tiring—experience.

I almost felt that Dean David was looking right at me last September when he said: "The prime necessity for the businessman today is * * * creativity in his dangerously neglected social and political functions." A business friend of mine—David Gile—had come to the conference with me and we both stirred uneasily in our seats when we heard this admonition. Only recently we had been asked to join the Scott campaign and were then actively considering what we should do.

The whole business was unsettling, to say the least. Political campaigning was a total enigma to me. In fact, the whole arena of politics was so foreign that I did not even know how to judge the performers. Not by inheritance, environment nor experience was I qualified to make any political judgments. My only attribute seemed to be that I was willing to be educated.

Furthermore, I had to worry over several factors in making my decision:

1. The philosophy and stature of the man and his cause;

2. The need for my services and my ability to perform;

3. The change in my present, and possibly future, way of life—family, business, and civic, as well as political.

How did a neophyte like me come to be asked in the first place? Frankly, I am not entirely clear on this point. I first met HUGH SCOTT through a passive relationship that he had established with a group of younger businessmen during the preprimary in January. (A preprimary is not an election by the public at large, but a nomination by the party chairmen and other leaders.) SCOTT had been touring the State to become better acquainted with the various groups of people and their problems and to sound out his political strength before actually declaring himself available for the nomination.

When he visited Pittsburgh, we arranged a luncheon for him and put together a group which was to become the Western Pennsylvania Businessmen for HUGH SCOTT. This committee was mainly a "stand up and be counted" movement to stimulate publicity and grassroots support; subsequently, all the members became associated with the Citizens for Scott-McGonigle. Through these meetings Dave Gile and I developed a speaking acquaintance with the candidate, but the setup was hardly an introduction to practical politics.

After SCOTT won his spot on the party ticket and endorsement in the primary election in May, a series of planning sessions were held. Each one was more gloomy than the last; everyone agreed that unless major shifts took place, SCOTT would be defeated in the general elections come November. Every national survey by magazines and newspapers, except one, definitely was predicting that he would lose.

Late in August, some members of the citizens committee suggested that Mr. SCOTT could make good use of "advance men" with his staff, and Dave Gile and I were approached for the job. The duties of the advance man, at this time, seemed to be relatively simple: we were to check out plans which had already been concretely established by the State committe staff in great detail by going out into the field and clearing them with the various local officials. But why Dave and me? True, we knew Mr. SCOTT through the preprimary acquaintance, and both admired him and his cause, but what did we personally know of practical politics? Were there not better qualified men?

A FLAVOR OF FRESHNESS

Undoubtedly there were. However, it might be that businessmen could adopt their

methods to campaigning—and, anyway, there was nothing to lose since HUGH SCOTT did not have a competent advance man previously assigned to his staff. The citizens committee believed that it was worth a try to have business techniques applied to a political campaign. Furthermore, enthusiastic and optimistic amateurs can be a real asset because they lend a flavor of freshness to a campaign which has great popular appeal. The 1952 Eisenhower crusade is a prime example.

At any rate, the Scott group approached the Pittsburgh Citizens for Scott-McGonigle, after securing the approval of the Allegheny County Republican Committee, with a view to improving the planning of the campaign. Up to that time, the citizens had been primarily concerned with the important but uncreative mechanics of registration drives, fund-raising and poll-watching on election day. Dave met with the group of citizens and made his decision to join up. The committee concluded that I should make the same decision, but, unfortunately, at that particular time I was on the Shenango collective-bargaining team at the Dover, Ohio, plant—a most demanding assignment which temporarily excluded all other considerations.

The Saturday I returned, Dave phoned and in our conversation reminded me of Dean David's warning remarks at the business school conference about businessmen and their neglect of their political function. He pointed out that a chance was now available to resolve this problem by joining him in this assignment.

My initial reaction was: "This is it." However, upon serious reflection, I asked myself: "What is this job that I am getting into; what are the objectives, the mechanics, the people? What will it do to my business, home, and community life? And how much do I know about HUGH SCOTT?"

When judging a man and his group one has to review an entire framework of value, beginning with belief in God and country. Once you decide that these overall beliefs transcend any political party, and are coincident with the principles of the candidate, you can then analyze the character and political shadings of the man himself.

SCOTT was the Republican choice, but as we have often found, Republicans and/or Democrats can wear many and varicolored coats. When I looked up SCOTT's biography, however, I found that he is quite a fellow. Professionally he holds a senior partnership in a well regarded Philadelphia law firm, and is a former chairman of the criminal law committee of the Pennsylvania Bar Association. As an author in the legal profession, he has written "Scott on Bailments," a widely quoted treatise. A good family man, he is a lay reader in his church, and, in general, a solid citizen.

Politically, he is well liked by all varieties of religious, ethnic, business, and professional groups because of his hard work and fair approach in handling their problems. He is a moderate Republican when the human element is involved, but puts "Mr. Scrooge" to shame when doling out the taxpayers' dollars. He had been national chairman and is general counsel for the Republican Party. An early supporter of Eisenhower for President, he was chairman of the headquarters staff for his election in the 1952 and 1956 campaigns, but still reserves the right to disagree with him, and does so on many occasions; e.g., the distressed area redevelopment loans which would ultimately increase Federal revenues.

As a Member of Congress for 16 years, he became most influential in foreign policy affairs and judiciary matters. He was on the Rules Committee, represented the United States at UNESCO, and is one of the very few Congressmen who had voluntarily served in both World War II (all theaters) and the Korean conflict.

SCOTT has a strong dedication to principles, but does not stubbornly and dogmatically sacrifice long-term strategy by refusing to compromise on short-term tactics. His one theme song has been that his vote is not owned by any group or any one. He is known as a man of real intellect, an enthusiast about promoting and strengthening the free-enterprise system.

But how about my usefulness in a major campaign like this one? It was a moot question as to whether Dave and I would be acceptable to the State chairman and his staff. There were five candidates from each party being elected by a statewide vote, all campaigning across the Commonwealth of Pennsylvania, and they were programed from their State headquarters in Harrisburg. As advance men we would be members of the staff of one candidate in the Republican camp. Although volunteers, we would be on the same level as any of the paid members. But with no background, or experience—amateurs entering a contest during the "big push"—would we be welcome to a professional crew that had been working for many years, day in and day out? The compelling fact was, however, that no competent person was on top to fill this crucial role of advance man to SCOTT.

Finally, there were the personal considerations. How could I possibly carry water on both shoulders for a period of 6 weeks? I would have to execute the duties and responsibilities of my business position, as well as performing adequately my new political assignment. This was a tough question to answer, especially as I was not certain exactly what campaigning would involve.

JUMPING—BUT NOT THE TRACKS

Yet, these were not the only areas to be considered: I had to look at my family and civic activities, too. My wife would have to resign herself to the fact that we would not have any spare time for social events apart from those connected with furthering the political fortunes of HUGH SCOTT. Also, in all likelihood, I would be traveling every weekend since the most advantageous arrangement would be to leave the office Friday and return Tuesday. Dave Gile and I could thus leap-frog each other, and carry out the whole political assignment between us in a way that would permit us to do our regular jobs as well. So Florence would have to be understanding about this sudden change in our lives.

Finally, the annual United Fund drive and the budget meetings of the Community Chest were just getting underway. A group of volunteers working for a charitable or professional organization is going to be effective only if each member bears his portion of the routine tasks, plus going those extra steps to supply the creative ideas and enthusiasm for the various projects. I would be unable to do either one for the period of the campaign. Ultimately, I decided that service in politics was simply more important for that particular period of time, so I announced my inclination to my friends on these various committees and boards. When I first made the proposal, they were all sure that I had jumped the tracks.

Then there was the matter of paying the bills. Neither the State committee nor SCOTT himself could promise any remuneration or even reimbursements for expenses. If I could not personally locate someone who was willing to help out with some cash, this could be rather serious. So I called on a few of my older friends, and several of them were more than anxious to help. Here was somebody taking on a job which their own consciences had always urged them to do. They agreed that this was a case of "young men for action—old men for counsel."

NO PARLOR LOUDMOUTH HE

Finally, there were a few very subjective considerations. I had been a great one for making statements that we all should give more of ourselves to political thinking and action. Now I was up against it. What was I to be—a hypocritical parlor loudmouth who concurred with the "old chestnut" that "America's chief weakness is that our most intelligent men are trying to operate in spite of the Government instead of helping to manage it" but did nothing about it or a genuine political entrepreneur? Basically, I was convinced that all the doubts I had about accepting the challenge were devices for avoiding change in a very comfortable pattern of life. Also, I was caught by the thrill of entering a new area to try out one's past experiences and abilities in an almost limitless field—the total voting population of Pennsylvania—against the limiting adversary—time. The whole project looked exciting, interesting, and important.

So I said "Yes," and Dave and I were off into the arena to campaign. The arena was the Commonwealth of Pennsylvania: 350 miles long, 150 miles wide, 12 million population—of whom 6 million could vote but only 4.2 million probably would bother to get to the polls in an off-year election. The political campaigning entities are the 67 counties each with a Republican county chairman. If the county is Republican, the total facilities of the courthouse and local dignitaries would be available.

Each of these counties varies in many aspects—religion, industry, agriculture, central cities, highway, rail or water transportation, civil rights, disaster economies, area redevelopment, and so on. Sixteen years as a Congressman, plus his previous traveling had equipped SCOTT with a working knowledge of most of these problems, but he was runing for the Senate and also had to have a thorough knowledge of foreign affairs and national issues.

But understanding of these problems is not enough to get oneself elected. To communicate with the interested voters, the most important political asset is a convincing, appealing, intelligent personality. How is this to be achieved, and by whom? What is the structure of a campaign?

As I mentioned previously, each statewide candidate came under the nominal guidance of the State committee program director. However, the basic and detailed scheduling is coordinated through the efforts of the various county chairmen and the candidate's personal staff. Aside from SCOTT himself, the campaign manager and treasurer was the leader of the team. In the nerve center, manned night and day, we had two executive secretaries who were supplemented by anyone happening to be in the headquarters at the time. Then there were various specialists—like the press release men, public relations specialist, legislative assistant, campaign scheduler, photographer, and advance men—that made up the 25 members of our circle.

BEATING GUMS AND DRUMS

Our job was to expose our product as effectively and efficiently as his excellent mind and health would allow, and our basic pieces of equipment were the telephone and the coffee pot. A format was developed which squeezed the utmost from every minute of every day and put across his name, face and viewpoint to as many of the opposing camp's voters as would open their eyes. Given a limited amount of time and dollars, our neophytic political sense developed an efficiency code that every penny and every minute should pay off in converted voters or guiding compatible ones to the polls.

SCOTT as a Congressman had not had the chance to become as well known statewide as his opponent who was the Governor; therefore, first, the name was emphasized. The second phase was to establish him as the Governor's opposition and, lastly, in time only, to drum the philosophy and platform. This strategy was substantiated by the New

York Times which had a full-page article predicting a Democratic landslide which would smother HUGH SCOTT because neither his name nor his record were known.

The procedure used for retailing our merchandise seems deceptively simple; a map of Pennsylvania showing the 67 counties was spotted with the dates of accepted speaking engagements. Adjacent county chairmen were contacted to coordinate appearances for the same or following day in the areas of their choice. Once the calendar-geographical problem was solved so that we did not exhaust the candidate with nonproductive traveling, the details of the actual visit were pinned down with the local people.

OILING UP THE MACHINE

The county chairmen vary all the way from the aged incumbent courthouse payroller in a highly agrarian area to the young aggressive businessman in an industrialized but economically distressed section. Most of them are congenial fellows who were anxious to work out an effective program. Nevertheless, we had to sell some on the idea that HUGH SCOTT would appear on the appointed day and hour, would meet schedule commitments and could hold press conferences and TV interviews without previous rehearsals or briefings. Over the years, not many party leaders had been so talented and conscientious. As the word spread and our enthusiasm caught on, county chairmen became less and less reticent. But still it was tricky to work out visits which corresponded both with what we thought made sense and what he did. One man was convinced, for example, that the only way to campaign effectively was to go from tavern to tavern all day long.

The final result of our efforts might look like this:

A TYPICAL DAY

(Prefaced by speaking appearance the day before which ended at 1 a.m.)

4:45 a.m., reveille.

6 a.m., Budd Manufacturing Co., plant-gate handshake, 1,700 men.

7 a.m., visit with commuters at PTC trolley and bus terminal.

8 a.m., breakfast with associates for skull session.

9:30 a.m., opening of headquarters for Fred Gartner, congressional candidate from Sixth District (SCOTT's own) and Tobias Goldberg, candidate for the State legislature.

11 a.m., office appointment, congressional affairs.

12 noon, leave for Drexel Hill—Mrs. Scott joins group.

12:30 p.m., luncheon speech, Women's Republican Club of Delaware County.

1:30 p.m., leave for Lebanon via Pennsylvania Turnpike.

2:30 p.m., arrive Citizens for Scott-McGonigle headquarters.

3:30 p.m., Bethlehem Steel Co. plant-gate handshake.

4:15 p.m., Lebanon Daily News interview.

4:45 p.m., Radio Station WCBR, 15-minute speech.

5 p.m., Radio Station WCBR, 15-minute tape-recorded interview with Hy White.

5:30 p.m., State Senator Thomas Ehrgood's house, meet president of Young Republican Club of Lebanon.

6 p.m., YMCA 100th anniversary dinner.

8 p.m., Lincoln Republican Club, speech plus question and answer period.

8:45 p.m., leave for Harrisburg.

9:35 p.m., arrive TV station with motorcycle escort.

10 p.m., WTPA-TV "Capitol Correspondents," half-hour panel show.

11 p.m., leave for Philadelphia and be ready for another such day.

That kind of day requires physical stamina, certainly, but the grueling mental gymnastics are at least as horrendous. SCOTT had to be aware of all pertinent issues of the day: Matsu and Quemoy have now faded from memory but were headlines then, as were the road programs, synagogue bombings, cinder scandals, and so on. Interspersed with all this, of course, are all the flash crises: What about the press release concerning civil rights? Don't forget to follow up those pending congressional appointments to the military service academies. How can we anticipate the next political accusation of the opposition? Why can't the Republicans show more enthusiasm in East Weston?

Then you never know what untoward event is going to upset your plans. During one plant visit we came across a local committeeman who must have been raised in the Haymarket Square days of the riots. He had called his friend the local police captain and persuaded him to send five squad cars fully armed to the scene. Fortunately we arrived before SCOTT and persuaded this terror-stricken little man that we were not saber rattlers, and please would he call off the commandos?

GIVING THE OPPOSITION THE GATE

We put great store in the plant visits, and arranged as many as possible. Held in the cold pre-dawn with only the candidate and two associates present, we definitely avoided the fanfare which might develop if the management was forewarned. After many of these informal "meet your candidate" affairs, the opposition became concerned. A Republican mayor of one town told us that the later plant visit of the opposition candidate was publicized, ostentatious, and lacked only the bray of Sicilian donkeys to make it complete.

Our total equipment for these tours consisted of a bus, station wagon with sound equipment and the personnel vehicle which carried the candidate and his wife (whose charm was a major asset throughout), campaign assistant, press man, photographer and driver-advance man, plus baggage. This group of people traveled more than 10,000 miles through Penn's Woods by plane, train and taxi.

Meanwhile, back at the office, another type of campaign is being waged. The candidate is being exposed by mail, matches, and mannequins; volunteers of the citizens groups are addressing over a hundred thousand pieces of literature featuring the candidate, plus an equal number handed out at many factories and on street corners; assorted ethnic groups are getting out special mailings which they sponsored; several professional associations have books of matches printed and produced films to show at their meetings.

To make all this work, the group has to function tirelessly, with single-minded dedication to the goal of success, coupled with perception and controlled sensitivity to the whims and desires of the others.

To adjust suddenly to the new and completely novel life of politics was easier for me than the decision to make the transition. I suppose I found it difficult to decide because I was tied down by the inherent assumptions about politics and the practice thereof held by most businessmen:

1. Dishonesty—moral, intellectual and/or criminal—must exist in a politicians life.

2. A man must compromise his principles if he is to be a successful politician.

3. No matter what one's individual ideals and objectives may be, they must be sacrificed to the consensus of the group.

4. It is not right to inflict the inevitable economic insecurity and possible domestic dislocations on one's family.

5. If a man is a success in his corporate career and civic responsibilities he has fulfilled his obligation to society.

6. Public promotion of individuals is vulgar.

7. If a man is successful in a business career, an appointive public office might be available to him.

8. Politics is set on a lower moral and intellectual level than business.

These preconceptions may be true to a degree, but to accept them in full is like believing that all businessmen are "robber barons." I have three schoolmates who are now also freshmen in the U.S. Congress. These men, one Republican and two Democrats, do not appear to be two-headed monsters who will shred the moral fiber of our civilization. Any of them, however, might make sincere, dedicated and directed efforts to rearrange our economic and social structure. It is up to the businessman to make sure that his views are represented and considered by these people.

TOO MANY ARMCHAIR POLITICIANS

He should sound off not only in the directors' meetings as the professional manager but also in the community hall as the citizen holding an elective post. Unfortunately, only a few do so; the rest keep themselves isolated from any political action by a routine and secure corporate career with compatible civic responsibilities. When we were campaigning in Philadelphia, a friend gave me all sorts of advice as to how SCOTT should attack the enemy. I listened with great interest to his heated and enthusiastic words as we stood in a drowning rain. He told me that he had taken this day off to carry out a charitable project, so I urged him to take time to join us for a while during our campaign. Suddenly our organization became the most leprous group of characters that ever pledged allegiance, and he quickly ended his association and literally fled into the crowd. He was not about to interrupt his preplanned career. Too bad—for him. He missed an invigorating and educational experience.

Ten Commandments for Parents

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. HUMPHREY. Mr. President, in a recent sermon, Rabbi Emmet A. Frank, of the Beth El Hebrew Congregation of Alexandria, Va., outlined 10 commandments for parents which deserve thoughtful consideration by every father and mother.

Because his words impressed me so deeply, I would like to share them with my colleagues, and so I ask unanimous consent that the 10 commandments for parents be printed in the Appendix of the RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

TEN COMMANDMENTS FOR PARENTS

(By Rabbi Emmet A. Frank)

1. Thou shalt earn your children's respect and not acquire it through fear.

2. Thou shalt not re-create your life through your children.

3. Thou shalt give your children every opportunity to expand and express their individual personality and not smother their growth.

4. Remember your children are human and have feelings, emotions, and problems as serious to them as your own.

5. Thou shalt return understanding and instruction, not recrimination, when your children confide in you. Let them feel comfortable in knowing they can turn to you for encouragement; do not frighten them away.

6. Thou shalt teach by precept and example, serving as a model and not a critic for your children.

7. Thou shalt not seek perfection from your children.

8. Thou shalt keep your word and thereby teach your children the inestimable worth of honor.

9. Thou shalt not shield your children from the realities of life.

10. Thou shalt teach your children there is a right and a wrong and that God, not man, is the yardstick.

Abba Eban: A Great Statesman Departs

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, April 7, 1959

Mr. KEATING. Mr. President, America's loss will be Israel's gain when Abba Eban, Israel's able and talented Ambassador to the United States and the United Nations, leaves to enter politics at home. A skilled diplomat, with a high degree of eloquence, Ambassador Eban has established an enviable reputation as a man who can walk into a situation and take command.

In his important assignments, Ambassador Eban has enunciated with magnificent ability the Israeli position on numerous thorny issues. In doing so, he has won the respect and admiration of friend and foe alike.

As one of his greatest admirers, I am pround to salute this fine champion of the noble State of Israel. As he and his charming wife leave Washington, I am pleased to wish them Godspeed and good luck. I am sure that in the days ahead both will contribute much to the progress of the great bastion of democracy in the Middle East.

Mr. President, the Washington Post and Times Herald in a recent editorial heaped well-merited praise on Mr. Eban.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ISRAEL'S AMBASSADOR

Abba Eban has been an unusually effective advocate of his country's interests during his 8½ years as Ambassador of Israel in Washington. His vogor in the United Nations, where he has been Israel's permanent representative since her admission a decade ago, has been equally marked. This Cambridge-trained diplomat has presented the cause of the young Jewish state with great oratorical brilliance and intellectual agility, and sometimes he has overwhelmed others by the sheer force of his eloquence. If American and Israeli interests have not always coincided objectively in every particular, Mr. Eban has nonetheless done his best in official representations and in talks through the country to make them appear identical. He has emphasized Israel's bonds to the United States and Western freedom, but his alert mind also has encompassed a much wider interest in world affairs. As he prepared to return to Israel with his lovely wife to enter a political career, he can take much satisfaction that he has left a real imprint here. Washingtonians will expect to hear and see much more of him in high position in the years ahead.

William E. Warne

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, when I was in Korea last fall on business of the Armed Services Committee, I heard many encouraging things concerning our aid program there and many fine reports of the work of the UNC Economic Coordinator, William E. Warne, a Californian and former Assistant Commissioner of Reclamation and Assistant Secretary of Interior. Unfortunately Mr. Warne was out of Korea during the brief time that I had there, and I did not see him, although about 18 months ago he was in my office and met with a large group of Members, as some of you will recall, and discussed with us the aid program in Korea.

After more than 23 years of service to the U.S. Government and 7½ years overseas with the International Cooperation Administration and its predecessor agencies, Mr. Warne has resigned to return to California to be commissioner of fish and game. Many years ago, I was directly interested in the work he will undertake. I wish Mr. Warne well and know that his many friends in the House will be interested in the release that was made in Korea concerning his departure from there, and an editorial from the Hankuk Ilbo of March 6, as well as editorials from Seige Ilbo March 8, Seoul Shinmun March 8, and Chosun Ilbo March 6, which I include in my remarks:

[From Hankuk Ilbo, Eyes of News, Mar. 6, 1959]

THE SEA AND MR. WARNE, WHO IS LEAVING FOR FISHERIES AND GAME COMMISSIONER

Mr. Warne, UNC Economic Coordinator, is leaving for home to become fisheries and game commissioner of California State. He is one of most unforgettable foreigners to come to Korea and will be long remembered as a devoted friend.

Mr. Warne, who also has served as director of American aid mission in Iran, rendered a great contribution to the development of the Korean economy, making the most of the knowledge he acquired in Iran. He was even seen transplanting in rice paddy on Farmer's Day, and his farmer-like appearance with an A-flame on the back and a band on the forehead proved his friendly attitude toward us.

His assignment began in July 1956, when inflation threatened to override all previous economic efforts. He swiftly took many proper measures, such as establishment of CEB, preparation and execution of the financial stabilization plan and community development projects, and enlargement of OEC functions.

And it may be not merely because of his 8-year experience as an AP reporter that he held regular press conferences.

Now Mr. Warne is returning to his hometown where he was born, graduated from a college, and once worked for a ranch, to assume a high-ranking office of the State.

From the bottom of our heart we pray for his best health and success.

[From Seige Ilbo, Mar. 8, 1959]

WARNE MAKES MERITORIOUS SERVICES TO ECONOMIC STABILITY OF KOREA

UNC Economic Coordinator Warne is to assume a new post in the United States on April 1, winding up his remarkable career in Korea since July 1955. His views on the Korean economy as revealed at his recent press conference are identical to ours, in that, since our economy has been generally stabilized, incessant efforts to attain economic self-sufficiency including the exploitation of oversea markets in conjunction with a long-term development plan are necessary. In fact, Mr. Warne will be remembered by the Korean people whenever they look back to the process of their economic development.

He has not only been faithful to the policy of the United States but also had a good understanding of the position of Korea. Though his intermediately stabilization policy sometimes drew criticism, it has finally paid off in stabilizing our national economy.

As pointed out by Mr. Warne, there are many jobs to be undertaken to improve the Korean economy, and it is regrettable that we should have to part with him at this time. And we should like to stress the need to further develop our national economy on the foundation built by Mr. Warne.

[From Seoul Shinmun, Mar. 8, 1959]

WE ADMIRE HIS ACHIEVEMENTS AND WISH HIS CONTINUED SUPPORT OF KOREA

Aa announced, Mr. Warne will leave his present post April 1 to become Fisheries and Game Commissioner of the State of California. His achievements rendered during 2 years and 7 months in office have been so admirable that we Koreans cannot express too much how sad we feel at the sudden news of his resignation.

Mr. Warne is, indeed, one of many people who rendered distinguished service to the development of Korean economy, and many other Americans have been here to help Korea. With his departure near at hand, we would like to speak highly of his service once again.

Mr. Warne tried his best to see that American aid funds are effectively used, and spared no effort through the combined economic board in the reconstruction of Korean economy. He managed to maintain the 500-hwaan-for-$1 foreign exchange rate, controlled runaway inflation by establishing a financial stabilization plan, and rendered a great contribution to the stabilized economy. Reduced to ashes during the war, Korea owes very much to the cooperation and help of the U.S. aid officials for the reconstruction.

Of course, we must not forget Mr. Wood, his predecessor, whose contribution during the period of rehabilitation of war devastated situation paved the way for the present foundation of economic development on which Mr. Warne successfully brought the fruits of effort.

Outstanding among Mr. Warne's countless achievements are continuation of economic aid, introduction of DLF and foreign capital, accumulation of private capital, encouragement and development of managerial and technical know-how, establishment of a long-term economic development plan, and a community development plan.

The fact that the Korean economy has made such a rapid progress is due largely to men like Mr. Warne, who proved to be capable and sincere.

It is indeed regrettable that we should part with such a capable person. At the same time we cannot but feel somewhat uneasy about the future R.O.K.-U.S. relations with respect to aid programs, now that we have to part with Mr. Warne, who is familiar with our situation and can handle it accordingly, at the time when there are growing indications that American aid will be reduced.

Since it is inevitable that men must separate some time, we only pray for Mr. Warne's happiness and hope he will continue to support the cause of the Republic of Korea. We, for our part, should reward his achievements in Korea by further developing our national economy.

[From Chosun Ilbo, Mar. 6, 1959]

REPORT OF MR. WARNE'S DEPARTURE

The report that UNC Economic Coordinator Warne is to resign soon to assume an important post in the State of California will provide an opportunity for the Korean people to reevaluate his service. Since he assumed the delicate and complex post of economic coordinator 2 years ago, he has been second to none in powerfully promoting the financial stabilization plan to overcome runaway inflation. It is also to be remembered that American aid for Korea has almost doubled during the years Mr. Warne has been in office.

Of course, implementation of the financial stabilization plan and increased aid cannot be termed the achievements of Mr. Warne alone, but there is no denying the fact that his role has been important. Though there was some criticism of the financial stabilization plan, his achievements are expected to influence the economic rehabilitation of Korea favorably for a long while.

It is believed that he may feel regret at the fact that the long-range economic development plan cannot be completed before his departure. He has long been trying to present the most effective and rational fundamental plan for the overall development of the Korean economy. But in view of the fact that at least 3 years are required to draft such a plan for an underdeveloped nation, it is only natural that the plan, whose preparation commenced last year, has yet to be completed.

Although the financial stabilization program itself is a basic policy of the ROK Government, it is very obvious that Warne is one of those who strongly stressed the need of the program. And it should be remembered that Korea received, during his term, twice the amount of aid received previously.

Opinion is split on the achievement in connection with its merits and demerits, for it has been not without criticism that the tight-money policy adopted in the course of the financial stabilization program went too far.

And there is left an impression that Warne has changed the combined economic board's nature, from having an advisory function to having an executive one. We note that this is a matter to be reviewed by his successor.

Warne's resignation came after the conclusion of the regional aid directors' conference for the Far East. There might have been some particular reason for that.

Nevertheless we appreciate what he has done and wish him good luck and success.

Elk Hills Oil Turnover Would Be Major Scandal

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 23, 1959

Mr. MOSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following thought-producing editorial from the columns of the Sacramento (Calif.) Bee of March 24, 1959:

ELK HILLS OIL TURNOVER WOULD BE MAJOR SCANDAL

One of the greatest Government scandals in U.S. history involved the bribing by private oil interests of Albert B. Fall, Secretary of the Interior during the Harding administration, to get hold of the naval oil reserves of Teapot Dome in Wyoming and the Elk Hills in California.

Congressional investigations resulted in the turning back to the Navy of both fields and the imprisoning of Fall.

Yet for all this background President Dwight D. Eisenhower's proposal in his budget message to turn over all naval reserve oilfields to private interests has gone almost unnoticed.

It is true that private companies by close-in drilling have drained away much of the value of three of the four naval oil reserves. Largely because of this fact the President is partially right when he refers to the Navy's fields being relatively small and anachronistic.

But he could not be more wrong when he applied those terms to the Elk Hills field. And he made no exception to that field. Elk Hills is a prize not only for the private companies but for the Nation.

Instead of being relatively small, it is the second largest proved oilfield in the United States, surpassed only by the best Texas field. It contains 1 billion known barrels of oil worth $2,500 million. It could in an emergency supply half the military need for oil for the whole Pacific coast.

Capable of producing 200,000 barrels a day, about one-quarter of the west coast's present crude oil production, it is presently in limited production of 15,000 barrels of oil and 30,000 barrels of water a day, allegedly to check water encroachment into the field.

To turn over such a vast source of vital petroleum to private exploitation would be a monstrous giveaway and a prodigal assault on the Nation's defense. Eisenhower has just clamped a mandatory restriction on oil imports, with the claim such restrictions will aid defense by encouraging oil explorations at home and hence assure greater domestic security in this vital resource.

Against such a background, how can he possibly claim defense would be aided by handing over 1 billion barrels of oil at Elk Hills to be dissipated in all manner of usages? How can he argue that exploration will be advanced by giving over this gigantic source for which no exploration is necessary?

Congress had best stop this proposed posthumous victory for the Harding boys or it may have a scandal on its hands which will far exceed that of the abortive Dixon-Yates deal.

The Real Truth About Michigan

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. McNAMARA. Mr. President, some little men with big ideas of political power once started a smear campaign in an effort to show that the elected leaders of Michigan were forcing industry from the State and driving it into financial ruin.

This campaign collapsed because there was no truth to hold it up. Unfortunately, however, the lies and slanders by this time were being picked up by newspapers and magazines outside Michigan. These publications, apparently, made no effort to check the real facts.

A Detroit newspaper, the Detroit Times, has undertaken the task of setting forth the truth about this campaign of villification. An article published in the Detroit Times on Sunday, March 29, presents, in conclusive detail, the real truth.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRUTH ABOUT MICHIGAN—CRITICS NOW DRYING TEARS

(By John Creecy)

Who would have thought that a few kind words for Michigan would create such a stir?

The Times during the last week has undertaken, in its series "The Truth About Michigan," to answer some of the slanders that have been spread concerning our State's solvency and economic outlook.

We thought it was high time that, at least, some of the more obvious and damaging falsifications were corrected.

And so, it turned out, did a lot of other people.

Representative Edward Jefferies, Democrat, brought 150 copies of the Times to the House and told his colleagues in a speech: "I believe that after every member of the legislature reads this maybe we can get down to business and do something for the people of the State of Michigan."

Congressman JOHN BENNETT, Republican, of Ontonagon, announced that he would insert the Times series into the CONGRESSIONAL RECORD.

Senator PAT MCNAMARA, Democrat, beat him to it. The Michigan Committee for Economic Development and other pro-Michigan groups mailed out as many copies as it could immediately lay hands on, seeking to dry the tears of some of the misguided editorialists who have been sermonizing on Michigan's downfall.

It is to be hoped that one reached the editor who, a couple of years ago, started the eight-ball rolling by inviting a number of industrialists to express themselves on the subject of taxation.

Amazingly enough, they all seemed to prefer low taxes to high taxes. And they concurred in the obvious generality that if taxes in Michigan got notably higher than in other States, the fact wolud be taken into consideration when locating future plants.

From this simple beginning arose the nationwide uproar over Michigan's scandalous tax situation.

Although there are legitimate disagreements between political and economic groups regarding details of Michigan's tax program, U.S. Department of Commerce figures show that there are 30 other States where the tax bite takes a bigger share of the average citizen's income than it does here.

Charles R. Landrigan, executive vice president of the Detroit Edison Co., says: "I have never heard of a company which left Michigan because of the tax situation."

But to read the anti-Michigan propaganda which has been circulated in rival States, you'd think there was a huge column of such corporate refugees beating a footsore retreat.

Nowhere are the wails of sympathy louder than in California—the most heavily taxed State in the Union. Just a few days ago the Los Angeles Times ran a piece naming Michigan as the worst State in the Union.

As evidence it cited a statistical survey showing Michigan at the bottom of the list of 15 States in the matter of new construction for business.

How true is this? Well, apparently it's about as misleading as such a statement can be.

According to the magazine Engineering News Record, the February issue which appeared well before the Los Angeles attack, Michigan ranked fourth among all States in industrial construction in 1958.

Industry in Michigan spent $110 million for expansion, a jump of nearly $30 million from the 1957 figure. The total outranked every State except Texas, New Jersey, and Illinois. And the Engineering News Record figures also showed that a steadier trend of expansion was maintained in Michigan in the last 5 years than for the country as a whole.

The most urgent job of Michigan's leaders, it seems to us, is to talk the State up instead of talking it down.

This can be done, we think, without dodging the fact that Michigan does have problems and that solutions must be found for them.

It is true that Michigan's economy is subject to sudden ups and downs, with remarkable effects on employment figures. As William Haber, noted professor of economics at the University of Michigan puts it:

"Michigan is the most highly industrialized State in the United States. About 50 percent of our wage earners work in the manufacturing industry.

"Nearly 37 percent of personal income received by people in Michigan in the form of wages and salaries comes from manufacturing.

"As a result, we are especially allergic to national developments which adversely affect manufacturing production and employment, especially automotive production.

"Michigan is hit harder in a recession than most other States. The percentage of our labor force out of work is usually two times the national average. This is not a recent development.

"Our present experience conforms to what happened in 1921, in 1929–33, in 1937, in 1949, and again in 1954.

Professor Haber, in his recent testimony before a subcommittee of the U.S. Senate banking and currency committee, pointed out that, as a result, the cost of unemployment insurance in a recession is likely to fall most heavily on employers here, putting them at a disadvantage with their competitors in other states whose manufacturing industry is more diversified.

Part of the picture, Professor Haber contends, is the failure of Federal unemployment legislation to accomplish what it was intended to do—that is, eliminate interstate differences in cost of unemployment insurance. Instead, the way it has worked out, these differences have been accentuated.

In asking that the committee consider creating a regional unemployment insurance equalization fund, he commented:

"There is no good reason why a State like Michigan or Pennsylvania or any other State should be penalized because of a recession which is national in origin and has a more serious impact in that State."

In his analysis, the Detroit and Michigan problems are a complex of several factors.

"The first is a major shift in defense procurement with a concentration on aircraft and missiles, rather than tanks and ordnance. As a result of the shift, Michigan may have lost 100,000 to 125,000 jobs.

"A second factor is to be found in the decentralization of automobile assembly and production.

"It should be emphasized that such decentralization is primarily motivated by market considerations, by locational factors designed to take advantage of population concentrations to reduce transportation costs and achieve similar economies.

"It is not a flight from Michigan because of taxes or wage rates or 'economic climate.'"

As other factors, Professor Haber cites the Packard-Studebaker and Nash-Hudson consolidations, and the increasing use of automation in manufacturing. He adds:

"Taken together these four factors combined with the recession provide an explanation of Michigan's present problems.

"They appear to me to be more impressive and logical than most of the talk about taxes, labor costs and unfavorable business climate.

"These issues are of course always present. They do not in my opinion have an important bearing on the causes of our present problem."

Now read Professor Habers' view of Michigan's future:

"Assuming high levels of employment nationally one can be decidedly optimistic about Michigan's economic outlook.

"Given time, an accurate interpretation of Michigan's economic advantages plus a cooperative relationship between the Michigan business community, labor and the State government, the State's economic growth can be resumed at the rate which prevailed before 1955."

Pointing to figures which indicate that Michigan population will continue to increase at a rapid rate, he commented:

"Population growth by itself does not generate jobs. It provides, however, a sound basis for economic growth.

"And there is no reason to assume that Michigan's rich resources in manpower skill and in management competence, coupled with its natural resources in water and chemicals to mention but the obvious, are likely to be developed and exploited for a growing population and an expanding labor force.

"There is no exodus of industry out of Michigan. The facts are to the contrary. There are more manufacturing plants in this State than there were in 1949 or 1953.

"And even the automobile companies, while they are now building elsewhere, have made substantial investments and expansion in their Detroit and other Michigan facilities in the post-war period.

"Michigan's industry is overconcentrated in manufacturing and especially in automotive production.

"There is a crying need for a greater degree of diversification to insure a better balance and lesser dependence upon the economic fate of one or two major products.

"Such a program has not been pursued with any vigor thus far, since it did not appear necessary. An opportunity to develop aircraft production and electronics after the war could easily have been exploited and this would have provided a more balanced economy.

"We need an industrial redevelopment program. The resources promise its success once we pursue it with the vigor which has made Michigan a great industrial State."

Poison in Your Water—No. 50

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article entitled "Pollution Problem Remains Unsolved" which appeared in the Kalamazoo (Mich.) Gazette.

POLLUTION PROBLEM REMAINS UNSOLVED

(By Byron Troyer)

A group of industries and municipalities seeking to solve Kalamazoo River pollution problems through building of reservoirs is expected to disband soon.

Dwight L. Stocker, chairman of the Battle Creek-Kalamazoo River Intermunicipality Study Committee, said Saturday he expects to set a date next week for a meeting of the committee to officially disband the group.

The reservoir plan was dropped by the committee after a meeting December 3 in Battle Creek, at which the firm of Malcolm Pirnie Engineers, New York, recommended that it was not feasible. The engineering group recommended after a study of several months of proposed reservoir sites that cost of creating them would be excessive.

Dropping of the plan apparently leaves industries and cities of the river's basin on their own in solving pollution problems.

"This is one of the possible solutions we have to write off," Dwight L. Stocker, chairman of the Battle Creek-Kalamazoo Committee, said after the engineeers reported the reservoir plan would cost $27 million.

"Apparently, this leaves each community, individual, and firm to work out his own solution to pollution problems," Stocker commented. It is assumed that the committee will be disbanded after disposing of a small balance in its treasury.

The Pirnie study showed it would be necessary to provide about 65,000 acre-feet of stored water to control pollution of the Kalamazoo River from Battle Creek to Comstock under present conditions. Another 180,000 acre-feet would be required for the stretch of river between Comstock and Plainwell.

Proposed reservoirs in Rice Creek and Augusta Creek would each provide 90,000 acre-feet, or a little less than the total amount required to keep the river in satisfactory condition. Another site on Wanadoga Creek, a tributary of Battle Creek north of Battle Creek, could provide 55,000 acre-feet, the study showed.

End of this project throws the pollution problem back into the laps of industries and cities along the course of the river, who have been under strong pressure from the Michigan Water Resources Commission to reduce their industrial discharges into the river. Both cities of Kalamazoo and Battle Creek and many paper mills already have made considerable reductions in their pollution loads through treatment plants and other means.

"With but few exceptions, industrial discharges into the river are from the paper industry," the engineering study noted. "Seventeen paper mills of importance discharge a population equivalent of about 570,000 persons."

Reducing the load of wastes into the river becomes an added business expense which injures the price position of Kalamazoo Basin paper mills in competition with other mills, mill owners contend. As a result, officials of several have publicly stated they will not expand operations in the Kalamazoo Valley further if compelled to assume large waste treatment costs.

Oklahoma Water Resources, Present and Future; Address by Associate Commissioner Floyd E. Dominy, Bureau of Reclamation, Before Oklahoma Utility Association

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 7, 1959

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Floyd E. Dominy, who has recently been appointed by the President as Associate Commissioner of the Bureau of Reclamation. The address was delivered before the Oklahoma Utility Association at Tulsa, Okla., on March 26, 1959.

The subject of Mr. Dominy's address is of great interest, not only to his audience, but also to those who have been so deeply concerned with the development of the water resources of my State. The information contained in the speech is such that I believe it will be of interest to all who read it.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OKLAHOMA WATER RESOURCES, PRESENT AND FUTURE

It was a particular pleasure for me to receive an invitation to talk about Oklahoma's water resources here today because it indicates a growing awareness of the importance of water in the future of your State.

Water resources and their development and utilization have long been of utmost interest to us in the Bureau of Reclamation but our activities in the early decades of Federal reclamation were concerned primarily with the more arid areas up against the Rocky Mountains and westward to the Pacific Ocean.

It has only been in recent years that there has been the interest and demand for an expansion of reclamation activity into the Subhumid Belt runninging roughly along the 97th meridian and including most of your State. From our experiences of more than half a century in water resource development, I can tell you without qualification that Oklahoma's future growth and economic stability, like that of most of the Nation, depend in large measure on how well the available water supply is put to use.

I can tell you also that this is one of the primary concerns of Secretary of the Interior Fred Seaton. Secretary Seaton comes from the subhumid area of central Nebraska which has a precipitation pattern similar to that in Oklahoma. Irrigation development there is much farther along, however, thanks to usage of abundant ground water which is easily pumped. He has seen the benefits to be realized from using this additional supply of water and is backing us to the limit in carrying on an orderly development program in all of the Western States.

A few months ago I had the pleasure of making a trip through part of Oklahoma and observing once again at firsthand some of the State's water resource projects and possible future development. Also, I was able to talk with some of your State officials and leaders in water resource development and management.

Oklahoma has reached the point where intelligent and firm decisions must be reached concerning its water resources and their development. It is a challenge which must be met to guarantee future industrial and agricultural progress, and related population growth.

The Census Bureau foresees an increase of 60 million people in the United States in the next 18 years but its projections do not indicate any increase in Oklahoma. As a matter of fact, from a high point of 2,403,000 in the State in 1931, population dropped to 2,283,000 in 1950, and the 1960 projection forecasts a population of 2,189,000. By 1970, according to Census Bureau forecasts, Oklahoma will be down to 2,135,000 people.

This outmigration and decline was triggered by the drought and economic depression of the 1930's. Development of new water supplies carry over storage to achieve better balance between the lean and the fat water years, and better utilization of what you now have can reverse this situation.

The welfare of all the various utilities represented here today depends on healthy industrial and agricultural activity and growth, so all of you have a real interest in Oklahoma's water resources and what is done with them.

Oklahoma's surface water supply—that which comes from shallow ground waters and terraces—is from recent precipitation. Other water—which is now stored in deep aquifers such as the Ogallala formation of the High Plains—comes partly from rain and snow which occurred centuries ago. This means that most of water supplies we are talking about and the ones Oklahoma expects to use are closely related to the day-to-day and season-to-season fluctuation in rainfall.

The climate of your State varies from semiarid in the western part, where annual rainfall averages some 17–18 inches annually, to humid in the eastern and southeastern region, where average annual precipitation is more than 50 inches in some sections. For the 59-year period from 1900 to 1958, precipitation for the State as a whole averages 33-1/10 inches.

But don't be misled by averages. It takes anywhere from one to five or six feet of water to produce a crop, depending on the kind of crop, the locality, and the pattern of rainfall. Consider also the fluctuations in both annual and seasonal amounts of precipitation. In Oklahoma, the minimum precipitation in this century occurred in 1910 when precipitation totaled about 19 inches or about 40 percent below normal. This was approached again in 1956 when precipitation averaged about 21 inches for the State as a whole.

The recent drought, however, has set a record when we consider any 5-year consecutive period where precipitation was deficient. In the period 1952 to 1956, inclusive, precipitation averaged only a little more than 77 percent of normal, and precipitation for every year in that period was less than normal.

The compounding effect of this deficiency in precipitation resulted in a drought which was more severe than has ocurred over any extended period since 1900 and probably set a record for an even longer period of time.

These precipitation statistics are for the State as a whole and are based on annual records. Many local areas have experienced much more critical times because of seasonal droughts which are often severe and damaging.

The effects of these droughts are distress to agriculture and economic hardship generally. Muncipalities and industries are hard pressed to meet their water needs as a result of inadequate streamflow and inadequate ground-water supplies.

Looking at the other side of your climatic picture, you have unusually heavy precipitation in some years and in some localities although not necessarily in the entire State. This often results in floods which cause damage and economic loss. Threat of floods in certain areas also retards development. Floods and droughts are not uncommon in the same year as was clearly demonstrated in 1943.

The amount of water falling on Oklahoma, based on normal rainfall of 33⅒ inches, is about 123 million acre-feet annually. This is a lot of water. However, most of it is lost through evaporation from the land surface or transpiration by growing plants. Geological Survey records show that the average annual runoff from the land surface into your rivers and streams is about 19 million acre-feet, or a little more than 15 percent of the total that falls.

There is inflow from neighboring States and, according to best estimates, some 37 million acre-feet leave Oklahoma annually.

If runoff were evenly distributed from year to year and throughout the State, your water problems would be simplified. However, about two-thirds of the average annual runoff of the State occures in the eastern third of the State.

Even more striking is the annual variation in runoff. In 1945 the total outflow from the State was about 74 million acre-feet, while in 1956 it was less than 10 million acre-feet. Of far greater significance, the 5-year average flow out of the State for the 1952–56 period was less than 18 million acre-feet, or less than 50 percent of the long-time average. The important fact to remember is that the minimum flows, over critical drought periods, rather than the average flows, largely control the water supplies that we can depend upon.

These discussions of fluctuations in water supply have been concerned with surface water or streamflow. The other source of water in Oklahoma—ground water—now constitutes the total supply for many areas.

One of the most important and certainly most strategically located ground-water areas of the State is in the high plains. Throughout much of the panhandle are of western Oklahoma, the Ogallala formation forms a large underground reservoir which provides practically all the water for that area. In many areas, high-yielding wells can be obtained and in recent years many thousands of acres of land have been irrigated by pumping from ground water.

There is very little runoff from this area, but recharge of the ground-water formations is relatively low since most of the precipitation which falls is evaporated from the land surface or used by plant life. Consequently, the ground-water supply constitutes a vast reservoir which can be exhausted if pumped faster than its limited recharge rate, but can furnish assured, long-term supplies if properly conserved.

Oklahoma also has other lesser reserves of ground water but these constitute a base for only limited growth. Most of the new water required for future economic expansion must come from wise and vigorous development of the available surface water supplies.

An important factor in understanding Oklahoma's water problems is the quality of its available supplies. Here in Oklahoma many streams and ground water supplies are unsuitable for every purpose. This condition results to a large extent from natural pollution such as salt springs discharging directly into streams or ground water aquifers and the washing of soluble minerals out of the soil by precipitation.

It is of particular interest in Oklahoma that research now underway with the support of private industry and the Federal Government offers hope that economical means will be developed for the conversion of saline water to a usable quality.

Another source of pollution is industrial waste. Disposal of oilfield brines in the past has caused extensive pollution in some areas. Your State leadership recognizes the folly of such practices, and vigorous steps are being taken to prevent the occurrence of inadequate waste disposal.

Oklahoma, like all other sections of the Nation, has been using greater amounts of water each succeeding year. Aside from rapid increase in municipal and industrial use, Oklahoma has experienced a remarkable increase in irrigation. In 1940 only about 2,000 acres were irrigated. By 1949, 34,000 acres were under ditch, most of this increase resulting from the W. C. Austin Federal Reclamation project, in Jackson and Greer Counties, which was just coming into irrigation production at the close of the decade.

In the past decade, since 1949,, irrigation has pushed forward at an amazing rate because of the drought and the realization by progressive farmers that irrigation pays. Latest information on irrigation furnished by the extension division of your State university shows about 300,000 acres are now being irrigated. About two-thirds of the area is irrigated from ground water by pumping and the balance comes from surface water including reservoir storage and unregulated streamflow.

The latest statistics we have on water use in Oklahoma are estimates by the Geological Survey for 1955. These figures show that 1⅛ million acre-feet annually or 976 million gallons of water were used daily in the State for all purposes exclusive of hydroelectric power generation. In that year, domestic and industrial consumption was a little over 200,000 acre-feet, and irrigation used about 250,000 acre-feet.

Since then, irrigation has increased about 35 percent and other demands have also gained. It is probable that your total water use, exclusive of water used in generation of hydroelectric power, is now approaching 1½ million acre-feet annually. Of this total water use, about one-third comes from ground water and the remainder is obtained from surface runoff.

The history of water use in Oklahoma has followed the natural pattern of developing the easy supplies first. As is to be expected population has concentrated in the areas of adequate water supply when other factors have been equal.

Most of the existing water facilities which furnish the million and a half acre-feet used annually have been planned and constructed through local initiative, including that of many of the utilities represented here today. They have usually been started to serve small towns and have had to be expanded as the towns have grown into cities.

However, unprecedented migration of rural population to urban areas, unforeseen increases in the national population, and greatly increased demands for industrial production have resulted in water demand greatly in excess of the capacities of the existing developments. These factors, together with the recent unprecedented drought, have resulted in constantly recurring water problems of increasing magnitude.

Due to these conditions, the search for new or supplemental sources of supply is intense at many locations in your State at the present time. Numerous water projects are either under construction or in the planning stage. The city of Tulso has recently completed a second Spavinaw Creek development and Oklahoma City is constructing extensive works which will transport water more than 100 miles. Lawton is constructing new facilities.

As water supply problems have become more difficult, local interests and communities have sought the assistance of appropriate State and Federal agencies. As the result, the Bureau of Reclamation and other Federal agencies have constructed Federal reservoir projects in which storage capacity is provided primarily for water supply purposes or is added to capacity provided for flood control or other purposes.

It is well to remember that until recently the most pressing water problems in Oklahoma were primarily the control of the devastating floods which have periodically plagued your State. Consequently, until a few years ago, most of the Federal works proposed or constructed in Oklahoma were primarily for flood control. In these, incidental storage capacity was sometimes available for conservation use.

Now, however, growing water demands make conservation of remaining undeveloped streamflow by regulation and storage essential to the future.

This is a nationwide need and was recognized by the 85th Congress in the Water Supply Act of 1958. This legislation, title III of Public Law 85–500, is directed toward insuring that, to the extent practicable, all Federal reservoirs develop the optimum water storage potentialities of their sites for municipal and industrial use even though there may not be an immediate need for the water.

I have already expressed an opinion that Oklahoma has reached the point where intelligent and firm decisions must be made concerning your water resources and their development.

Here at the crossroads, the future of your water resources will depend on the logic and wisdom of the goals that are set. These goals must be supported by a well-defined water policy set forth in appropriate statutes and vigorously and equitably administered. Otherwise, it is conceivable that the water resources over a considerable part of your State may be dissipated or wasted instead of being reserved and used for beneficial purposes including domestic, municipal, and industrial uses and irrigated agriculture. These purposes comprise the major part of the economic base to support your future growth.

To establish and adhere to a wise and equitable water policy will require courage of the highest order by those who have responsibility for legislation and administration, because pressures to do otherwise will be great. But failure to do this can only lead to chaos in water resource development, and ultimately economic stagnation for certain sections of your State.

But let's not overemphasize the wrong path. I prefer to think that the right course will be found and followed. If this be so, here's what I believe will be the pattern for your State in water resources and their development.

First, we must recognize that agriculture is one of the more important industries of your State and, certainly, land is a basic resource. Measures for the conservation of your soil resources should be continued. Cultural practices to maintain soil fertility and prevent soil erosion are essential. Measures to prevent flooding and the movement of sediment into your water courses are desirable and should be carried out wherever they can be effective.

These worthwhile practices, however, do not necessarily mean nor do they justify indiscriminate storage of water at every conceivable point where it is possible to build impoundments. Much water so stored would be wasted by evaporation and nonbeneficial consumption.

Your ground water is very important to your future supply. Systematic groundwater investigations should continue. They will make it possible to intelligently develop new water supplies in certain localities. At the same time, this information will provide a guide to prevent development beyond that which the aquifer is capable of supplying. Artificial or induced recharge may help ground-water supplies in some areas. It must be recognized, however, that in the more arid sections of the State there is little runoff now from the land surface. It is not probable that large additional water supplies can be obtained by increased infiltration in those arid areas.

For the future, however, most of your water supplies must come from surface runoff. Your State officials recently established a policy that, whenever a reservoir is planned and constructed, adequate storage capacity shall be provided for the capture and storage of water for beneficial purposes. Whenever possible, water supply is to be emphasized as a primary function. Feasible dam and reservoir sites are limited and must be fully exploited whenever developed. This is a wise course of action and in line with national policy.

It is desirable that the State, with the cooperation of appropriate Federal agencies and local interests, should begin working on a master water plan. Such an undertaking would assess the long-range water needs throughout the State; and analyze available water resources, their quality and their distribution within the State; and finally, create an overall plan which would make available water resources meet the needs to the maximum extent practicable.

A master water plan must not necessarily be complete and rigid before any new work is started. On the contrary, such planning should be flexible and capable of being remolded from time to time as needs, conditions, and experience show desirable. Such a master plan will show what reservoirs should be developed to capture and control water not now used. Order of construction can be determined by need and economic feasibility.

Already, in western Oklahoma, plans are being made for reservoirs on Beaver Creek, Salt Fork of Red River, and Otter Creek, and Rock Creek in south central Oklahoma, which will essentially utilize all flows of those streams to the extent it is economical to develop them at the present time. The entire flow of the North Fork of Red River, the North Canadian River above Oklahoma City, and the Washita River above Chickasha are appropriated by existing uses or projects now underway or proposed. It is apparent that for all practical purposes most of the usable surface water resources in the western half of Oklahoma are already committed.

The big part of Oklahoma's water resources lies in the eastern one-third of the State. As opportunities for developing adequate water supplies locally are fully exploited, it may be necessary to move the abundant and surplus surface water from eastern Oklahoma westward into the drier areas.

We have seen this kind of development going forward in the West for many years. We are now transporting water more than 500 miles through tne Central Valley of California. The Colorado-Big Thompson project in Colorado brings water from the western slope under the high crests of the Continental Divide to the overappropriated and water-short eastern slope. Storage is basic to any such plans and cost and economic justification will be the limiting fac-

tors of such large-scale water movement in Oklahoma.

Because of the erratic nature of streamflow, even for the streams in the eastern part of Oklahoma, it is essential that maximum storage for streamflow regulation and conservation be provided whenever reservoirs are constructed as your new State policy requires.

Besides the storage reservoirs, a system of pumps, pipelines and canals will be required to transport the water westward to points of use. A great deal of low-cost power will be required for any such movement.

In order that an orderly process of water resource development may be carried out, it is essential that water rights be firmly established and adequately protected. Your recently established Oklahoma Water Resources Board warrants united support in a program of sound water right administration.

How the work which will ultimately be required will be undertaken cannot be determined now. Planning and construction probably will be joint ventures in which local interests, the State, and appropriate Federal agencies will all play their part. It will be a big but rewarding task if well planned and logically carried out.

In closing, I want to make one more reference to water rights and particularly as they relate to our Bureau of Reclamation operations. We have heard shouts of alarm on many occasions that the Government is stealing water. I want to refute any such allegation emphatically as far as the Bureau of Reclamation is concerned. We are required by law to observe State water laws.

We also are required to obtain reimbursement for costs entailed in providing water supply for municipal, industrial, irrigation or related purposes. To insure reimbursement, we consider it essential that water rights be established to insure continued availability of water for project purposes. We obtain such rights in accordance with the applicable State water law. If a State does not have adequate water right legislation or administration to protect the water rights of a project, we do not favor construction of a project. The interests of the Government must be protected and, also, interests of the water users who must repay the cost. I am convinced that this will be one of the most important factors in connection with future development of Oklahoma's water resources.

I urge that each of you become acquainted with your water problems, and take an active interest in development of the State's water resources. It is a job for all and requires the highest degree of cooperation at all levels of Government and the people themselves. Your State's future depends, to a large degree, on how well you work together.

The Townsend Plan

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. O'KONSKI. Mr. Speaker, when Congress passed the Social Security Act in 1935, it was widely predicted and almost universally believed that title I (the title concerned with old age assistance) would prove to be little more than a temporary stopgap. The theory was that as social security matured and more and more people qualified for old age insurance, the need for assistance would disappear. It has not, of course, worked out that way at all. Today nearly 2,500,000 elderly persons still are recipients of old age assistance. Close to 500,000 persons draw both old age insurance and assistance. The assistance program, which was supposed to have outlived its usefulness after a few years, has become a permanent fixture.

This is most surely to be deplored, not because we are helping people who need help, but because of the stigma that attaches to charity of whatever nature. Our States subject recipients to half a dozen humiliations. The means test, required in all States, is simply a modern version of the Elizabethan pauper's oath. Many States require applicants to sign documents giving the authorities a lien on their homes. Others badger responsible relatives, under threat of legal prosecution, to contribute to the support of welfare clients. In more than half the States the names and addresses of recipients are made a matter of public record.

I know of cases in which elderly women are actually ashamed to cash their welfare checks at the grocery store because they feel they will be looked down upon. I know of other cases in which welfare clients have been reduced to tears by the constant and impersonal probing of case workers. The assistance program strips recipients of their dignity and self-respect. What is even worse, it perpetuates poverty by limiting clients to subsistence levels and penalizing them by reducing their grants whenever they show initiative by earning and working.

There is, to the best of my knowledge, no way of eliminating this disgraceful and un-American system as long as we continue to cling to the present social security system. Yet I think my colleagues will agree that it is desirable to eliminate any program which humiliates and stigmatizes free Americans.

There is a practical way of accomplishing this goal, and it lies in the enactment of a bill, known as the Townsend plan bill, which has been introduced in this session of Congress by Mr. BLATNIK and Mr. GUBSER.

This proposed legislation would solve the problem simply by paying retirement benefits as a matter of right. This cannot be done under present social security because benefits are related to earnings; and people who can show no earnings are disqualified, and therefore must rely on charity. H.R. 4001, by contrast, would impose a universal gross income tax; the rate would be moderate; citizens would automatically be eligible, just as children automatically are entitled to a public education as a matter of right.

Surely there is no excuse in this land of ours for the crushing burden of poverty and the twin evil of grudging charity. These blights can be removed, and there is no reason in this world for further delay.

H.R. 4000 and H.R. 4001 supply the solution. I heartily commend them to the attention of my colleagues. Here is a magnificent opportunity for the Congress to restore dignity and decency to millions of American senior citizens. It is difficult to imagine a goal more noble.

The Greatest Age of All Time

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Tuesday, April 7, 1959

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Greatest Age of All Time," by Mr. John Park Cravens, Sr., of Booneville, Ark.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GREATEST AGE OF ALL TIME
(By John Park Cravens, Sr.)

After waiting untold millions upon millions of years, the human creatures on this, our small planet on which we live, are at the dawn of exploring outer space. I believe this will be successfully done within the next few years, and its results will be for the glory of God first, and secondary, material gain for this world of ours as a whole, and all of its nations will only be able to benefit equally.

The people of our earth, with few exceptions, know that such as earthquakes, wars, cyclones, disastrous fires, volcanoes, hurricanes, and other things can happen, but they have faith and believe our planet will continue to orbit unharmed and hold its proper place in the universe, and it in no way will be affected by scientific discoveries or the exploring of outer spaces. And, throughout countless past ages, humankind has not feared or worried about anything going wrong with the workings and the existence of our home planet which is but a small cog in the machine of a vast universe. Down through all time since the dawn of humanity, people have not feared that the sun would not rise or never set, and they have looked upon the moon, the sun, the stars, and other planets with awe, and thought that a great and Divine Spirit controlled their earthly home and everything they saw in the vast heavenly panorama. A small percent of them may have believed different as some of today do, but their percentage was negligible.

Today, a greater part of he people are afraid of what hydrogen bombs, and other weapons of destruction will do to harm our earth, and I do not think this will happen, and that outer-space exploration will be done peacefully, and no harm will come to the universe or any part of it because of mankind's present and future scientific achievements.

According to the scriptures, "The heavens declare the glory of God; and the firmament sheweth his handywork." Also, "The heavens declare His righteousness, and all the people see His glory." As I see it, these are two of the most impressive verses of the Bible. From the beginning of mankind, the peoples of our earth have had the privilege of looking up into the heavens, and seeing His great handiwork. As the ages of the past rolled by, there have been countless millions of people that lived on this planet of ours who never were but a few miles from the places of their births. But the eyes of all of them, like those of today, had the experience of many times, and also the privilege, of gazing upon the moon, the sun, the stars, and other things of the celestial firmament with the realization they were the work of a master hand. Only a small percent of the past and present have seen much of the world on which we live, but all with proper sight have seen the heavens in all their great im-

pressiveness. When we gaze upward to the heavenly scene we know that millions upon millions of people of ages of the past have done the same, and were impressed as us of the present day and age, with the glory of a creator of all they beheld. We can see the love of God about us and the beauty of His creation in several ways on this earth, but though the heavens be far away, when we look up into them we can see His love and glory in greater form in such as the sun and moon that gives us light and life.

I will never forget when I was a little child, and there were no electric fans and air-conditioners in our home in the Petit Jean Valley, below the Great Mount Magazine of the Ozark Mountains. When the summer months came there were always a few dry and hot days, and my mother would make pallets with homemade pieced quilts on the grass lawn of our residential yard for members of our family to sleep on until after midnight cool breezes arrived, and we would go to our bedrooms. As I lay on my pallet in the yard before sleep came to me I would look up into the heavens as I listened to the singing of the crickets, the low of cattle in fields nearby, the falls of a swiftly running creek, the singing of a mockingbird, the baying of a pack of dogs chasing a fox, and other sounds, were not strange to me, but my eyes would become transfixed at the sight of the moon and the stars which greatly facinated me until I feel asleep.

The next morning I told my grandmother what I had seen, and asked her many questions, and she answered them as best she could. She told me about God creating the heavens, and our earth, and His gift of eternal life. And many times after that, when a child, I lay on my pallet on the lawn of a night and looked up at the moon and stars grandmother told me were so far away, and I wondered if anybody would ever be able to travel to them, and if they could, what a glorious thing it would be. Sometimes I would see flocks of wild fowl winging their way from Canada to South America, and wondered if it would be possible for them to fly to the moon. God has not denied any human creature of all the past ages with proper eyesight, the right to look up into His heavens and behold His great works of His own creation.

I believe the time will soon be here when people of this earth will travel to, and return from, the foreign planets, which will open up a new phase in the spiritual and material life of the peoples of our earth, and I believe this is a part of the plan of the Creator of us and all things. When I was a youth and would look up into the heavens on a clear and calm Ozark Mountain night, I did not realize that in my day the people of America would send a manmade instrument past the moon to orbit the sun. Neither did I realize or think I would live in a space-travel age which I look upon as the golden age of God when improved telescopes, radar, aircraft, rockets, and other things would bring our world so close to the foreign planets to which we can safely make round trips. I believe that successful space travel by the people of this earth will mean their getting closer to the Creator and eternal head of all things.

Down through the ages many changes took place in our world, and they were unknown to distant lands about; but when a new comet appeared in the skies, it was known to all peoples. Alexander the Great wept when he believed there were no more countries on earth for him to conquer. I believe during his lifetime he many times looked up into the vast outer spaces and realized they were controlled by a Supreme and Divine Power, and the planet on which he lived was only a small segment or part of a great kingdom of worlds mystifying to him and beyond his reach. And how wonderful it is that man is now on the threshold of exploring outer space.

Great is the reward of man to overcome the laws of nature against him in his pursuit of science for the benefit of humanity and progress of civilization and the general benefit and longevity of life upon this earth of ours, and greater still is the reward of those who overcome temptation and sin and pursue a path of pureness in heart and righteousness, as after death they will receive from God the gift of eternal life. And now that we have come to the space age, we have reached the most vital point in our earth's history since its creation. And I believe that much will be accomplished scientifically, but greater will our faith in an Almighty Creator become, our souls and our religion and our brotherhood will become broadened and strengthened as our outlooks upon life in general, and we will be brought closer to God in all respects, and there will be less jealousy, rivalry, and hate among the races and countries, and there will be a greater understanding and more good will.

I believe that after space travel is achieved in the great advancement and progress of this world, the importance of human souls will greatly and naturally take precedence over that of material things. "What profiteth a man if he should gain the whole world but lose his own soul."

I believe within the next 10 years man will begin making trips to the Moon and Mars, and other foreign planets known to our Earth, and from them make new discoveries about outer space that would be most vital and important in continued exploration. It is possible new planets will be discovered, and some could have on them a form of life similar to ours, and in time man will explore them, and from them he may discover other planets farther on out into space. It may be that man could spend millions of years in a chain of such exploration, and space is composed of many galaxies. And is could be that man of this earth will be limited to his own galaxy in his travels to and return from outer space. I believe as we travel onward and farther out into space, greater will we recognize the glory of God in our hearts, minds, and souls, and no longer will our world be a small planet isolated in a vast universe, but will be the headquarters of a kingdom of planets.

After keeping them closed for millions of years, the Divine Creator of the Heavens, has opened up the paths of space travel to us. It is the greatest challenge of all time ever to come to humankind. I hope the peoples of this planet succeed, and use the resulting benefits for Gods Glory, and peace on earth and good will to all men, women, and children. Otherwise every living thing on this earth will perish by the hands of man, and not by the will of God, and I have faith that the political, military, and scientific leaders of our world know what the results of a world war would be, and will never enter into such a conflict, and there will be peace, and man will continue to go forward in his exploration of outer space for the benefit of all the peoples of our earth, and those that should be living on other planets besides ours, and the glory of God.

Civil Defense Obsolete and Wasteful

EXTENSION OF REMARKS
OF
HON. STEPHEN M. YOUNG
OF OHIO
IN THE SENATE OF THE UNITED STATES
Tuesday, April 7, 1959

Mr. YOUNG of Ohio. Mr. President, a recent article, entitled "Porter on Civil Defense," which was published in the Cleveland Plain Dealer on April 2, 1959, is worthy of careful study. It offers an exceedingly clear commentary on the waste of taxpayers' money on the utterly useless and vague program of the Office of Civil and Defense Mobilization.

Philip W. Porter, associate editor of the Cleveland Plain Dealer, is a nationally noted columnist. He served as a colonel in World War II. He is an eminently respected and widely read author and commentator. In fact, it is safe to assert that many thousands of readers of the Cleveland Plain Dealer turn to his column and read it first, before reading the front-page news.

I ask unanimous consent that his article be printed in the Appendix of the RECORD. I commend it to my colleagues in the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Cleveland Plain Dealer, Apr. 2, 1959]

PORTER ON CIVIL DEFENSE—FEDERAL GOVERNMENT WASTES VAST FUNDS ON USELESS AND VAGUE PROGRAM

(By Philip W. Porter)

Senator STEVE YOUNG not long ago let fly with a plain spoken denunciation of the Civil Defense Administration as outmoded, obsolete and wasteful. He was completely right. The Federal Government spends money in a lot of silly ways, but none more so than on this outfit.

YOUNG pointed out what has long been obvious to any sensible person—that mass evacuation from cities is impossible, there is no real defense against nuclear attacks, the present activities of Civil Defense are just so much wheel spinning, and money spent on this bureau is pure waste.

Nothing will be done about it, however, because neither the administration nor Congress seems willing to take such a brutally realistic view of the facts.

YOUNG spoke kindly of the volunteer civil defense workers who have done wonders in time of floods, tornados, and big traffic jams. This, actually, is the only visible sign of real usefulness in the entire civil defense setup. These folks have not only been useful and tireless—they have often been heroic. For that matter, the officials appointed to civil defense have tried to do a job, under impossible conditions, and should not be scolded.

But the main trouble is that no one, from the top on down, seems to know what the job is now, or what it ought to be. They know they don't have the funds to build enormous underground shelters. They know the populace cannot be worked up in peacetime or even cold war, to really take seriously or participate in those absurd occasional drills, when air raid sirens sound. It looks like play acting. Federal employees can be herded out of buildings when the alarms sound, but who else pays much attention?

It may sound hard and fatalistic, but it's far better to face the fact that if we ever get into an atom war and are on the receiving end of a hydrogen bomb, thousands of people are going to be killed. If you're lucky, you won't get it; if unlucky you will, and that's that. Just as thousands of civilians were killed in Britain, Germany, Russia, Japan, and Italy by aerial bombing in the last war.

After the first raids, when nobody really believed he was going to catch it, those people developed caution, and took to what bomb shelters they could devise: Some really heroic firefighting and bomb-demolition work went on. But the public didn't awake or respond until casualties got heavy. That's human nature. That's the way it would be here, too.

The only sensible thing for ordinary people to do is to familarize themselves thoroughly with first aid, home nursing, and other similar facilities provided by the Red Cross. And the only sensible way for the Government to spend money preventively is to subsidize such activities, and organize classes in them, instead of appointing civil defense officials to write directives, paint signs designing special evacuation highways, buy sirens (which couldn't possibly give 5 minutes warning against an ICBM), shuffle paper, and draw salaries.

It is possible for large numbers of men and women to take additional training in first aid, to know how to take care of cuts, wounds, and burns. It is possible for them to give blood for storage against emergency. It is possible to educate them in disaster-relief teams—to go to other nearby cities which might be hot.

The idea that somehow, in this day of missiles traveling 10 times faster than the speed of sound, we could really detect and destroy all of them, or alert an entire population to evacuate a crowded city without panic, is wacky, and most folks know it. Hell's bells, we can't even get home in cars on our main streets when there's a sudden 6-inch snowfall. Nor get ourselves untangled on State roads on summer Sunday afternoons.

The Farmers Union Grain Terminal Association Daily Radio Roundup

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 7, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the Farmers Union Grain Terminal Association Daily Radio Roundup of March 20, 1959.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP OF MARCH 20, 1959

To hear some people talk, farmers are sitting on top of the world. Their income is up, taxes paid, money in the bank, cows in the barn—and new rubber on the tractor. And all paid for, too.

Well, you farmers are the best judge of whether all that is true or not. Are you satisfied with the way things have been going? If you are, it doesn't show. It didn't show up, either in the election last November. That's when farmers turned their backs on administration farm policies and gave the Democratic Party a powerful mandate to develop a new and better farm bill. It was a mandate to oppose, and if possible reverse, the farm policies of the President and his Secretary of Agriculture.

The farmers had patiently tried and tested Eisenhower farm policies for 6 years and found them inadequate. It was time for a change. That's what farmers had in mind.

But how about that change. Is it coming? What is the democratically controlled Congress doing about living up to the mandate voted by farmers? Democratic leaders, along with farm State Republicans who were elected or reelected on an antiadministration farm platform, say they are doing all in their power to honor that mandate. They are determined to develop a new and better farm bill. They believe they can pass such a bill and make it stick. Maybe not the first time, but they say they'll pound away until they succeed.

But as one Democratic spokesman said: "It is only fair to advise farmers that the Congress is working under a blanket of restrictions." First, there is the limitation imposed by the President's veto power. The Democrats and their GOP farm colleagues know that the President will veto any bill they might pass which would do anything to raise farm prices substantially. So that tightens the clamps. No farm bill would get anywhere unless Congress could muster a two-thirds vote to pass it over the veto.

Secondly, Congress is limited in what it can do for farmers by the administrative power held by Secretary of Agriculture Benson. Farmers have seen how good farm programs can be ruined by unsympathetic administration. The power of the Secretary of Agriculture to work against the will and intent of Congress is very great.

But, on the other hand, Congress has the power to slow Benson down by letting the air out of the tires. That's what the Congressmen have done so far and they've hidden the pump. Democrats gave this assurance to farmers: No more price-support cuts, no punitive taxes on farm co-ops, REA will not be turned over to Wall Street, and the drive for a decent farm program will continue because they expect to have a more sympathetic President and Secretary of Agriculture after 1960.

So that's what farm Democrats are saying today. Not all Democrats, of course, because some are not more sympathetic toward farmers than Secretary Benson himself. Fortunately, they are in the minority.

One very good way to keep informed on up-to-the-minute farm developments is to tune in every day, Monday through Friday, to the radio program sponsored by farmers of the upper Midwest through GTA—the co-op way.

The Supreme Law of the Land

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 7, 1959

Mr. ROBERTSON. Mr. President, recently I received a memorandum from Mr. J. Luther Glass, a consultant on juvenile court law and procedure in the Virginia Department of Welfare and Institutions. In this memorandum, Mr. Glass discusses implications of the Supreme Court's school segregation decisions in relation to fundamental constitutional questions. I ask unanimous consent that this thought-provoking article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THOUGHTS TO REMEMBER

(By J. Luther King)

Brown v. *Board of Education*, decided by the Supreme Court of the United States on May 17, 1954, has caused me to do a great deal of thinking on the subject of our basic law, the Constitution of these United States.

Frequent reference has been made to this decision as being the supreme law of the land. Those responsible for this are, to say the very least, guilty of fuzzy thinking. The Constitution could not be plainer on the subject. Article VI, paragraph 2, of that great document uses these bold words:

"This Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of land; * * *."

The above-quoted language makes no provision, or provides any excuse, for any decision of any court ever becoming the supreme law of the land. Assuming that the Court acted within the scope of its constitutional authority, its decision can never be more than the law of that particular case.

But did the Court have a constitutional right to reach the conclusion that was reached on May 17, 1954? That is the question that this article proposes to answer.

The best place to start answering this question is to look at the first paragraph of the body of the Constitution, that of article I, section 1, which is as follows:

"All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives."

Nowhere in the Constitution can we find authority for the Supreme Court, or the Chief Executive to exercise legislative powers. Those powers remain within the Congress alone. The two words, "herein granted," are most important. They are key words, meaning powers granted to the Federal Government by the original 13 sovereign States. A clear understanding of these two words reveals the sort of checkrein the people determined should be held over the General Government. Many great powers were reserved for and retained by the States and the people. This is well stated by a competent court in *Livingston* v. *Van Ingen* (9 Johns. (N.Y.) 507):

"When the people create a single, entire government, they grant at once all the rights of sovereignty. The powers granted are indefinite and incapable of enumeration. Everything is granted that is not expressly reserved in the constitutional charter, or necessarily retained as inherent in the people. But when a Federal Government is erected with only a portion of the sovereign power, the rule of construction is directly the reverse, and every power is reserved to the members that is not, either in express terms or by necessary implication, taken away from them, and vested exclusively in the Federal head. This rule has not only been acknowledged by the most intelligent friends of the Constitution, but is plainly declared by the instrument itself."

The next place where it would be well to take a good, long look is at the 10th amendment to the Constitution. Its language is crystal clear, and reads as follows:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Since the Constitution is silent as to schools or education, it naturally follows that the United States has never been given jurisdiction over this question. There are those who claim that the 10th amendment is outmoded and no longer has any effect. But how could this be true? Has it ever been repealed? It appears that the 18th amendment became somewhat outmoded and was repealed by the adoption and ratification of the 21st amendment. It has also been said that Chief Justice Marshall's decisions killed the 10th amendment. If that be true, why did not Chief Justice Hughes follow the same procedure in killing the 18th amendment?

Now the Court claims to base its authority for outlawing segregated schools upon the provisions of the first paragraph of the 14th amendment. The first sentence of the 14th amendment had only one purpose, to wipe out the effect of the Dred Scott deci-

sion, which, incidently, was one of the soundest decisions ever rendered by the Supreme Court. The second sentence of this amendment is framed in this manner:

"No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

Now let us consider for a moment the language just quoted. Assume for the moment that a very large class of citizens as a group are denied the right to vote. Would not this constitute abridgment of their privileges, or amount to denying them equal protection of the laws? It would certainly seem that way. Could not the Court remedy the situation simply by decreeing that such was in violation of the 14th amendment? You would certainly think so, wouldn't you? But consider that the Negro man found himself without the right of suffrage, and he found his remedy in the 15th amendment. Likewise, the ladies of the country discovered that citizenship, education, high moral standards and interest in good government were insufficient to insure them the right to vote. Did they hire lawyers to acquire their right to vote under the 14th amendment? They did not. They brought pressure to bear which resulted in the adoption and ratification of the 14th amendment.

So, then, it would appear that the Supreme Court has exceeded its authority in the Brown decision. It not only exceeded its authority; it tied its decision to the socialistic views of MYRDAL and to the 14th amendment, about which grave doubts exist as to whether or not it has ever become a part of the Constitution, for the reason that Southern States were blackmailed into ratification in order to get back into the Union.

Would it not then follow, as the night the day, that the only legal way to deny to the States their inherent right to legislate as they see fit concerning school matters would be to amend the Constitution as was done when the 15th and 19th amendments were needed?

One further thought, have you considered the possibility of bringing a suit in the Supreme Court itself, seeking a declaratory judgment as to whether or not the 14th amendment was properly proposed, adopted, and ratified according to the provisions of article V of the Constitution? Read article V and consider how the Southern States were denied representation in the Congress when two-thirds of each House voted upon this proposal; and further, the then composition of southern legislatures, having been at that time composed mainly of ignorant Negroes and carpetbaggers.

Ponder these questions if you seek to understand the basic, fundamental principles of constitutional government.

Excessive Unemployment

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. PROXMIRE. Mr. President, the Nation continues to be plagued by the serious problem of excessive unemployment. This is a very personal type of tragedy in nearly 5 million American homes.

The American people, last November, turned to the Democratic Party to point the way out of the recession. Thus we have been handed a heavy and urgent responsibility.

The Democratic advisory council, keenly aware of this responsibility, has issued an excellent and comprehensive statement on this problem of unemployment. I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the Appendix as follows:

[From the New York Times, Apr. 6, 1959]

Last fall the American people cast an overwhelming vote for the Democratic Party. That vote meant many things.

It meant a repudiation of a tired and weak Republican administration. It expressed a deep and growing concern over our country's unmet needs at home and abroad. Above all, it was a call for action—for strong, positive leadership and programs. And, by their votes, the American people made it clear that they expected that leadership and those programs from the Democratic Party.

The Democratic platform of 1956 spelled out clearly the objectives of our party and the policies and programs necessary to their achievement. During the following 2 years the Democratic advisory council interpreted that platform in 26 major policy statements and applied it to the specific issues and problems facing the Nation.

Of course, we recognize that our program cannot be realized fully while the executive branch remains in the control of the Republican Party. Under our system of government it is not possible to force the Executive to use his great power wisely or well or even at all, against his will. He can fail to propose in all cases and fail to dispose in many. Timidity in the Executive cannot be offset fully by boldness in the Congress. It will require a Democratic President in the tradition of Roosevelt and Truman, working with a Democratic Congress, to place America squarely back on the road to true national progress.

INEXCUSABLE UNEMPLOYMENT

The Democratic Advisory Council is greatly concerned by the critical and inexcusable level of unemployment. This has been tolerated all too long. With unemployment approaching 5 million and with the equivalent of more than another million full-time unemployed resulting from those who can only find part-time work, there is unmistakable evidence that our economy is not functioning satisfactorily, and that immediate corrective steps must be taken.

To those who are employed, unemployment is too often regarded as an annoying Government statistic. But to the 20 million American men, women and children who make up the families of these unemployed, unemployment means suffering, want, fear and loss of self-respect. This is the most critical domestic problem today. No American who desires to work should be denied that opportunity. No national obligation is greater than making available to every person in our country the chance to utilize his skills, his energy and his mind to the fullest.

The principal reason for the disgracefully high amount of unemployment is the failure of the Republican administration to use the great power of our Government as an instrument of economic growth.

INADEQUATE GOP BUDGET

The inadequate and shortsighted Presidential budget submitted to the Congress in January shows that the Republican administration hopes to balance the budget without balancing the economy. It has lost sight of the three basic objectives of our economic system:

First, to achieve a high and steady rate of economic growth.

Second, to use economic means to reflect our sense of national priorities of needs and desires.

Third, to assure economic opportunity and justice for all and a fair division of goods and services.

We are not growing enough.

We are neglecting our great needs.

We are not providing economic justice for all our people.

President Eisenhower's program says that, in order to fight inflation, we must default on all three of these fronts. This is ridiculous.

Our major problem today is that private and public consumption has lagged behind our current productive capacity and that departures from full employment and full production have resulted. This is the condition we must now correct.

President Eisenhower insists that we can save ourselves from inflation at home and from the challenges of hostile governments abroad by spending less. This means that we should try to save ourselves by doing less. Such counsel points the way to disaster. And disaster, at home, is now being suffered by the unemployed and their families.

CITES PARTY BELIEFS

The Democratic Party does not believe in spending for its own sake, but we know that a nation which is doing too little is not spending too much.

We are not doing enough when millions of Americans cannot find work, and when the billions of dollars of goods and services they could produce are being permanently lost to our country.

We are not doing enough when our children have inadequate schools, when 13 million American families are living in substandard housing, when many American men and women are undernourished and when many more have too little or no medical or hospital care available to them.

We are not doing enough when scores of American communities are scarred by spreading slum areas, woefully overloaded public and private services in transportation, waste disposal, and air pollution.

We are not doing enough when our natural resources are being insufficiently developed and insufficiently protected from private exploitation.

And we are certainly not doing enough when our Nation's military defenses are in jeopardy and when we are failing to meet our international responsibilities and our own self-interest in promoting the economic development of the free world.

Legislative programs to meet these urgent needs must be enacted. We recognize that many of them will meet with the opposition of leaders of the executive branch of the Government and that of their counterparts in the legislative branch. Some needed programs may be blocked by this combined opposition. But this expectation should not deter forward-looking Democrats from pressing ahead with the policies and programs so overwhelmingly endorsed by the American people last year.

BENEFITS EXHAUSTED

In the interim, we must meet our responsibility as a nation to the individual unemployed. Approximately 2 million persons have already exhausted both State unem-

ployment benefits and the temporary extension voted by Congress in 1958, or are not covered by such benefit programs. The Department of Labor estimates that almost 200,000 more will exhaust their State unemployment benefits in each month from April through October.

To meet this problem therefore, requires, at the very least, the continuation in full for another year of the temporary extension of unemployment compensation benefits, as enacted in 1958, and its application to those not covered by existing State unemployment compensation systems. The proposal to close out this program by providing benefits for a short period only for those who have already exhausted their State benefits does not even meet this most minimum of requirements.

The temporary extension of unemployment benefits is not, however, the full answer to the individual problem. As our experience of the past year has graphically demonstrated, State unemployment compensation systems are woefully inadequate, both in the duration, and in the amount of the benefits which they provide. It took a Republican recession to demonstrate vividly how far we have gone backward in the matter of unemployment compensation.

In relation to current prices, wage levels, and living standards, many States today provide smaller unemployment compensation benefits than were provided 20 years ago. In a period when business profits are immeasurably greater than they were in the 1930's, the contributions required from employers to finance unemployment compensation are only a fraction of those which were required when the systems were first established, under the force of Federal law. Those few States which have sought to meet their responsibilities in this area have been placed at a disadvantage by the refusal of other States to do likewise.

WOULD ALTER LAW

What is called for here is the reestablishment of the system of unemployment insurance in its intended role as protector of the unemployed and stabilizer of the economy. The Federal Congress in 1959 should follow through on the principle first established in 1936 and condition the exemption of employers from the tax provisions of the Federal Unemployment Tax Act upon the provision by the States of adequate unemployment compensation benefits. Such a program, as contained in bills already introduced in the Senate and in the House (S. 79; H.R. 3547), would cost not 1 cent in Federal appropriations.

We also again urge the enactment of area redevelopment legislation, similar to that vetoed by the President after the 85th Congress had adjourned and which passed the Senate late last month by a narrow margin, with the Democrats voting almost 3 to 1 in favor and the Republicans voting over 7 to 1 against.

Once more we are witnessing callous Republican indifference to the suffering and needs of people who, through no fault of their own, are unable to obtain jobs.

We support the immediate increase of the national minimum wage to at least $1.25 per hour with a realistic broadening of the coverage provided under it to include more than 10 million additional workers.

We also favor an increase in social security and railroad retirement benefits to a realistic level which will reflect today's living costs.

A sound, national unemployment compensation program is critically important and urgently needed today, but in the longer run, it should be regarded as a palliative, not a solution. A healthy, expanding economy, sufficient to meet our national and international needs and responsibilities, is the true solution to the unemployment problem, and to most of our other problems as well.

Fair Treatment for Great Lakes Maritime Workers

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. O'KONSKI. Mr. Speaker, today I introduced a bill which, if passed, would eliminate a terrible and inequitable situation which has repeatedly been called to the attention of the Governor and the State Legislature of the State of Ohio. This bill will provide the necessary remedy by amending section 3305(f) of the Internal Revenue Code of 1954 to withhold tax credits under section 3302 from a maritime employer who maintains the office from which the operations of a vessel are regularly supervised, managed, directed and controlled in a State that does not, on and after July 1, 1961, treat maritime service the same as other service for the same employer.

My bill, Mr. Speaker, if enacted, is adequate to achieve the results desired; namely, elimination of stipulations in State unemployment compensation laws which discriminate against maritime employees by affording them protection against unemployment on terms less favorable than those extended to workers in other covered industries. Illustrative of the form of discrimination which my bill is designed to terminate is that authorized by the Ohio unemployment compensation law, whereunder maritime employment is treated as seasonal and the workers engaged therein are eligible to receive unemployment benefits only during the 9 months of the year in which the Great Lakes shipping industry is in operation—Revised Code Annotated, page 1954, section 4141.33(B).

Under such a provision, a maritime worker who consistently is rehired during each annual 9-month shipping season would never be able to qualify for benefits during the 3-month layoff period.

In addition to singling out maritime workers for this special treatment, even to the extent of distinguishing them from other workers engaged in seasonal employment, Ohio also appears to protect entrepreneurs in the maritime industry from the exaction, in conformity with a merit-rating plan, of a substantially severer unemployment compensation tax than is imposed on employers in more stable trades. Indeed, under the Ohio law, a maritime employer who regularly rehired all of his workers at the end of each annual 3-month layoff period conceivably would be entitled to the highest rating accorded employers with stable employment records, and, correspondingly, to the lowest rate at which Ohio unemployment taxes are levied; to wit, 0.1 percent. By way of contrast, Wisconsin, which subjects employers engaged in seasonal industries to the same conditions as are applied to all other employers, conceivably might impose on maritime employers a merit-rating exacting as high as 4 percent—Ohio Revised Code Annotated, page 1954, section 4141.25; Wisconsin Statutes Annotated—West, 1957, section 108.18 (4); Ohio Board of Review, Decision 655–BR–51, June 18, 1951; Commerce Clearing House, Inc. Unemployment Insurance Reporter; Ohio, paragraph 2000.08; Wisconsin, paragraph 2000.

What is sought to be achieved by the passage of my bill is the enlargement of the power of the Secretary of Labor to the end that he may withhold approval not only of entire State unemployment compensation laws—United States Code, section 26:3304(c)—but also of discriminatory provisions of otherwise certified State laws which affect maritime workers adversely. Upon withdrawal of Federal approval of such provisions, an employer of maritime workers covered thereunder would cease to be eligible for the 90-percent credit allowed as an offset against the Federal 3-percent unemployment tax—United States Code, section 26: 3301, 3302(a)(3)—and would be exposed to the burden of paying in their entirety both the Federal as well as the State unemployment compensation tax.

Foreign Aid Facts and You

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. MASON. Mr. Speaker, my regular weekly letter to the people of my district treats of our foreign aid program and our present national fiscal situation. The discussion of these subjects is pertinent today in the face of the proposed foreign aid appropriation for the next fiscal year.

Mr. Paul Peters has prepared a bulletin on the same subject that gives added information. I include my letter and Mr. Paul Peters' bulletin as a part of my remarks for the enlightenment of my colleagues who will vote soon on the appropriation for foreign aid for the coming fiscal year:

FOREIGN AID FACTS AND YOU

1. In 1948, 450 people were employed to hand out foreign economic aid. Ten years and $41 billion later the foreign aid staff had grown to 12,000 employees directing 2,000 projects. Besides that, 9,000 persons are engaged in the military aid program that has given out $22 billion.

2. A total of $3 billion foreign aid funds has been given to foreign governments to help reduce their national debts and balance their budgets. In order to do this we had to borrow the money and increase our national debt.

3. Two billion dollars in foreign aid has been given to governments that are hostile to the United States—Poland, Yugoslavia, and the Soviet Union.

4. An official report on foreign aid given to oil-rich Iran states: "U.S. aid in Iran, between 1951 and 1956, totaled a quarter billion dollars. This was administered in a loose, slipshod, and unbusinesslike manner, so that it is impossible to tell what became of the money."

5. The much-touted Development Loan Fund is a foreign aid device to loan money on what amounts to second mortgage securities and accept soft local currencies in

repayment. The Development Loan Fund also lends money to American businessmen to build oversea factories to produce goods in competition with American-produced goods. Seven hundred million dollars has already been appropriated, but so far only $400 million has been obligated.

6. India—a country that has received hundreds of million of dollars in aid from us—increased her Communist vote from 4 million to 12 million between 1952 and 1957. Today the Communist Party is the second largest party in the Indian Parliament.

7. Our foreign aid program results in confusion, misunderstanding, and often chaos. After 15 years of giving out $63 billion in foreign aid we are probably the most disliked and envied Nation in the world.

8. More than one-fourth of our national debt of $285 billion has resulted from our foreign aid programs. The annual interest on the foreign aid portion of our debt is $2 billion. Our past and present foreign aid programs amount to 20 percent of all tax money collected from American individuals. So, 20 percent of your Federal tax money goes for foreign aid. Figure out how many of your dollars go for foreign aid.

TODAY'S FINANCIAL PICTURE

Recently Secretary of the Treasury Anderson personally briefed the members of the Ways and Means Committee on the Nation's financial picture and the national debt. In a nutshell the following is the picture:

(a) Our total debt amounts to $867 billion, distributed as follows:

	Billion
Federal debt	$285.0
State and local debt	60.0
Corporate debt	284.0
Individual debt	238.0
Total debt	867.0
This year's budget receipts will be	63.0
This year's budget expenditures will be	80.9
This year's deficit will be	12.9

Our Federal Government is having difficulty today in refinancing Government bonds when they become due. There are two reasons for this situation: First, our Government credit standing is not so good as it was 20 years ago; and, second, the demand for money for industrial expansion is much greater today than ever. Therefore, competition for money is keen.

Other countries are cutting down their national debts while we are increasing ours. Why?

SPENDING FOR FOREIGN ECONOMIC AND MILITARY AID IN 13 POSTWAR YEARS GREATER THAN GRANTS-IN-AID AND CHECKS TO INDIVIDUALS BY BILLIONS

In the 13 postwar fiscal years, 1946 through 1958, inclusive, the U.S. Treasury has disbursed more of the taxpayers' dollars for foreign economic and military than was disbursed as grants-in-aid to State and local governments plus checks direct to individuals for subsidies, relief, and all other purposes, including veterans' benefits.

As a matter of fact, the obvious preference of foreign governments and people over the hard-pressed American taxpayers, probably will be one of the hottest issues in the campaigns of 1960. The issue is already getting so hot that efforts of the Eisenhower administration to dress up foreign aid as a military necessity in support of our national defense efforts or as a method to "contain" communism are not receiving the reception expected. In fact, the record shows that foreign aid has not contained communism, nor has it in any way lessened our own expenditure for national defense.

The table following shows in separate columns by fiscal years, the reported expenditures for foreign aid (grants and credits) and the amounts disbursed here at home as grant-in-aid and checks direct to individuals other than loans for the 13 postwar years:

Fiscal year	Reported gross foreign aid	Grants-in-aid and checks to individuals
1946	[1] $6,904,122,806	$1,209,107,183
1947	[2] 8,523,477,612	1,694,070,076
1948	7,087,000,000	5,551,054,046
1949	7,602,929,206	5,493,710,703
1950	6,338,536,000	5,518,879,345
1951	6,624,286,000	4,850,097,620
1952	5,068,000,000	4,241,158,202
1953	7,030,000,000	4,053,941,794
1954	5,155,410,175	4,284,380,522
1955	4,380,920,377	4,594,669,209
1956	4,473,177,000	5,152,135,647
1957	4,625,000,000	6,468,449,700
1958	4,661,000,000	7,420,709,899
Total	78,351,136,176	60,615,424,066

[1] Excludes loans to several American Republics.
[2] Includes British loan for $3,750,000,000 of which $2,050,000,000 had been disbursed. Excludes subscriptions to International Bank and International Monetary Fund.

Gasoline Price Fixing

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. ROOSEVELT. Mr. Speaker, Subcommittee No. 5 of the Select Committee on Small Business, of which I was and am privileged to serve as chairman, made an investigation during the 85th Congress of distribution practices in the petroleum industry.

In reply to a recent inquiry made by the subcommittee to the Department of Justice, as to actions taken on subcommittee recommendations, we received the following letter:

MARCH 24, 1959.

Hon. JAMES ROOSEVELT,
Chairman, Subcommittee No. 5, Select Committee on Small Business, House of Representatives, Washington, D.C.

MY DEAR CONGRESSMAN ROOSEVELT: In your March 16, 1959, letter you request a brief summary of progress made by the Department during the past year relating to the recommendations made in the interim report of Subcommittee No. 5 concerning distribution practices in the petroleum industry. Your subcommittee recommended:

"1. That the Department of Justice investigate the present influence of consignment, commission, and company operated stations in price leadership, maintenance or fixing, or in price discrimination against independent lessee-dealers, as possible violations of the antitrust laws.

"2. That the Department of Justice Investigate, take appropriate action and report to the House of Representatives as to the legality of suggesting retail prices and of the creation of trade areas by oil suppliers within which they grant competitive allowances or subsidies to petroleum lessees and dealers."

Regarding No. 1 above, the Department during the past year has considered numerous retail gasoline price fixing complaints involving consignment, commission, and company operated service stations by the major oil companies. A number of these complaints concerned the west coast area and were referred to the trial staff handling the case of *United States* v. *Standard Oil Company of California*, the so-called west coast oil case. Other similar complaints from Charleston, W. Va., and New Hampshire were investigated by the Department and further action is under consideration at the present time. On January 12, 1959, the National Congress of Petroleum Retailers, through its general counsel, William D. Snow, Esq., submitted to the Department an accumulation of complaints received by the association involving control of gasoline prices through commission and company operated stations. This complaint named 10 major oil companies and was based upon information received from independent dealers and officials of dealer associations in 20 States and the District of Columbia. It involved approximately 60 market areas where allegedly the major oil companies utilize strategically located high gallonage commission and company operated stations to control retail gasoline prices, including those of independent dealers. This complaint was given immediate and careful study by this office and on February 24, 1959, a conference was held by the Department with complainants from eight States where the practice appeared to be most prevelant. During an all-day discussion complaints were evaluated for the purpose of selecting areas where there appears to be the best chance of developing evidence for antitrust enforcement action. The areas have now been selected and steps are being taken to initiate appropriate enforcement action.

Pending also, as you may know, is a grand jury investigation in Denver, Colo., involving gasoline prices in that area. I cannot comment on this investigation of course since the grand jury has not completed its investigation. As you are aware, we have pending in South Bend an indictment involving retail gasoline prices which was returned on October 7, 1958. This case, *United States* v. *Standard Oil Company, et al.*, as you know, was based largely on information developed at hearings conducted by your committee. A copy of this indictment is enclosed for your information.

Recommendation No. 2 above is being handled by the Federal Trade Commission by arrangement with the Department, in order to avoid duplication of effort and expense. We understand through liaison channels that the Commission has conducted an exhaustive investigation of the practice of suggesting retail prices. Likewise, the Commission has conducted and also has pending investigations involving the granting of allowances and subsidies to certain dealers under its responsibility to enforce section 2(a) of the Robinson-Patman Act.

We have forwarded a copy of your letter to George B. Haddock, Esq., Chief of the Los Angeles office of the Antitrust Division, 1602 U.S. Post Office and Courthouse, Los Angles, Calif., for his comments on your inquiry about proposed legislation relating to the petroleum industry in California. You will be advised further in this matter in the very near future.

Sincerely yours,

VICTOR R. HANSEN,
Assistant Attorney General, Antitrust Division, Department of Justice.

Housing and the Little Fellow's Taxes

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. HOSMER. Mr. Speaker, Columnist Raymond Moley, formerly promi-

nent in Government circles in the New Deal days, pays tribute to the perspicacity of our colleagues, Representatives McDONOUGH, HERLONG, and ALGER, in the following discussion of housing legislation:

[From the Los Angeles Times, Mar. 22, 1959]

HOUSING BILLS REVEAL HYPOCRISY OF LIBERALS WHO SPONSOR THEM

(By Raymond Moley)

The monstrous hypocrisy of the liberal groups now in control of Congress could not be better illustrated than in the omnibus housing bill before the House and the one passed by the Senate in February.

These breast-beating friends of the "little fellow" propose, as they have enacted in the past, a much bigger windfall for rich investors than the alleged benefits they offer in subsidies to the people they claim to help by cheap housing.

GOP HAS OPPORTUNITY

Speeches by three Members of the House, taking less than 10 minutes of the time of the House on March 3 and 9, have opened an issue which, if seized by the President, the Vice President, and the Republican Party, could strip the mask from their political enemies who are trying to win the 1960 election with taxpayers' dollars.

They could also do exactly what they proclaim they want to do—knock the "party of the rich" label from the Republican Party. It is one of the hottest but least understood social and economic issues of our time.

The three Congressmen who opened this lid are men who, by ability and sincerity, have won the respect of every right-thinking individual in their districts. One is a Democrat, the others, Republican. They are GORDON L. MCDONOUGH, of California, A. SYDNEY HERLONG, JR., of Florida, and BRUCE R. ALGER, of Texas.

Certain public-housing bonds, issued by local housing agencies, represent local obligations only. They have back of them the full faith and credit of the United States. This Federal backing gives them their gilt-edged value.

BOON TO WEALTHY

The Federal Government gives them a very exclusive tax-exempt basis, which makes them very attractive to people with large incomes. They are really rich men's investments. They pay a little less than regular U.S. Government bonds—around 3 percent, depending upon the year they are issued.

In the omnibus housing bill passed by the House committee, about $2.6 billion is authorized, and over their 40-year life they will generate $1.9 billion in interest. But to a person of large means, who pays 50 percent or more in income taxes, the tax advantage will be very large indeed.

As an example of the windfall, Mr. HERLONG cited an issue acquired by a large bank to be sold to its clients. While the interest rate on these would be 3.4 percent, the people who get them, provided they have incomes of from $50,000 to $100,000 a year, will realize from 14 percent to 26 percent on their investment. And it should be noted that this range of income is exceeded by a great many people in this country.

These bonds go into the market in competition with regular U.S. bonds, which pay only a little more in interest and which the Treasury is having plenty of trouble in selling. The reluctance of investors must compel the Treasury to pay higher and higher interest on its bonds. This will be an item in the budget which must be paid every year for all those years.

The impact, therefore, will fall on all taxpayers, including the little fellows that the liberals claim they love so much. Thus, the liberals behind this housing bill, just like those who have voted over and over for similar bills, are really soaking the poor to enrich the rich.

OLD DECEPTION

This deception has been going on for a long time, and there have been strenuous protests against it. In 1952, the Chairman of the Federal Reserve Board, W. M. Martin, Jr., said:

"Not only do such issues (tax-free housing bonds) absorb some of the funds which would otherwise supply a market for Government bonds or for mortgages generated by new private construction, but they afford an opportunity for wealthy individuals and corporations to reduce legally their income-tax payments in a period when it is essential that tax revenues be as large as possible."

Some of the mayors who are rushing to Washington to support these liberal housing bills should realize also that these tax-exempt housing bonds go into competition with their own municipal bonds and compel them to pay more and more interest to get money for their own communities. All they can pledge for those municipals is their own faith and credit. The housing bonds have Uncle Sam's endorsement.

It is time that this hoax on the little fellow be thoroughly aired.

Texas Broiler Association

EXTENSION OF REMARKS

OF

HON. JOHN DOWDY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. DOWDY. Mr. Speaker, on March 16, 1959, at Winnsboro, Tex., the following address was made to the Texas Broiler Association by its president, Mr. J. B. McMillan, of Garrison, Tex.:

It has been said that Texas Broiler Association was a voice crying in the wilderness. If that were ever true, it is certainly true no longer. For ever since TBA founded U.S. Poultry & Egg Producer Association in Dallas on Washington's Birthday in 1957, the press of the Nation, including all the great news gathering agencies, scores of great daily and weekly newspapers, practically all farm papers, newsletters, magazines, radio, and TV, have reported the hard-driving TBA efforts in every nook and cranny of this God-blessed land from the Atlantic to the Pacific, from Canada to the gulf.

And when the TBA membership voted to affiliate with our great Food Industry Union, it was considered of sufficient importance to warrant coverage by the aristocrats of press and radio, and we are always getting telegrams from various papers asking for reports on our various meetings.

With all that, it is literally true that wherever the shrill cry of the rooster has pierced the dawn and the hen has cackled in proud triumph, your own nationally known TBA has touched the hearts and won the respect and heartfelt sympathy of countless thousands to become far and away the best known poultry producer organization in these United States. True, there has been plenty of biased reporting, innuendoes, half-truths, insinuations, and outright misrepresentation. But that great mass of mankind whom Abraham Lincoln called the plain people nevertheless brushed aside the malice and sensed the truth behind the great crusade for a fair deal for broiler growers and eventually all farm folks, and came to trust, respect, and applaud the unyielding tenacity of TBA in its fight for economic stability, justice, and fairness in our loved and battered broiler industry. And, if our mail can be trusted, there is no doubt that even now multiplied thousands of prayers for the success of TBA's efforts are ascending heavenward, borne on the wings of eternal hope. And we have strong support in every major broiler-growing area of Texas and in many other States, including Louisiana, Arkansas, New Jersey, Ohio, Indiana, California, Oregon, Missouri, Maryland, Virginia, and others.

Equally significant is the fact that we have been fought as bitterly as we have been fought unfairly by the great mass producing combines whose selfish greed has deliberately wrecked the broiler industry with senseless overproduction. Insane production without regard to what the market can take at a reasonable price. Apply that principle to United States Steel, General Motors, and the other behemoths of American business and every one of them will explode and vanish in chaos in less than 1 year. Nothing yet developed can stand the senseless philosophy of overproduction practiced by our broiler industry's mass producing combines. But there is method in this mass producing madness. These powerful combines are simply trying to destroy the last vestiges of family farm production and then, having the field to themselves, they can make the American housewife repay all their losses and build fortunes that would make the fabled wealth of Croesus pale into insignificance. That is the very essence of monopoly. And make no mistake about it, these mass producing broiler monopolies are as much the enemy of our feed dealers, processors, hatcheries, and smaller mills as they are of us broiler producers on the family farm. Yet far too many of these smaller industrymen who depend upon the family farm growers have allowed themselves to be misled by propaganda put out by these vicious and evil mass producing combines who are determined to destroy not only the farm growers but those industrymen who serve the farm growers as well. We have always preached and argued that the broiler industry was a closely knit economic unit and that the well-being of each segment demanded the cooperation of all. We still stand solidly on that principle and are, and have always been, eager and anxious to cooperate for the benefit of us all. For in true cooperation lies the salvation of us all. So when you hear me cussing the industry, remember that I am talking about the powerful mass producing combines and not the honest feedmen, processors, and hatcherymen, all of whom are marked as victims of these evil and destructive combinations, just as we are.

And remember that it was your own Texas Broiler Association who first dared to brand these powerful mass producing combines as vicious and destructive monopolies, enriching themselves on the blood, sweat, and tears of multiplied thousands of unoffending broiler growers and did so on a great national platform from which some of the most powerful Members of the Congress of the United States also addressed the poultry producers of the Nation and pledged support for an economically sound and stable industry. From that moment onward, TBA has been feared and hated by these vicious monopolistic wreckers of a great industry because they know that we have turned the fierce white light of public opinion on the almost incredible abuses so long practiced.

As a matter of fact, we are proud of most of our Texas broiler industry leaders for it is a well established fact that most of our troubles come from beyond the borders of Texas. The Texas industrymen deserve commendation and I am happy to commend them for their efforts to cut down senseless overproduction of broilers, even though their action proved to be shortsighted and unwise, resulting in dismal failure and serious injury to all segments of our industry. I refer to the fact that in 1957 Texas tried to

cut down the stupid and ruinous overproduction but the mass producing combines in other States, as usual, took advantage of our good intentions and increased their already swollen overproduction more than enough to offset the Texas cutback. Thus, while Texas fell from second to fifth place in broiler production, the mass producing combines boomed and national production of broilers rose by some 21 percent, totally wiping out the Texas reduction and keeping the industry in economic chaos and spreading ruin for thousands of growers and their friends, the feed dealers and smaller industrymen. Texans are accustomed to advance and when we fell from second to fifth place in broiler production, it hurt all Texas. It did not help the growers. It did not help the industry. It helped only the arrogant, mass producing combines who created all the chaos in the first place.

Therefore if the industry had cooperated with Texas Broiler Association in its continuing efforts to stabilize the broiler industry on sound economics and good business, not only we but they too would have been far better off and Texas would have been able to have held its rightful place in broiler production thereby benefiting us all as honest and sincere cooperation is always bound to be beneficial to any group that has the courage to practice it. We are still ready and willing to cooperate with all segments of the industry and we hope that our friends in the industry will see both the necessity and the justice of helping us establish a good working relationship with all segments of the industry.

But the Texas industry effort to reduce ruinous overproduction, mistaken and unwise though it proved to be, nevertheless proved once more the absolute correctness of TBA in its insistence all along that the broiler industry was national in scope and therefore a national problem which no State, not even Texas, could solve alone and that nationwide action was required.

Although TBA has thus far failed to win cooperation, we have never stopped fighting for the great principles for which we have always stood. We have also realized that the broiler industry is so vast and so concentrated that only the Government or the great family of organized labor are strong enough to bring stabilization, justice, and sound economics out of the appalling chaos existing in the broiler industry. Thus, denied help and cooperation from our own industry we turned to the great food industry union, Amalgamated Meat Cutters and Butcher Workmen of North America, AFL–CIO and, in this 63 year old union, we found as fine a group of men as it has ever been my good fortune to meet. Able, helpful, sincere, hard-working, and dedicated men, it is an honor and a privilege to know them and to work with them in the great task before us. When we went to them for help, they generously extended a helping hand and have shown us more consideration, more helpfulness, more sincerity, more understanding of our problems and more Christian brotherhood than we had found in the entire broiler industry and all the industry dominated poultry organizations in the United States put together. And if you will read the constitution of our union, I know you will agree with me that any man or woman who lives up to the high standards set forth is not only a patriotic citizen but a good Christian man or woman in every sense of the word. And in the charter, are the important words: "The autonomy of the union is hereby granted and recognized." That means, my friends, that whatever is done in our broiler grower union will be done by broiler growers, with each member having an equal vote. It necessarily follows that our broiler grower union will be as good or as bad as we broiler growers make it and if we fail, we cannot blame it on any one, certainly not on the international union. It is strictly up to us and if we do our part, success is certain and we and our children will enjoy a sound and stable broiler industry for generations to come. And our part is simply in joining our union and then voting and supporting it, thus making it an effective and powerful organization backed by the economic and political might of 18 million members of the great family of organized labor. No farm group in the history of American agriculture have ever had such a great opportunity as broiler growers now have and, if you support this union, it will be the dawn of a new day for all farm groups, for the eyes of the Nation are watching us as they have never watched any farm group in history. It is our opportunity and our responsibility. Therefore let us take time by the forelock and seize opportunity while we can. For, if we let this pass, we will never have another chance to save our broiler house and equipment investments or to get decent pay for our work.

Now just what is a union? Well, a union is simply a group of people associating themselves together for the benefit of all and operating on the tried and true democratic principle of majority rule. That means that when we growers have decided an issue by majority vote, we will be backed by our own great Food Industry Union with 397,000 members all over the Nation. And that is not all for we are a part of the powerful AFL–CIO and can depend upon the support of this great organization with more than 18 million members. Now just think a moment about that 18 million members with whom we broiler growers are now privileged to stand on equal terms. Why do so many men and women stand solidly together year after year? The answer can only be that there is great good in the union and that each and every member actually benefits from his or her membership. Think a little further and you will realize that most of these 18 million union members are heads of families and, say there are four people in the average American family. That would be 72 million people enjoying direct benefits, security, and protection from the union in their daily lives. Thus, nearly half of all our people enjoy direct benefits from unions while millions more enjoy indirect benefits such as a higher standard of living, better economic conditions and better pay. Indeed all the people in our Nation enjoy manifold benefits from the economic security unions make possible. That is why we are proud, honored, and grateful to be a part of our great Food Industry Union, the amalgamated.

Moreover, working men and women are not the only people who believe in the principles of unionism. Try to find a doctor who does not belong to the American Medical Association. Try to find a lawyer who does not belong to the bar association, which is nothing more or less than a lawyer's union. And, if you do find a doctor who does not belong to his association or union, you will find an outcast in his profession no matter how brilliant he may be. And if you happen to find a lawyer who does not belong to the bar association or lawyer's union, you dare not hire him for even should he win a favorable verdict for you, the higher courts would throw it out as was done recently right here in Texas. And even our good friends, the bankers, with all their vast economic power, find it necessary to organize and you can be sure that they have very powerful organizations, which are, after all merely bankers' unions. Now, if organization helps the banker, how much more would it help the broiler grower? If the doctor and the lawyer need organization, with all their special training and skill, how much greater is the need of effective organization for broiler growers? Look around you, the banker, merchant, doctor, lawyer, factory owner, bricklayers, schoolteachers, even ministers of the gospel all have organizations to protect their rights and bring security. Now, ask yourself the question: If all these people need unions, how can we broiler growers hope to survive standing alone?

No, ladies and gentlemen, there is no substitute for effective organization and, if we want the good life, with good pay and all that goes with good living for ourselves and our children, we must organize and stand solidly together for the enduring benefit of us all. There is no other way. And as an organized group, you can do anything you want to do so long as it is honest and reasonable. Unorganized, you will remain helpless and exposed to every wind that blows.

In conclusion, let me humbly urge that you take advantage of this God-given opportunity to become a member of the most effective organization ever developed by man, the great family of organized labor, yet privileged to run your own broiler grower union without interference.

So let each of us put the old shoulder to the wheel and begin now to make things happen the way we want them to happen and the way to do that is join your own TBA broiler grower union today and then ask your friends and neighbors to join for the quicker we can get a few hundred more members, the quicker we can begin to get things done. The initiation fee is only $5 and the regular dues will not begin until the membership has voted on what those dues shall be. That is the democratic union way. Join today. I thank you.

Industrial Michigan Faces New Age

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. McNAMARA. Mr. President, a newspaper in my State, the Detroit Times, has been making a notable effort to clear away the lies and slanders that have been perpetrated about Michigan recently and to get at the real truth.

The Detroit Times has not been doing a "whitewash job" in presenting the facts. One article, for example, notes that Michigan has perhaps been lagging in developing the scientific and basic research brainpower that is needed to cope with the new age.

Yet, the article shows that Michigan has already taken great strides to correct that deficiency. I ask unanimous consent that this article, from the Detroit Times of Friday, March 27, be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE LAGS ON SCIENCE

(By Jack Pickering)

It may be that the traducers of Michigan have missed the most significant criticism that might have been lodged against the State from the standpoint of economic development.

That is research and scientific brainpower.

In this direction Michigan is, indeed, lagging.

"Lagging" does not mean that Michigan is at the bottom of the heap. Michigan is far from that. In some respects Michigan is outstanding in scientific forethought. In

some respects she is so-so. In some respects she is behind the eight ball.

The best way you can sum up the situation is to say that Michigan, up to the last few years, has been adequately supplied with scientific brains.

Now, in the morning of a new kind of age, Michigan has allowed too many other areas to leap too far ahead.

It hasn't hurt very much—yet. But unless something is done soon, the consequences will become more and more obvious.

Yet now comes the most encouraging sign of what otherwise would be a dark outlook: The effort to correct this situation already is in progress, and the effort started before the "man in the street" was even aware of the problem.

The Governor's science advisory board includes men who, without question, are among the truly thoughtful leaders of scientific thinking.

In a word, their opinion, now taking form, is that if Michigan is to earn its rightful share in the future, it must start developing new products and new industries.

To develop these, somebody must invent or discover them.

In a word, what Michigan needs is more research. More scientific study.

We'll get back to that in a minute, but first let's just remember Michigan's history in this century.

Michigan has been the automobile capital, the shrine city of mass production. Automobiles grew to such a fabulous importance that Michigan neither wanted nor needed—nor could have handled—many other industries.

It was a big enough task just keeping up with the demand for more cars.

Now, for the first time (the Great Depression was a painful interlude but not a milestone) the automobile industry has reached its adulthood.

That doesn't mean it won't produce even more cars in 1965 than it did in 1955. It probably will. But it no longer can keep growing at the rate of its infancy and youth. It is grown up.

With continued growth of population, and with automation, Michigan must find other work for its people to do.

That is why, among thinking people, the real issue today isn't any of the incidental criticisms which are being nurtured so noisily by outsiders.

The need is new ideas and new knowledge. The ideas for new industries rarely leap full-grown from concept to useful products.

Some man, working for the sake of knowledge alone, uncovers a new fact. Einstein evolved the mathematical formula for translating matter into power, but it was years before anyone split an atom, and still more years before splitting atoms became a bomb, and even more years before fisioning atoms became useful power supplies.

By the nature of Michigan's development, the State for decades has not been hungry for basic ideas. It had one—the idea of a horseless carriage! for half a century it has taken the utmost in ingenuity and skillful management to make the most of that basic idea.

Now, at last, it is time for some additional ones.

How does Michigan stand in producing thinkers—and laboratories in which to do their thinking? Not especially well.

We have six colleges and universities which are doing a pretty good job of training students. A pretty good job. University of Michigan is, indeed, one of America's great universities. But it isn't the "Athens of the West" that some overenthusiastic Ann Arborites once tried to tell themselves it was.

We have Wayne State University, University of Detroit, Michigan State University, all producing engineers and science graduates—and one educator gratuitously commented that MSU's activity in this line is much underrated.

Western Michigan University and the School of Mining and Technology at Houghton are not to be forgotten, either. We have some good schools.

And yet, at the same time, Michigan is a strange mixture of strong and weak points. U. of M. ranks third in the United States, exceeded only by Massachusetts Institute of Technology and California Institute of Technology, in defense projects being handled for the Government.

Yet Michigan schools are graduating only about 100 bachelors of science in electronics, when the State needs at least 1,000 a year.

Curiously, in the important field of physics, the big Ann Arbor campus has only about three dozen undergraduates specializing in physics—yet has several hundred graduate students taking advanced work.

The implication is unavoidable: Michigan has skilled teachers and excellent laboratories, yet people from other States are more interested than we are in making use of them.

You have proof right there that for whatever reason, Michigan residents in the mass are not making adequate use of the facilities we already have.

Now let's look at a different phase, yet related. Last year the National Science Foundation awarded 389 first-year graduate fellowships. These are awarded to topflight students, and they are allowed to go to whatever schools they choose.

Only eight came to Michigan; 230 went to the notable schools of the east and west coasts.

A significant resignation was announced only last week. Dr. J. Earl Thomas came here nearly 4 years ago to head the physics department at Wayne State University. But he has resigned and will leave at the end of the present session. He came here with dreams of building an outstanding physics department; he found, he says, too little interest in such a goal.

True, Wayne State has its financial problems, but Dr. Thomas said that the worst lack was a lack of enthusiasm, a lack of dreams which could be achieved, a lack of respect for intellectual curiosity and scholarship in too many high places.

He is getting more money to go to an electronics corporation in Massachusetts, but the money hasn't taken all the sting out of his failure to achieve what he wanted to achieve.

What is his feeling as to the reason for Michigan's seeming lack of interest in a scholarly approach to science? He thinks it is a price Michigan has paid for its greatness as a mass production center.

"Too much of the attitude," he says, "that everything must be immediately useful in the automobile business. Too little patience or respect toward basic ideas, and an absence of reverence for scholarship for its own sake."

Don't let that word "reverence" mislead you. Don't make the mistake of thinking that this physicist is demanding that people bow down to an academic symbol.

For Dr. Thomas is not an ivory-tower idler. Only 40, he worked on the atomic bomb at Los Alamos, helped develop rockets at Cal Tech, is currently doing work for the Navy.

You don't develop new products, new methods, new industries out of thin air, he insists. You accomplish these concrete benefits by a pattern that has proved itself over the centuries. The scholar finds a new fact, not necessarily having the slightest idea what it is good for.

In due time somebody finds a use for it. But there isn't any shortcut. Omit the basis, and the rest is futility.

Or if you want to hear the same thing by somebody else, take a reference from a preliminary report from a subcommittee of the Governor's advisory committee on science.

The committee members are worth noting carefully: George J. Huebner, Jr., Chrysler research engineering chief and the man who headed the team which developed the Chrysler missile program and ultimately lofted America's first satellite; Dr. Michael Ference, physicist and head of Ford's research laboratories; Dr. L. A. Sweet, Parke, Davis research director; Dr. Winston Kock, of Bendix; Dr. Lawrence Hafstead, GM vice president and the man who discovered a characteristic of neutron emission which is what makes nuclear powerplants possible, instead of merely bombs.

These men, obviously, have one foot in each of two worlds: The scientific world, and the business world. So mark this from their report:

"Half of all products now manufactured in this country can be traced directly to a research laboratory, and profitability of many of the others rests on research.

"Our high standard of living and our growing economy in the United States are no longer based on natural resources and fortunate geography, but on scientific research."

Thomas and other scientists are bitter at the remarks of some so-called "practical" men who sneered at research in the past.

C. E. Wilson's remark is one: "I agree with Boss Ket: 'If you show me a piece of basic research, I'll show you something useless'."

Or Kettering's proud announcement that he had a sign outside his laboratory, "Leave all slide rules here before entering."

Or even Henry Ford's objection to sending his son to college—although there are some who suspect Ford, as was often the case, wasn't sneering at knowledge so much as he was suspicious of the rah-rah attitude that once seemed to be the outstanding characteristic of campuses.

Even since the war at least one atomic energy laboratory was disbanded by a top-ranking Michigan executive because he could see no immediate sales possibility from understanding the atom more fully.

But lest this recital of past mistakes seem depressing, look at the other side of the coin. The auto companies, once so sure that the practical side was all that counted, now have influential representatives—see the committee list above—insisting on research as the key to the future.

Note that Michigan (led by Walker Cisler, of Detroit Edison) is in the forefront of peaceful atomic power, with the construction of the Enrico Fermi plant—and don't think that is being built by some tinkers with wrench and tinsnips. A powerful team of mathematicians, physicists and engineers are doing it.

Burroughs, Upjohn, Parke-Davis, Bendix and a host of others are showing how research builds business.

For still a further point, admitting that Michigan has need of stimulating its interest, and respect, and activity in science, is there still time for Michigan to catch up? Has Michigan, in fact, slipped?

One highly reliable index to the economic health of any community, nation or state, is its use of electric power.

In the 10 years 1947-57, Michigan's kilowatt-hour consumption rose 8.8 percent.

Eleven Western States increased 9.8 (California rose 9 percent, while New Mexico and Nevada, with a lot of catching up to do, rose 15.8 and 16.9).

New York showed only 5.8; busy New Jersey 8.3 which still didn't match Michigan; the New England States 6.7; Ohio a lusty 12.4 although other Midwest States ranged from 5 to 7; Kentucky-Tennesse-Alabama-Mississippi, 16.7, indicating quite a surge there.

It might not hurt, however, to keep this in mind. You don't just buy good scientists, or hire them away from somebody else, or pick them off trees. You train them, from schoolboys on up.

And while Dr. Thomas is understandably disappointed in his own experience here, his present viewpoint is objective and interesting:

"I came here because I knew that Detroit industry had to have basic science to support it. This still is so. Industry goes where the ideas are. If Michigan wants part of the aircraft, or jet engine business, what better way is there than to design better air frames or engines here? Incidentally, it puzzles me to hear so much about gas turbines in the automotive field, yet there seems to be no effort to design jet engines—and General Electric gets contracts instead.

"However, there are some promising things about Detroit, too.

"One is its population. It seems to me that Detroit, instead of being a melting pot, is more of a marble cake, with so many nationality groups all remaining separate entities.

"At the same time, this may be a very important factor in its way. This reverence for scholarship that I mentioned—it is very strong in Europe and other parts of the world.

"I think that may be why the east and west coasts, being more exposed to other nations, and their thinking, have acquired more of this attitude toward scholarship. There is nothing that foreign-born parents like so much as to see a son become a scholar.

"The hope of Michigan lies with the people. Not the native-born leaders, but the people."

Annual Report of the New York Civil Defense Commission

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. JAVITS. Mr. President, the New York State Civil Defense Commission has recently published its annual report. The report reflects the philosophy of the civil defense program in New York State, and presents the case for a greater awareness of the potential dangers that confront us. I ask unanimous consent that the foreword of the report be printed in the Appendix of the RECORD, as I deem it worthy of the attention of my colleagues.

There being no objection, the foreword was ordered to be printed in the RECORD, as follows:

FOREWORD

The annual report for 1958 marks the completion of 8½ years that the present civil defense program is in operation in New York State. Despite its origin in wartime, it has now become a continuous peacetime program reflecting recognition by the Federal and the State Governments that civil defense, like military defense, constitutes a bulwark of our national security and is, therefore, an essential element of everyday life.

As the year comes to a close, two questions appear uppermost in mind: What has been accomplished in the past year? Where are we heading in the coming year? The second of these is the most important, for nothing can be done about the past; but, it is within our power to do something about the future.

Reviewing the accomplishments of the year toward attaining an effective civil defense, several major developments stand out. One is that the State civil defense plan and the 12 target-support area plans were completed; and that city and county plans and in the case of the latter, also town and village plans, are in the process of completion. The other development, ensuring the progressive improvement of the Nation's civil defense, was the promulgation by the President of the national plan for civil defense and defense mobilization.

Thus, the broad general civil defense doctrine on the Federal and State levels has been firmed up, and the course of action that needs to be taken is now clearly defined. In the latter connection, New York State has already moved to coordinate its efforts with those of the Federal Government.

The preparation of the written plans did not introduce any basic changes in the concepts underlying the work of the Commission and the local civil defense organizations up to the present time. The approach adopted by the Commission from the outset has been fundamentally sound; and, with few minor changes, our planning policies and principles have been kept up to date in line with new requirements. While the written plans, which consolidate and reflect the latest thinking, serve a useful purpose in enhancing civil defense efforts in the immediate future, there is no need to break sharply with the past, lay new foundations, and begin our work anew.

What will be required, however, is a more intensive effort in familiarizing ourselves with the contents of these plans and in making the doctrine universally known throughout the State. With the written plans as a basis, manuals and other detailed guides have been developed for use in training. This step will enable us to test our plans and also to apprise the organized civil defense forces and the population as to what our problems are and what needs to be done to resolve these problems.

Since there is a broad definite thread of continuity in our civil defense program, the work which is planned for the future should not be difficult to grasp. We need only to examine past accomplishments to disclose the gaps which exist and then to chart the new areas of civil defense activity on which we must embark.

Coupled with the day-to-day efforts to advance our civil defense preparations is another important job which we must undertake. Those of us who have been in civil defense over the years know and appreciate its vital importance. There are others who need to be convinced. True, civil defense has not been accepted as readily as military defense; therefore, we have the job of winning this acceptance. This we must achieve if we are to gain the wholehearted cooperation of the entire population without whose support and assistance civil defense can never be fully adequate.

There still prevails to strongly the idea that all our national security requires is to build up and maintain military retalatory forces. It is difficult to understand how we can conceive of full retaliation if, with the first blow against us, our homefront will be unable to withstand and deal with the effects of initial attack.

Today, national survival depends on the timely availability of weapons superior to those of the the potential enemy. It also depends on the capability of the homefront, which will be a primary battleground, to measure up fully to the exigencies of modern war. One cannot do without the other.

With soundly based National and State plans, defined responsibilities, and tested procedures, civil defense can now proceed to present a genuine deterrent to an enemy's plan to overwhelm the American people by terror. Americans will be able to survive, get on their feet and fight back. This is the objective of a well-organized civil defense.

Until such time as nations will give up war as a means of settling disputes, we will live under the threat of war.

Modern arsenals of war now consist of weapons armed with an explosive potential measured in millions of tons of TNT. Nuclear explosives are so plentiful that a number of nations now possess sufficient quantities to carry out any military action they may desire.

Delivery systems—that is, the manned aircraft and ballistic missiles—have been perfected to the point where their numbers are now simply a matter of industrial production capability. Guidance systems have been improved to the point where any target, wherever located, can be attacked.

Underlying these developments is the salient fact that offensive capabilities are outstripping defensive capabilities. According to our military leaders, there is no assurance of a perfect defense which an enemy could not penetrate.

We are confronted, therefore, with the prospect that we might have to live in a state of siege, with the enemy operating from bases thousands of miles away.

Urban concentration is the heart of modern civilization. Our very existence is centered in highly complex and interdependent communities. While this system of living has brought us untold benefits and has enabled us to achieve the highest standard of living in the history of mankind, it is also the source of grave potential danger in that in any attack on the United States the concentration of population and industry will become the most inviting and convenient focal points of attack.

In any future war that nation will win whose people are prepared to and can withstand the shock. This can be accomplished only through recognition of the problem which will confront us in any future war and through advance preparations to cope with the dangers that will face us. The means through which we can achieve such preparations is civil defense.

A misconception prevalent among many of our people is that civil defense is something apart from our daily lives and our Government. Actually, civil defense is our Government and our people at war. It must be recognized as a way of life, and must be fully integrated into our governmental structure.

In war as in peace, the safety and welfare of the people are entrusted to the regularly constituted local authorities. The mayor's responsibility as chief executive does not cease because of war, nor does the responsibility of the chief of police for the maintenance of law and order, nor, for that matter, does that of any other official within his sphere of authority. However, because of the impact of war, many normal duties will have to be expanded and new duties added.

Civil defense, then, involves all of Government plus the additional facilities and personnel which will be required to enable us to take care of the added burdens imposed by war.

The concept of civil defense has undergone tremendous changes since World War II. Its mission is the same—advance preparations preattack to insure adequate preparations before an attack; to bring assistance to stricken areas following attacks, to keep production going in support of the war effort; and to lay the basis for recovery when hostilities cease.

Adjustments, however, have been made in our approach to civil defense to meet the new requirements created by the new weapons and delivery systems. These ad-

justments conform to the changes which have taken place in military defense.

The basic pattern of civil defense evolved in recent years is geared to meet the various contingencies dictated by modern war. This pattern provides for effective arrangements to warn the people against impending attack; for training people in what to expect in the event of war and keeping them informed of the progress of hostilities during war; for laying the basis of various types of evasive action they can take, depending on the warning time available; for a shelter program; for permitting the marshaling of all available resources and capabilities for postattack disaster rescue and relief operations; and, finally, for instituting measures promoting recovery and restoration following attack and the cessation of hostilities.

Civil defense is essentially a "package" type of operation involving all phases of remedial action which can be taken under the circumstances. Sound planning requires that we prepare for the remote as well as the highly probable contingencies. We have made constant strides in all of the courses of action, except shelter. Here, a special effort must be made.

With the possible warning time being steadily reduced by speedier instruments of delivery and the increase in the destructive yield of weapons, the need for adequate shelter is ever more apparent and becoming even more urgent. Shelter will afford protection to some degree against all of the destructive effects of nuclear weapons—heat, blast, and radiation.

As a parting word, there are two points which I would like to emphasize. One is that civil defense preparations should not be turned on and off depending on the temporary state of international relations. When tensions become critical it will be too late to do something about civil defense preparations. The program is too broad and inclusive to permit its adequate development at a moment's notice even if a crash program were undertaken. Like military preparations, it must be continually developed and maintained; and its development should be such that, if any need arises to put civil defense into immediate effect, it will be done quickly and with effective results.

The other point is leadership. In view of their magnitude and complexity, adequate civil defense preparations require the best in leadership. It is no small job that can be conducted as a secondary effort. One needs only to examine existing civil defense plans to see its far-reaching ramifications. Coupled with this is the fact that civil defense preparations require financial outlay. We must use what we have, but we must not terminate or impede civil defense preparations on financial grounds. Obviously, this also calls for an outlay in peacetime. These expenditures need not be on as extensive a scale as the military, but we should not begrudge the price of a modern missile-bearing submarine in order to keep our civil defense going.

C. R. HUEBNER,
Director.

President de Gaulle of France on the Berlin Crisis

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, on March 25, President de Gaulle, at his press conference in Paris, offered some profoundly significant observations in noting that two-thirds of the inhabitants of the earth lead a miserable existence, while certain peoples have at their disposal what is necessary to insure the progress of all. He asks what is the use of the dangerous wrangling over West Berlin and the German problem. For in our time, he says, the only quarrel worthwhile is that of mankind. He invites us to vanquish misery, to abolish poverty through international cooperation, and suggests that this should be the primary subject for the agenda of possible East-West conferences.

I commend to the attention of the Members the following official transcript of President de Gaulle's remarks:

The crisis opened by Soviet Russia on the subject of Berlin plunges the world into grave anxiety.

Three closely related questions are put by Moscow:

The possibility of measures which would raise an obstacle to the movement of American, British, and French military elements between West Berlin and the Western Zone.

The destiny of the German people, which would be profoundly affected by the formal separation of Germany into two states and by the fact that the former capital of the Reich would become incorporated in territories under totalitarian dictatorship or subjected to conditions which would lead to this servitude.

Finally, neutralization of a zone in Europe of which Germany would be an essential part.

Let us add that the Soviet Government, in pressing the West to open negotiations on the fate of Berlin and on a peace treaty with the two Germanys, made it known that it envisaged transferring its rights and responsibilities regarding the city to the Pankow (East German) authorities. In this case, the goings and comings of American, British, and French forces would have to be made in agreement with Pankow, a situation which Washington, London, and Paris would find themselves forced to recognize.

Should the Western Powers see the way barred to them and should they want to open it by force, they would come up against Soviet troops stationed in East Germany who, we have been told, are not there to play marbles.

This being so, it might be thought that France wishes to profit from the crisis and, joining the move to split the German people, insure for herself, at the expense of that country, advantages parallel to those which the Soviet Union seems to wish to seize for herself. That is a policy that others have been able to practice toward an unfortunate neighbor.

It is not only policy. If the present Germany seemed dangerous to us, then no doubt the memory of trials suffered by her actions and the desire to prevent their recurrence would motivate our demands. But Germany, as she is, in no way threatens us. We even think that with her capabilities, her energy, her resources, she constitutes an essential element in the life and progress of Europe and the whole world.

Even more, as is normal for two old adversaries who have given up fighting and destroying each other, France and Germany have resolved to cooperate. On this point, the policy of Chancellor Adenauer coincides with ours. Quite recently, Mr. Segni confirmed to me that it was also that of Italy.

We shall thus support nothing which would be such as to lead the German people to despair or to compromise its peaceful future or to wreck the hope which, after so many shocks and tears, has arisen on both sides of the Rhine.

One might think, on the other hand, that France might consider keeping out of the quarrel. Being without means of action, that is to say of destruction, equal to those in the hands of the Americans and the Russians, and thus, without the power to try and impose her policy, she might endeavor to keep outside the conflict and, should it come to that, out of the war. This would amount to France, in an attempt to keep her life, giving up her reasons for living. But also this would be to destroy the Atlantic alliance, and alliance which is unimaginable without the participation of France.

Thus nothing except atomic war could prevent Soviet domination from spreading over all Europe and all Africa, before it went on to cover the rest of the world. After which, the human race, or as much of it as would have survived, would everywhere be given up to the oppression of dictatorship and to the frightful upheavals brought about by dictatorial trends and leaders.

We prefer to maintain the alliance until the day when the future of peace is assured.

We hold it necessary in the first place that America, Britain, and France should not agree to allow anyone to put obstacles in the way of the comings and goings of their troops to and from Berlin. As a result of the victory, as well as of arrangements concluded in the past with Soviet Russia, the three powers have the right of passage. If anybody opposes this, they and all others who might come to support them would commit an act of hostility toward the Western Powers and would thus be responsible for the clashes which could follow.

As regards the fate of the city itself, we note that those of its inhabitants who have the opportunity to express their views are unanimous in wishing it to stay Western. For this reason and for others, we would not allow West Berlin to be given up to the Pankow regime.

Furthermore, we are not prepared to recognize this regime as a sovereign and independent state because it could not have been born and could not exist except by virtue of the Soviet occupation and because of an implacable dictatorship.

From the point of view of the foreign relations of the French Republic, we cannot put on the same level, on the one hand, this arbitrary construction and on the other, the German Federal Republic, where citizens say, read, and hear what they like, come and go as they please and, in complete freedom, elect their representatives and their government.

The reunification of the two parts into a single Germany which would be entirely free seems to us the normal destiny of the German people, provided they do not reopen the question of their present frontiers to the west, the east, the north, and the south, and that they move toward integrating themselves one day in a contractual organization of all Europe for cooperation, liberty, and peace.

But, pending the time when this ideal can be achieved, we believe that the two separated sections of the German people should be able to multiply ties and relations between themselves in all practical fields. Transport, communications, economic activity, literature, science, the arts, the goings and comings of people, etc., would be the subject of arrangements which would bring together the Germans, within, and for the benefit of, that which I would call "Germanness" and which after all is common to them, in spite of differences in regimes and conditions.

As regards turning Germany into a neutralized territory, this extrication or disengagement in itself has no meaning for us which is of any value. For if disarmament did not cover a zone which is as near to the Urals as it is to the Atlantic, how would France be protected? What then, in case of a conflict, would prevent an aggressor from

crossing by a leap or a flight the undefended German no man's land?

What narrow strip would remain between the Meuse and the ocean, in which to deploy and use the means of the West? Certainly, we are supporters of the control and limitation of all weapons of war. But, in order for these measures, apparently humanitarian, not to risk leading to our disappearance, they must cover an area deep enough and large enough for France to be covered and not, on the contrary, exposed.

On these different subjects and on others, I do not see, for my part, any objection of principle to the opening of negotiations, whatever precedents there may or may not have been. M. Couve de Murville would thus attend a conference of foreign ministers, should one be held.

If it were to develop that that conference, after thorough examination of the problems, succeeded in sifting out the elements of an agreement on important points, then, with Premier Michel Debré at my side, I could myself take part in a meeting of those charged with the supreme responsibilities of the great powers.

But it is clear that, in order to achieve something worthwhile, it is necessary to prepare the topics for discussion in such a forum, and discussions must be carried out in a peaceful atmosphere. In this matter, I am in complete agreement with what President Eisenhower said recently.

On this serious occasion, France feels qualified to speak clearly and calmly. First of all, because she has no feeling of competition or animosity toward the Russian people. Quite the contrary, she has a real and traditional friendship. In the next place, for the reason that in the matter of Germany, which is the stake in the crisis, she has been able to master her grievances and, taking into account the changes which have occurred there, to consider this country not as an enemy, but as a partner.

Lastly, because France herself does not yet have atomic bombs, and, unlike the three others, is not subject to the obsession of launching her bombs before those of the adversary have been able to accomplish their mission. In short, France looks at the present crisis in her own way, with clarity and even with impartiality.

That is why, speaking in her name, I am sure of speaking the thoughts of more than 2 billion human beings who think as she does. Because of, and in comparison with, the risks run by our species and of the immense human tasks that we could and should accomplish in common, any summons which might be addressed to the West with a view to obtaining abandonment by intimidation would be hateful and absurd. When, in both camps, everything is arranged so that means of destruction, capable of annihilating continents, could be unleashed in the space of a few seconds—at a time like that, creating a state of tension, such that any error, any incident might unleash the cataclysm, would be trantamount to presenting the very existence of humanity with an unpardonable challenge.

When two-thirds of the inhabitants of the earth lead a miserable existence, while certain people have at their disposal what is necessary to ensure the progress of all—what is the use of the dangerous wrangling over West Berlin, the East German Democratic Republic, and German disengagement?

For, in our time, the only quarrel worth while is that of mankind. It is mankind that must be saved, made to live and enabled to advance.

We, who live between the Atlantic and the Urals; we, who are Europe, possessing with Europe's daughter America, the principal sources and resources of civilization; we, who have the means to feed, clothe, and house ourselves and to keep warm; we, who have mines and factories going full blast, well-tilled soil, railways where run numerous trains, roads choked with cars, ports filled with ships, airports full of aircraft; we, all of whose children learn to read, who build many universities and laboratories, who form armies of engineers and technicians, who can see, hear, read what is of a nature to satisfy the mind; we, who have enough doctors, hospitals, medicines to ease suffering, to care for the sick, to ensure the life of most newborn infants—why do we not erect, all together, the fraternal organization which will lend its hand to the others? Why do we not pool a percentage of our raw materials, our manufactured goods, our food products, some of our scientists, technologists, economists, some of our trucks, ships, aircraft in order to vanquish misery, develop the resources, and help in the work of less-developed peoples? Let us do this—not that they should be the pawns of our policies, but to improve the chances of life and peace. How much more worth while that would be than the territorial demands, ideological claims, imperialist ambitions which are leading the world to its death.

It seems to me that this should be a primary subject for the agenda of possible East-West conferences. In case of agreement in principle, it would evidently be necessary to draw up a common plan of organization and implementation.

If we should hold a summit conference this year, I would be ready to speak of it with my friends, Mr. Eisenhower and Mr. Macmillan, and I hope that Mr. Khrushchev, whom I met some time ago in Moscow in the entourage of Stalin and who has come a long way since then, will be willing to take an interest in it.

Question: "How do you feel that the situation has developed in Algeria since last year when you offered the 'peace of the brave' to the Algerian rebels?"

There have been 130 years of vicissitudes in Algeria. For 4 years and more now, fighting and attacks have not ceased. We are living in an age when, on this earth, a gigantic organization is militating everywhere against the West, while the West often neglects to look after itself. We are witnesisng a turmoil which, inside the Moslem world, sets many Arab countries against foreign peoples, many states and parts of states against others of the same race and the same religion, and many leaders against other leaders who, like themselves, and yet against them, claim to be the champions of unity. Under these conditions, I doubt that anyone has ever been able to imagine that peace and prosperity would come all of a sudden to a torn Algeria, or that all that was necessary, at the height of a persistant fever, was to shout down one slogan with other slogans in order that all the internal and external causes of the present war should disappear as if by magic.

Personally, I do not think that, and I never say it. On the contrary, I believe and I say that the destiny of Algeria depends upon a task of long duration, the task of a whole generation performed under conditions and in a spirit that are completely new and that are aimed at enabling Algeria to reveal herself to herself and to open herself to the world as it is. I believe and I say that such a task is inconceivable without the presence and the action of France. I believe and I say that France has made her resolve, that she is now following a clear and firm plan and that, while endeavoring to achieve pacification as soon as possible, she is working for a transformation that will enable Algeria to find her new self.

What has been done for this transformation? This is what has been done in 8 months:

From the political point of view, the way of equal and universal suffrage has been opened for the first time and forever to the Alegrians, giving them the means of expressing their true will. Irreversible measures have established a single college for all women and men and given the Moslems the largest proportion of elected representatives in every kind of election. It was on this basis that the referendum, held last September, showed that the vast majority of the Algerian people trust me to secure for them peace, liberty, and dignity and to act so that Algeria will thereby remain linked to France. Legislative elections were held in October. The Algerian municipalities will elect their councils next month. Later, the general councils [of the departments] will be elected. Doubtless it may be objected that the war situation interferes with the objectivity of these various elections. It is nonetheless true that they are taking place, that the nature and the composition of all representative bodies have been profoundly altered by comparison with what they were and that thus the Algerians are henceforth ensured of self-determination as peace is gradually restored. That is a revolution if ever there was one.

With regard to economic development and social conditions in Algeria, anybody can see for himself that the implementation of the industrial and agricultural plan of Constantine has been started and that the Premier has just called attention to this fact. As it sometimes happens that France and progress share the same luck, by a happy concidence, the exploitation of Saharan oil and gas have just given Algeria the necessary means for getting things started. Algerians, take a look at your country as it still is. Soon, I promise you, you will see a very different Algeria.

From the point of view of education, the number of Algerian schoolgirls and schoolboys increased last year, will increase this year and in each of the years to come by hundreds of thousands so that, before 10 years have elapsed, all the children will be going to school. At the same time, a great effort is being made to train professional, technical, administrative and military personnel. And what value should be given to the number and importance of human relationships, which are constantly becoming more numerous between all France and all Algeria? In these relationships, the Army—in which, I might mention in passing, serve 110,000 Moslems—plays a major role. Intellectually, socially, morally, Algeria is in a period of gestation. A body of young people is emerging there, which includes those who have fought on one side or the other—young people who will want to see the birth and growth of a new Algeria, that is to say, a modern, educated and fraternal Algeria.

As this new Algeria takes shape in body and spirit, her political destiny will appear in the minds and in the votes of her children. I am sure that the Algerians want and will want this destiny to be tied to that of France and that the latter also wants and will want it, because this fits in with the nature of things, with common sense and with sentiment. This is a magnificent task which calls for the efforts of all the Algerians, of all the communities and of the French of France. By comparison, the desperate continuation of combats and attacks appears each day more absurd, because this continuation no longer seems to have any justifiable aim and therefore can lead only to hatred, misery and death.

Yes, blood and tears still flow; yet, Algeria and France are marching together toward the future—a future which, I assert, will belong to everyone and in which no door will be closed.

In Dixie: Mob Action

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Camden Chronicle, Camden, S.C., March 22, 1959:

IN DIXIE: MOB ACTION

Ironically enough, news the past few days on the racial issue front—news of the violence-and-trouble variety—has all come from Northern States.

In Michigan, Delaware, Indiana, New York, and Pennsylvania, everyone is supposed to be happy integrated—if you believe the professionals who specialize in stirring up racial conflict and disorder.

In those States there may be integration, but it appears to be far from happy.

Take, for instance, the situation in Detroit where white policemen are accused of staging a slowdown strike after they were assigned to ride with Negro policemen in squad cars.

Before March 1, Detroit's police patrols had operated on a segregated basis. That is, a car was occupied either by two white patrolmen or by two Negroes.

A new police commissioner took over. Evidently he's one of those commissioners with political ambitions. He ordered mixing.

So white patrolmen slowed down their rate of writing traffic tickets and otherwise registered oblique protests.

The commissioner got tough. "Racial integration is here to stay," quoth he. "Anybody who doesn't like it better resign right now." He had some takers. Probably he will have more when other white patrolmen line up new jobs.

In Wilmington, Del., a Negro family moved into a formerly all-white neighborhood. What was described as a "crowd" gathered in front of the Negro residence. Stones were hurled through windows. Firecrackers were exploded. Police were forced to erect barricades and stand guard.

If any such thing had occurred in the South, the headlines of Northern newspapers would have been knee-deep chronicling what angry Dixie mobs were doing.

At Evansville, Ind., a Negro preacher went into a barbershop. He wanted a shoeshine. The proprietor told him, "We don't give colored people shines in this shop." He called the police. The preacher was charged with disorderly conduct.

The city court dropped the charge, although the prosecutor said there was a "valid basis for the charge." He added, however, that "a criminal court is not an appropriate forum for resolving complex questions concerning integration in public places."

What if that had occurred in South Carolina or Georgia? The town would have been overrun by NAACP lawyers, FBI agents, assorted do-gooders, and the usual posse of trained seals from the bleeding-heart integrationist press.

School integration isn't progressing too well even in New York City. Fifty persons, including Negro preachers, staged a demonstration outside the Brooklyn Board of Education's offices.

What was their complaint? Too many schools still have pupils of only one race, or only a scattering of Negroes. They want districts rezoned so more white children will be forced into Negro schools, and vice versa.

And there was more trouble at that housing parade, famed in film and story, Levittown, Pa. A white pastor offered moral support for a Negro couple whose move into the white community had caused protest. His church lost 30 members. He resigned.

What if that had occurred in the South? You can imagine what the northern headlines would be saying, and how the "telly-V" commentators would be telling the Nation, ever so ponderously, how the fate of the Nation was at stake.

All these instances underscore the fact that southerners are far from being alone in contending that forced integration represents a denial of individual right of association in schools, business and private life.

They also demonstrate the fact that forced mixing causes rioting, violence and ill will, since there are no such troubles in South Carolina and other Southern States where the fact of segregation's basic wisdom is accepted by the vast majority of both races.

Welfare State in Action

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Indianapolis Star, Saturday, March 21, 1959.

WELFARE STATE IN ACTION

A picture of Indians of the Six Nations picketing the White House probably attracted no more than a curious glance. But the next time you are traveling in a part of the country where there is a major Indian reservation, give it more than a curious glance. Give a thoughtful look. There, but for the grace of God, sit you, or we.

But for the grace of God, and the independence of a lot of ancestors who figured they would work things out for themselves rather than look to the Government to take care of them.

The Indians were not given as much choice about it. For more than 170 years—though considerably less in the case of some tribes which were less tractable than others—the all-providing guardian of the reservation Indians has been the U.S. Government. In any case since well beyond the memory of any living elder, the reservation Indian has been the beneficiary of a cradle-to-the-grave welfare state administered in Washington.

What is the result?

In Mississippi the Jackson Clarion-Ledger and Daily News recently looked to the Choctaw Indians, whose reservation is there, for an answer. A missionary called the Choctaws the most poverty-stricken group in the Nation. The only serious challenge we can think of to that statement might come from those who would claim that the distinction belongs to some other reservation tribe. This condition has been developed under generation after generation of management of economic affairs by Federal experts. It is to such management as this that the welfare enthusiasts want to turn over the entire American economy.

The missionary critic said the adult Choctaws average a second grade education. An Indian Agency official said this wasn't so, that the Choctaws have a fourth grade average. The Federal Government, from the beginning, has been responsible for providing education for the reservation Indians. This is the same Government which the Federal aiders say must plunge into all American public education at once, to save it from disaster.

The last school census showed some 91,000 Indians of school age. A third of these were in public schools, off the reservations. Nearly 8,000 were in mission schools. About half of the rest were in federally provided schools. On the Navajo reservation alone, in the Southwest, there were 15,000 school-age children not in school. School facilities were not available for them. It is to the Federal Government, which has had the responsibility for reservation schools from the beginning, that the Federal-aid enthusiasts now want the whole country to look for money and example in providing adequate schools. What an example.

The tuberculosis death rate among the Choctaws is put at five times the national average. The infant death rate is termed three times the national average. The Federal Government is and has been responsible for hospitals and medical care for the reservation Indians. The welfare staters want to turn over the health of the entire Nation to the mercies of a bureaucracy with a record like this.

These are, to be sure, examples from the worst of the Indians' experience. Many Indians, either in groups or individually, now live just as well as anyone else. But they haven't done it under the care and feeding of the Federal Government. These are the ones who have succeeded in taking over the management of their own affairs, or who have left the reservations, or who have been so fortunate as to have oil turn up under their tribal lands.

Take a long and thoughtful look at the tribal groups which have continued to depend on the wisdom and benevolence of Federal paternalism. You will see what all America would be like a few generations from now if the welfare state planners should succeed in taking over.

Let's not let it happen. Let's chuck the welfare state, with its security and its benefits, into the ash can where it belongs. Let's go back to the principles and practices of individual initiative. They built a nation out of a wilderness. They can keep the Nation going forward to ever greater heights of freedom and progress.

Our Senior Citizens Deserve Better Treatment

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. ASPINALL. Mr. Speaker, as I am sure most of my colleagues know, I have been a strong advocate of the Townsend plan for national insurance throughout my career as a Member of the Congress. It is a matter of pride to me that the Colorado delegation, to which I have the honor of belonging, has invariably cooperated 100 percent on those occasions when a discharge petition was employed in an effort to bring this legislation to the floor.

I consider it a privilege to speak in this Congress in behalf of H.R. 4000, the current Townsend bill, which now resides within the jurisdiction of the Committee on Ways and Means.

I sincerely hope that this committee will see fit to issue a favorable report on H.R. 4000 when this Congress is called upon to consider revision of our social security program. The amendments it proposes are, in my mind, long overdue.

Many of my constituents were rather badly disappointed with the social security amendments of 1958, and I must say that I can hardly blame them. The 7 percent increase we voted for beneficiaries of old age, survivors, and disability insurance, and the few additional dollars we appropriated for recipients of old-age assistance constituted a pitifully inadequate solution to the problems which our senior citizens must face every day of their lives.

It is a sad but true fact that these problems too often tend to be ignored or overlooked, not only by the whole of society, but here in Congress. And yet it is Congress, and Congress alone, to which these people must look for a solution.

I suggest that our basic approach has been erroneous. Last year, for example, we satisfied ourselves with a so-called cost-of-living formula. We were told that since the last social security benefit increase, the cost of living index had jumped by eight points, and so, as a curious compromise, we settled on a 7 percent increase in benefits. On the surface, this seemed to be a not unreasonable solution. But the real crux of the matter lay beneath the surface. The truth was that the original benefit level was so absurdly low that the tiny increase we authorized served only to perpetuate an existing evil. What I am saying is that a small percentage increase at the poverty level does little more than bring poverty up to date, and the amelioration is so insignificant as to be virtually nonexistent. Our social security fabric needs a complete overhaul. Repairs on a tiny percentage scale are like patches on a worn garment.

As we all know, the Department of Health, Education, and Welfare has exhibited no fondness for a realistic benefit level; indeed, at hearings during the previous Congress, Department spokesmen made it abundantly clear they favored only minimal improvements. The Department has time and again reiterated its contention that the system must be kept solvent, and that any benefit increases must be related to the program's financial capabilities. It is impossible to quarrel with this logic. But it is equally impossible to accept as final the notion that our vastly wealthy Nation has strained its resources to the point where no further improvements can be made in our social security structure.

I suggest we have been the victim of partial truths. There is, to be sure, some evidence that the present social security system has matured to the extent that little further growth seems feasible—at least within the cost range that people will tolerate. But this does not mean there is no better system. The fact is, a better system does exist.

The better plan is H.R. 4000. It is better because it can do the things the social security program cannot do, that is, pay higher benefits to more people without the risk of insolvency, and at same time assure that retirement benefits will at all times bear a realistic relationship to living costs.

It is quite natural that as benefits under the present program grow more and more expensive, the Congress will grow increasingly reluctant to increase them. I believe we have just about reached that point. It is time now to take a long, hard look at the system itself. If we can find a more economical way to pay the higher benefits our senior citizens deserve and need, then certainly we are morally obligated to give it close and careful scrutiny.

For this reason I urge the Committee on Ways and Means to consider H.R. 4000 as the next logical step in the development of our country's social security pattern.

The Plight of the Cities

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. KENNEDY. Mr. President, the distinguished senior Senator from Pennsylvania [Mr. CLARK] once again has called attention to the plight of America's urban communities. In an excellent article entitled "A Voice for the Cities," which was published in the March 7, 1959, issue of The Nation, he points to the need for a greater recognition in the councils of government, of urban problems. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A VOICE FOR THE CITIES

(By Senator JOSEPH S. CLARK)

This is a land of milk and honey and money.

We have become accustomed to a gross national product and a rate of private expenditures which are, in the old Hollywood phrase, "merely colossal." But our schools are deteriorating, traffic is strangling our cities, slums are spreading quicker than we can eradicate them, and in the midst of affluence there is poverty. Seven million American families are existing on incomes of $2,000 a year or less.

Our failure to face and deal realistically with these problems amounts to a kind of paralysis in our public life. The scope of our action is determined not by a forthright analysis of the facts which all admit, but by preconceived limitations growing out of inertia and outmoded thinking.

Last November's election was, I am convinced, an indication of profound public discontent with the way things are going. Americans voted for candidates of both parties who appear to look to the future and not to the past. If we interpret the voter's mood accurately, complacency with present-day America cannot be the mark of the current Congress.

My own discontent, when I look at our public scene, rises for many reasons, but the one about which I perhaps feel most keenly is our failure to recognize and deal with the change which has transformed us from a rural to an urban nation.

Simply because of the economics of housing, the continuance of our present cities is assured for the immediate future. For some time the rate of new housing construction has been insufficient even to take care of our expanding population and to replace dwellings which burn or are demolished. The prospect for the future shows little chance of improvement. People will continue to live in cities for the simple reason that there is nowhere else for them to go. There is grave question, of course, as to what kind of cities they will be, but in any case they will continue to house at least as many people as they now do.

Even with the most optimistic assumptions as to urban renewal, we can expect to house in our central cities only 17 million of the estimated total population increase of 55 million in the next 20 years. Thus, at least two-thirds of our population growth must be housed outside the core cities of our metropolitan areas. In other words, the metropolitan explosion cannot be stopped.

So we are going to have central cities and rapidly growing fringe areas which surround and swallow many smaller cities. Within another generation, the remaining gaps will be filled in the continuous urban and suburban belt reaching from Portland, Me., to Alexandria, Va. The problem is to make these urban concentrations as civilized an environment as possible.

What is wrong now is familiar to all of us: The decay of the older areas of central cities; blight and slums; the flight of the middle class to the suburbs; the vicious circle created as talented people desert the central city, leaving a leadership vacuum filled by those less skilled culturally, economically, and politically. And, on the other hand, the often barren life in the suburbs—inadequate community organization, the haphazard provision of services through inadequate special districts, and the oppressive problems of transportation and communication (traffic bottlenecks, lack of downtown parking) resulting in strangulation of the commercial areas of the central cities.

Yet a visitor from outer space, looking at the structure of our Federal Government, would conclude that America is still a rural Nation, with rural problems its dominant concern. We have a Department of Agriculture, which devotes itself to the problems of the farm; we have a Department of the Interior, which reflects the interests and needs of the more sparsely settled States; but there is no department with responsibility for the problems of the tens of millions of people living in forced congestion in metropolitan areas.

City people, too, need an advocate in Washington. To illustrate; The Senate became disturbed last year about the plight of the Nation's railroads. The Department of Commerce was concerned; so was the Interstate Commerce Commission. The Commerce Committee of the Senate has a standing subcommittee with jurisdiction over railroads. So it organized a study. Those of us who have been worried about a related problem—namely, the plight of the commuter and the deterioration of mass transit in the cities—tried to make sure that urban mass-transit problems would be covered in this study. The answer was no. States rights intervened.

No department of the Federal Government has any interest in what should be done about commuter-transportation services. No committee or subcommittee of the Congress has any jurisdiction. Yet mass transit is not merely a State and local problem. Much of the traffic crosses State lines. Some of the railroads involved serve many

States. Let's face it—State and local governments are incapable of dealing successfully with this problem in most localities—just as urban renewal was generally beyond their competence until the Federal Government stepped in.

Maybe the ultimate answer is that mass transit should not be a Federal problem, even in part. Maybe the same applies to air and stream pollution, and water supply. But what concerns me most is that, at the present time, we don't even have the mechanism for examining such problems, comprehensively and making intelligent national decisions.

I believe the first step should be the creation of a Department of Urban Affairs at Cabinet level with the responsibility of keeping abreast of urban and metropolitan problems and developing recommendations for Federal, State, and local action. The department would represent the urban viewpoint in the administration of nationwide programs which particularly affect cities and their suburbs—notably, highways and water conservation. It would be assigned—initially, at least—only those operating programs which are peculiarly urban, and these are already clustered in the Housing and Home Finance Agency. But the department, to my mind, would be something far beyond the present HHFA. The additional element would be a "hunting license" to study, research, and recommend, and a responsibility to listen to representatives of groups like the HHFA, understand their problems, and reflect that understanding in the policy-forming processes within the executive branch.

I have seen the criticism that a new department should not be formed until a philosophy of Federal-State-local relations is agreed upon. I think the logic points in just the opposite direction. Governmental philosophies do not spring full-blown into being; they evolve. But they cannot evolve unless someone in government has responsibility for thinking creatively about them. We will get the philosophy far more quickly if we establish the mechanism first.

In 1957, speaking at a convention of the American Institute of Architects, I responded to the question, "How can the city be restored?" by suggesting that three things are needed: more money, changes in political structure, and elimination of political lag.

First, money. Our central cities are in mortal danger not only through strangulation from traffic congestion but through financial starvation and attrition. The city, still the hub and nerve center of its area, must provide more and more services at increasing costs not only for the people who live in it, but also for those who work in it, use its facilities, but no longer vote, live, and pay taxes there. Moreover, the people who can best afford to sustain the increasing costs of maintaining and improving the city's facilities are the very ones who have moved to the suburbs.

Some recently published figures on the Washington area illustrate this point. They reveal that the average family income for families living within the District of Columbia in 1956 was $4,900; but in the immediate surrounding area it was $6,773, more than one-third higher. In nearby Montgomery County, Md., it ranged up to $7,735. I suspect the same relative income levels hold true for similar areas.

As the city's costs go up, its tax resources go down. Those who move in are poorer than those who move out. Morover, in the competition with State and Federal Governments for tax revenues, local government comes off a poor third. Business, looking for lower tax rates, is following the flight to the suburbs. The city is left with the problems of providing the needs and services required for civilized living without the money to cope with them.

I don't believe the way out of this financial dilemma will come through local taxing systems—even as they may be revised. Wealth is too unequally distributed; its location bears too little relation to the need for services. Hence the property tax is unfair and relatively unproductive as well as relatively inflexible. And there is hardly any other kind of tax available which can be administered well on a local basis. Local sales taxes drive business outside the taxing jurisdiction. Graduated income taxes have been largely preempted by State and Federal Governments.

There are only two alternatives. One is to establish a new level of government, a fourth layer, that will correspond geographically to the new community, the metropolitan area. The other is to use the larger judisdictions that already exist: the State and Federal Governments, which in practical fact means the latter, since States are as limited in their financial resources as the cities.

All the evidence I have seen indicates that, despite the current outcry, the Federal budget is less of a strain on the national tax base than local budgets are on local tax resources. Since 1946, State and local taxes per capita have risen three times as fast as Federal taxes; State and local debts (a rough measure of the excess of need over resources) have also risen much faster than the Federal debt. This is why it seems to me that the economy campaign now being waged by some powerful organizations is totally misguided when directed against those parts of the Federal budget which would relieve the burden on local taxpayers—for example, Federal aid to education. Equally misguided have been the administration's cuts in urban renewal, which is a splendid example of something that could not be done at all if the communities had to rely on their own tax resources.

The second obstacle to restoration of the city is obsolete governmental structure. The legal and political framework in which we struggle to provide for the city of the future is sometimes our own worst enemy, when it should be our greatest ally.

What would we do if we were the Founding Fathers, and were creating a national political structure in this year 1959 instead of 1787? Of course, we would still create a Federal system, but would we have 49 States—plus Hawaii—with the present boundaries? Of course not. We would pay attention to the natural boundaries of social, economic and political communities and regions—we might even try to make boundary adjustments from time to time as conditions change.

But we are the captives of the mistakes, as well as the beneficiaries of the wisdom, of the Founding Fathers and their successors. We can't do much about illogical State boundaries in our lifetime. We can only try to moderate their effects.

In the meantime, there is a great opportunity for political invention at the local level. Instead of the unimaginative labyrinth of special and ad hoc bodies created in our metropolitan areas, let's continue to search for new approaches to metropolitan government. The need is great. I favor such developments as those being worked out in Toronto and Atlanta, in Dade County, Fla., and Allegheny County in Pennsylvania. And, in seeking larger jurisdictions, let's use intelligently the larger jurisdictions that already exist—the county, for instance; or for problems which cross county lines, the State; or for metropolitan problems that are characteristically interstate, the Federal Government.

If this last month sounds like a dangerous invasion of our honored tradition of local home rule, consider what's happened in highways. Very few of our communities had made any real start in building the metropolitan highway system of the future until the new Federal highway program was enacted. Now superhighways within metropolitan areas are an accepted part of the interstate system. Communities have the wherewithal to get these highways built, yet local control over the location of the highways is not truly lessened. City authorities participate to the full in these decisions. Under Federal leadership we have improvised a de facto metropolitan structure for highway-building which is working.

The same evolution is evident in regard to metropolitan water supplies. Municipal water supply has already become an important factor in Federal river-development projects; eventually, it may be the major factor. And because of the multipurpose use of water today, it may require a river-basin governmental agency to coordinate various consumer uses.

But to use our higher levels of government as we should in the solution of urban problems, two other political reforms are required:

1. We must bring the State legislature up to date, so that the tail of the rural counties stops wagging the dog of our huge urban populations.

2. We must reorient a Federal Government superbly equipped to deal with the nineteenth-century problems of agriculture and natural resources, and hardly equipped at all to deal with the urban society which today it largely represents.

A Federal Government which does not pay as much attention to urbiculture as to agriculture, to the conservation of cities as to soil, to the movement of people and goods within as well as between cities, is not adapted to today's America.

The third obstacle to restoring the city I have called a political lag. Thomas Jefferson warned that "the laws and institutions must go hand in hand with the progress of the human mind:" We must overcome the lag that separates the politician from the planner. The successful politician leads the people as well as reflects their views. Overcoming political lag means educating not just the politicians, but the public as well.

I don't suggest that creation of a Federal Department of Urban Affairs will determine whether the good society will survive. But I think it can be the focus for efforts to restore our cities—perhaps our greatest challenge in the age-old battle of man to control and shape the environment in which he lives. The struggle between man and his surroundings—both those he found and those he made himself—is the stuff of which history is made. Along the path of this struggle, civilizations have come and gone.

And in many ways, the city is civilization. It is more than form; it is substance, life, spirit. Streets, buildings, and facilities exist for a purpose; they came into being because people need them to lead the type of existence which they preferred to any other.

And the desire to live in cities, the desire for urban culture—these will continue as long as civilization lasts.

Economic Conditions in the United States

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. SCOTT. Mr. President, the recent annual report of the United States Steel Corp. contains a very forceful statement by Robert C. Tyson, director and

chairman of its finance committee, which I believe warrants wider comment and study. It is not confined to a defense of our capitalistic system, but is rather an analysis of profits, their function, importance and necessity in an economic structure, dependent upon continually expanding employment.

I ask unanimous consent to have Mr. Tyson's statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the Record, as follows:

PROFITS—THEIR FUNCTION

(Statement by Robert C. Tyson, director and chairman of finance committee, United States Steel Corp.)

United States Steel and its management have long realized, as recorded in previous annual reports, that United States Steel—its employees and its stockholders—can prosper only as its customers and the Nation as a whole prosper. The combined good or ill fortune of its customers affects United States Steel in multiplied fashion. The percentage swings in United States Steel's business from one year to another are roughly double those of the Federal Reserve Board's index of industrial production.

Steel being cheap, durable and serviceable in so many ways is a principal material used in creating the Nation's tools of production—plant, equipment, construction, transportation, and the like. Hence United States Steel's business responds especially to investment in new tools of production. United States Steel's direct interest in new production investment is but part of what is, or should be, a widespread national concern. For it is only as the Nation's tools of production are kept sufficient and efficient that the Nation can either expect to enjoy economic progress with its rising standard of living, or hope to survive in a position of leadership in a troubled world.

Of relevance, too, in view of the unemployment that exists, is the truism that the only way that a new self-sustaining productive job ever comes into existence is that savings are invested in tools of production. This creates the environment in which men may go to work producing the marketable values to cover their continuing wage and the investors' profit.

In America people do not invest savings in job-creating tools of production unless they thereby expect to gain a profit in so doing or to diminish a loss otherwise to be incurred. The American competitive enterprise system is an acknowledged profit and loss system, the hope of profit being the incentive and the fear of loss being the spur. Since some two-thirds of all employment in America is furnished by corporations, it is of deep concern to observe how greatly over the years the corporate incentive has been undermined. This may be noted by comparing the compensation of employees in the Nation with the corporate profit through which so great a part of the employment is maintained and new productive employment inspired.

The fact is that over the past decade there has been a sharp downward trend in the relative position of profit in the American economy. This trend has already cut the profit incentive approximately in half. Thus, as may be seen the chart, corporate profits just before and shortly after World War II ranged from about 12 to 14 percent of the Nation's employee compensation. Since then the percentage has shrunk to about 7 percent. Most employees realize that the only true job security they have is that their employers can make profits and so continue to hire them. In terms of this measurement the margin for job security has been cut about in half.

Almost everybody "believes" in our competitive enterprise system. But may have misconceptions of its nature and function and so lend at least passive encouragement to those who would either bargain away, tax away, or regulate away profits, all of which efforts have something to do with the undermining of the profit incentive which has taken place.

PROFITS AND INFLATION

A principal pretense about profits, proffered primarily by labor union leaders, is that corporate profit rather than cost-push wage inflation is responsible for price inflation. This attitude ignores recorded facts. What the Nation's prices must cover, if production is to continue, are the costs and profits of producing the goods and services that constitute the net national product. The principal official components of that product, as determined by the U.S. Department of Commerce, are: The compensation of employees, including employer contributions for social insurance and other employee benefits; taxes on business, including corporate income taxes; the income of unincorporated enterprises—proprietors; and the profits of corporations.

The net product increase, for example, from $221 billion in 1947 to an estimated $400 billion in 1958. Of the $179 billion increase, $125 billion was attributable to increase in employee compensation, $27 billion to increased taxes and $27 billion to increased income of unincorporated enterprises—proprietors—and miscellaneous items. There was no increase in the 1947 corporate profit component of $18 billion. To have kept pace with the rise in the combined other components since 1947, corporate profits in 1958 would have had to be about $34 billion, as contrasted with the all-time high in 1956 of $23 billion.

It is indeed curious reasoning which contends that rising prices are attributable to corporate profits—the only major component of net national product that did not increase—instead of to the wage and tax components which account for about 85 percent of the increase.

A profitable economy is actually less susceptable to inflation than one in which profits are meager. Shrinking profits and mounting unemployment go together, invoking, as most recently witnessed in 1958, inflation-threatening Federal deficits.

BIG PROFITS

Perhaps the most widespread misconception about profits is that a big profit, by whatever convenient measurement, is unfair and should therefore somehow be confiscated for other purposes—be they higher wages, bigger taxes, or lower prices. But the fairness of a profit, or of a loss, is never to be determined from its arithmetic magnitude, but only in terms of the fairness of price, wage, and other transactions of which it is the mere arithmetic consequence. In the American tradition fair dealings are those into which there enters no element of dictation, compulsion, or intimidation. If they are honest and voluntary, they must be deemed fair and beneficial by the participants who otherwise are free not to undertake them—and so also must the profit or loss result be deemed fair.

DIVIDENDS

Among other misconceptions about profits is the notion that stockholders get all the profits of corporations. They do not. All the money that stockholders ever get from their corporations (except in the event of dissolution and distribution of assets) are the dividends declared to them. Dividends are a relatively small but exceedingly vital part of the Nation's income. They are small—they average only about one-twentieth as much as the national compensation of employees, and the trend in this ratio over the past decade or more has been slightly downward. They are vital because on that slender thread of income to compensate those who have risked their savings to provide the tools of production depends the functioning of the American economy. They, like spark plugs in an automobile engine, are a tiny part of the whole mechanism, but one without which the whole mechanism fails. Abolish profits and dividends through taxation or otherwise and out of the ensuing chaos would inevitably arise some sort of socialistic dictatorship. In view of this it is as sadly surprising as it is socially foolish that corporate income paid in dividends should be double taxed—first as earned, and again when transferred to stockholders as dividends.

INCOME REINVESTED IN BUSINESS

Another fallacy is the belief held by some that the remaining part of income, which we designate "income reinvested in business," represents a stagnant pool of purchasing power that has been siphoned off from the economy and which in the general interest, should somehow be forced back into circulation. It is a viewpoint sometimes urged as justification for bargaining, taxing or regulating away profits. But nothing could be further from the truth, and that the idea is given any public credence at all probably stems from accounting terminology which labels this remaining part as "undistributed profits" or "surplus." The people who compile the figures understand very well that income reinvested in business does not represent an accumulated pool of cash purchasing power. Income reinvested is a tag which, for convenience in keeping track of things, is put on part of the money which has come into, flowed through, and for the most part, already passed out of the business as an expenditure for tools of production or other assets that are needed to operate the business.

PROFITS AND CASH FLOW

That there is no pool of purchasing power to be raided for any purpose can be readily demonstrated by the recorded facts of United States Steel. To establish this truth United States Steel has aggregated for the 13 years, 1946–58, the conventional items of its income statement and other items relevant to the cash flow. The compilation discloses that although receipts from customers were $41,344 million, the increase in cash was only $20 million—and this despite the fact that $1,391 million was recorded as income reinvested. To have had even this little increase in cash United States Steel had to secure $750 million from the sale of its bonds, common stock, and property. The simple fact is that income reinvested is a representation of purchasing power that has been expended rather than of purchasing power accumulated and available to be tapped.

The principal reason that income reinvested represents purchasing power already expended is that cash spent for new tools of production was $1,493 million more than the $2,473 million of wear and exhaustion of facilities—depreciation—recorded as cost. Of this excess, over $1,050 million was the extent to which recorded depreciation was deficient in recovering the buying power originally invested.

USES OF INCOME REINVESTED

Corporate income reinvested, like dividends, constitutes a very small part of the Nation's income flow; but, like dividends, it is an exceedingly vital part of that flow. It has numerous functions to perform.

In periods of inflation a first claim on income reinvested is to make good the deficiency in depreciation and so to preserve the enterprise. Under the tax code and presently accepted accounting principles the depreciation cost is based on the number of dollars originally paid—often long ago—for the depreciable asset. But as the buying power of the dollar declines, the depreciation amount becomes less and less adequate to cover the cost of equipment that must be purchased if the company is merely to stay

even. During inflation, depreciation recovers the dollars originally expended, but not the buying power represented by such dollars, and income reinvested is thus called upon to do part of the job that depreciation ought to do. The extent to which income is preempted to perform this stay even function has appropriately come to be called phantom profit. In the case of United States Steel, as previously noted, the depression deficiency due to inflation over the years 1946–58 amounted to over $1,050 million.

Not only is much of income reinvested thus necessary to maintain existing supplies of tools and the jobs that go with them, but income reinvested is also the most immediate, direct, and traditional source of money to purchase additional tools of production. Such purchases not only provide the jobs of making the new tools, but also the jobs of later operating them to increase the abundance of needed or wanted goods and services.

There are still other vital functions for income reinvested to perform. Additional money can neither be borrowed nor repaid unless income reinvested be present or prospective. Thus few will lend their money to a corporation except that it be a going corporation with income prospects to assure safety of principal and interest. And a corporation that once becomes indebted cannot pay off that debt except out of income earned or through sale of stock, which latter, in turn, is not possible without income prospects. Income reinvested is also the most immediate and direct source of increased working capital required not only by inflation but also to facilitate the functioning of an expanding productive economy.

He who would squeeze income reinvested to increase wages, taxes, or other costs, or to reduce prices, would simultaneously be squeezing out: (1) Money needed to overcome depreciation deficiency and maintain existing tool capacity and employment, (2) the employment supplied in making both replacement and additional tools, (3) the employment of more labor to operate the additional tools, (4) the new and better products that come from new and better tools, and (5) the most immediate and direct means that exist of financing and expanding industrial capacity, important in peacetime and essential in wartime.

PROFITS AND FREEDOM

There is a big difference between the American economy and the Russian economy. In the American economy productive effort, through the voluntary and competitive decisions of free men, is automatically and continuously devoted to meeting with maximum satisfaction the wants of all the people; in Russia production is by governmental compulsion directed toward satisfying the aspirations of its ruling class with mere subsistence for the people. But the American economy cannot function if there is interference with the voluntary and competitive markets by which the community bestows its rewards. These rewards are in terms of income or profits to those who most ably produce what the community wants at prices it is willing to pay, while those who serve to its lesser satisfaction receive lesser incomes or experience losses.

Our system rests on its provision of opportunity for free men to benefit themselves by saving and investing, but only if in so doing they serve the public's economic interest. If the benefits from so doing are removed, then progress must stop, unemployment arise, and government compulsion replace the voluntary decisions of free men.

A profit and loss system can be practiced only by free men. They cannot sacrifice that system without sacrificing their freedom.

American Automobile Association International Travel Survey

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. JAVITS. Mr. President, the American Automobile Association has recently published the result of a survey made of the some 600 Americans in 19 States who have utilized the international travel service of the 12 affiliated AAA clubs. This survey throws additional light on the broad extent of travel by Americans abroad and its great significance for peace and better understanding.

I ask unanimous consent that the survey be printed in the Appendix of the RECORD.

There being no objection, the survey was ordered to be printed in the RECORD, as follows:

A SIGNIFICANT FOREIGN TRAVEL SURVEY

(Following is a copy of a questionnaire distributed recently to persons who have utilized international travel services of 12 affiliated AAA clubs. Under each question, we have tabulated the results.)

We feel that the following facts are significant:

Question No. 6: Nearly 50 percent reported for 5 weeks or longer; 32 percent of the respondents spent 10 weeks or more abroad.

Question No. 6: Nearly 50 percent reported that their trip changed preconceived attitudes about the countries or people visited.

Question No. 8: While questions 6(b), 7, and 8 requested specific reactions and points of view, an analysis of the comments showed replies to No. 8 as the most interesting. Recognizing that they come from people in all walks of life, we feel that many of the definitions of "tourism and its benefits" are extremely thought provoking. On the basis of these, it might be said that Americans who have traveled abroad have a deep insight into the true meanings of personal contact with peoples of other lands. (Comments received in reply to question No. 8 are attached in exhibit A.)

Question No. 9(a): Of those answering this question, 91.3 percent favored increasing tourist contact between the United States of America and U.S.S.R.

Question No. 10: 64 percent of the respondents expressed interest in visiting the U.S.S.R. (A few clarified their replies by saying that they would not consider going to Russia at the present time, or under the U.S.S.R.'s current regime.)

Question No. 11: Considering the fact that 77.5 percent of the participants were abroad in 1958, it is interesting to note that 29 percent planned to go abroad again in 1959 and 22 percent have plans for foreign travel in 1960.

TOURIST SURVEY BY THE AMERICAN AUTOMOBILE ASSOCIATION

(Questionnaire mailed to 600 residents of 19 States who patronize the international travel services of affiliated AAA clubs. The questionnaire had a 41 percent return.)

JANUARY 22, 1959.

DEAR FRIEND: As part of a research project dealing with the touring experiences of people who have patronized the international travel services of the motor clubs affiliated with the AAA, we will appreciate your answering the following questions and returning this form as soon as possible in the enclosed stamped envelope. Since we are anxious to complete this survey, your immediate response will be appreciated.

Thank you very much.

AMERICAN AUTOMOBILE ASSOCIATION.

1. Most recent year of your trip outside the United States: 77.5 percent, 1958; 15.5 percent, 1957; 7 percent, 1956 (or previously).

2. Length of your trip: Average length of time abroad 8 weeks; 10 weeks or longer, 32 percent; 5 to 9 weeks, 37.3 percent; less than 5 weeks, 30.7 percent.

3. Countries visited: England, France, West Germany, Italy, Spain; others: Caribbean tour, Mexico. Ninety-two percent went to Europe or included Europe in part of a more extended tour.

4. Country liked best: Most frequent mentions: Switzerland, 34.5; Italy, 25.5; England, 14; France, 13; Austria, 11.5; Scandinavia, 11.5; (split votes counted as one-half).

5. Was your trip: (a) solely for pleasure? (b) combination, business and pleasure? For pleasure, 75.5 percent.

6. (a) Generally speaking, did your trip change any attitudes you had about the countries or people visited? Forty-seven percent reported "yes"; 53 percent reported "no." Some clarified their reply by stating that their most recent trip did not alter their attitudes since they had previously been abroad.

(b) Could you cite a specific example?

7. What single fact or observation impressed you most in any one country, or overall?

8. In a few words, how would you define the true meaning of tourism and its benefits to the people of the world?

9. (a) Do you favor increasing tourist contact between the United States and the Soviet Union? (b) Americans to Russia only? (c) Russians to the United States? Of the respondents answering part (a), 9.13 percent were in favor of increasing tourist contact; 8.7 percent has no opinion or did not reply. Only one respondent favored restricting United States of America-U.S.S.R. travel to Americans only. More than 90 percent favored Russian visits to the United States.

10. Would you, personally, like to visit Russia? Sixty-four percent expressed interest in visiting Russia; 28 percent were negative; 8 percent did not respond to the question.

11. When do you expect to make another trip abroad? 1959, 29 percent; 1960, 22 percent; 1961 or later, 15 percent. (Thirty-four percent did not respond to the question or said they had no definite plans.)

EXHIBIT A

AAA TRAVEL SURVEY

Question No. 8: "In a few words, how would you define the true meaning of tourism and its benefits to the people of the world?"

"There will be no real peace in the world until people of all nations have a respect for each other's point of view. International tourism is the only way to bring this about" (Massachusetts).

"More Americans should go abroad, not just for the pleasure but to become better acquainted with the people of other lands. This personal contact and the understanding which results can, if multiplied by thousands, exert a tremendous influence for good and for peace" (North Carolina).

"In knowledge, there is understanding. In understanding, there is respect. Tourism evokes a mutual respect—the greatest need in our world today" (Ohio).

"Tourism helps you appreciate the cultures out of which America has been created: the religious, the literary, and the artistic treasures that have motivated our thinking" (Virginia).

"Only by actual contact with peoples of other races, and with their modes of living, can anyone possibly gain an understanding and appreciation of their true worth" (Washington State).

"It broadens the horizon and destroys more prejudices than it causes" (Rhode Island).

"Tourism provides the opportunity of getting to know people better—their strengths and their weaknesses. It broadens one's understanding of the problems faced by different nationalities and in so doing develops a true tolerance for all peoples. One cannot think ill of a friend and travel develops this type of friendship" (Rhode Island).

"Tourism should be guided by a desire to learn not to teach. You may be paying your way but you are still a guest of the country" (Pennsylvania).

"Tourism is the means of bringing about understanding between nations. For the average person it is only by meeting people from other lands that they realize they have the same problems, hopes and emotions as themselves" (Pennsylvania).

"The perception of the likenesses in man rather than political differences commonly stressed by the press; the increased consciousness of the vastness of the world, to say nothing of outer space. It increases our sense of unity and appreciation of people. Americans need to discuss politics with people of other beliefs in order to intelligently defend and live in a democracy" (Pennsylvania).

"Although tourism can increase as well as decrease prejudice, when indulged in with the right spirit it increases human understanding and sympathy and enriches one's personality" (Ohio).

"Tourism is that indefinable quantity of which the American people do not do enough. Travel is a big thing in the United States of America. Everyone enjoys driving into another State or another area of their own State. But tourism takes one to another country, another land, where if you are wise you will try to live for a short while as do those other people and then you are better able to understand the ideas of foreigners and thereby become a better member of the family of nations. Tourism doesn't make you a foreigner. It merely makes you count 10 before you argue with one" (North Carolina).

"I am not ashamed of the label 'tourist' and get very unhappy with Americans abroad who try to appear cosmopolitan. These, however, are not as bad as the ones who shout from the housetops that they are Americans and everything in America is better. Real tourism can be, and should be, the best way of making people of all nations understand better the problems and anxieties of other nations. I had a driver in Spain who was an ardent Franco fan; I still can't agree with him, but I now understand why Franco is what he is in Spain" (North Carolina).

"Tourism means far more than 'seeing.' It means understanding—or seeing with the mind. This can lead the way to worldwide friendship and peace" (North Carolina).

"To the individual: Tourism is a means of enriching one's own life by incorporating into it not only the culture of one's own land, but the culture of others as well. To nations: An intelligent tourist of any land can grow more tolerant of the quirks of another land if he visits, and, by behaving tolerantly, can be a good will ambassador" (North Carolina).

"A better idea of what the differences are among people and how small they number to the same ideals and needs people have. A greater admiration for the many ways one can achieve life's ends and to realize your ways are not the only or the best" (New York).

"A tendency toward one world—in its best sense" (New York).

"Tourism in the best sense is an eager interest and appreciation for the good and beautiful everywhere and a sincere attempt to understand differences in problems and attitudes. Those who travel with closed minds might better stay home and save their money" (New Jersey).

"Traveling by automobile 7,000 miles and visiting people off the beaten paths and finding the Europeans generally happy and contented with their lot. They, in turn, finding out firsthand about America especially the North-Central United States. Being good will ambassadors to the people of Europe was our paramount desire and purpose" (Minnesota).

"To develop understanding between peoples; reduce distance—physically and emotionally—and alter artificial barriers between nations; to foster a sense of responsibility for others and an appreciation of their abilities, talents, and achievements" (Minnesota).

"To us, travel is not only a means of enjoyment, but greatly increases one's education. The firsthand knowledge of the many far places of the world gives each American a better understanding of the problems facing our civilization today" (Michigan).

"The learning to understand, respect, and appreciate our neighbors even though we cannot understand their language. This should not only affect vacationers but the leaders of our countries. When we learn to like and love each other, how can we ever want to harm each other?" (Michigan).

"Tourism should be an exchange, through personal contact, of ideas and attitudes, social, political, economic, and cultural" (Michigan).

"You cannot appreciate good music until you are exposed to it, nor can you enjoy or understand a book unil you have read it. You cannot know or become a friend of your neighbor until you meet him, therefore, by traveling abroad you can learn to appreciate, to enjoy and understand, and to to know and become a friend of your fellow men of other lands—thus creating a benefit for all" (Michigan).

"Enrich your soul by receiving the riches of our past; learn that men are the same decent people the world over" (Washington, D.C.).

"The growth in understanding that comes from personal contact with those of other countries can be a great stabilizing force for peace" (Colorado).

"One seldom can maintain a smug self-satisfied air concerning one's own country when one beholds the glories—both historically and artistically—found in other cultures. Traveling gives one a deep appreciation for the problems and desires—as well as the past achievements—of other peoples, thereby contributing often in a profound way to better understanding—the great hope of the world" (Colorado.)

"It has great possibilities for enlarging concepts and enhancing understanding, provided there is an open mind unhampered by preconceived ideas and bias, and that the individual has a sufficient command of language to be able to communicate and so to interpret the phenomena witnessed against the background of the country's culture" (Colorado.)

"If half the people of one country were to change places with a like amount in another country for 4 to 8 weeks each year, it would be the greatest peace creator yet found. Interchange of ideas and customs and mixing socially would shatter the impression that those opposed to their ideology are not as pictured by their leaders" (Colorado.)

"It dispels false conceptions and shows everyone as human beings no matter what their language or color of skin." (Colorado.)

"To broaden one's outlook. To realize the universality of man, of ability of capability" (Connecticut.)

"It is vital for as many individuals in the world to exchange common experiences on the level of everyday life. Meet your fellowman on his terms in his country. We don't have to give, we need to ask for what they all have—friendship and understanding" (Connecticut.)

"Realization that the United States is not the only place in the world where people, as individuals, have pride in personal and national accomplishments" (Connecticut.)

"I hope it tends to bring about a better understanding between the people of different countries. We can be good-will ambassadors as Americans if we will only remember, 'When in Rome, do as the Romans do' and respect their ways and customs even though they differ from ours. We would be chagrined if Europeans came over here and were as demanding and inconsiderate of us as some Americans are of their people" (Connecticut.)

"Tourism, intelligently managed, might be defined as the best way of getting rid of a lot of prejudices with which we are possessed in varying degrees" (Connecticut.)

"As the world grows smaller by communications it follows what we should emphasize—neighborliness and friendliness" (Connecticut.)

"I feel all people at heart are the same. They like to live and let live—and they like to be liked. Tourism gives us ordinary people with no ax to grand a chance to see and know our neighbors of foreign countries. To me, they were all most interesting and understanding" (Connecticut.)

Poison in Your Water—No. 51

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article entitled "Texas Streams Still Polluted," which appeared in the Dallas (Tex.) News of February 17, 1959:

HEALTH RISK—TEXAS STREAMS STILL POLLUTED

(By Wayne Gard)

Often overlooked as a factor in the Texas water problems is the pollution of the State's rivers and creeks. Fish have been killed, livestock poisoned and human health endangered because of the sewage and industrial wastes dumped into streams. The recent growth of cities and industries has made conditions worse.

This problem, of course, is not confined to Texas. About 43 percent of our cities and 57 percent of our industries discharge raw or insufficiently treated wastes into nearby water. This poisoning costs the people at least a billion dollars a year.

Some Texas cities have built modern sewage-disposal plants only to outgrow them in a few years. Some industries have gone to much trouble and expense to treat their wastes, but others have done little or nothing about this. Apparently they assumed

that pollution laws would not be enforced, and often that has been a safe assumption.

Oil production in many parts of the State has complicated the Texas problem of stream pollution. In 1913 the Texas courts were directed to restrain by injunction the polluting of streams with oilwell wastes, but as more fields were opened the situation became worse instead of better.

Other laws against pollution were passed in 1931 and 1943, but they did not have effective teeth. The National Resources Committee stated, "The most serious pollution problem in the entire western gulf district is along the Trinity River. During periods of low flow, the river below Dallas is virtually an open sewer."

Pollution is always worse in a drought, in which the flow declines and water stagnates in isolated pools. Farmers who see thousands of dead fish floating on the water can't be happy at having their cattle drink from such pools.

One trouble with the Texas laws against stream pollution, which the legislature has been passing since 1860, is that of divided responsibility. The railroad commission has authority over oil producers, the board of water engineers supervises underground disposal of oil wastes, the game and fish commission is charged with protecting wildlife, the department of health is responsible for health protection, and the attorney general is expected to enforce all laws.

With each of these agencies going its own way and usually busy with other duties, stream pollution does not have the concentrated and continuous attention it needs. Many believe that a single State agency is the only solution.

The U.S. Public Health Service has advised the setting up of such an agency to end buck-passing. The legislature can hardly afford to await a serious disease epidemic from polluted water to cleanse Texas streams.

Business Should Be Socially Responsible

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, April 7, 1959

Mr. WILEY. Mr. President, today the responsibility of the business executive is very great. All of us should get direction and guidance from our religious principles. We cannot solve every problem by human law.

A fine article entitled "A Matter of Responsibility" appeared in the January–February 1959, issue of the Harvard Business Review. The article was written by F. S. Cornell, executive vice president of A. O. Smith Corp., of Milwaukee, Wis. The article takes issue with the viewpoint of Theodore Levitt, who in a previous article took the position that business should not be socially responsible.

Mr. President, in order that my colleagues and others may have an opportunity to read this fine article, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A MATTER OF RESPONSIBILITY
(By F. S. Cornell)

In the article's headline the philosophy of Levitt's piece is set down briefly: "Are they (the businessmen do-gooders) letting the country in for a nightmare return to feudalism by forgetting that they must be businessmen first, last, and almost always?" The stand has been made. And such a stand, especially in these times, demands an answer.

Not almost always but always, I am a businessman. And since I am, my social responsibility to my community, to my form of government—to our way of life—demands my active participation. I know I do not do this to ape a current vogue; I'm not sure how much love of fellow man plays a part in it.

But I do know that fear—fear as strong as fear can be in the face of the forces currently at work against our civilization—plays a prominent part in activating me.

I am the executive vice president of a corporation with a number of plants from coast to coast. In this post, I am charged with the responsibility of continuing the development, insofar as I am able, of this corporation built by those before me.

As it was with my predecessor, it is my responsibility to develop, to modernize, to expand, to make this business flourish so the greatest efficiency—and therefore the greatest profit—can be derived from the fruits of our corporate body's total efforts. I will never deny this responsibility. I believe in it and will continue to demand that this be our operating philosophy. But I will also continue to demand that we function as responsible and God-fearing people. The capital organization that does not remember this second truth defeats itself.

We are all aware that in every walk of life since the beginning of time there have been some bloodsuckers. And these we will probably have with us until the end of time. But in the end, these bloodsuckers defeat themselves.

To operate for profit only—no matter what the cost—is just not good business. It never has been and never will be.

I believe that we must have responsible, God-fearing hardheaded businessmanship. I believe in God. I love God and fear Him, and shall continue to do so. And I am not ashamed to say it. The fact—not theorem—that faces us now is that we have too much forgotten God, and our responsibilities as His people. This has much to do with the problems we face today.

"The world of God, peopled by man, demands social responsibility. The policy memorandum that sets this down has been in existence for some time." Luke 10: 23.

Let us keep this spiritual business out of our discussion, Levitt will say, asserting that businessmen are charged to make profit, not to bother with the social needs of the people for that is Government's job. But we are all a part of this Government—no matter how much any of us might want to deny it.

Government is not an ephemeral "they." It is an emphatic "we." When it is not, it will not be the government and the political ideology for which we all profess our most profound belief.

I believe in this form of government. And so believing, I cannot cast out the sense of responsibility that stems from my faith in God—for to cast this out is to defeat our own purpose.

Do so and you take the important step toward what I and, I hope, you are furiously fighting: The doctrine of communism. Contrary ideology is being too well sold, I am afraid, in some of our schools and, as it appears, in some of our more directed-to-leadership publications. From the growing red on the map, it appears it is selling pretty well through some of the Mideastern and European countries.

"God," "Fear," "Communism," "Politics": Levitt might say I am using all the popular antagonisms to make my point. I am—not because they are popular antagonisms, but because they are fundamental realities.

These represent fundamental realities of life that have played a part in the evolution of a management philosophy—the best I know—to use in creating a greater profit for my company and perpetuating the capital organization where I work. For I am not only responsible for the development of this corporation in today's market. I am also charged with the responsibility to do all within my efforts to protect my corporation and its market of tomorrow. I represent a position that will be filled by capable men after I have gone, and was filled by capable men before I came. We are an entity all charged with the same duty. A marketing man such as Levitt surely knows that this is a fundamental of marketing.

And because I am so charged, as a hardheaded businessman, I will sell social development. I will continue to do all within my power in my home and in the community to build a better climate for living based on a better living condition for our youth and better youth to live in it.

To attain this objective, I must participate in the social developments of our community, in the actions taken to develop and improve the executive, legislative, and enforcement branches of our Government.

We must do all things to cancel out the cancers that are growing, too rapidly, in our communities—in all communities. And when all of them are set straight, the world will be the place we want it to be.

I, and the many like me who have this understanding, will continue to do this in our own homes and communities. Hopefully, other people not of Levitt's thinking will follow this example.

With such seeds, we must develop, inspire, and create conditions and people—not of my own particular choosing, but individuals with a chance to grow in the atmosphere of ideology which we all say and believe is the "best way of life."

Target the community, and the world will take care of itself. That is not a profound thought. It is a basic axiom in all marketing. As Levitt well knows, start at the center and let your pattern grow, so that each outgrowing activates the next circle until the whole market is covered.

What are we marketing? And what has this got to do with "making the most profits possible"? We are marketing the American way of life. We are selling it by improving its weakest points—just as a marketer tailors his product to the demands and needs of his customer.

We are doing this because it is fundamental to build and to protect if we are to save our way of life in which a businessman can "make a profit." Would you have us otherwise? Would you have us all be carpenters building stairs that will carry people only as long as we, individually, need them—to have them crumple and be destroyed whenever we have finished with our own selfish wants? I personally could not live in a climate where "consideration of others" was not a primary credo.

But even not using this respect for the continuing dignity of man as a purpose for my actions, my case still holds. It is my responsibility to protect my corporation—not only today but tomorrow. Even accepting Levitt's dictum of "businessmen for profit only," I will practice social responsibility because it is simply a matter of good business.

The dangers which lie in active acceptance by businessmen of their social responsibilities are not what Levitt would have us believe. Quite the contrary, such actions are a means toward preservation of our way of life.

And, surely, if more of us don't get on stream and set the pace (which Levitt admits we are admirably equipped to do), we are not only going to lose the opportunity to

make the "most profit possible," but we are also going to lose our whole ideology, our children, and our children's children into a Godless society that is abhorrent to the thought.

Let us demand greater recognition of social responsibility and social action by businessmen. Let us quit talking of our work in the far countries, close to the peril of communism. Let us put the focus on our own lives and on our own communities. We must put all the forces of business's hard-headed profit-seeking abilities into a fight to build the strongest possible organization of youth and people. We are surely going to need them—and soon.

Carlton Cadettes Visit Washington

EXTENSION OF REMARKS
OF
HON. ALBERT THOMAS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. THOMAS. Mr. Speaker, recently I had the distinct honor and pleasure of welcoming to Washington a group of young ladies from the Jefferson Davis Senior High School in Houston. The 36 young ladies are senior members of the Carlton Cadettes, one of the finest high-school drill corps in the country.

For the past several years the senior members of this group have visited Washington on a tour of the eastern part of the Nation. The visit these young ladies pay to my office and to the Capitol is always one of the highlights of the congressional year to me.

On the trip this year, the cadettes visited Williamsburg and Philadelphia before coming on to Washington. While in the Nation's Capital, they toured the Capitol and other historic buildings. The young ladies also were able to visit the U.S. Naval Academy at Annapolis.

I am glad that the practice of high school students visiting the Nation's Capital seems to be increasing. These young people, the leaders of tomorrow, have a much better appreciation of our great country and our system of government after visiting the White House, the Capitol, and other points of interest. Certainly, it is refreshing for Washington to play host to thousands of these young visitors each year.

The Carlton Cadettes were accompanied by Miss Frances Newton and Mrs. Lorraine Nix, faculty sponsors for this outstanding group. Others who made the trip to Washington are Lorrie Blackburn, Margaret Boney, Charlotte Cernuch, Deette Dupree, Rosemary Evans, Judy Frederick, Gloria Garcia, Pat Genaro, Susan Gray, Sandra Hauck, Lucretia Hoke, Linda Holder, Betty Howard, Judy Jennings, Mary Krause, Annette Leu, Frances Mendoza, Jean Mitchell, Joyce Muery, Jane Noble, Diana Overstreet, Deanna Partain, Patsy Payne, Terry Perrigin, Linda Plemons, Sue Pool, Karen Sanford, Julia Santos, Estella Schott, Judy Spencer, Betty Thagard, Sally Thompson, Esther Williams, Jennie Wilson, Diane Wolf, Nita Yokem.

Nixon's Progressive Conservatism

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. HOSMER. Mr. Speaker, Columnist Holmes Alexander recently wrote of Vice President NIXON's views and attitudes on a number of important subjects and revealed the solid competency with which the Vice President has capability in dealing with the problems of the Nation. Mr. Alexander's column was as follows:

NIXON PROGRESSIVE-CONSERVATISM A PART OF THE RECORD FOR 1960

(By Holmes Alexander)

Vice President RICHARD NIXON must be considered the 1960 Republican nominee until proved otherwise. He is also owner of the best known, most forthright political record of all the Presidential aspirants, Republican and Democrat alike.

This statement will surprise only those who, perhaps, have never thought about NIXON'S positions on the issues and those who have judged NIXON by anti-NIXON appraisals. But if NIXON runs for President next year, and if he scores an upset over a Democratic favorite, it will be because the Nation has anticipated that a Nixon administration would be somewhat as follows:

Domestic affairs: RICHARD NIXON, if President, would hew to the Eisenhower line of the balanced budget and of finding free enterprise substitutes for Federal activities. Mr. Eisenhower's enemies call this the big business approach. They have chided Ike for his efforts to encourage private electrical power companies, group insurance plans, self-help housing schemes and for his smaller-than-Democratic appropriations to support the Government's share in welfare projects.

It's predictable that under NIXON the pro-business approach would be continued with better management in the light of the 1953–61 experience. The Nixon philosophy of government could be called progressive-conservatism. He does not believe, with some of us, in a return to fundamentalism. The Vice President holds that free enterprise offers the best chance for social and economic advances and that Federal enterprise bogs down in bureaucracy.

Foreign affairs: RICHARD NIXON, if President, would not substantially alter the Eisenhower reliance upon collective international security, but NIXON would move toward two reforms. In foreign aid, he would stress how rather than how much, indicating a major revaluation, especially on the information programs.

The Vice President has been deeply impressed with Russian foreign relations workers wherever he has been able to observe them abroad. They know their enemy. Without leaning on IQ tests and postgraduate degrees, NIXON in the White House would have one main criterion for American overseas personnel: that they understand our fight against the enemy, international communism.

Labor laws: In watching the Senate at work, NIXON concludes that passage of an inadequate labor bill, by which he means the Kennedy-Ervin measure, would raise a public clamor in 1960 for something much stronger.

If the second session of the 86th Congress failed to produce a labor bill with (a) fiduciary responsibility, (b) further protection of union democracy, (c) provisions against secondary boycott and organizational picketing, the 1960 campaign would be fought partly on the labor issue. NIXON'S prescription: that all unions follow the procedure which good unions already do follow.

Civil rights: "I believe in gradualism," NIXON told this reporter for quotation. "I would always expect progress, for example, in the southern acceptance of school integration. But I would expect that this progress, its methods and its degree of compliance would differ in different areas, according to the community customs and circumstances."

The Vice President's thinking on racial matters flows from two personal experiences. One, he was raised as a Quaker. Two, he has been around the world and he knows that at least 1 billion persons are not white. It is this reporter's educated guess that NIXON, as President, would be incapable of sending American troops against Americans.

White House leadership: As Vice President, NIXON has given loyalty. As President, he would require it. He sees loyalty as the first responsibility of a cabinet member and even of a vice-president, although the latter case is complex.

It is revealing, however, that NIXON feels Vice President Calhoun, who disagreed violently with President Jackson, was justified in resigning. But the justification in NIXON'S mind was strengthened by the fact that in the 1830's the Presidential succession moved from the Vice President to the Secretary of State, thus keeping the top post firmly within the party.

In general: RICHARD NIXON, if President in 1961, would rely chiefly upon past experiences, at home and abroad, in dealing with communism. He would follow the progressive-conservative line, as expressed in the afore-cited views, but not follow it stubbornly and inflexibly. Experience in these fields, of which NIXON has had more than any living American, would be the compass.

It is possible, I think, to forecast a Nixon administration but not possible with equal confidence to forecast the administration of any Democratic candidate. If the nation should choose NIXON—and political upsets are within easy memory—the reason could be that the Nation knows him best of all.

What—No Fifth?

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. MONAGAN. Mr. Speaker, in the old days when a man bit a dog, it was news. In these modern times, it is news when a witness before a congressional investigating committee fails to seek the protection of the fifth amendment.

This phenomenon recently took place before the Foreign Operations and Monetary Affairs Subcommittee of the Government Operations Committee and the forthright testimony of the witness caught the fancy of the editor of the Waterbury (Conn.) Republican who wrote the following article which appeared in that newspaper on March 25, 1959:

WHAT—NO FIFTH?

(The members of a House Government Operations Subcommittee must have indeed been taken aback by the performance of one

witness who recently faced the probers. He answered all their questions without once hiding behind the fifth amendment.)

House committee probers have long grown accustomed to expect that when embarrassing questions are asked of certain witnesses the answers are bound to be hidden behind the fifth amendment. With a great many witnesses, such action to prevent self-incrimination is very much the order of the day.

So what a shock it must have been when a certain Edward T. McNamara, of Tampa, Fla., one-time public works officer for the International Cooperation Administration in Laos, southeast Asia, not only answered questions put to him but also offered unexpected information, without once hiding behind the fifth amendment.

And, in view of some of Mr. McNamara's testimony, we are a bit surprised ourselves that he didn't "take the fifth." For he testified accepting gifts of stock, of accepting sizable loans that were never repaid, and airline tickets from an American-owned construction company in Bangkok. The sum total, McNamara estimated, come roughly to $25,000.

He testified further that in his dealings with the firm, the Universal Construction Co., he recommended that the company be awarded public works contracts in Laos which totaled more than $1.6 million. He also said that he had no plans or specifications by which the quality of materials used or the performance of the construction firm could be adequately measured.

The committee offered no explanation as to why Mr. McNamara seemed so willing to testify in matters which could definitely put him behind the proverbial eight-ball. We rather imagine they didn't have any explanation. We can't think of any, either—except that perhaps like the man in the death cell, McNamara figured that he wanted to clear his conscience once and for all. At any rate, in this age of "refuge in the fifth," it was an amazing performance.

Although the editor may well have discovered some of the reasons for the manner in which the witness testified, I am sure that the basic reason for his revealing testimony was the careful and persuasive manner in which the factual case against him had been prepared by the committee staff and elicited by the subcommittee chairman, the Honorable PORTER HARDY.

Relaxing of Gambling Ban

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. FINO. Mr. Speaker, in the 7 years that I have urged the Members of this Congress to support my national lottery bill, I have pointed out that the gambling spirit of the American people is deeply ingrained in human beings and cannot be legislated out of existence.

Further, I have argued that leading theologians in discussing the subject of gambling have insisted that gambling is not sinful nor immoral except when carried to excess, abused, or when it is corrupted.

I am happy to note that New York City's chief magistrate, John M. Murtagh, feels as I do on this issue.

The following newspaper item reports the highlights of Judge Murtagh's position as expressed Sunday, April 5, 1959, on the WCBS show, "Let's Find Out."

MURTAGH FOR RELAXING OF GAMBLING BAN

Asserting there is nothing basically immoral in gambling, Chief Magistrate Murtagh suggested yesterday that the laws should be changed to regulate it, rather than forbid it. The community's present attitude toward gambling and narcotics, he added, is "creating the situation whereby organized crime thrives."

He compared gambling bans with liquor-prohibition laws and pointed out that the latter finally had to be scrapped. Murtagh, on the WCBS show, "Let's Find Out," declared the underworld lives mainly on gambling and narcotics, and held that "gambling cannot be legislated out of existence."

He called for normal outlets for the gambling instinct, which he held to be immoral only if there were overindulgence, but he did not suggest what these outlets might be.

Results of Questionnaire Mailed by Hon. John F. Baldwin, of California, to Residents of the California Sixth District

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. BALDWIN. Mr. Speaker, 2 months ago I mailed a questionnaire to every family of registered voters in the California Sixth Congressional District. The response to this questionnaire was, by far, the largest that I have ever received. Many constituents not only answered the questionnaire, but attached supplementary letters or wrote detailed comments on the back of the questionnaire. I have spent many hours personally reading all of these comments, and they have been most helpful. I am firmly convinced that a Congressman can better represent his constituents if he knows the views of all of those constituents, than if he has only heard from pressure groups.

The tabulation of the questionnaire is summarized below:

1. It has been proposed that Congress pass legislation to insure to union members the right to elect their union officials by secret ballot. Do you favor or oppose such legislation? Favor 87 percent, oppose 5 percent, undecided 8 percent.

Answers from union members: Favor 83 percent, oppose 4 percent, undecided 13 percent.

Answers from nonunion members: Favor 91 percent, oppose 5 percent, undecided 4 percent.

2. Should we stand firm in the protection of West Berlin against Communist threats, or should we pull out of West Berlin? Stand firm 88 percent, pull out 4 percent, undecided 8 percent.

3. Do you favor, or oppose, the admission of Communist China into the United Nations? Favor 19 percent, oppose 65 percent, undecided 16 percent.

4. Do you feel that President Eisenhower and Allied leaders should, or should not, have a summit conference with Khrushchev of Russia? Yes 57 percent, no 24 percent, undecided 19 percent.

5. Do you favor, or oppose, statehood for Hawaii? Favor 85 percent, oppose 8 percent, undecided 7 percent.

6. A bill pending before Congress would provide that any Federal civilian employee who is a security risk may be discharged. Do you favor or oppose such legislation? Favor 76 percent, oppose 11 percent, undecided 13 percent.

Answers from Federal civilian employees: Favor 72 percent, oppose 7 percent, undecided 21 percent.

Answers from non-Federal civilian employees: Favor 80 percent, oppose 11 percent, undecided 9 percent.

7. It has been proposed that the social security program be expanded to provide for the payment of surgical and hospital bills for those who are retired and receiving social security pensions. The increased cost would be covered by increasing the social security withholding tax by an additional one-fourth of 1 percent or one-half of 1 percent on both employers and employees. Do you favor or oppose such legislation. Favor 63 percent, oppose 27 percent, undecided 10 percent.

8. Would you be in favor of, or opposed to, an increase of 1½ cents per gallon in the Federal gasoline tax for the purpose of keeping the Federal interstate highway construction program moving forward on schedule? Favor 39 percent, oppose 51 percent, undecided 10 percent.

9. The present income tax laws provide that oil and gas depletion allowances of 27½ percent may be deducted from profits before the income tax is computed. A bill has been introduced to reduce these depletion allowances to 15 percent. Would you be in favor of this reduction? Yes 41 percent, no 30 percent, undecided 29 percent.

10. Would you be in favor of legislation to make bombings of schools, churches, and other buildings a Federal offense? Yes 85 percent, no 10 percent, undecided 5 percent.

11. The Post Office Department estimates its deficit for the coming fiscal year will be $522 million. In view of this fact, would you favor an increase in the first-class letter mail rate from 4 cents to 5 cents? Yes 50 percent, no 43 percent, undecided 7 percent.

12. The present selective service or draft law will expire this year unless extended. In view of world conditions, would you be in favor of its extension? Yes 83 percent, no 10 percent, undecided 7 percent.

Monsignor Burke's Opening Prayer for Opening of the Massachusetts Senate

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, March 20, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the opening prayer of Msgr. Joseph P. Burke of St. Patrick's Parish, Lawrence, Mass., at the opening of the Massachusetts Senate, who was the guest of State Senator William X. Wall, of Lawrence, Mass.:

PRAYER FOR THE OPENING OF THE MASSACHUSETTS SENATE, MONDAY, MARCH 16, 1959

We pray Thee, O God of might, wisdom, and justice, through whose authority laws

are enacted, and judgments decreed, assist with Thy holy spirit of counsel and fortitude the legislators of our Commonwealth, that their deliberations may be conducted in righteousness, and their enactments may be eminently useful to Thy people whom they represent. Let the light of Thy divine wisdom direct them in all their labors; and may all their actions be ordained to the peace and happiness of our Commonwealth, and to the perpetuation of Thy honor and glory forever and ever.

On this eve of the feast of the glorious Apostle St. Patrick, we further beseech Thee, Almighty God, to hear and grant this benediction upon our senators here assembled:

May the blessing of St. Patrick keep you and preserve you. May the joy of St. Patrick ever be in your hearts. And may the luck of the Irish be with you, always.

Statement of Dr. Donald C. Stone, Before the House Foreign Affairs Committee, on Mutual Security Program

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 17, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

STATEMENT BY DR. DONALD C. STONE, BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE HEARING ON THE MUTUAL SECURITY PROGRAM AUTHORIZATION, ON BEHALF OF THE NATIONAL COUNCIL OF THE CHURCHES OF CHRIST IN THE U.S.A., APRIL 7, 1959

My name is Donald C. Stone. I am testifying here in behalf of the National Council of the Churches of Christ in the U.S.A. by the authorization of its appropriate officers. I am currently dean of the Graduate School of Public and International Affairs of the University of Pittsburgh and a member of the department of international affairs of the National Council of Churches.

While I am here as a designated representative of the department of international affairs, I obviously cannot and do not presume to speak for each of the 38 million members of the 33 Protestant and Eastern Orthodox denominations in the National Council, but I am presenting policies and views adopted after careful study, discussion, and deliberation by the Council's policymaking bodies composed of official representatives of the denominations.

The Council believes it appropriate and desirable that in hearings such as this major religious groups in our country have the opportunity to share in expressing, from religious and moral perspectives, their views on the objectives, policies, and adequacy of the mutual aid and assistance programs of the United States. On behalf of the Council may I express appreciation for this opportunity.

GENERAL POSITION OF THE NATIONAL COUNCIL OF CHURCHES

In keeping with the actions of the council's policymaking bodies, we hold it to be a Christian concern and the moral responsibility of the United States to take all appropriate action within its capacity and resources to promote justice, economic betterment, social well-being, freedom, and peace among the peoples of the world, including our own—and especially among the newly independent, emerging, and developing nations. To this end we support the improvement and expansion of technical assistance, educational exchange, economic aid, trade, and private investment, and other measures essential to the improvement of conditions of life and the creation of free, responsible, and stable societies.

RELIGIOUS AND MORAL FOUNDATIONS

The competence and the responsibility of the churches to delineate the religious—the moral and ethical—truths or requirements which underlie public issues is well established. This has been a function of our religious traditions and heritage beginning with the prophets of old.

In studying God's purposes and requirements, as reflected in both the Old and New Testaments, we find the principle that the state should be founded on justice, that it is instituted by God to enact just and equitable laws, that in the fulfillment of its mission the state should be the organized expression of God's character and purpose. The state—to be specific, our country or any country—is thus judged by divine standards of righteousness and justice. Lawmakers, judges, and administrators are God's servants charged with bringing to all people the blessings of just, efficient, and humane government. Nations and individuals are accountable for their acts and are judged by God by the same moral and ethical standards.

We believe that governments, as individuals, must conform to the moral law of God. The people of a nation, as children of God, have the obligation of promoting justice, freedom, equality, opportunity, respect, integrity, and mercy in all relationships. So, too, government as the means by which people carry out their collective public concerns and responsibilities, must fulfill these same obligations.

This conception of the moral and religious foundation of government is uniquely reflected in the covenants of our country and in the official statements of our leaders.

The Declaration of Independence explicitly emphasized these truths. In the eyes of its architects, men are viewed as children of God, they have rights and values growing out of their spiritual relation to God, they are equal as personalities and equal as members of one human family, they are part of a world brotherhood, and government is a means subject to their control for achieving the benefits of their God-given rights.

George Washington summed up these views in his Farewell Address with the words:

"Reason and experience both forbid us to expect that national morality can prevail in the exclusion of religious principle."

The mind of Lincoln was saturated with the same values of life—brotherhood, justice, mercy, honesty, reverence. A fundamental tenet in his political philosophy was the responsibility and the accountability of the Nation to Almight God.

In speaking of the rights of men, women, and children in the struggle for existence, President Wilson said, in his first inaugural address:

"Justice and only justice shall always be our motto. * * * The feelings with which we face this new age of right and opportunity sweep across our heart strings like some air out of God's own presence, where justice and mercy are reconciled, and the Judge and the brother are one."

I mention these factors in our heritage because they emphasize the necessity and practicality of applying moral and religious principle in the formulation and execution of public policy. We in the churches are concerned with the tendency to separate these interrelated aspects of life in the market place of daily decisionmaking.

We believe that these moral and religious foundations for government and public policy apply to the total community of mankind. They are the requisites for individual and group fulfillment at the level of the family, the local community, the State, the Nation, and the international community. Where individuals seek special privilege based on selfish interest, where they have no concern for the well-being of their fellowmen, and isolate themselves from responsibility for service to the general welfare of the community, there justice, freedom, economic and social advance, and public morality corrode and wither.

Likewise, when a nation on the basis of its narrow self-interest endeavors in isolation to provide for its protection, seeks the economic prosperity of its citizens with little tangible regard to the misery, poverty, and ignorance which may exist outside of its boundaries, or furthers the economic development of other countries primarily in the interest of its own security and as a means of obstructing the out-reach of an enemy, it, too, lacks adequate moral and religious foundation, and its policies will be frustrated and its actions resented.

It is in this context and on moral and religious grounds that churches support more adequate assistance for the underprivileged and disinherited peoples of the world and more effective measures of mutual help and self-help.

INADEQUATE MORAL AND RELIGIOUS RATIONALE FOR OUR AID PROGRAMS

We believe the concept of mutual security, under which countries join together to create conditions essential for peace and freedom, and for the furtherance of economic and social well-being, is consistent with the moral and religious principles just elaborated. We believe that in the Marshall plan these principles were fulfilled in a historic manner. The success of that program and its appeal to man's conscience and to the aspirations of human beings everywhere was due to the unusual extent to which the ideals of sharing, mutual respect, help, self-help, and the imperatives of human brotherhood were incorporated in the total program, especially during the first 2 years.

We are concerned with the extent to which present day official arguments justify both the military and economic components of the mutual security program almost exclusively on the basis of narrow self-interest, emphasize their value in counteracting Soviet imperialism, and imply that we can buy with our material surplus the support and friendship of countries whose help we need. We are concerned with the criticisms which grow out of a naive expectancy that people of other countries should be grateful for the programs which we ourselves declare we are carrying out in our self interest. How can right feelings and genuine mutuality be created among nations unless moral and psychological conditions essential to understanding, respect, and cooperation are fostered?

We believe that our country would be far more effective in achieving its stated objectives if the specific assistance programs, and the methods used in carrying them out, fulfilled more fully the moral and religious tenets which the Council of Churches and its constituent denominations have enunciated on several occasions before this committee. In doing so, we would be infinitely more successful in creating the conditions under which collective security, international cooperation, and economic progress can be realized. Moreover, under which the newly independent, emerging, and less-developed countries would feel partners in a common enterprise aiming at achieving their freedom, stability, and social advancement. We must develop a rationale that will meet the test of the collective conscience of mankind, and that test must be morally and ethically sound.

We must do these things because we are concerned for people as people—for the citizens of other countries as well as our own—and because misery, ignorance, despotism, and self-serving exploitation must be relieved wherever they exist—so far as the abilities, resources, and mercy of a people permit. The great extremes of poverty and relative abundance in this world are intolerable to the Christian conscience, and they will not be accepted for long by the peoples of depressed areas who today, through communication, education, transportation, and other forces which have created a shrunken, closely knit world, are determined that they, too, should share in the better things of life.

THE CHURCHES SPEAK FROM EXPERIENCE

Not only do the churches speak out of their religious conviction based upon sustained and penetrating study of the application of religious principles to U.S. foreign policy, but beyond this, the churches have had long, practical, and steadily broadening experience in oversea aid and in international cooperation. In mission work they pioneered in technical and economic assistance, in education, literacy programs, medicine, public health, agriculture, industry, mass communications, and leadership training.

During recent years, the churches have engaged in many types of relief and cooperative endeavors to administer to the distressed, and to help hungry, illiterate, diseased, and impoverished persons to become self-supporting and to guide their own peoples into responsible nationhood. During 1958, our churches contributed approximately $120 million to these ends. Through our Department of Church World Service, our churches have given aid to people in need around the world, distributed surplus food, sent relief in the wake of disasters, and pioneered in village and community projects. In 1958, the churches contributed $32 million for such aid.

Worldwide projects are carried on also by the United Christian Youth Movement, the United Student Christian Council, and United Church Women. These agencies and the Department of the Church and Economic Life and the Department of International Affairs of the National Council of Churches conduct study and action programs on international relations under the leadership of outstanding lay persons who have particular competence in these disciplines.

SOME GUIDING OBJECTIVES FOR MUTUAL AID PROGRAMS

Let us now turn to the implications of these moral and religious principles and perceptions to the mutual security programs now under consideration by the Committee on Foreign Affairs. Based on their experience in international affairs, as well as on intensive study and discussion of U.S. policy and programs, the churches have evolved general principles which can be applied to our Government's international programs. The following are some of the guidelines and practices which we believe essential if our foreign aid efforts are to become more effective in developing conditions of peace with justice and freedom:

1. The United States should assist our fellowmen in the emerging, newly independent, and developing areas of the world to the full extent of our capabilities on one hand, and their absorptive capacities on the other. This objective of fostering improved conditions of life and internal political, economic, and moral strength in other countries, should find sufficient justification as a worthy national objective of its own, and not be made an incidental aspect of our concern to increase the military capabilities of countries allied to us or linked with us in collective security arrangements.

2. Although all parts of our foreign policy are interrelated and require coordination, economic and technical aid should be administered in relation to economic and social needs and opportunities, and divorced insofar as practical from military considerations.

3. In the absence of a clearcut mandate by both the legislative and the executive branches of our Government to focus our foreign economic programs on helping people because they are members of the broader human family, and because the principle of sharing is as essential in international development as it is within nations and communities, the various types of assistance as well as individual projects tend to become, in daily administration, unduly related to military and political factors. We believe this objective will be more realistically and effectively fulfilled if military assistance appropriations are separated from economic and technical assistance aiming at the long-term economic and social development of less technologically advanced countries. This broad policy of sharing and concern should represent a primary and basic feature of our total foreign policy.

4. The amount of assistance from all sources which is being provided today appears far from adequate to meet the elementary needs of the developing countries. Expanded programs of technical cooperation appear essential if the individual countries are to create institutions capable of rendering the most basic public services under responsible democratic government and if industrial, agricultural, health, education, and other vital aspects of civilization and adequate society are to be promoted.

5. It is evident that far larger sums of capital must be made available from public and private sources if any significant progress is to be made in many countries of the world toward increasing per capita income from $50 or $100 or $150 a year to levels on which people can live with some degree of decency and self-respect and develop the capacity to help themselves. The resources of the Development Loan Fund need to be increased to the extent that effective loans can be made and placed on a long-term operating basis. We support such measures as the proposed international development authority and the inter-American development bank as additional means for providing the essential capital.

6. Congress should establish these programs of assistance on a long-term basis in terms of objectives, scope, financing, and administration. Present authorization and appropriation practices prevent effective planning, force improvisation, create waste and inefficiency, and foil the fulfillment of objectives. By the time U.S. field staff are in a position to reach agreement with officials of the participating country, the period for which funds are available may have already expired. Representatives of participating countries are bewildered and the best laid plans are frustrated

7. We believe the objective of fostering the development and internal economic, social, and moral strength of other countries will be brought into sharper focus if the various tools or methods of providing economic and technical assistance are better integrated and coordinated. Because the rationale of our programs has not been clear, and because the Government has proliferated the several devices or means of assistance among several agencies, the result has been increasingly a haphazard collection of projects and diffused activities. We have produced such a complex dispersion of agencies and responsibilities that neither our own citizens nor the people of the countries with whom we are working can comprehend what is going on. In consequence, technical assistance, loan projects, and grant aid tend to be resolved in reference to momentary military and political considerations rather than as a positive part of a long-term sustained effort to produce stability, responsibility, freedom, and human betterment.

8. In applying the principle of mutual help in the administration of assistance programs, joint working arrangements with other countries needs to be emphasized. To be stressed also, is the fostering within the participating countries of indigenous organizations and staffs capable of planning and administering the country's development program, and of using external assistance effectively. Whether technical assistance is provided thrcugh Government agencies or private organizations, a common purpose is to develop indigenous leadership, professional skills, and democratic values required for effective economic and social development.

9. To assure the administration of the programs with the fullest integrity, vision, and moral purpose, more resourceful efforts are required in the recruitment and training of Americans for international service. To this end, it is imperative that the agency or agencies responsible for economic and technical assistance be established on a long-term basis and that they be in a position to recruit and train personnel for long-term responsibility. Many of the inadequacies of American personnel assigned to overseas service is due to the temporary and unstable character of the programs. We believe that many of the finest citizens of America—citizens who possess the requisite professional and technical skills, who have the humility and concern for human beings which this delicate task of working in another country entails, and who are prepared to undergo the rigors of training and separation from their homeland for long periods—will come forward if the Congress and the executive branch will manifest the greatness of our foreign assistance programs and indicate that they are determined to carry them forward throughout the period of years which success obviously requires.

10. To the extent that their administrative capacities permit, increasing emphasis should be placed on the use of the United Nations and other international organizations for the conduct of economic and technical cooperation programs. The same principles outlined above for bilateral assistance—moral, financial, administrative—apply to the collective efforts carried out through international organizations.

11. While the very nature of the types of assistance needed calls for heavy governmental responsibility, a maximum use of private initiative is to be encouraged. This includes such measures as broader guarantees to encourage private investment, the reduction of barriers to trade, and the fostering of private enterprise throughout the world. We believe, further, that there are many untapped opportunities under which Government programs can utilize American universities and other educational organizations, research institutions, foundations, consulting firms, and American business in industry in the conduct of assistance programs. Cooperative arrangements between corresponding institutions of the United States and the participating country often provide a superior psychological basis for assistance than the assignment of Government personnel.

OUR PEOPLE NEED LEADERSHIP

We are dealing here with complex and difficult problems. Few of our citizens can be expected to understand their technical aspects or administrative ramifications. But, all people have a conscience and respond when the moral principle is clear.

We of the churches will continue to foster the study and discussion of both the substance of policy and the relevant moral and

religious principles. Through the constituent denominations of the National Council of Churches, through a thousand local church councils, and through such branches as the United Church Women and youth councils, opinion and recommendations will be formulated.

However, we need creative and courageous leadership by both the Congress and the executive branch in these perilous times in pointing the direction. We need, above all, the justification and explanation of proposed policies and programs which stand the test of moral and religious principles, and which avoid appeals to narrow self-interest, prejudice, or an excessive reliance on military power in fulfilling our national responsibilities.

Pacific A-Tests Help Study of Radioactivity in Atlantic

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. OLIVER. Mr. Speaker, there has recently been considerable concern expressed over the increasing amounts of strontium 90 discovered in our wheat and milk. Oceanographers are equally disturbed about the possible effects that dumping of atomic waste materials into our oceanic depths might have. Injurious atomic waste could easily find its way to our dinner table through fish contaminated by absorption of waste material.

The following article, which originally appeared in the New Bedford, Mass., Standard-Times, illustrates yet another fascinating aspect of the science of oceanography. Our country's failure to adequately invest in this vital science could endanger our future health.

PACIFIC A-TESTS HELP STUDY OF RADIOACTIVITY IN ATLANTIC

(By Everett S. Allen)

The ashes of the atomic age—radioactive waste materials which may remain hot and lethal for hundreds or thousands of years—are going to start piling up soon. This prospect is driving oceanographers to find some place to dump them where they will not jeopardize the health of the human race.

Strontium 90, for example, which might remain radioactive for 5,000 years, could, if carelessly dumped into the ocean, find its way into the bones of sardines.

Ocean scientists, well aware of the importance of their task and the rapidly approaching deadline demanding a solution, are working to see that such a catastrophic eventuality never occurs.

HAZARD IS GREAT

A report of the National Academy of Sciences and the National Research Council concluded, "Unlike the disposal of any other type of waste, the hazard related to radioactive waste is so great that no element of doubt should be allowed to exist regarding safety.

"Stringent rules must be set up and a system of inspection and monitoring instituted. Safe disposal means that the waste shall not come in contact with any living thing. Considering 'half-lives' of the isotopes in waste (the length of time it requires for the isotopes to become harmless), this means, in general, for 600 years if cesium 137 and strontium 90 are present or for about 1/10th as many years if these two isotopes are removed."

Biologists have warned repeatedly that if the hot wastes get into water, they might be concentrated by plants and animals and ultimately find their way to foods for human consumption.

SOME IS DUMPED AT SEA

The wastes are radioactive byproducts of the operations of nuclear reactors. They must be kept from living organisms until the radioactivity disintegrates with the passage of time. Methods for this disposal in the oceans have been considered, but the circulation of the seas has led some to suggest that it might not be permanent.

In the United States, where there is plenty of land, there probably are disposal areas ashore sufficient to take care of this country's atomic waste for the next 20 years. For Russia, there is the Black Sea, which probably would be safe enough, but it is too far removed for any other country to use it even if the Soviet Union permitted it.

It is possible that other nations could cast their radioactive waste in concrete and dump it into the ocean; this now is being done here in New England—small quantities of this waste material from Boston are being dumped into the Gulf of Maine once each week.

However, atomic plants are expected to operate on so narrow a margin of profit that this might prove to be too expensive a proposition; presumably, they will not be able to afford to use partly expended fuel or to purify their waste products.

HAS TO BE SOLVED

Oceanographers properly have directed public attention to this problem as justifying their existence and warranting additional support of their research operations: The problem has to be solved, and they possess the training and experience to do it, given the opportunity.

Recently, 15 of the world's most prominent oceanographers gathered at the Woods Hole Oceanographic Institution to establish a long-range planning group on an international basis, designed to take advantage of the broad cooperation engendered by the International Geophysical Year. Provisional chairman of the Conference was Dr. C. O'D Iselin, director of the Woods Hole organization.

Present at the meetings were Dr. Anton Bruun, Denmark; Comdr. R. A. Capurro, Argentina; Dr. Y. Miyake, Japan; Dr. R. Revelle, United States; Prof. I. Zenkevitch, U.S.S.R.; Dr. M. N. Hill, England; Dr. G. E. R. Deacon, England; Dr. G. Bohnecke, West Germany; Prof. H. Mosby, Norway; Prof. Steeman Nielsen, Denmark; Dr. N. B. Marshall, England, Prof. Y. LeGrand, France, and Dr. N. W. Rakestraw, of the United State.

PROBLEM PINPOINTED

This group decided there are three long-range problems of the ocean that are of critical importance to the future welfare of mankind, adding, "The first of these concerns the use of the deep sea as a receptacle for the waste products of our industrial civilization. This may be a particularly important problem in the future, when very large quantities of poisonous radioactive wastes will be produced by the industrial use of atomic power.

"We need to know whether we can dispose of at least part of these wastes in the deep sea or whether the oceanic circulation or the vertical movements of the fauna will result in too rapid a transport of dangerous material to levels in the sea from which the world's food supplies are in part derived."

To approach the solution of this problem, greater knowledge is required of the rate and character of the exchange between the deep and surface waters of the oceans. The physical difficulties of making such measurements have been overcome only in part.

MOTION TRACED

Among the new measurement techniques are these:

1. The use of natural radioactive substances occurring in the water, such as radio-carbon and tritium, to trace the paths of motion and the mixing of the waters.

2. Direct measurement of the deep currents by following free-floating buoys or by using deep current meters.

3. The measurement, with a new order of precision, of the salt content of the water. This allows the salt, itself, to be used as a tracer of the water movements.

4. Measurement of the heat flow from the interior of the earth into the deep water, which allows the heating of the deep water to be used as an index of the time of passage of the water over the ocean bottom.

The AIBS Hydrobiology Committee, a group of foremost American scientists, met in Washington to consider the problem of the probable contamination of marine waters with radioisotopes coincident with the accelerating development of atomic energy.

The committee concluded: "We are cognizant of the fact that the U.S. Atomic Energy Committee is planning to contain a major portion of the wastes, especially the high-level (of radioactivity) wastes, and to avoid their release to the environment.

CONTAMINATION INEVITABLE

"However, it was the consensus of the Committee that contamination of natural waters and of the sea is inevitable."

The Committee predicted that countries with limited land area and dense populations will be unable to contain their radioactive wastes indefinitely and noted the possibility of disposal of the high-level wastes in the deep sea "is being seriously discussed.

"Low-level wastes already are being introduced into coastal waters, a procedure which probably will become more commonly adopted. Thus, even though our country can maintain its radioactive contamination of the sea at a minimum, this is a global, not a local, problem, and it is imperative that the answers to a variety of questions be known before the problem becomes serious.

"The contamination is to be expected not only from the ultimate development of atomic power, but is present today as fallout, as induced radioactivity, and as wastes resulting from industrial, laboratory, and hospital uses of radioisotopes. The present rate of addition of radioisotopes to the sea is sufficiently small so that no serious problems exist as yet, except in isolated incidents associated with weapons tests.

"However, the biological, geochemical, and oceanographic processes which will determine the fate of radioisotopes in the sea are inadequately known and the development of pollution is so insidious that extensive studies should be initiated now to permit evaluation of the problem."

PRESENT SITUATION

Here is a thumbnail sketch of the present situation in this field:

Tritium, used as a tracer of water movements in the sea, is a radioisotope, a form of hydrogen. Some of it is present naturally in the atmosphere, and in the ocean; it combines with oxygen to form water, and we observe it first on earth as rain. This was the case until 1954.

In that year, atomic tests in the Pacific introduced artificially into the earth's atmosphere an amount of tritium equal to all that which was present before. Up to this point, tritium from the air was entering the oceans of the world, at sea surface, in roughly uniform quantities everywhere.

The debris from the bomb blast hung together in the air as a lump of tritium, how-

ever, and because the explosion took place near Eniwetok, in the northern latitudes, the tritium settled out mostly in the Northern Hemisphere. Thus, most of the tritium eventually entered the North Atlantic.

TRITIUM WATCHED

Now, oceanographers are watching this tritium, using it as a tracer device to learn about the North Atlantic's movements, including the rate at which ocean currents can smooth out this lump of radioactive wastes by carrying it deeper, or to other waters. By monitoring the tritium, they are presently watching to see how rapid will be its introduction into the South Atlantic.

Ocean scientists have to know at what rate this material will mix with sea water. For example, if something happened to an atomic-powered ship—sinking or collision, in either peace or war—what would be the effect of its mishap spewed atomic wastes into the shipping lanes?

How much of an area would have to be roped off and for how long would it remain hot and dangerous? What would happen to the food fish in the area?

Tritium, relatively harmless to mankind, is the guinea pig for the extremely dangerous strontium 90; sea waters presently have only a very low content of this latter long-lived atomic product.

But if tritium helps ocean scientists to know how the waters move, in which direction, how fast they mix, dilute, and transfer radioactive wastes, it could one day save thousands—or even millions—of lives.

The So-Called Democratic Advisory Council

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. AUCHINCLOSS. Mr. Speaker, the appended editorials from the Washington Evening Star of April 2, and the Newark Evening News of April 3, entitled "Burned Child," and "Disservice," respectively, express my feelings so well that I am grateful for the permission to insert them in the CONGRESSIONAL RECORD with my brief remarks. The recent statement made by the so-called Democratic Advisory Council criticizing the foreign policy of the administration of the United States at a time when delicate and highly sensitive negotiations are going on, with tremendous import on the future of the world, is evidence of very bad taste if not gross stupidity. It is gratifying and heartening to know that the real leaders of the Democratic Party who are active in the affairs of our Government refuse to associate themselves with this group of eager beavers who in this instance would have been of greater service to their party and their country by keeping their mouths shut.

[From the Washington Evening Star, Apr. 2, 1959]

BURNED CHILD

The latest screed to emerge from the Democratic Advisory Council is a massive exercise in irresponsible nonsense.

Sponsored, as it is, by men and women of some stature, the truth-torturing nature of this foreign policy report is astonishing. Its ostensible purpose is to unload a partisan H-bomb on the Eisenhower administration. But even as a flagrantly political document it is self-defeating. For example, the report charges, with reference to the Formosa resolution ,that President Eisenhower heedlessly dropped a time bomb into the already explosive Far Eastern situation. It does not mention the fact that an almost unanimous Congress voted for the Formosa resolution. Does the Advisory Council's indictment extend to the Democrats who approved the resolution? Also ignored is the fact that the expression of American purpose contained in this resolution, time bomb or not, has served for nearly 5 years to discourage a Chinese Communist attack on Formosa. If this is catastrophic error, as the Advisory Council would have the people believe, we could do with more of the same.

This incredible document concludes on a questioning note. "Must we sit in paralyzed horror for 2 more years," it asks, "watching our strength, our influence, our position in the world, and our alliances dissolve, as just a hundred years ago men watched the Union dissolve under the weak and palsied hand of Buchanan?" The best that can be said for this kind of gibberish is (we hope) that no one will take it seriously—except, perhaps, the members of the Democratic Advisory Council.

To read the phrenetic language of the report is to understand why the responsible Democratic leaders in Congress have shunned the Advisory Council. They are better acquainted with the facts of life, and they have a better understanding of the harm which this kind of ranting partisanship could do to the country in a time of danger. It is not so easy, however, to understand why Dean Acheson would serve as chairman of the committee which presumably drafted the report.

In his days as Secretary of State, Dean Acheson was subjected to much the same kind of outrageous abuse, and one might think that as a burned child he would dread the fire. But evidently he does not. In partisan politics, apparently, the familiar maxims do not apply.

[From the Newark Evening News, Apr. 3, 1959]

DISSERVICE

The Democratic Advisory Council, to which Democratic leaders in Congress regularly pay no attention, has issued another in its series of attacks on administration foreign policy. This one, which comes from the council's committee headed by former Secretary of State Dean Acheson, is pretty much like the others that preceded it.

Administration failures in assorted areas are reviewed at length. There's a partial playback of the presidential campaign of 1952, and a foretaste of the sweetness to come in 1960. All of it is accompanied by the familiar council line that under Mr. Eisenhower our alliances disintegrate and our power declines.

Now Mr. Acheson and associate critics may be touched with genius in the conduct of foreign affairs, but they are nevertheless atrocious judges of timing. Their discordant blast came at an hour when foreign ministers of the Western powers were in Washington, engaged in consultations on the Berlin crisis and on their conference next month which will determine the fate of the summit meeting with the Soviet Union.

At this point the need for national unity is apparent to all except the Democratic Advisory Council. To strangers to Washington that title, Democratic Advisory Council, may sound impressive. It might mislead allied representatives who, unfamiliar with the intricacies of domestic politics, do not know how consistently the council is ignored at home, particularly by the Democrats who run the Congress.

Altogether, in the light of Berlin's tensions, the council's statement is intemperate, indiscreet and mischievous. It suggests a bitter division that is nonexistent, and therefore ranks as a national disservice.

Mrs. David W. Vess Selected Alabama's Mother of the Year

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1959

Mr. HUDDLESTON. Mr. Speaker, the State of Alabama recently selected a mother of the year. I am quite proud of the fact that the outstanding recipient of this honor is Mrs. David W. Vess, of Birmingham, my district.

Mrs. Vess is a most unusual mother. Aside from her own three grown children, she has become a mother to hundreds of prison inmates in Alabama. She spends many hours each week writing them and, since 1938, has made more than 1,000 visits to various prisons throughout the State.

An article recently appeared in the Birmingham Post-Herald which indicates the many good reasons for bestowing such deserved recognition on Mrs. Vess. Under leave heretofore granted, it is my privilege to insert this article in the RECORD.

VESTAVIA'S MRS. DAVID VESS NAMED ALABAMA'S MOTHER OF THE YEAR

Alabama's Mother of the Year is Mrs. David W. Vess, of 1857 Shades Crest Road, Vestavia Hills.

The 66-year-old mother of three grown children was selected in a statewide contest as most outstanding in her Christian home and community activities.

She will represent Alabama in the American Mother of the Year contest in New York in May.

Her selection was based on her unusual mission work.

Instead of spending her free time relaxing at home with her husband, Mrs. Vess travels the State spreading cheer to the forgotten men in prisons.

She has made a full-time job of prison welfare since 1938 when she took part in a religious service at Jefferson County jail.

For a time she worked with a group from First Methodist Church, then later went with an independent group which enlisted the aid of ministers and religious workers to conduct monthly services at State prisons.

Mrs. Vess has made more than 1,000 visits to Kilby Prison, Alabama's maximum security prison.

Draper Correctional Institution for younger men, Julia Tutwiler Prison for Women, and Atmore Prison Farm for Negro Men also welcome visits from mother Vess.

Each week she spends hours writing inmates, many of whom receive no other mail, and more time goes to visiting and helping the prisoners' families.

Mrs. Vess has been active in church work since her early days in Florence when she became president of the East Florence Baptist Church Sunshine Band.

She attends Southside Baptist Church and is a member of the Bonnie Howard Sunday School class there.

She also finds time to take an active part in WMU and the United Daughters of the Confederacy.

Of her selection as Alabama mother of the year she said, "It was all a shock to me."

Convicts in our prisons evidently thought she deserved the honor. They sent in more than 2,000 letters supporting her nomination.

Mrs. H. L. Anderton was chairman of the committee to select the Alabama mother.

The American Mother of the Year will be selected May 5 after a New York banquet to which all the State mothers of the year will be invited.

An interdenominational program, the search for mothers of the year singles out accomplishments of mothers in establishing Christian homes and in contributing to the communities in which they live.

Beer Halls at Gettysburg?

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. QUIGLEY. Mr. Speaker, I believe that the Members and all citizens will be interested in the editorial carried in the April 11 issue of the Saturday Evening Post, titled "Beer Halls at Gettysburg? Our National Shrines Need Protection."

The centennial of the Civil War is less than 2 years away. Unless the Congress sees fit to restore 1960 appropriations for the acquisition of lands at Civil War battlefields, they will not be in appropriate condition to properly commemorate this historic anniversary.

Perhaps, as Lincoln said, "We cannot dedicate, we cannot consecrate, we cannot hallow this ground," but certainly it is within our power not to detract from it further by preventing additional commercialization of the areas. The editorial follows:

BEER HALLS AT GETTYSBURG?—OUR NATIONAL SHRINES NEED PROTECTION

The commercial invasion of Gettysburg and other Civil War battlefields demonstrates the need of a firm new policy regarding privately owned land within our national shrines. Without such a policy, we shall witness the spread of residential subdivisions, automobile graveyards, and beer halls in the midst of cherished historic areas.

The traditional practice of buying 1 acre when 100 acres are threatened, and of depending on land donations from the States and wealthy public-spirited citizens, isn't good enough.

Of 24 million acres authorized by Congress for national parks, monuments, and historic areas, 700,000 acres are still privately owned. This is only 3 percent of the total, but the trouble they cause is out of all proportion to their acreage. These "inholdings" involve more than 3,000 individual owners. Many of their structures are eyesores and fire hazards. National Park Service officials testify that they create serious problems of administration.

The battlefields were established as national memorials in the post-Civil War era, when the lands around them were essentially farm country and were expected to remain so. The character of the landscape has changed, but basic legislation on land acquisition has never been updated.

At Gettysburg, the classic battlefield shrine, nearly 700 of the 3,400 acres within the authorized boundary are privately owned. This land is either being developed commercially or will be very soon. The field of Pickett's charge is sprinkled with motels and spreading subdivisions. An automobile graveyard flourishes where thousands of Union and Confederate soldiers fought for 7 desperate hours, often hand to hand, on July 3, 1863.

Other Civil War battlefields—Antietam, Manassas, Fredericksburg, Vicksburg, Kennesaw Mountain—also suffer. Half of Manassas, the scene of decisive actions in 1861 and 1862, is being swallowed by residential construction, almost in the backyard of the National Capital. Venerable earlier battlegrounds like Yorktown, Va., where the American Revolution was finally won, and Chalmette, La., where Andrew Jackson scored the greatest land victory in the War of 1812, are in danger, too.

To look beyond the battlefields, nearly all 29 of the national parks—except Crater Lake and Yellowstone—have problems of privately owned land. Not until 1948 were any funds appropriated for land acquisition by the Government, and then only meagerly. In the 5-year period of 1948 to 1952, the total was less than $1 million. Since then the problem has slowly gained increased recognition. Last year's appropriation was $1,500,000, and the new administration budget now before Congress recommends doubling the figure. The boundaries of the entire national park system could be completed today for an estimated $30 million to $40 million, but at the present rate, and with land values still soaring, it will take many years—and some of the choicest areas still will be lost.

Congress can select an alternate course—direct the Interior Department to liquidate the inholdings and provide the funds to do the job. The battlefields need first priority; the $10 million required to safeguard their boundaries should be earmarked for completion by 1961, the centennial of the beginning of the Civil War.

Endorsement of the President's Budget Plan for Economy

EXTENSION OF REMARKS
OF
HON. DEAN P. TAYLOR
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. TAYLOR. Mr. Speaker, I have received a resolution from the Women's Republican Club of Rennsselaer County, Inc., Troy, N.Y., as follows:

Whereas the Republican Party has traditionally been the party of Government economy, balanced budgets, lower taxes, and fiscal integrity; and

Whereas President Eisenhower has submitted a balanced budget for the coming fiscal year, yet the Democrat majority in Congress has indicated its refusal to vote a balanced budget and has already embarked on a giveaway spending spree; and

Whereas continuous deficit spending by Government is the chief cause of inflation which is the cruelest tax of all: Now, therefore, be it

Resolved, That the Women's Republican Club of Rensselaer County, Inc., Troy, N.Y., go on record in support of President Eisenhower's proposal to balance the budget and to apply any surplus to retirement of the national debt; and be it

Resolved further, That the Women's Republican Club of Rensselaer County, Inc., Troy, N.Y., urge all citizens to join in this economy effort by writing to their representatives in Washington and in Albany; and be it

Resolved further, That a copy of this resolution be sent to President Eisenhower, Congressman Dean P. Taylor, and Assemblyman Thomas H. Brown.

DAISY M. PINNEY,
President.

Reality of the Central Valley Dream

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I wish to discuss the Central Valley project in California, which is one of our major investments in the development of water resources, fish and wildlife conservation, flood control, and human progress of the Nation.

In a recent editorial the Stockton (Calif.) Daily Record pointed out that this great project is not only providing uncounted benefits to California—it is paying for itself with interest.

Congressional appropriations for this kind of expenditure is not money thrown away, it is a wise investment in our future.

In the coming months, we will be considering authorizations and appropriations for worthy projects being added to this great Central Valley project.

Following is the complete text of this pertinent editorial, which illustrates most graphically the desirability of continued development of the Central Valley project:

REALITY OF THE CENTRAL VALLEY DREAM

Once a dream becomes reality it all too often becomes commonplace. So it is with the concrete and steel, the water and the power, of the Central Valley project which so long was a vision in the great and fruitful basin that is California's midsection.

Since this complex of dams, canals, power stations, and pumps began operation in 1949, the Central Valley project has brought a full or supplemental water supply to 800,000 agricultural acres. Last year water deliveries amounted to 2,541,837 acre-feet, an increase of 5 percent over deliveries in 1957. Power production was nearly 4 billion kilowatt-hours, the highest in the project's history. Less definable in specific figures are the project's benefits in terms of flood control and the protection of fish life.

Central Valley project now consists of 5 dams and reservoirs, 10 pumping plants, 364 miles of canals, 390 miles of operating roads and communications systems, and 4 electrical generating plants. There are nearly 800 miles of transmission lines. The huge earth-fill Trinity Dam now is the major element still under construction.

Federal money amounting to $589,302,000 has been spent on Central Valley project, according to the annual report of the Bureau of Reclamation, but this is by no means largess. About 93 percent of the cost is reimbursable to the Federal Treasury, and at interest rates of 3 and 2.5 percent. The

remaining 7 percent is charged to flood control, navigation, recreation, and conservation of fish and wildlife.

Last year Central Valley project grossed $17,966,444 in revenue from all sources, the bulk in sales of power, for a net of $9,233,396. This was a repayment to the Treasury. An interest payment of $2,427,022 was calculated in the operating cost.

Not only is the Central Valley project a practical reality in its benefits of water, power, and flood control, but also it is a sound fiscal operation. Repayment is well ahead of schedule, and at the end of the amortization period all taxpayers in the United States will benefit rather handsomely from the income.

Here is "a dream walking," to use the terms of a one-time popular song, which everyone in central California can see, a dream which still has not reached its complete reality. Surely the performance record thus far argues strongly to any reasonable man the desirability of bringing Central Valley project to its ultimate fulfillment. And the record should bolster, as well, the faint-hearted who have doubts as to California's ability to carry out its own plan for maximum use of water.

A Farmer's Views on the Farm Program

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. BERRY. Mr. Speaker, I ask unanimous consent to insert in the Appendix of the RECORD one of many letters I have received expressing almost the same thought, this one coming from a young farmer in my district who responded to a recent questionnaire I sent out, which covered some of the farm programs.

Dean Enright of Timber Lake, S. Dak., has done a good job of expressing the views of apparently a large number of farmers in my district. Because so many of them have expressed similar ideas, I thought at least one of these letters should go into the CONGRESSIONAL RECORD for the benefit of all Members of Congress. The letter reads as follows:

TIMBER LAKE, S. DAK.

DEAR MR. BERRY: I have studied the copy of H.R. 1231 which you sent to me, and am going to give you my very frank opinion. Since reading the last issue of "Farm Journel," it will likely have some bearing on all our beliefs about farm programs.

It has been my thinking for quite some time that bushel quotas rather than acreage allotments are needed. It has been proved the hard way that acreage allotments don't work. However, I do not understand the need for controlling the movement of wheat as set forth in your bill; nor do I see how you can control our preference for Wheaties over, say, Wheat Chex, or how many loaves of bread the Nation will eat. These marketing certificates and restrictions are too involved and would require a police force to control. It would seem to me a farm program should be for the farmer and not involve the manufacturer, exporter, importer, and what have you.

Another thing, if this would not do away with price support programs, then there is nothing accomplished. Price supports have long been a contributing factor toward surpluses. This is the merry-go-round we are trying to get off. Not only is the taxpayer in the grain business, he is also in the granary business. He buys the grain, furnishes money to build a granary, and pays storage on his own grain in a granary put up by himself.

This bill will still not do anything for the small farmer, that is, the man who has been forced out of the wheat farming because his acreage allotment was repeatedly whittled until he had to quit. This is the man who needs help—the sow-cow-hen-plow farmer.

You base bushel quotas on the production of wheat for the past 3 years, and the small farmer is left out. The big local farmer and the suitcase-program farmer will grab the money, as usual. We see men come to South Dakota each year who farm from Mexico to Canada. Uncle Sam furnishes them seed loans, guarantees them a crop under the Federal Crop Insurance program, and pays them for what they raise and also to store it. Now, I ask you, How can this type of farmer lose? Also, how can a small family-size farmer compete with this sort of thing? He could compete on equal footing, but he can't beat Uncle Sam's programs.

Perhaps these opinions of mine won't help you, but I do believe that this sort of thinking is gaining ground among the majority of the farmers.

DEAN ENRIGHT.

Rear Adm. Ralph K. James, U.S. Navy

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. HOSMER. Mr. Speaker, the very many friends of Rear Adm. Ralph K. James, both in the naval service and outside, view with the greatest approval his nomination to the position of Chief of the Navy Bureau of Ships. One such expression of approval appeared editorially in the Long Beach Press-Telegram a few days ago. I have asked that it be set out here so that those who do not already know "Jimmy" James may join with those who do in the knowledge that under his direction, the Bureau of Ships will continue the excellent service to the Nation that it has given under the able leadership of its present chief, Rear Adm. Albert G. Mumma, U.S. Navy:

ADMIRAL JAMES: A NICE GUY WITH CHIP ON SHOULDER

Nomination of Rear Adm. Ralph K. James to the post of Chief of the Navy's Bureau of Ships is fitting recognition for a fine naval officer.

Admiral James, former commander of the Long Beach Naval Shipyard, is well known in this area. He has served as assistant chief of the bureau this past year, and when he left here to assume that post we wrote:

"If any naval official assigned to the Long Beach area ever deserved a 21-gun salute for outstanding service to this community, it is Rear Adm. Ralph K. (Jimmy) James."

This community has never had a finer friend than Admiral James. This was true when he served here. It has been true since he left. And we are confident it will continue to be true in the future.

When Admiral James came to Long Beach in 1955 he had the reputation of being "a nice guy." However, he found himself in command of a "sinking shipyard." He regarded it as one of the finest, most efficient naval facilities in the world; but subsidence—earth sinkage—threatened to destroy it, and he noted a lethargy to face up to the problem.

It was at that point that Admiral James began to acquire a new kind of reputation—that of being a nice guy with a chip on his shoulder. He started a fight to save the Navy yard.

He helped awaken Long Beach to the dangers of subsidence, and in so doing he helped the city convert its worry and concern into positive action to solve the problem.

When he takes over his new post of Chief of the Bureau of Ships, Admiral James will be in a key position in determining the future of the Long Beach Naval Shipyard, so important to this community.

We know he regards the local yard as one of the finest.

However, we also are confident that he will not recommend its continuance if he is not satisfied that appropriate antisubsidence measures are being taken. He is not the kind of man who will waste Federal funds on a hopeless cause.

Admiral James made this point clear when he visited Long Beach earlier this month. He commended the city of Long Beach and other oil producers in the Wilmington oilfield for making remarkable progress on a crash water flooding program to halt subsidence, but he also cautioned them to complete the program "without missing one date."

Nomination of Admiral James as Chief of the Bureau of Ships was announced by President Eisenhower. He is expected to assume his new duties in about a month after confirmation by the Senate, which is regarded as a routine formality.

Admiral James has a distinguished background and is well qualified for this new position. He should prove to be a great asset to the defense of the United States in this capacity.

We wish him well on his new assignment.

A Free Market for Gold

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. BERRY. Mr. Speaker, I have asked unanimous consent to insert in the Appendix of the RECORD a resolution adopted by the California State Society, Daughters of the American Revolution, at their March 1959 meeting with regard to providing a free market for gold, and their request that freshly mined gold, gold ore, and gold commodities be transferred to the Committee on Interior and Insular Affairs. The resolution follows:

GOLD

Whereas the absolute and arbitrary control exercised by the U.S. Treasury over the production, disposition, and holding of domestic gold is a direct violation of the rights of personal liberty, personal security, and personal ownership of private property; and

Whereas the Government has usurped the right of individuals to sell newly mined gold to industry and to the arts, and has denied individuals the right to own, buy or sell this commodity in a free market; and

Whereas the sale of gold from our Federal gold reserve for other than monetary use annually exceeds the total domestic gold

production and is dissipating the U.S. monetary reserves; and

Whereas by making itself the sole buyer of newly mined gold in processed form and by fixing its arbitrary and low price, the U.S. Government imposes such hardships on the domestic gold producer that most of our primary gold mines have been forced to close operations; and

Whereas all matters pertaining to newly mined gold and gold commodities are now assigned to the Senate Committee on Banking and Currency, to which it bears no relationship:

Resolved, That the California State Society, Daughters of the American Revolution, urges the Congress of the United States to enact legislation to discontinue the sale of Government-owned gold from the monetary reserve to private industry and to restore to the people the right to freely buy, possess, sell, and otherwise treat gold, without price restriction, and to amend pending legislation to include other than newly mined gold; and

Resolved, That the California State Society, Daughters of the American Revolution, urges the U.S. Senate to take immediate steps to transfer all matters pertaining to freshly mined gold, gold ore, and gold commodities to the Subcommittee on Minerals and Mineral Resources of the Senate Committee on Interior and Insular Affairs, where they rightfully belong.

John W. Edelman, Textile Workers Union of America, Urges a Better Wage-Hour Law

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, March 20, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a copy of a letter sent to the editor of the Christian Science Monitor by John W. Edelman, Washington representative of the Textile Workers Union of America:

MARCH 24, 1959.

The EDITOR,
Christian Science Monitor,
Boston, Mass.

DEAR MR. EDITOR: Your editorial of March 18 was welcome in that it recognized the gravity of continuing unemployment and the inadequacy of the present unemployment insurance system. It is unfortunate, however, that the same editorial embraced a series of misconceptions about the causes of unemployment.

You assert, for example, that "demands for a higher minimum wage could easily result in more unemployment." The only possible basis for such a statement is the recent letter of Secretary of Labor James P. Mitchell to Congress, which accompanied his Department's report on the impact of the $1 minimum wage instituted 3 years ago.

Mr. Mitchell's letter opposed a higher minimum at this time on the grounds that "disemployment," as he put it, might result. Yet the report itself, on which the letter was presumably based, does not offer any firm basis for the Secretary's stand. Like similar studies conducted by the Department of Labor after previous increases in the minimum wage, the report indicates that the $1 minimum had little or no effect upon employment, and for that matter, had little effect upon wages except those below or close to $1 an hour.

So many factors are involved in business mortality rates that measuring any one of them with any degree of accuracy is probably impossible. On the other hand, the absence of any pronounced change in the months following an increase in minimum wages certainly suggests that the increase was readily absorbed.

Nor can it be said that raising the minimum wage is inflationary. The industries most directly affected in the past (textiles, garments, etc.) have a generally lower price structure today than they had 5 years ago, when the Federal minimum was 75 cents. A study prepared for the Senate Labor Subcommittee found that the extension of wage-hour standards to large retail establishments, as proposed in a bill now before Congress, would not necessitate higher prices.

Your subsequent remarks about costs and prices are also unfortunate. You favor higher man-hour productivity, yet you seem to deplore higher wages and shorter hours. This is surely an unrealistic position.

Few would quarrel with your preference for better or cheaper products as productivity rises. The record clearly shows, however, that this classic piece of economic doctrine, like the law of supply and demand, no longer operates in many major industries.

In the auto industry, for instance, there is no visible disposition on the part of management to emulate the original Henry Ford. General Motors admittedly sets its prices so as to yield a 25-percent return on net worth, after taxes, on 180 days' operation a year; and General Motors sets the price standards for its competitors. This, of course, is just the reverse of the classic practice of lowering markup in a quest for greater volume.

If the sales resistance being encountered by the automakers is primarily a matter of price—and that's surely debatable—the blame doesn't lie with labor costs. Auto and steel are outstanding examples of industries whose price policies have little relation to once-accepted economic doctrine.

Thus the insistence of trade unions on winning, in the form of wages, a share of the fruits of productivity is the only practical way to maintain purchasing power and thus to keep the industrial machine running. The current campaign for a better wage-hour law is a part of that effort; and since it involves workers who, for the most part, have no other way to win a living wage, it surely deserves the support of the Christian Science Monitor.

Very truly yours,

JOHN W. EDELMAN,
Washington Representative.

Milwaukee's Mayor Suggests International Congress of Cities on Nuclear Threat

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. REUSS. Mr. Speaker, the distinguished mayor of Milwaukee, the Honorable Frank P. Zeidler, has again expressed his deep concern over the threat of atomic destruction which hangs over us all, and has suggested an international conference of cities as one means of lessening world tensions.

Mayor Zeidler expressed his views in a recent editorial in the Public Enterprise Record, published by the Public Enterprise Committee of Milwaukee County. Under leave to extend my remarks in the RECORD, I include that editorial:

WILL THE CITIES OF THE NORTHERN HEMISPHERE SURVIVE THE NEXT DECADE?

(By Frank P. Zeidler, mayor, city of Milwaukee)

One again the people in the cities in the Northern Hemisphere are threatened with wholesale death. The Berlin crisis with which the Soviet Union has confronted the United States may well trigger off a nuclear war which will destroy the United States, the Soviet Union and China. The dictator of the Soviet Union is determined to liquidate West Berlin, and the Western Powers through their leaders have expressed equal determination not to let it be liquidated. The opportunities for compromise seem very small, for Western Germany will not recognize the Communist controlled government of Eastern Germany, to which the Soviet Union will hand its authority. If the Eastern German Government attempts to blockade the road to Berlin, the Western Powers will fight. If the Western Powers fight, the Soviet Union will support the East German Government. On the other hand, the Soviet Union will support a plan for declaring all Berlin a free city provided its troops are included in the occupying powers. This the Western Powers will not agree to. Proposals are being made to have the forces of each government disengage and withdraw, but the Western Powers will not disengage to allow free Berlin to be overrun by the Eastern German Government.

If some decision is not reached, the cities of the Western World will become the greatest death trap of people in all history. Because of this possibility, some advocates of banning nuclear tests believe that the western governments should give into Soviet Union demands because the consequences are too horrible to contemplate. Others counter that to give into these demands would merely lead to further threats by the Soviet Union, and if there is to be a showdown ultimately, let it come now before the Soviet Union is too far ahead in rockets with which they can hit any city in the world.

The hope of the free world lies in the United Nations which should supervise Berlin as a free city under terms to be developed which can be acceptable to the powerful Communist Party and to the free world. The future of Milwaukee hangs upon the decisions to be made in the next few weeks.

A CONGRESS OF CITIES OF THE WORLD

In view of the fact that nuclear energy and explosives threaten the people of the cities of the world, the people of the cities ought to ask their national governments to consider calling an international congress of cities for the purpose of discussing the control of the manufacture of atomic weapons and the ending of the threats to the people in the cities. The leading officials of all the big cities ought to sit together in such a congress to see what can be done to end the tensions. When national governments talk war with each other, they are actually threatening not only the lives of people in the other countries but also the lives of their own people. When Khrushchev threatens nuclear war on the western democracies, he also threatens the lives of hundreds of millions of Russians in the cities in his own country. Thus, too, Hitler's war talk meant the destruction of every major German city and the death of millions of people in those cities.

National governments are often controlled by political parties whose strength usually comes from people who feel no personal

threat from war because they do not happen to live in cities, or can escape from them. The city dweller who is threatened, however, is often too busy with his personal affairs to pay much attention to what national governments are doing, and he doesn't know his own real interest. If the people of the German and Japanese cities could have known what would happen to them because their governments threatened and began a war, they might have countered their foolish national leaders who brought destruction on them. Therefore, the U.S. Government ought to invite the leaders of all the major cities in the world to a congress of cities and put forth proposals which can guarantee peace and freedom and the removal of the threat of atomic destruction. To this congress let there be called the leaders of the arts, the sciences, and all things cultural to discuss how men can learn to live together without threatening their mutual destruction.

For their part, the American cities ought to earnestly think how they can approach cities of similar characteristics around the world to lessen the misunderstanding and the ill will that has developed.

Poll of the People of the Second Congressional District of South Dakota

EXTENSION OF REMARKS
OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include the results of a questionnaire I recently sent out to the people of the Second Congressional District of South Dakota.

Since this district is about equally divided between agricultural and nonagricultural interests, I made a special effort to obtain the benefit of the views of those in the agricultural area.

The questionnaire was sent to boxholders outside of first-class post offices and addressed to residents in first-class post office areas. Approximately 38,000 questionnaires were sent out in this manner, and approximately 7 percent have thus far returned their questionnaires.

In tabulating the results, I have divided the returns into four groups: the nonagricultural cities in the Black Hills area, agricultural cities and towns, farmer, and farmer-rancher categories.

Aside from the general questions on agriculture, labor, defense, and aid to education, probably the most interesting are the answers to questions 6 and 7 wherein 81 percent of the people of my district told me to vote against those grant-in-aid bills which violate the budget, unless tax increases are provided to cover additional costs. This, Mr. Speaker, does in my opinion give the Congress a good idea of the way the people of America feel with regard to grant-in-aid programs and wreckless spending in general.

Let me say, Mr. Speaker, that this questionnaire has been most valuable to me, not only because of the vote itself but because more than 8 out of 10 returning the questionnaire gave me the additional benefit of their thinking in footnotes at the bottom of the questionnaire itself. Many also enclosed an additional letter covering their views.

In presenting the tabulation, the percentages are listed simply as "Yes" and "No." The remainder have no opinion on the various questions.

QUESTIONNAIRE RETURNS

1. The defense of the United States—in the face of the Soviet Union's constant aim for world domination and the challenge of their outer space satellites—is a grave national problem. Do you favor expansion and an acceleration of our defense effort, particularly in such fields as long-range ballistic missiles, nuclear weapons, earth satellites, and basic scientific research, even though this may require additional taxes to meet these added expenditures:

Total: Yes, 64 percent; no, 18 percent. City: Yes, 77 percent; no, 13 percent. Town: Yes, 66 percent; no, 12 percent. Farmer-rancher: Yes, 59 percent; no, 26 percent. Farmer: Yes, 52 percent; no, 21 percent.

2. In the President's budget, he suggested appropriating $3.9 billion for our mutual security (foreign aid) program, on the basis that this program helps the free nations promote collective defense and economic growth and, as such, is essential to our security. Do you favor continuation of our mutual security-foreign aid program?

Total: Yes, 45 percent; no, 40 percent. City: Yes, 50 percent; no, 34 percent. Town: Yes, 47 percent; no, 46 percent. Farmer-rancher: Yes, 47 percent; no, 45 percent. Farmer: Yes, 37 percent; no, 35 percent.

If your answer is "yes," check one of the following:

Total: At present cost, 52 percent; at reduced cost, 41 percent; at increased cost, 7 percent.

3. In an effort to keep a check on domestic spending at a time when our defense program must have absolute top priority, the President has asked that Congress curtail certain civil programs and turn back the responsibility for various Federal grants-in-aid programs to the State and local governments. Do you agree with such a domestic belt-tightening program at this time?

Total: Yes, 72 percent; no, 16 percent. City: Yes, 76 percent; no, 16 percent. Town: Yes, 76 percent; no, 11 percent. Farmer-rancher: Yes, 75 percent; no, 14 percent. Farmer: Yes, 60 percent; no, 25 percent.

The President also suggests that new starts on construction of irrigation and flood-control projects be delayed until defense pressures on our economy have eased. Do you agree with this policy?

Total: Yes, 72 percent; no, 21 percent. City: Yes, 73 percent; no, 20 percent. Town: Yes, 69 percent; no, 24 percent. Farmer-rancher: Yes, 80 percent; no, 18 percent. Farmer: Yes, 70 percent; no, 24 percent.

5. School districts depend generally upon the real and personal tax base within their districts for the operation of the schools. Increased demands are being made upon districts by a higher pupil load, more classroom facilities, and increased salaries for teachers. Increased revenue can be obtained in four ways: (1) Increasing the real and personal property tax levy; (2) by the State adding 1 cent sales tax earmarked for education; (3) the Federal Government adding 1 cent on the net income tax, diverting it directly to the treasury of the State earmarked for education; (4) an expensive overall Federal aid-to-education program (Murray-Metcalf bill costing from $3 billion to $5 billion annually) with the necessary Federal regulations and controls. Which system do you prefer?

Total: (1) 14 percent; (2) 64 percent, (3) 19 percent, (4) 3 percent. City: (1) 9 percent, (2) 72 percent, (3) 15 percent, (4) 4 percent. Town: (1) 14 percent, (2) 63 percent, (3) 18 percent, (4) 5 percent. Farmer-rancher: (1) 15 percent, (2) 67 percent, (3) 17 percent, (4) 1 percent. Farmer: (1) 17 percent, (2) 55 percent, (3) 24 percent, (4) 4 percent.

6. In order to keep the budget in balance, would you favor requiring the Congress to levy additional taxes for all spending programs enacted which would be in excess of the anticipated national income?

Total: Yes, 52 percent; no, 32 percent. City: Yes, 54 percent; no, 33 percent. Town: Yes, 51 percent; no, 33 percent. Farmer-rancher: Yes, 55 percent; no, 28 percent. Farmer: Yes, 48 percent; no, 35 percent.

7. Do you want me to vote against those grant-in-aid bills which violate the budget unless tax increases are provided to cover the additional costs?

Totals: Yes, 81 percent; no, 8 percent. City: Yes, 81 percent; no, 6 percent. Town: Yes, 81 percent; no, 8 percent. Farmer-rancher: Yes, 88 percent; no, 7 percent. Farmer: Yes, 76 percent; no, 10 percent.

8. There is wide recognition of the need to more fully utilize the potential of our young people in professional fields, particularly science and engineering. Do you favor the granting of Federal tax deduction credit to parents for college tuition costs as one means of encouraging greater college enrollment of qualified young people?

Total: Yes, 55 percent; no, 35 percent. City: Yes, 57 percent; No, 34 percent. Town: Yes, 59 percent; no, 32 percent. Farmer-rancher: Yes, 56 percent; no, 35 percent. Farmer: Yes, 48 percent; no, 39 percent.

9. Following the findings of the McClellan Labor Rackets Committee hearings, the President recommended labor legislation which would do four things: (1) Safeguard workers' funds in union treasuries against misuse of any kind whatsoever; (2) protect the rights and freedoms of individual union members, including the basic right to free and secret election of officers; (3) advance true and responsible collective bargaining; (4) protect the public and innocent third parties from unfair and coercive practices such as boycotting and blackmail picketing. Do you want me to oppose legislation which falls short of these four goals?

Total: Yes, 74 percent; no, 14 percent. City: Yes, 75 percent; no, 13 percent. Town: Yes, 77 percent; no, 14 percent. Farmer-rancher: Yes, 78 percent; no, 13 percent. Farmer: Yes, 65 percent; no, 18 percent.

10. In his agricultural message, the President emphasized the food-for-peace program of expanding the use of our agricultural surpluses for food abroad. Although expansion involves increased expenditure, would you favor such a program rather than curtailment of farm production?

Total: Yes, 66 percent; no, 19 percent. City: Yes, 60 percent; no, 23 percent. Town: Yes, 65 percent; no, 19 percent. Farmer-rancher: Yes, 68 percent; no, 18 percent. Farmer: Yes, 69 percent; no, 17 percent.

11. Would you favor limiting our economic foreign aid program entirely to providing food supplies abroad?

Total: Yes, 49 percent; no, 36 percent. City: Yes, 40 percent; no, 43 percent. Town: Yes, 50 percent; no, 37 percent. Farmer-rancher: Yes, 48 percent; no, 38 percent. Farmer: Yes, 56 percent; no, 28 percent.

12. A crash program on missiles has produced amazing results. Would you favor a crash program in research for the development of industrial uses for farm commodities?

Total: Yes, 59 percent; no, 24 percent. City: Yes, 42 percent; no, 35 percent. Town: Yes, 58 percent; no, 24 percent. Farmer-rancher: Yes, 61 percent; no, 24 percent. Farmer: Yes, 75 percent; no, 14 percent.

13. Wheat is the principal farm commodity on which a legislative program may be expected out of this Congress. Would you

prefer the domestic parity or two-price system for wheat, with bushel rather than acreage quotas, to the present support program?

Total: Yes, 49 percent; no, 13 percent. City: Yes, 30 percent; no, 9 percent. Town: Yes, 47 percent; no, 12 percent. Farmer-rancher: Yes, 55 percent; no, 13 percent. Farmer: Yes, 62 percent; No, 21 percent.

14. Would you favor high Government supports on all farm products with absolute rigid production controls covering all farm commodities?

Total: Yes, 14 percent; no, 72 percent. City: Yes, 5 percent; no, 73 percent. Town: Yes, 10 percent; no, 72 percent. Farmer-rancher: Yes, 16 percent; no, 77 percent. Farmer: Yes, 26 percent; no, 65 percent.

15. The President has proposed an increase of Federal gasoline tax from the present 3 to 4½ cents per gallon to accelerate construction of the Interstate Highway System. Do you favor such an increase?

Total: Yes, 41 percent; no, 52 percent. City: Yes, 48 percent; no, 42 percent. Town: Yes, 43 percent; no, 50 percent. Farmer-rancher: Yes, 37 percent; no, 56 percent. Farmer: Yes, 37 percent; no, 59 percent.

Ominous Trend in Castro's Cuba

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. PORTER. Mr. Speaker, Dale Francis, correspondent for the Catholic periodical Our Sunday Visitor, knows much about Cuba. In the past I have inserted many of his articles in the Appendix, because I was convinced of his good faith and accuracy as a reporter. I have never met him but I have talked with him on the telephone.

Now he writes, "My own confidence in the possibility of a victory for freedom with Fidel Castro as the head of the government has been considerably shaken." He says that in his earlier articles he failed to anticipate the consequences of the unstable character of Fidel Castro and he overemphasized the importance of the fact that the vast majority of Cuban people do not like communism.

He says the biggest complication in the democratic forces was their organization. He says he recognizes the strong possibility that Castro may be a Communist and he says Castro's behavior is, "if you say it gently, irrational."

Based on my own observations, in Cuba and elsewhere, I have been disturbed about many developments. However, I still believe in the good faith of Fidel Castro and I do not believe that he is a Communist. I have written him at length about several important matters that do disturb me. I am looking forward to hearing his explanation by mail or next week when he comes here.

Castro's job is tremendous and he was not well prepared for its great responsibilities. Very few people would be. Cuba has been dominated for years by dishonest, terroristic governments. An honest and democratic government cannot be created overnight. However, we can ask that the leadership recognize its affinity with the free world against communism and we can insist that verdicts of acquittal by duly authorized tribunals not be reversed by executive decision. We can also be much disturbed about the overthrow of able, democratic labor leaders who were open and effective enemies of Batista.

I do not think Castro is a dictator yet but I do see an ominous trend. I agree with Dale Francis that "if it is true Castro is another dictator and worse, a dictator who does the will of the Reds, then the consequences of this truth are so terrible no one wants to face them." Face them we will have to if they do occur, but far better that we examine the trend at this time and make certain that Fidel Castro understands it for what it is and has an opportunity to reverse his policies before it is too late, both for himself and Cuba.

Under a previous consent I am including the text of the article by Dale Francis in Our Sunday Visitor for March 29, 1959, entitled "Will Cuba Be Betrayed?"

WILL CUBA BE BETRAYED?

(By Dale Francis)

A nationally famous news commentator, commenting on these articles, spoke of my complete about face on the Cuban situation and this is a most unfortunate misimpression. It is the situation that changed, not me. I was mistaken in that I had not expected such a quick change in the situation. I was not wrong in my reporting of the facts of both the situation that existed under Batista and the situation as it existed in the early days of the new government.

What I have tried to do, and what I intend to do in the future, is to report the news as it exists at the moment. My news sources in Cuba are, I feel quite certain, unequaled by any other newsman's and I will report accurately what I learn.

There was always the real possibility that democratic forces in Cuba could win out. I have informed and intelligent friends in Cuba who still believe they can win out. My own confidence in the possibility of a victory for freedom with Fidel Castro as the head of the government has been considerably shakened.

Democratic forces did not win out because of a variety of complications, some of which I will discuss in this article. Communists won out at least temporarily, because they are well organized. My own failure to anticipate their quick dominance—you will recall I always warned of the possibility of their gaining power—was a miscalculation based on the overemphasis I gave to the vast majority of the people who do not like communism and my failure to judge the consequences of the unstable character of Fidel Castro.

The biggest complication among the democratic forces was their lack of organization. Two examples will explain what I mean.

In Santiago de Cuba, an appointment was to be made of the director of education for the province. A person recommended by Archbishop Enrique Perez Serantes seemed certain to get the job. This person was a good Catholic, a believer in democratic freedom. His would have been an ideal appointment.

But another Catholic, who wanted the same position, opposed the appointment most strenuously and bickering over the position began. While the divided Catholic forces bickered over who should have the position, an active Communist was appointed.

The second example of lack of organization involved Catholics and Protestants. Castro had committed himself to religion in the schools in one of his many long talks. Quite naturally the secularists, free-thinkers, and the Communists did not want this, but so long as he had said it, there seemed to be little chance for them to express their oppposition.

The plan offered by Catholic leaders was similar to the released time plan in the United States. No one would be required to take religion who did not want it. Protestants would teach Protestants, Catholics teach Catholics, those who did not want religious courses could be excused.

Protestant leaders came out in strong opposition to the Catholic plan, charging violation of separation of church and state. They even added a protest against chaplains in the army, although again both Protestants and Catholics had chaplains.

The Protestant opposition gave the revolutionaries their opportunity. Immediately the Communist newspaper, Hoy, and the revolutionary paper, Revolucion, began their attacks on Catholic leaders.

The Communist organization was well established. It entered the 26th of July movement in full force almost a year ago when Castro brought in publicists like Marta Pravde and Carlos Franqui and he soon learned they had the know-how to get things done.

But despite the excellent Communist organization, the Reds could have done little without the help of the unstable character of Fidel Castro. The fact that Castro is the law in Cuba means that those who have his ear are able to dominate the country. Were the Communists to try to take control of the government either by voting strength or by military conquest, they would face certain defeat because the people are almost unanimously anti-Communist. But with only Fidel Castro to conquer, the task was relatively simple.

But then what of the theory that Fidel Castro has always been a Communist himself? There have always been those who claimed this. I have quoted those who know him well and deny it. Now, after having talked with probably the best informed men in Cuba, I have still not been absolutely convinced he is a Communist, but I recognize the strong possibility it may be so.

A man who has known him for years and has remained close to him since his arrival in Havana, told me he was convinced Castro is not a Communist. He said he believed that Castro has figured the Reds are the most competent workers he can find and that he is using them, believing he can outsmart them and get rid of them when he has used them. If this is true then Castro has just uttered the most famous of last words.

The evidence that Castro may be a Communist dates back to 1953. Students of Cuban history will remember the famous Montreal pact in which the Orthodox and Authentic Parties met in Canada to present a united front against Batista. What has not been known publicly until now is that there was a strong pressure group in the Orthodox Party that wanted this to be a popular front against Batist that would have included the Communist Party. Quite aside from the evil of communism, this would have been disastrous for it would have given Batista a chance to stamp his opposition as Red. There was never any serious consideration given by the 10 party leaders to this proposal for a popular front and there was an anti-Communist resolution offered by the Authentic Party.

This resolution was strongly opposed by some of the Orthodox representatives because they feared the pressure group in their party. Finally the resolution was dropped from the public statement. All of this was not made public and there would be no purpose in making it public now except for the fact that the man back in Cuba who had pressured the Orthodox representatives most strongly to include the Communist Party in the popular front was Fidel Castro.

When the Orthodox representatives returned he blasted them because they had not done as he had told them. Their explanation they had at least prevented the anti-Communist resolution was angrily dismissed by Castro. He said that, seeing how little influence he had in the Orthodox Party, he'd start his own movement. Soon after that there was the attack on the barracks at Santiago and the 26th of July movement was born.

This never before revealed information certainly suggests Castro may have always been Communist-minded. If it is true then never has there been a Communist supporter who more frequently lied, publicly and privately.

Against this theory is not only the testimony of friends who are anti-Communist but an irrational behaviour that would seem strange for a dedicated Communist.

To call Castro's behaviour irrational is to say it gently. Except in musical comedies, I doubt if there has ever been a Prime Minister quite like this one.

He is quite capable of holding up an important conference in Pinar Del Rio while he plays aboard a German warcraft, shooting off big guns like a little boy at play. He does not think it strange to suddenly leave a cabinet meeting to go out to see a show, asking the cabinet members to wait until he gets back.

All these things he has done and more, and these are not actions of a calculating man, but a strangely irrational man. When I reported to you after visiting with him, I spoke of his compulsive urge to speak, his egomania. All these things, which I tried to excuse as possible consequences of tiredness and the early days of excitement, have been accelerated rather than diminished.

His overriding of his own court in Santiago trials of the aviators, his denunciation of the rebel officer who served as defense attorney and the rebel officers who served as judges were not so frightening to me as what happened during the second trial.

Castro had said the aviators would be executed. He intended it that way, I am sure. But Archbishop Perez Serantes came once again to Havana, his tired body moved once again in an act of compassion, and he pleaded successfully for the lives of the fliers.

The next day Castro spoke. In words that alternately were calm and reasoned and then confused, exaggerated, and almost like the words of a madman, Castro announced the sentence for the aviators even while the second trial was going on.

Because they want so much for it to be true, many Cubans still have hope for freedom under Castro. But after this speech, after this clear evidence there is no law except Castro, it would take a great deal of hiding from the truth for any thinking Cuban to convince himself there was not a dictatorship in Cuba.

For anyone familiar with Communist terminology, the fact that this new government is Red dominated must be increasingly more apparent. Possibly the most revealing fact of all is semantic. For millions of Cubans, the happy end of the revolution came when Batista left. For the Communists, for men like Raul Castro, for others who have been deceived by them, the revolution really began then and is still going on. The Red and the Leftist newspapers and the public addresses of leaders are filled with the fact that this is a revolution that is not to end, and that any who even suggest there is anything to dispute are guilty of counterrevolution, which in Castro's Cuba is now a crime.

Why? The people of Cuba want Castro to be the apostle of freedom so intensely they will do anything to keep themselves from being convinced he is not. If it is true Castro is another dictator and, worse, a dictator who does the will of the Reds, then the consequences of this truth are so terrible no one wants to face them.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 16, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of March 28, 1959:

WASHINGTON REPORT BY CONGRESSMAN BRUCE ALGER, FIFTH DISTRICT, TEXAS

MARCH 28, 1959.

The second supplemental appropriation bill, 1959, totaled approximately $2,480 million and involved mainly Government salary increases voted in the last Congress. The big debate was over the $100 million increase to the Development Loan Fund, under foreign aid. The clash occurred over the Comptroller's figures of $678 million in the Fund still unexpended versus the argument that obligations or signed loan agreements totaled $685 million, leaving only a $15 million balance. Admittedly, the report accompanying the bill described the latter figures as "guess figures." To this uncertainty is added the disapproval some of us have over the loss of congressional control of this revolving fund, best example of which is our voting to spend more on the strength of "guess figures." Secondly, I find it hard to approve further spending, even meritorious (if it is), when we are spending beyond the already-too-high budget. The amendment approving this $100 million amendment additional spending passed by a vote of 183 to 59. I opposed it.

The Bretton Woods Agreement Act amendment in two parts deals with world loans (68 individual member nations):

1. International Monetary Fund: Its purpose, to stabilize member nations' currencies, endeavoring to keep currencies convertible by extending short term loans. The end sought being increased trade and monetary exchange between nations. Of a total of $9 billion, the United States has subscribed 26 percent, and this bill would provide another $1,375 million, 25 percent of which is payable in gold, as is 25 percent of the earlier subscription.

2. International Bank for Reconstruction and Redevelopment: Its purpose, to aid economic assistance of member nations through loans for projects such as electrical power development, port and transportation facilities, land reclamation and others. Of the $10 billion, the United States has bought stock totaling 28 percent. This bill would double the stock purchase of each nation (total becoming $21 billion). Of each nation's total, 2 percent is in gold or dollars, 18 percent in a nation's currency, and 80 percent callable as reserve. The nations of the world helping each other through joint participation is a neighborly, challenging, and commendable goal, as I see it. The results are satisfying in that no loans are in default, and banking policies—that is, businesslike procedures—are being followed. But dangers, that in starry-eyed idealism we must not overlook, include: (1) loans to stabilize foreign currency, the whole structure resting on U.S. credit and financial strength—the whole program is weakened to the degree that U.S. currency is unstabilized by our own deficit financing and debt through trying to help others. And we are operating at a deficit, (2) our gold reserve is steadily being depleted, and our currency value rests on this gold. Foreigners can convert dollars into gold, but Americans cannot. Of our $20 billion gold reserve, some estimate that $11 billion is callable now by foreign nations, (3) we add money to funds which must have large liquid assets when the United States because of continued expanding Federal spending is not liquid itself, with its own bonds becoming less attractive to investors, (4) how much of this loan structure is actually repayable through U.S. gifts of foreign aid in one form or another? It seems to me that no one can know until the study is made. Basically, if the U.S. economic systems on which world loans depend collapses, it would be the death of the free world and personal freedom which we all treasure. I feel our action of expanding spending programs is too hasty when we have a $13 billion deficit this year and another deficit in prospect. Can anyone seriously contend we can help strengthen others if we weaken or collapse our own economy? I cannot.

The fair trade bill, H.R. 1253, is before the Interstate and Foreign Commerce Committee for hearings. Last year as a member of the subcommittee, I sat through weeks of hearings. This week I testified against this bill and presented 22 digested studies of the bill for the CONGRESSIONAL RECORD and colleagues who might be interested. The fair trade bill would permit manufacturers to set retail prices through Congress setting aside antitrust law which makes price maintenance conspiracies illegal.

For the layman, it may be difficult to take the matter seriously, it is so apparently antithetical to all our beliefs, but I'm convinced the proponents are serious. What's wrong with the bill? Well, it's unconstitutional, incompatible with free enterprise, and violates States rights and individual prerogatives. These charges can be spelled out with documentation. Information will be sent to anyone so requesting it. Retailers, particularly smaller independents, should study fair trade to learn how it will ruin, not help, them.

(EDITORIAL NOTE.—No kinfolk are on the payroll and no office rental payments are received for Texas' Fifth Congressional District.)

Rowland R. Peters of the Nocona News Named Editor of the Week

EXTENSION OF REMARKS
OF
HON. FRANK IKARD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. IKARD. Mr. Speaker, my congressional district is very fortunate in having a number of excellent weekly newspapers, owned and edited by experienced, first-rate newspapermen. Just recently the Publishers' Auxiliary, national newspaper publication, named Rowland R. Peters, who is the editor of the Nocona News, Nocona, Tex., Editor of the Week. Mr. Peters is not only an outstanding editor but he takes an active part in the civic affairs of Nocona which has endeared him to the people in that community. I am proud to include in my remarks an article that appeared in a recent issue of the Wichita Falls Times concerning the newspaper background and present activities of Mr. Peters:

Publishers' Auxiliary, national newspaper publication, has named Rowland R. Peters, prizewinning editor of the Nocona News, Editor of the Week.

Mr. and Mrs. Peters bought the Nocona News in March 1952, and Peters has won the admiration of his readers for the positive stands he has taken.

"I have never failed to print anything or support any project that was for the good of my community," Peters says.

Since taking over the Nocona News, Peters has won 18 awards in recognition of outstanding work. Peters has all awards framed and hung on the wall in his office. He says, "They are my constant reminder to do a better job."

Not a single edition of his paper has been published without an editorial. Many weekly newspapers have cut out their editorials but Peters says: "I must be from the old school. I was taught that every edition should have an editorial, and the Nocona News will."

Peters got started in the editorial office of the newspaper rather late in life. He was a telegraph operator and had spent 16 years working for newspapers in that capacity. When the teletype came in, the entire profession was "washed out." Each operator had to find another profession. Peters started as a cub reporter, with a wife and two children to feed. It was hard, but in a short time he was promoted to reporter and then to managing editor.

STRONG EDITORIALS

He feels that every editor should take a positive stand in their editorials and should stand for those things that are for the improvement of the community. When Nocona started out to get its lake, the people defeated the first bond issue. Before the second election Peters wrote front page editorials favoring the lake. His most popular was headed "Going Fishing." The lake bond issue carried, and he received several awards for his editorial.

Peters writes a weekly column known to his office staff and friends as the "sacred column." But the name is "Round About Nocona." He writes funny incidents that happen to people, their children, and their pets.

He is one of the few people who has visited Alcatraz prison. Of course, there is little desire among the masses to make such a visit, but Peters decided he wanted to know what life was like on the tiny island behind the high walls. The trip was arranged and he has made numerous talks on the island prison.

Peters never misses a council meeting or school board session and he reports what happens at those meetings.

ACTRESS SEARCH

Peters remembers a train wreck that happened on a cold, windy night at Dunkirk, Ohio, when snow was about 3 feet deep. His paper received a tip that Joan Bennett, the actress, was on the train and he was sent out to find her. He found a woman who resembled her but she denied she was the famous star. After questioning her three separate times and getting the same "No" answer, Peters gave up and reported that actress Joan Bennett had missed the train.

It was almost 20 years later that he saw her on television and heard her tell about the train wreck in Ohio and the persistent reporter who tried to interview her.

"She was a better actress than I was a newspaper reporter," Peters says.

He claims to have the distinction of being the only editor who married his sports editor. His wife, Illo, was written up in Yank magazine, which devoted a full page to her duties as sports editor for the Bucyrus, Ohio, newspaper, during the war.

It was at a time when most of the staff had been drafted and Peters and a high school boy composed the editorial staff of the busy daily newspaper in a town of 10,000 population.

Peters has been active in civic affairs since he moved to Nocona. He has been a director of the chamber of commerce, a member of the rodeo association, worked with the FFA boys, the Camp Fire Girls and Boy Scouts, is a member of the Rotary Club, a Mason, and Shriner.

He has been invited to Marshall, Tex., to attend the East Texas Press Association conference and has been advised that he will receive at least one more award.

Just One More Decade

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. BERRY. Mr. Speaker, I have asked unanimous consent to insert in the RECORD an editorial appearing in the March 16, 1959, issue of the Omaha World Herald, which is of concern primarily to those of us who are interested in keeping the Federal well from running dry. The editorial is as follows:

JUST ONE MORE DECADE

Time was when the congressional battle over foreign aid was won with the argument that permanent peace through temporary handouts was just around the corner.

Help our allies for just 4 short years, said Mr. Truman as he launched the Marshall plan in 1947, and our allies then will be strong and prosperous and able to pull their full weight in defense of the free world.

The 4 years came and went, and with them came new commitments for NATO.

But did foreign military and economic aid diminish? It did not.

Vote the funds we ask this year, said its advocates in the early 1950's, and things will be better next year. So the funds were voted, new areas shared in Uncle Sam's dole. Foreign governments came to rely on U.S. aid dollars until in Bolivia, for example, the aid amounted to more than the people paid in income taxes.

And while the aid advocates in Washington were saying, "just one more year," America's relief clients the world around were demanding, "Give us more." And the few lands still outside the vast area of beneficence were demanding, "How about us?"

So it went. Europe, southeast Asia, north Africa, Latin America, the Middle East, behind the Iron Curtain in Yugoslavia and Poland.

More and more and more aid. Steadily increasing resentment and outright hatred of Uncle Sam for not giving as much as was wanted. Staggering waste. Grandiose projects whose dubious benefits were rarely visited upon the common people. Intrenchment of anti-American regimes that might have fallen except for the U.S. aid which propped them up.

And what about the supposed friends who supposedly benefited? Are they firm allies, ready to stand shoulder to shoulder with Uncle Sam in any showdown with communism? Is aid making them more confident, more self-reliant, raising their standard of living, spurring them on to new accomplishment?

Except in a few cases—a very few—America's aid clients cannot confidently be regarded as reliable allies.

Nevertheless, President Eisenhower on Friday asked Congress for almost $4 billion in foreign aid for the coming fiscal year. And at the same time he predicted that aid will be needed for a long time. It will be needed, he said, to win the billion people of the less developed areas to America's side.

And how long will this take? He answered:

"The battle is now joined. The next decade will forecast its outcome."

Just 10 more years of aid, to find out how things are going.

And after 10 years, what? Just one more century, perhaps, or one more millennium? More likely until the well runs dry.

A Declaration of Independence From Federal Dependence

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 16, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, there follows a statement approved by the Chamber of Commerce of Twin Falls, Idaho. It is a provocative statement which should invite all of us to make a new appraisal of the proper functions and responsibilities of the Federal Government. One of the greatest services which the Congress of the United States could perform would be the return of government of the people, by the people, and for the people back to the people and permit them to govern themselves on the banks of the Snake River rather than to be governed from the banks of the Potomac:

A DECLARATION OF INDEPENDENCE FROM FEDERAL DEPENDENCE

Whereas we, the members of the Twin Falls Chamber of Commerce are in agreement with the principles of individual freedom, a free market, limited government.

Whereas we believe the present trend in political thinking and fiscal policy will ultimately destroy our free institutions and the savings of our people and our children; and further we believe this same trend in political thinking and fiscal policy mortgages the future of our children to ultimately leave them economically destitute, politically enslaved, and defenseless; and

Whereas our Nation's strength lies in local, county, and State government, by the citizens using local, county, and State funds; and that under the trend of the present political philsophy our people are slowly and surely being lulled to sleep and deprived of their substance; and

Whereas we deplore those Federal agencies and representatives of Federal agencies who, in addition to their primary function, engage in activities designed to expand and perpetuate those functions beyond their original design and concept.

We therefore call upon all chamber of commerce and all like-minded groups throughout these 50 States and Territories who hold to the principles upon which this Nation was founded and under which it has prospered, and who hold with us to the principles of individual freedom, a free market,

limited government, to make and to protect this same declaration; to steadfastly resist further encroachment upon these principles by action of the Federal Government; to limit our use of Federal funds and to seek a corresponding reduction in tax levies and governmental controls; to avoid being deluded by glib tongue, trite phrase, and uneconomic thinking with promises of personal and financial security through the bait of Federal aid; there being no Federal aid, since Federal aid is our local money less the high cost of freight for political brokerage on its long trip to Washington and back—returned with the barnacles of Federal restrictions and bureaucratic controls.

With a belief in Almighty God, we therefore declare that those steps necessary to reestablish a Government of the people, by the people and for the people, be taken by all the people, not tomrrow but today.

And further we in Twin Falls resolve to take those steps necessary to bring again to the banks of the Snake those functions of Government now mushrooming on the banks of the Potomac.

Earl Haroldson, President; Carl Berg, First Vice President; Egon Kroll, Second Vice President; Warren Barry, Earl Faulkner, Lee Fillmore, William Lanting, Joe McCollum, Mel Carr, Otto Florence, Jr., Carl Irwin, Ed Heap, Bill Grange, Secretary-Manager.

Approved March 13, 1959, board of directors, Twin Falls Chamber of Commerce, Twin Falls, Idaho.

Endorsed by Earl Haroldson, president.

Poison in Your Water—No. 52

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article entitled "Fish Deaths Held Worst On Record," which appeared in the Washington, D.C., Evening Star of March 3, 1959:

FISH DEATHS HELD WORST ON RECORD

WINCHESTER, VA., March 3.—The executive secretary of the State water control board, A. H. Paessler, says a recent fish kill in the Shenandoah River below Front Royal was the worst in Virginia since the board began keeping records in 1948.

Mr. Paessler spoke last night at a mass meeting of fishermen here arranged by the Izaak Walton League of Winchester.

The water control board has estimated that 200,000 fish were killed.

Fred Glaize, chairman of the pollution committee of the local Izaak Walton League, told the meeting the number of fish killed in the Shenandoah River was closer to 2 million.

The water control board has said preliminary investigation indicated that industrial wastes from the American Viscose Co. plant at Front Royal killed the fish. A laboratory report is expected to be finished by the next water board meeting March 26.

E. Blackburn Moore, speaker of the house of delegates, and chairman of the water control board, told the meeting the company does not admit responsibility for the kill.

The Individual Soldier

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. GAVIN. Mr. Speaker, under unanimous consent to extend my remarks, I insert in the RECORD the article written by Bill Wescoat, editor of the Reynoldsville (Pa.) Star. Mr. Wescoat attended the XXI Corps—Army Reserve—Small Arms Tournament at Fort Meade, Md., recently and in his article pays high tribute to the individual soldier, both Regular Army and the reservist:

[From the Reynoldsville (Pa.) Star., Apr. 2, 1959]

(By Bill Wescoat)

With the news currently centering around the nuclear retaliatory powers of the United States in the event of an all-out war with Russia, our military chiefs defending their requests for more and greater weapons, and a high-ranking Army general's charge that our arsenal already contains too many atomic and hydrogen weapons, perhaps you would be interested in reading an informal report on the plain old individual soldier and his rifle.

Almost forgotten in our mad scramble to achieve and hold superiority in the nuclear and push-button warfare fields is the individual soldier—the man on the ground with a gun in his hands. The man without whom no war can be fought to a successful conclusion. Fortunately for all, there are Army commanders everywhere who fully realize the importance of the individual soldier, and who wage a constant battle for his recognition. Along this line, making a strong contribution to the effort, are the rifle and pistol matches held on every level in the Army, and culminating in the naming of all-Army champions.

I spent 6 days the past week attending the XXI Corps Commander's Small Arms Tournament at Fort George G. Meade, Md. I was not there as a participant in the matches, but on the administrative end of things and in that capacity I had an excellent opportunity to observe and to get the feeling of what is being done along these line.

The tournament, sponsored by Maj. Gen. H. J. Vander Heide, commanding general of the XXI Corps, brought together some of the top shots, both Regular Army and reservists, from Pennsylvania, Maryland, Delaware, Virginia, and the District of Columbia. The majority of the participants were reservists, however, and every effort was made to place the conduct of the tournament entirely in the hands of the reservists—the men who give 1 night a week and 15 days in the summer of their time toward building a strong Ready Reserve.

Under the capable direction of a young Reserve captain named Jim Speidel, who proved to be a real ball of fire, the tournament came off in excellent order. Actually, this was the first one exactly of its kind ever held, and it laid the groundwork for bigger and better operations in the future. If there was one impression the uninitiated observer, like myself, carried away from this tournament, it came from the intense interest and enthusiasm exhibited by the participants.

A tournament such as this costs a lot of money to build—your money—but if the ultimate objective can be realized then it is certainly money well invested in the military security of our country. The goal, of course, is to spread this interest and enthusiasm into Army units of all kinds, and by this to develop confident, competent rifle and pistol shots, who, in turn, will provide the sort of fighting men we desire if the need for their services ever arises.

Preparation for the tournament included 2 days' instruction by personnel from the Advanced Marksmanship Unit of the 2d U.S. Army. These people are real experts, and their instruction left little to be desired. Most people who have had any Army service have been exposed to rifle instruction and rifle-range shooting, but actually there is little comparison between this and tournament shooting. The latter involves, for the most part, experienced rifle and pistol shooters who look upon this activity as a hobby, and pursue it even more zealously than the most ardent golfer or fisherman follows his hobby.

The importance of the fact that most of the men participating in this tournament are reservists seems readily apparent. They are the modern Minutemen. If their eagerness and devotion to duty can be properly exploited, then the importance of the individual soldier will be enhanced, and our ability to wage war of any description in defense of our country will become greater. The motivating force behind such tournaments is much more than a man shooting at a target with a rifle, and it is toward this end that the XXI Corps is directing its efforts. Your tax dollars buy many things—some good, some bad. In this case I believe that in the overall program you are buying something we all hope will never be used—but if we must use it—it will be good.

Antarctic

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. SAYLOR. Mr. Speaker, Mr. Walter Sullivan, a reporter for the New York Times, has written a very interesting article on Antarctica which appeared in that paper on April 1, 1959. The article follows:

U.S. DECISION NEAR ON THE ANTARCTIC

After 3 decades of groping and uncertainty, the future of the United States in Antarctica will probably be decided here within the next 2 days.

A policy decision is being prepared by the National Security Council. The result may be an Executive order to be issued Thursday or soon thereafter.

The last time that the United States came close to a long range commitment in Antarctica was in 1939, when this country's chief potential enemy, Germany, was seeking to gain a foothold on that continent. The result was formation of the U.S. Antarctic Service, but World War II killed it and no official claim was made to Antarctic territory.

Now the Soviet Union is this country's only big rival in scientific exploration of the continent. The rivalry has been friendly and plans are being made by the two nations to continue the exchange of expedition personnel.

NO LAND CLAIMED

Neither the Soviet Union nor the United States has claimed any land in Antarctica. Nevertheless, both have clearly been motivated by a desire to be active in the area and thus have a say in any future settlement.

The debate as to who should run the U.S. antarctic program has been going on for 3 years or more. The four stations currently manned there by the United States were all established as part of this country's effort during the International Geophysical Year, which ended last December 31.

The International Geophysical Year program was run by the National Academy of Sciences, a nongovernmental agency, with funds allocated by the Government's National Science Foundation. Now operation of the program has been transferred to the Foundation, although the academy's committee on polar research still makes recommendations.

The interests of the various Government agencies are protected through screening of the projects by the Interdepartmental Committee on Antarctic Research. This includes representatives of the Army, Navy, Air Force, Weather Bureau, Coast and Geodetic Survey, National Aeronautics and Space Administration and the Departments of State and the Interior. Dr. Alan T. Waterman, director of the National Science Foundation, is Chairman.

BILLS BY WILEY

On May 31, 1957, Senator ALEXANDER WILEY, the Wisconsin Republican, introduced a bill to create a Richard E. Byrd antarctic commission. It was sponsored by leading Members of the Senate. The commission would be on a level with agencies such as the Atomic Energy Commission. It would supervise nonmilitary antarctic operations supported by any branch of the Government.

The proposal was turned down by the Bureau of the Budget. It was also opposed by some members of the scientific community on the ground that it would make the antarctic effort political, rather than scientific.

Last January 29 Senator WILEY and his associates introduced a modified version of the bill. It provides for the creation of from 5 to 18 centers at academic institutions, under sponsorship of the commission.

Meanwhile the Committee on Polar Research of the National Academy of Sciences, headed by Dr. Laurence M. Gould, has offered a plan for the creation of a polar research institute. It might be modeled to some extent after Associated Universities, the team of academic institutions that runs the Brookhaven National Laboratory under sponsorship of the Atomic Energy Commission.

This institute would direct research in both polar regions. Its money would come from the National Science Foundation, which would also make arrangements for logistic support. Such support must be furnished on a large scale by the Navy and Air Force.

Still another proposal is to enlarge the Arctic Institute of North America to handle the antarctic program. This institute is a joint Canadian-American affair.

The rival schemes include a proposal to continue the present arrangement, in which the program is run directly by the National Science Foundation.

Scientists would like to establish a satellite-tracking station at the South Pole and install a communications net invulnerable to magnetic storms.

One of the more troublesome problems has been whether the United States should join with the Soviet Union and other nations in a joint antarctic mapping program. For several years the Russians have been pressing for such a venture but no Government agency has had the funds to participate.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

Appendix

The Supreme Law of the Land

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 7, 1959

Mr. ROBERTSON. Mr. President, recently I received a memorandum from Mr. J. Luther Glass, a consultant on juvenile court law and procedure in the Virginia Department of Welfare and Institutions. In this memorandum, Mr. Glass discusses implications of the Supreme Court's school segregation decisions in relation to fundamental constitutional questions. I ask unanimous consent that this thought-provoking article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THOUGHTS TO REMEMBER

(By J. Luther Glass)

Brown v. *Board of Education*, decided by the Supreme Court of the United States on May 17, 1954, has caused me to do a great deal of thinking on the subject of our basic law, the Constitution of these United States.

Frequent reference has been made to this decision as being the supreme law of the land. Those responsible for this are, to say the very least, guilty of fuzzy thinking. The Constitution could not be plainer on the subject. Article VI, paragraph 2, of that great document uses these bold words:

"This Constitution, and the laws of the United States which shall be made in pursuance thereof; and all treaties made, or which shall be made, under the authority of the United States, shall be the supreme law of land; * * *."

The above-quoted language makes no provision, or provides any excuse, for any decision of any court ever becoming the supreme law of the land. Assuming that the Court acted within the scope of its constitutional authority, its decision can never be more than the law of that particular case.

But did the Court have a constitutional right to reach the conclusion that was reached on May 17, 1954? That is the question that this article proposes to answer.

The best place to start answering this question is to look at the first paragraph of the body of the Constitution, that of article I, section 1, which is as follows:

"All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives."

Nowhere in the Constitution can we find authority for the Supreme Court, or the Chief Executive to exercise legislative powers. Those powers remain within the Congress alone. The two words, "herein granted," are most important. They are key words, meaning powers granted to the Federal Government by the original 13 sovereign States. A clear understanding of these two words reveals the sort of checkrein the people determined should be held over the General Government. Many great powers were reserved for and retained by the States and the people. This is well stated by a competent court in *Livingston* v. *Van Ingen* (9 Johns. (N.Y.) 507):

"When the people create a single, entire government, they grant at once all the rights of sovereignty. The powers granted are indefinite and incapable of enumeration. Everything is granted that is not expressly reserved in the constitutional charter, or necessarily retained as inherent in the people. But when a Federal Government is erected with only a portion of the sovereign power, the rule of construction is directly the reverse, and every power is reserved to the members that is not, either in express terms or by necessary implication, taken away from them, and vested exclusively in the Federal head. This rule has not only been acknowledged by the most intelligent friends of the Constitution, but is plainly declared by the instrument itself."

The next place where it would be well to take a good, long look is at the 10th amendment to the Constitution. Its language is crystal clear, and reads as follows:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Since the Constitution is silent as to schools or education, it naturally follows that the United States has never been given jurisdiction over this question. There are those who claim that the 10th amendment is outmoded and no longer has any effect. But how could this be true? Has it ever been repealed? It appears that the 18th amendment became somewhat outmoded and was repealed by the adoption and ratification of the 21st amendment. It has also been said that Chief Justice Marshall's decisions killed the 10th amendment. If that be true, why did not Chief Justice Hughes follow the same procedure in killing the 18th amendment?

Now the Court claims to base its authority for outlawing segregated schools upon the provisions of the first paragraph of the 14th amendment. The first sentence of the 14th amendment had only one purpose, to wipe out the effect of the Dred Scott decision, which, incidently, was one of the soundest decisions ever rendered by the Supreme Court. The second sentence of this amendment is framed in this manner:

"No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

Now let us consider for a moment the language just quoted. Assume for the moment that a very large class of citizens as a group are denied the right to vote. Would not this constitute abridgment of their privileges, or amount to denying them equal protection of the laws? It would certainly seem that way. Could not the Court remedy the situation simply by decreeing that such was in violation of the 14th amendment? You would certainly think so, wouldn't you? But consider that the Negro man found himself without the right of suffrage, and he found his remedy in the 15th amendment. Likewise, the ladies of the country discovered that citizenship, education, high moral standards and interest in good government were insufficient to insure them the right to vote. Did they hire lawyers to acquire their right to vote under the 14th amendment? They did not. They brought pressure to bear which resulted in the adoption and ratification of the 14th amendment.

So, then, it would appear that the Supreme Court has exceeded its authority in the Brown decision. It not only exceeded its authority; it tied its decision to the socialistic views of MYRDAL and to the 14th amendment, about which grave doubts exist as to whether or not it has ever become a part of the Constitution, for the reason that Southern States were blackmailed into ratification in order to get back into the Union.

Would it not then follow, as the night the day, that the only legal way to deny to the States their inherent right to legislate as they see fit concerning school matters would be to amend the Constitution as was done when the 15th and 19th amendments were needed?

One further thought: Have you considered the possibility of bringing a suit in the Supreme Court itself, seeking a declaratory judgment as to whether or not the 14th amendment was properly proposed, adopted, and ratified according to the provisions of article V of the Constitution? Read article V and consider how the Southern States were denied representation in the Congress when two-thirds of each House voted upon this proposal; and further, the then composition of southern legislatures, having been at that time composed mainly of ignorant Negroes and carpetbaggers.

Ponder these questions if you seek to understand the basic, fundamental principles of constitutional government.

History of the Red River

EXTENSION OF REMARKS
OF
HON. RUSSELL B. LONG
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 8, 1959

Mr. LONG. Mr. President, recently I had the good fortune to listen to my colleague the senior Senator from Louisiana [Mr. ELLENDER] deliver a very fine address to a large audience representing the people who live behind the levees of Red River in the States of Louisiana, Arkansas, Oklahoma, and Texas.

This address does a fine job in tracing the history of the Red River and the efforts which have been made by the Federal Government, the governments of the States, local groups, and individuals to control flood waters and preserve them until they were needed to irrigate the lands or furnish water to the residents of neighboring communities.

I ask unanimous consent that the address delivered by the senior Senator from Louisiana before the Red River Valley Association, in Shreveport, La., on March 31, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY SENATOR ALLEN J. ELLENDER BEFORE THE RED RIVER VALLEY ASSOCIATION, SHREVEPORT, LA., MARCH 31, 1959

I appreciate the invitation of your president, Cliff Fairbanks, and of my good friend, Roy Matthias, to be present here today since it offers me the opportunity of discussing with you some of the problems facing the Red River Valley and, indeed, the entire Nation, as a result of our very rapid increase in population.

It is always a source of pleasure to participate in your annual meetings, because you are dedicated to a cause in which I am deeply interested—the preservation of two of our most precious resources, soil and water.

Recently in reflecting on my 22 years in the Senate, where I have devoted a great deal of my time to the protection and development of the resources of our country, I had occasion to review some of the history of waterway improvements.

It was interesting to note that the first appropriation for the improvement of our waterways was made in 1824, and that by 1828 the War Department had requested an appropriation for the improvement of navigation on the Red River in the vicinity of Shreveport.

From the earliest days of exploration of our country the Red River was the main artery of entry into the Louisiana Territory. Many years ago a mass of vegetation and driftwood had become tightly packed for a distance of about 150 miles, in the bed of the Red River, forming the so-called great raft. This obstruction blocked the flow of the river, causing it to spread out and deposit its silt in the valley. Thus, the richest soil in America began the process of accumulation to form our fertile valley under this stagnant overflow. But because of the great raft, the valley, as today, was subject to severe flooding.

When it became imperative for the Federal Government to establish a garrison fort on the upper Red River in Texas, the War Department became interested in navigation on the Red River. Supplies for this garrison were sent down the Mississippi River, around the "raft," through the swamps and bayous, and then up the Red River.

On May 23, 1828, Congress appropriated $25,000 for the removal of the "great raft" from Loggy Bayou, 65 miles below Shreveport, to Hurricane Bluff, 27 miles above Shreveport. This was the first attempt on the part of the Government to improve the Red River, and harness it for the needs of man.

You are all familiar with the fact that Capt. Henry Miller Shreve, who helped to establish this modern city of Shreveport, found that the river presented a real flood problem. Before he could lay the foundations for Shreveport, he had to clear away miles of trees an debris in the river channel.

My interest in the beneficial development of the water resources of our Nation stems from my personal conviction that such developments were an important factor in achieving our present high standards of living, not only in this great valley of the Red River, but throughout the entire Nation.

All through history, water has dominated human life. The earliest civilizations appeared in the great river basins of Mesopotamia and Egypt. Settlements were limited to coast lines and river banks; trading centers arose at the confluence of navigable streams. Rainfall and drought set the stage for the drama of human existence.

Unless a well planned and aggressive program of water resource development is carried forward, our children and grandchildren will not have an opportunity to enjoy the many advantages that today we take for granted. We cannot afford to neglect our economic strength and our economic growth. If we ignore the development of our water resources, we jeopardise the expansion of our national economy. This we cannot afford if we are to maintain our position of strength, on which rests the future of the free world.

The benefits that result from completed projects are positive examples of increased national wealth created by such improvements. More startling proof exists in Europe and Asia, where the prosperity of the countries are directly proportional to the effort expended on projects to conserve soil and water. My recent travels through these areas have convinced me that unless we protect our greatest resource, water, unless we keep it inland and do not let it flow to the sea unused, some day many parts of our great country may become as barren as the Gobi Desert, or as the lands which I have seen on my travels in old Persia. Our history books tell us that about 500 years before Christ, the entire area of Persia was capable of sustaining the livelihood of 115 million people. Now it adequately can care for less than 14 million.

Consider the great valley of Mesopotamia between the Tigris and Euphrates Rivers. At one time that area could produce food and fiber for 15 million people. Today it can hardly supply the needs of 2 million people. Why? Because the rulers neglected a great natural resource—water. If it had been possible to retain the waters upstream on those great rivers, and not permit them to steal the rich topsoil and float much of it out to sea, the chances are that the great valley would still be very productive.

The fact is, that those rivers carried millions of tons of earth downstream and among other damage done, clogged the small tributaries and rivers of Mesopotamia. Today that land is not suited for extensive cultivation. It is sour. It is not productive farmland. Certainly we cannot afford to let that happen in our great country.

Two years ago I visited various portions of the Soviet Union for well over a month. This was my third trip to that country in as many years.

I had the opportunity of visiting cities never before seen by an American Government official—cities in the far reaches of Siberia, an area which had been pictured to me before my visit as wastelands of snow and ice—as a vast prison camp. But this was not what I found. To my great surprise, I saw a virgin land being awakened; a land that promises to make Siberia the granary of Russia. Industry was flourishing to a surprising degree. One of the principal tools the Russians are employing in this development is a well planned utilization of their waterways system, both for navigation and the development of hydroelectric power. I visited several hydroelectric power stations that were larger than our biggest, and one that was almost twice as large as any we have in this country. I observed foundations poured for the construction of turbines and generators which will have a rated capacity of 300,000 kilowatts each—almost three times larger than anything we have. And these projects were designed, constructed, and had all their component parts built within the Soviet Union. In fact, much of the work on the large turbines was being done at Novosibirsk, located in central Siberia, which was a small trading post in 1905, and now a city of almost 1 million.

As a result of my inspection of installations in Russia, I am convinced that in water transportation, and hydroelectric power developments, the Russians are inching ahead of us.

In any comparison of time, money and effort expended on resource development in Soviet Russia and the United States, there is, of course, absolutely nothing that we can do about the rate of such developments in Russia. They are proceeding with their own resources to meet the needs of their own economy. We must direct our attention to what we can do to satisfy our own needs.

But it makes my blood boil when the critics of an adequate program to develop our rivers cry "pork barrel." Without the improvements heretofore made, our great sea ports could not handle our vast world trade; our steel industry would starve for lack of the ore that comes through the Soo locks; and the Ohio Valley would not have earned the nickname of the Ruhr of America without providing for an adequate water supply and an excellent water transportation. Critics of this program, because they have no sound basis for attack, cry "log-rolling" and "political back-scratching." Well, Mr. Khrushchev does not need to roll any logs, or scratch any political backs. Russia is developing her natural resources for the simple reason that it is to her economic advantage. Russia will, if she can, do everything in her power to defeat us on the economic front.

Mr. Khrushchev has already announced that this is one of Russia's principal aims—to defeat us on the economic battlefields of the world.

Now, I want to make it crystal clear that I do not approve, condone, or sanction in any manner, the Soviet system, or endorse the means by which Mr. Khrushchev and his followers stay in power. That is not the point at all.

What I am saying, and what I have heretofore said, is that the Russians—well aware of the value of the development of their water resources—are moving ahead rapidly in this field. This is a statement of fact. We cannot hide from it no matter how much we might like to—no matter how much we dislike or abhor the principles of communism.

As a practical matter, if the Russians are intent upon waging economic warfare against our way of life, then it behooves us to assess the capabilities of our opponents. We must be realistic. No field commander ever defeated his enemy by consulting his own personal preferences instead of his intelligence reports.

No general achieves victory by ignoring his opponent's strength.

However, above and beyond the need to maintain economic growth in order to defeat the forces of communism on the present economic battlefront, development of our water resources is just plain good business and commonsense.

If we studied our history lessons we would know that water resources development is in the best interests of our own country. History is replete with examples of how societies down through the ages have organized themselves to match resources with needs. Success in this effort has insured survival, as with Switzerland; failure has resulted in decline and ultimate decay, as with ancient Persia.

Water, controlled and navigable, and of good quality, is the most important factor in developing a sound and progressive community.

In any given river basin there are a limited number of good sites for storage of water, and limited areas where distribution channels or protective works are feasible. These sites should not be preempted, or devoted to purposes which will freeze the pattern of development, so that future needs cannot be met or will become so costly as to be impracticable.

Let us discuss for a moment the use and availability of water. As is the case with many nations of the world, our inhabitants

settled this country along the river valleys. Two-thirds of our population at the present time resides within 50 miles of navigable water. But the increasing water shortage, which now, more than ever, is an important factor in the determination of proper plant location, requires that the many industries which must base their policies upon long-range future requirements, be located along waterways. In a recent study by the 10th Federal Reserve District, it was concluded that the geographical distribution of water supply may be of such a nature as to conflict with such economic goals as the diversification of industry.

There have been many comprehensive studies of resource developments made in recent years. One of the latest was the Presidential Advisory Committee on Water Resource Policy, dated December 22, 1955. In that report it was stated that the estimated use of water in the United States in 1950 was 185 billion gallons per day and that, based on an estimated population of 200 million by 1975, the requirement would be 350 billion gallons per day.

The November 28, 1958, issue of U.S. News & World Report contained a very penetrating article by Dr. Phillip M. Hauser on the so-called explosion of population in the United States, which sheds more light on one of the factors of increased water use.

Dr. Hauser is head of the department of sociology at the University of Chicago, and has been Deputy Director of U.S. Census. He points out that the newest projections of the Census Bureau place the population of the United States in 1975 at between 216 and 244 million. That is an increase in the predictions of from 8 to 20 percent in the past 3 years.

Putting it another way, taking a mean of the projections, a population of 230 million by 1975 would mean a 30 percent increase in our population in the next 16 years. Think of the tremendous increase in demand on all elements of our resources, including water. In terms of water we will require about 400 billion gallons per day. In other words, during the quarter century period from 1950 to 1975 we will more than double our water requirements.

I know that you can get almost as many estimates of the consumption of water by the American people as there are authorities making surveys. Some of them tell us that in 1850, the average consumption of water per capita by the people of the United States was 50 gallons per day. They tell us that in 1950 it exceeded 1,000 gallons per capita per day.

The Public Health Service, and others charged with responsibility in that regard, tell us that in 1980 the per capita consumption requirements for water by the people of the United States will be about 2,000 gallons per citizen per day. Unless we stop to think, such figures sound incredible. When you consider that in the transformation of raw material to finished products, 1 bushel of wheat requires 7,500 gallons of water, 1 ton of finished steel takes 65,000 gallons of water, 1 yard of woolen cloth takes 500 gallons of water, a pound of rayon takes 150 gallons of water, and 1 gallon of gasoline requires 25 gallons of water, you begin to appreciate the fact that our domestic consumption is but a small fraction of our per capita consumption.

We are continually reclassifying from luxury to necessity items for our personal comfort which add to our water consumption. Take, for instance, the great increase in air conditioning. This alone adds a huge demand on our water supply systems.

That is the kind of changing economy, industrial and domestic in which we now move.

It has taken this Nation, that you and I regard as the strongest on earth, 350 years to reach a population of 170 million people. At the present rate of increase that population will double in less than 40 years. That means that our annual productive capacity will also have to double in the same period to maintain our present standard of living.

If that be the case, we are going to have to speed up water conservation, rather than slow it down if we are going to meet the requirements of this increasing demand from our economy. Plans must be made now to meet those expanding needs.

When the time required to develop a major project—3 years or more for planning, then 8 to 10 years for construction—is considered, it becomes evident that now is none too early to start projects which are actually needed and justified. They will become critically urgent long before they can be completed on an economical program.

The U.S. Geological Survey found in 1953 that there were 1,000 cities, from fairly good size up to big municipalities, that actually had to maintain a very restricted use of water. If something is not done now, then in 15 or 20 years it may be too late.

The average rainfall in the United States is about 4,300 billion gallons per day. Of that amount, about 3,000 billion gallons goes back into the atmosphere by transpiration and evaporation, leaving a total of about 1,300 billion gallons as runoff in rivers and streams, or for percolation into the ground. This, then, is the ultimate limit of our supply. Our consumption in 1956 was about 200 billion gallons; that means that we are consuming about 15 percent of the maximum available supply. By 1975 we will be consuming about 30 percent of the maximum available supply. These are average figures and do not take into account geographical distributions, distributions throughout the year, or the quality of the water for domestic or industrial uses.

There is a vast difference in the amount of rainfall in the various parts of the country. For instance, in the North Atlantic States the rivers carry about 191 billion gallons, but in the basins of the Red River of the North, in Minnesota and North Dakota, which is about the same area, the runoff is only about 4.5 billion gallons. It is apparent, therefore, that there is a very unequal geographical distribution. In some areas the seasonal distribution is even more unequal.

Perhaps a more important question than our absolute capacity to care for the water problems of our agricultural and urban areas, is the question of the relative cost at which we undertake needed developments. The cost of future water supply development can be held to a minimum by intelligent planning of urban settlements, and by multiple purpose water resource developments.

To help meet that problem, the Congress under the leadership of my good friend the great conservationist, ROBERT S. KERR, the senior Senator from Oklahoma, enacted the Water Supply Act of 1958. That act set the stage for a more farsighted and comprehensive consideration of water supply in river basin planning and development. One of the most important features of this act is that it enables the Corps of Engineers to include storage in reservoir projects to meet future needs for municipal and industrial water where there is no water user immediately at hand to pay the bill. The act, however, provides for equitable reimbursement when the need develops.

This act provides as essential and long-needed basis for planning, as in the past no authority existed to build for future water needs, even though it was obvious that they would develop.

Quantity is only one of the considerations in maintaining an adequate water supply; the quality of the water is of equal importance. The greatest water needs are for mineral-free or lightly mineralized water. The kind of water we need is not found everywhere.

What is the present administration doing to help meet this problem? It has not only failed to recommend funds to start surveys, plans, or new construction on projects that are needed now, but last year built into the budget a planned slowdown which would delay the benefits from the projects underway. This would also increase the overall cost of these projects.

As you all know, last year when the Congress added some new starts for planning and construction, there was a terrific blast from the White House.

On September 2, 1958, the President reluctantly signed the public works appropriation bill. At that time he issued the following statement:

"In the Public Works Appropriation Act, 1959, the Congress has included approximately $39 million in funds to initiate construction on 65 unbudgeted new starts that will ultimately cost almost $700 million. Adding nearly $700 million to the already heavy future commitments for Federal Water Resources projects is but another instance of irresponsibility in the expenditure of public funds. I am compelled to approve the act, however, because it appropriates essential funds for continuing work on river and harbor, flood control, and reclamation projects that were started in previous years."

When you consider that the appropriation for construction in the 1959 act was approximately $870 million, was it really an act of irresponsibility in the expenditure of public funds to start new projects which will ultimately cost nearly $700 million? I do not think so. That is adding less than 1 year's future commitment at the present rate of construction.

Unless it is the desire of the administration that the water resource program wither and die on the vine—and that may be the underlying reason—a fair number of new starts should be added each year.

Perhaps these shortsighted planners in the Bureau of the Budget believe that the Federal Government is spending too large a portion of its budget in developing the water resources of this Nation. Let us examine the facts.

Between 1950 and 1956 our national population increased 11.2 percent. Between 1950 and 1956 the national income increased 42 percent. During the same period the expenditures for rivers and harbors and flood control decreased 14.9 percent.

I believe those figures are very significant. As all of you know, construction costs have increased on an average of 5 percent a year. If that average is applied to the 1950 expenditures of $627 million, we should be spending about $908 million in 1959 on the civil functions of the Corps of Engineers in order to maintain the same level of operations as in 1950. In contrast, the appropriation was just under $814 million. This comparison disregards the increased need for these public works resulting from our expanding population.

I am not unmindful of the fact that it is requiring more capital outlay to carry on this Government than at any time in our history, but I believe that to curtail the development of our natural resources, may be the most expensive economy that we can make.

What is the situation in our own Red River Valley? The Red River, with a drainage area of about 91,000 square miles, flows through Oklahoma, Texas, Arkansas, and Louisiana. The Red River constantly expends a portion of its great energy in attacking the easily eroded materials through which it flows. The river is continually changing its alinement, and the losses from caving banks are very extensive. In Louisiana, alone, the 10 local levee boards have spent in excess of $35 million dollars for flood control and major drainage. In addition, millions upon millions of dollars worth of public improvements, such as highways and bridges, a large portion of

which are part of the Federal Aid Highway System, have been damaged or rendered useless by floods and the meandering of the Red River.

Denison Dam was constructed by the Corps of Engineers to control the runoff from the upper 39,700 square miles of the Red River Basin, and thus reduce flood stages downstream.

For the past 2 years, when representatives of the Red River Valley Association appeared before the Public Works Subcommittee of the Committee on Appropriations to seek funds to continue this important work, floods were raging along the Red River. In fact, as I recall, we have had three floods in about 13 months in that area.

The fact that flood disasters still occur is not an indictment of the effectiveness of projects that are in operation. Quite the reverse is true. The effectiveness of the projects in operation emphasizes the fact that we are not progressing fast enough with our authorized projects for relief and control of these floods.

Year after year, waters that should be confined and utilized, flow over farmlands, destroying crops and cattle and driving many of the residents of the valley from their homes. Streets, sewers, water and gas lines, and other public facilities are destroyed. As terrible as are these losses, they can be repaired by the expenditure of millions of dollars for reconstruction. To me, a more serious loss is that resulting from bank caving, where thousands of acres of rich soil are carried out to sea each year. That is a permanent loss.

The great flood of 1945 demonstrated that the runoff from the uncontrolled areas below Denison can produce floods equal to or greater than the maximum of record. The present plan for flood control on the Red River below Denison Dam was based on that fact. That plan was authorized by Congress in 1946. As subsequently modified by Congress, this plan provides for controlling floods by means of reservoirs, supplemented by local protection such as levees, channel improvements, and bank stabilization measures. It is primarily a reservoir plan, since reservoirs account for about 90 percent of the cost.

Considerable progress has been made on the authorized projects. Denison, Texarkana, Wallace Lake, Ferrels Bridge, and Bayou Bodeau Reservoirs have been built, and they have been very effective in reducing the heavy damage sustained as a result of floods in the past 2 years. But it was never contemplated that these completed reservoirs by themselves would solve the problem. As long as major tributaries—including the Little River—are completely uncontrolled, the Red River Valley is a sitting duck for a disastrous flood.

At long last the control of the Little River by a system of dams, authorized in the Flood Control Act of 1958, which incidentally was one of the plans that was the basis for the previous veto of the bill by the President, offers a ray of hope. Following passage of the authorization act last year, funds were provided for the initiation of the preconstruction planning on the Millwood and Broken Bow Reservoirs.

These were some of the new starts to which the President objected when he signed the Public Works Appropriation Act for the current fiscal year.

As I previously mentioned, we must not only look to the quantity of water, but also its quality. Salt pollutants in the Red River Basin add over 5,000 tons of salt and sulfates each day to the Red River arm of Lake Texoma. Preliminary studies of the U.S. Public Health Service in water quality conservation indicate that there is a possibility of improving the quality of Red River water. The objectives of the investigation are to find the source of pollutants, determine the type and volume, and devise practical means for controlling them.

Project studies now under way indicate promising means of reducing pollution of the Red River. The principal source of natural salt pollution is a rather thin, long rock formation, about 500 miles long and not over 10 miles wide. This formation cuts across many large river systems and pollutes otherwise good quality water.

The fact that major sources of pollution can be isolated suggests the possibility of remedial measures to prevent contamination.

The early completion of this study, and accomplishment of the remedial measures, is essential to the full utilization of the water resources of this great natural asset.

The problems which we have here in the Red River Basin are typical of the problems of water resource development throughout the Nation. Significant progress has been made toward solving these problems, here and elsewhere. Much remains to be done, but the importance of our water resources is becoming more and more widely recognized. With the continued efforts of men of leadership and vision, such as this association has demonstrated in the past, these problems will be solved here, and elsewhere.

It is impossible for me to accept the proposition that the American economy cannot afford the expenditure of funds for wealth-producing projects in this country, at a time when the administration recommends a 26-percent increase in a foreign aid program that in all conscience should be reduced below the 1959 level. I am afraid that the only hope for a nod from the administration for the construction of public works will be those States that border another nation. In such instances it may be possible for such a State to get a few crumbs. Just last month it was announced that the United States and Mexico would jointly build a $100 million dam on the Rio Grande. I wonder if such a project will be subject to the same tests and requirements that a similar project lying wholly within the United States would be required to pass in order to survive?

Could it be that the Bureau of the Budget and the administration actually do not believe that the conservation of water resources makes a major contribution to the economic stability and welfare of the people? No, for that is the basis for requests for large expenditures for economic aid, and for the Development Loan Fund under the mutual security program.

I have frequently been referred to as the Senate's most outspoken critic of the foreign aid program, and I suppose it is true. As I have said many times in the past, I did support foreign aid as originally conceived and I have no apologies to make. I was willing to help our friends get back on their feet. This has long since been accomplished, but we still continue to help them in one way or another. My objections to the present program are based on personal observations of actual operations, and I am convinced that we are not achieving the desired objectives.

In some cases we are sponsoring the wrong projects in the wrong places. For example, we are building flour mills in order to convince the people of Korea that bread is a suitable substitute for rice in their diet. It is hoped that by so doing, the consumption of rice in Korea can be reduced, thus making rice available for export, ignoring the fact that Korea is thus being placed in the position to compete for Far Eastern markets which our own rice industry would desire to obtain. It must be realized that Korea produces very little wheat. Thus, after constructing the flour mills we shall be obligated either to subsidize the importation of wheat into this country, or give it to the Republic of Korea. Consequently, it will be necessary for our aid to continue ad infinitum.

In other cases, the advantages from the projects we sponsor do not inure to the benefit of the peoples of the countries involved. In addition, almost universally, the peoples of the countries we are trying to assist are totally unaware of the millions we are expending in the development of their country. In some instances, because we gave something to one country and did not give a like amount to another, the nonrecipient country begins to pout. The moral of this should be clear to the President—you do not solve problems by giveaways.

One of my principal objections to economic aid projects approved under the mutual security program is the lack of adequate considerations in the overall planning, and the complete disregard of economic justification. A project in a foreign country receives little or no consideration as to its economic soundness, and construction is frequently started before the project is conceived in its entirety, thus increasing unnecessarily the eventual cost. Whereas in this country the project must be specifically authorized after detailed surveys under prescribed standards, and after critical review at the local, State, and National levels.

The project is again subject to critical review in the annual appropriations. Of course, these projects must show a favorable benefit-to-cost ratio, under prescribed conservative standards.

Last year when the House adopted an amendment requiring resource development projects in the foreign-aid program to show economic justification, the administration forces had that proviso removed from the bill, on the basis that it would cripple the program, as indeed it would.

In concluding his message of March 13, 1959, on foreign aid, the President stated:

"If we are wise we will consider it (foreign aid) not as a cost but as an investment—an investment in our present safety, in our future strength and growth, and in the gorwth of freedom throughout the world."

If the President is really sincere, he will also consider resource development projects as investments in America's future, rather than irresponsible expenditures. Believe me, so long as we consider appropriations for resource development as outright expenditure, instead of as an investment which will return sound dividends, just so long will we allow the chaos of flood and drought to deprive us of the full benefits of our resources.

I am certain that the American people are tired of being told the Federal Government cannot afford to improve our own rivers and harbors—that it needs much of our tax dollars to provide similar facilities in foreign countries. If it provides additional funds to start resource projects it will unbalance the budget.

Our efforts to obtain sufficient funds to keep our public-works program going is becoming more and more difficult. I believe the time has come for the Members of Congress, and the entire Nation as well, to stand up and demand that the administration take a new look at its public-works policy, or else prepare for the entrance of a new administration that will.

USO—The Warmth of America in the Cold War

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. WILEY. Mr. President, it was my privilege this morning to listen to one of the finest talks I have heard in Washington. It was by our friend and associate, the Senator from West Virginia [Mr. RANDOLPH]. The occasion was a breakfast of the United Service Organization's National Council. There were present 75 Members of the Senate and House. There were in attendance 600 members of the USO advisory group, representing every State in the Union. They were here for a 2-day visit. As Senators know, the USO—United Service Organization—has in its membership representatives of all religious groups, business, and labor—in fact, it is a cross-section of America dedicated to selling service, in its broadest interpretation.

The meeting started with a talk by Harvey S. Firestone, Jr., USO chairman. It was following his remarks that the Senator from West Virginia [Mr. RANDOLPH] gave us a most illuminating and inspirational talk on the subject, "USO—the Warmth of America in the Cold War." The Senator's address gave a picture of the world today—the challenges which face us and the successes and failures of the Kremlin.

I ask unanimous consent, Mr. President, that this fine address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE WARMTH OF AMERICA IN THE COLD WAR

(Address by Senator JENNINGS RANDOLPH, Democrat, of West Virginia, to the United Service Organizations National Council hometown breakfast, Sheraton Park Hotel, Washington, D.C., April 8, 1959)

Mr. Chairman, members of the board of governors, ladies and gentlemen of the national council, and guests, once again we meet to applaud and appraise the work of the USO in servicing the needs of the young men and women of our Armed Forces.

I have been asked to discuss the topic of "The Warmth of America in the Cold War," a subject that admits of wide latitude, to say the least. However broad the title assigned, it bespeaks a particular aspect of the work of the USO and of the national character of America which is of central concern to all of us; it indicates the role of compassion and understanding which lies at the heart of so much of our work, as well as that of the individual affiliated agencies. It challenges also the need for our extending these qualities throughout the range of our national affairs—a point to which I shall return in more detail later.

This month, ladies and gentlemen, we memorialize the 18th year of the USO—a year heavy with symbolic import. For this is the year when the young men who were born—as was the United Service Organizations—in 1941 first become subject to military conscription.

These young men, and we ourselves, face a radically different world from that of 1941. In that year American troops were stationed only on American soil and American Territorial possessions, guarding our national security by means which were determined largely by 19th-century conditions of warfare and by Admiral Mahan's concept of naval power.

Today our national security is intimately involved with that of every nation of the free world, a security cemented by alliances with other nations throughout the Western Hemisphere, in Western Europe, in the Middle East, and in southeastern Asia. American troops have followed these alliances as guarantors of our national commitment to the security of the free world, from the wastes of the Arctic to the sands of Arabia, from Korea to Koblenz.

To a limited extent only is this a world of our own making—and even less so is it one of our own choosing. But this is the world we have and must abide with for an indeterminate future.

Until the turn of the century the world was ruled largely by 13 empires. The First World War led to the collapse of the German, Austrian, Turkish, and Russian Empires. By 1955 most of the remainder had been dissolved—with the British, French, and Dutch Empires eroding under the resurgent tide of colonial nationalism.

Since the end of World War II, 21 new sovereign nations have come into being; so also has a new kind of imperialism—that of the aggressive and militant Soviet-Sino Axis, animated by the dynamism of a new religion of the state. This new imperialism controls the strategic heartland of the Eurasian land mass, and—with its satellite nations—numbers well over a third of the world's population.

This is one measure of the change, ladies and gentlemen, that has taken place within less than two decades. Another, and correlative measure, was the presence in Washington last week of the foreign ministers of the NATO nations—an indication that the free world is not without the strength and the means to oppose the Soviet imperialism.

But let us not be deluded by our own terms. We use the term "imperialism" to apply to the expansionist designs of the Soviet Union—just as we used the same word to apply to Germany and Japan of 20 years ago. The German and Japanese imperialisms, however, were based upon a racial mystique of pan-Germanism and pan-Asianism, respectively—each developed independently of the other, and each relying ultimately upon military conquests as the means of expanding its sphere of influence.

The new imperialism of the Soviet Union is neither so limited in its appeal to other peoples nor in its means of exploiting this appeal. Indeed, military conquest, in the traditional sense, is only one means—and not the most important, either—of the new Soviet imperialistic design.

The successes of the Communists in recent years have been on the propaganda front, in areas of economic and political infiltration, and in exploiting the tensions of colonial nationalism rather than on the military front. There we have successfully opposed them, in Europe and in the Middle East.

Not only has the Soviet Union failed to expand its strategic military position, but it has also felt compelled to retreat from many of the advanced positions it held at the end of World War II. This we have failed to recognize amid the Soviet successes in other fields, but let me note a few of the areas of Soviet withdrawal:

In Europe, they have withdrawn from the Danish island of Bornholm, from the Finnish naval base, and from the strategically valuable section of eastern Austria, while they have been forced also to accept the independence of Yugoslavia and a loosening of their hold on Poland. In Asia they have given up their naval bases in Darien, they have withdrawn from Sinkiang, they have ceded their domain over the Manchurian Railroad to China, and there is even evidence that their hold on Outer Mongolia may be weakening.

Thus, although we have seen some Soviet military withdrawals in Europe, and the ceding of Soviet authority in Asia to Chinese power, we have witnessed also the continued successes of the Soviet in other and equally important areas. Through piecemeal economic competition on a selective basis the Soviet Union has succeeded in gaining an economic and political foothold in many of the underdeveloped nations of Asia, Africa, and Latin America. In the Middle East it has exploited, with varying degrees of success, the tensions of Arab nationalism—falsely appearing there, and elsewhere, as the defender of the very values which have given us our strength—the ideas of freedom, of human dignity and of national sovereignty. Then, too, Russia's recent scientific and technological achievements have been presented to the less industrialized nations as evidence of the superiority of the Soviet economic system over that of a free society.

This, then, is the face of our adversary—a resourceful, aggressive and cunning opponent—equally capable of offering the disarmingly open hand of aid to Iraq or the mailed fist of conquest to Hungary and Tibet.

Against the expansion of this power we have developed our system of economic and military alliances in Western Europe and southeastern Asia, the cornerstone of which, in each instance, is the military power of the United States. This power can be effective only as it exists in force and in readiness, for we will never again be granted—as we were in World Wars I and II—the opportunity of 2 or 3 years in which to prepare behind the shield of our allies. The Armed Forces of the United States are now the main shield of the free world—not the French infantryman of World War I, or the British Navy and Royal Air Force of World War II.

Yet the men and women of our Armed Forces—stationed at the ramparts in England and Western Europe, in Africa and the Middle East, in Okinawa, Japan, and Korea—these young people are more than the sword and buckle of freedom. They are also emissaries of the American culture and American character to the lands in which they serve. And unlike the system of Soviet communism, the ideals of America cannot be extended under the sway of boot and bayonet.

The extent to which the people of other lands will rally to the American cause of freedom is determined in large part by the image created by American service men and women stationed in those lands. In many instances our uniformed youth must overcome local hostilities—created sometimes by Communist agents, and sometimes by nothing more than the natural envy of the poor for the rich. But whatever the source, its most effective antidote is the natural generosity and compassion of the young people in our Armed Forces. For it is they who provide the living image—and sometimes the only concrete one available in those lands—of the meaning of American ideals. Whether it be the American GI who shares his rations with the Korean war orphan, or the American Army doctors who help improve native health and sanitation facilities in Libya—wherever they serve, the members of our Armed Forces are ambassadors of the American ideal.

Today this ideal embodies the concept of a world society which preserves the values of national sovereignty and individual freedom—as opposed to the Soviet ideal of a world superstate, with nationalities as well as individuals in subservience to the state. It is the ideal of the commmunity of man, voluntarily held together by compassion, understanding and respect for individual differences—as opposed to the soulless collectivism of the Soviet, held in thrall by a secret police.

The young men and women of our Armed Forces thus share a large part of the responsibility for making this ideal meaningful to the people of other lands. And in this task—as you ladies and gentlemen know—the USO shoulders its responsibilities as well. For we have gone well beyond the coffee-and-doughnut concept of ministering to the needs of our Armed Forces.

The educational, cultural, and religious programs of the USO, in this country and in our stations abroad, help to illuminate for our service people the values of the culture they are defending. In this respect, the very name of our organization—United Service Organizations, Inc.—comprised of people from a variety of religious faiths and national origins—this very name symbolizes the voluntary and generous aspect of the character we identify as "American."

This national trait of service and voluntary giving is, according to the noted historian, Arthur M. Schlesinger, one of the 10 contributions of America to civilization. He finds it in America on a scale unparalleled in other countries—in our 4,000 philanthropic foundations, in our contributions to the Red Cross, in our United Fund, and in CARE. And, he states, "Thanks to this ingrained trait of the national character, the Government found it easy to mobilize our people behind the Marshall plan, a costly tax-supported program for repairing the war-stricken economies of Western Europe. Though these official undertakings were in part designed to halt the spread of communism, they arose from deeper springs of human compassion and have no parallel in history."

This is a large part, ladies and gentlemen, of what we mean by the warmth of America. But this is not all. We must extend this spirit of warmth and compassion into more than just the areas of national good will and generosity with our own material bounty—important as these are.

For the crisis our Nation faces today encompasses the entire domain of our feelings, our will, and our intelligence. It is a crisis in the human spirit—a crisis which challenges our capacity to know, and to feel the knowledge that we are come to one of the great watersheds of history. As with every such place in man's long travail out of barbarism, it is a moment of danger as well as opportunity—and a moment of choice. This time the choice may be between a planetary holocaust or working toward a new plateau of civilization. We have the technical means for either, but do we have the human means—the imagination, the compassion, and the will to make the right choice?

While history shows many instances of noble causes overwhelmed by the brute forces of evil—man has more frequently brought on his own defeat by failure to pursue the right than by the active forces of evil. We are no exception. We have received no divine dispensation from our own limitations and frailties; it is not written in the stars nor in the flights of birds that our national will is to prevail.

Yet, we may say with assurance that the image of the United States which we present abroad can be no stronger than that which we show to ourselves. Thus, we must answer for ourselves the question of whether the warmth of America is borne of our genuine commitment to the values of a free society, or whether it is in large part merely the expression of exhuberance in our national wealth. The issue presented is whether—as individual men and women, and as a free society—we can once again generate as strong a faith in the values of a free society as in the material fruits of a free economy, and without confusing the identity of either.

Ours is the first civilization in history which has developed the means of eliminating poverty among all its members. For the first time in humanity's ageless struggle with nature we find at hand the means to release men from the iron chain of circumstance—from the pain and hunger which have been their daily lot.

The choice is ours to make, namely, either to use our national good fortune for the enlargement of the faith of man, to expand the ideal of brotherhood, and to extend our vision of the truth—or to continue with our present preoccupation with pleasure and profit, submit to a cult of mediocrity, and abide under the tyranny of our own selfish concerns and narrow nationalism.

Perhaps the latter seems a harsh and unfair description of our present national attitudes. This is a conclusion one may draw when he hears the constant boast of our increasing gross national product—without ever the question of "For what?"—when we spend $10 billion a year on advertising to convince ourselves that we cannot do without the things we don't need, when we spent $10 billion a year on alcohol and $3 billion a year on cosmetics, the two together equal to our total expenditures—public and private—for education? What other conclusion may one draw, when, with a gross national product of approximately $450 billion, we hear calamitous talk of national bankruptcy over the issue of spending $3.5 billion on foreign aid—less than 1 percent of our total product? Is this the image of a strong society?

More than 100 years ago Ralph Waldo Emerson stated that "Things are in the saddle." He followed this comment with the observation that "A man's things soon come between him and himself." Now, this was no prejudice of Puritan asceticism, but an observation on human behavior—applicable to a society as well as to a man.

The evidence surrounds us if we will but open our eyes, for we have many unfinished tasks in our own society: to furnish the conditions of human dignity to the 5 million or so of our own families who live on the squalid edge of poverty—to eliminate the conditions of urban blight that contaminate so many of our cities—to restore education and the life of the mind to their proper role in a democratic society. These are only a few of the problems that press upon us.

We have the means to solve these problems. But not all our wealth of technology and instruments will avail us if we lack the imagination to perceive, the compassion to understand, and the will to act.

This is, in part, the meaning of a recent comment by Archibald MacLeish—one of the most intelligent and perceptive observers of our times. In referring to the defense of freedom in our society, MacLeish stated that, "The man who knows with his mind only, who will not commit himself beyond his wits, who will not feel the thing he knows, or know the thing he feels—that man has no freedom anywhere. He is tugged by the string of whatever is told him, maneuvered by slogans. Sooner or later his life will seem indifferent to him, something managed by others, and he will acquiesce in the management, think about it as little as possible, occupy himself with the only things near enough to seem real—his car, his front lawn, those shadows on the television screen—symbolic shadows."

This retreat into the privacy of selfish and petty concerns is our chief enemy of the human spirit in America today. For our greatness—as individuals and as a Nation—is achieved in the complementary relationship of private rights and public responsibilities. Our finest hours as a people have thus been those when we presented to the world at large the hope of realizing a new moral and spiritual vision of man.

This, I believe, is also what the warmth of American means today.

Address by Hon. Herman E. Talmadge Before Tennessee Agricultural Council

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD, the thoughtful speech delivered by the Senator from Georgia [Mr. TALMADGE] before the annual meeting of the Tennessee Agricultural Council in Memphis, Tenn., on April 3, 1959. More than 1,000 leading farmers and businessmen were present to hear Senator TALMADGE. These farm leaders were impressed by his analysis of the farm problem and his recommendations for a solution. I am certain that Members of Congress and others who are giving consideration to the plight of the American farmer in trying to do something to better his lot will be interested in the analysis of Senator TALMADGE and will be impressed with the fact that he has a specific program to present, which is deserving of most careful consideration.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a happy occasion for me to have this opportunity to meet with my fellow farmers.

And I do like to regard myself as a farmer even though my principal agricultural pursuit at present is endeavoring to plow under Secretary of Agriculture Ezra T. Benson and his farm policies.

It is a planting which, I am sure you will agree, is long overdue.

And I am pleased to be able to report to you that the climate for doing some major cultivating in that field is improving every day both in Washington and throughout the Nation.

As incredible as it may seem to those unfamiliar with the facts, we in the United States have a Department of Agriculture which is the enemy of the farmer.

Had the Department of Labor for 1 day been as antagonistic to the interests of organized labor as the Department of Agriculture for 6 years has been to the interests of the farmer, Mr. Reuther and his associates in the AFL–CIO would have ridden the Secretary out of Washington on a rail before sundown.

For 6 years now it has been the policy of the Republican administration to ruin rather than to save the farmer.

For 6 years now it has been the program of Mr. Benson and the Department of Agriculture to discredit rather than to help the farmer.

With apologies to the late great Will Carleton, the farmer's present plight might well be summed up like this:

"Worm or beetle—drought or tempest—on a farmer's land may fall,
Each is loaded full o'ruin, but the Benson farm plan beats 'em all."

Or to paraphrase that well-known bit of anonymous farm doggerel:

"Some people tell us that there ain't no hell,
But they never farmed under Benson, so how can they tell?"

Of course, my friends, it is not necessary for me to tell you who earn your living from the soil that the present farm program has been a miserable failure and American agriculture is in the worst mess in this country's history.

It is a situation which is reflected in every compilation of agricultural statistics.

It is a situation which is reflected in the accelerated shift of population from farm to city.

It is a situation which is reflected in last year's election results.

It is a situation which is apparent to everyone except Secretary Benson and President Eisenhower.

These are the irrefutable facts:

Between 1952 and 1958, realized net farm income in this country declined from $14.4 to $13 billion despite substantially increased Government payments. And, when the degree of inflation which has occurred since 1952 is taken into account, it is obvious that realized net income would have to be increased considerably above the $14.4 billion sum merely to put farmers back where they were in terms of purchasing power 6 years ago.

Such an eventuality is hardly likely under the present program, however, inasmuch as the Agricultural Marketing Service itself predicts a reduction of from 5 to 10 percent in realized net income this year.

During the same 1952–58 period, farm production expenses increased from $22.6 to $24.5 billion and the spread between farm and retail prices widened by $75 for each thousand dollars spent for farm produce. The farmer's share of the market-basket dollar dropped from 47 to 39 cents and still is falling.

The Bureau of Labor Statistics index for last January showed prices received by farmers at that time were 10 percent below those realized in 1947–49 while prices paid by farmers were up 19 percent for the corresponding period.

In view of the situation evidenced by those figures it is not surprising that the Department of Commerce reports that between 1950 and 1957 2,349,000 persons migrated from the farms of the Nation to compete for increasingly scarce jobs in urban areas. According to latest reports, that trend is continuing.

Those are the facts which Mr. Benson blithely ignores in insisting that black is white and failure is success.

The essence of his recent testimony before the Senate Committee on Agriculture and Forestry was that—and I am sure this will be news to you—farmers in the United States never had it so good.

As a matter of fact, he told the committee in effect that things are going so good for the farmer that unless Congress does something about it before May 15 the whole country is going to pot.

His prescription for doing something about it turned out to be a bigger dose of Benson brand sulfur and molasses.

The Secretary can claim the distinction of being the first man in history to use his own failures as arguments in favor of his policies.

He is making much of the fact that realized net farm income increased 21 percent during 1958.

What he is not mentioning is the fact that the 1958 total still is considerably below the rate which prevailed at the time he took office.

He is making much of the fact that per capita farm income last year topped the previous high set in 1951.

What he is not mentioning is the degree of inflation which has taken place since the Korean war and the fact that farm income is spread among fewer families now that his policies have forced more than 2 million persons off the farm.

He is making much of the fact that the national farm surplus continues to increase.

What he is not mentioning is the fact that it was he who kept all surplus commodities off the world market during 1953 and 1954 and that it was not until Congress required by law that he do so that he began to move them into world trade channels.

He is making much of his contention that he could solve the problem of overproduction if Congress would give him authority to reduce prices.

What he is not mentioning is the fact that under authority given him since 1954 he already has reduced supports by an average of 20 percent and, at the same time, the wheat surplus increased by a third and the corn surplus doubled.

He is making much of his contention that he could restore the agricultural economy of the Nation if Congress would give him the laws he wants.

What he is not mentioning is the fact that of the 53 recommendations he has made to Congress, 48—or more than 90 percent—have received favorable legislative action and that those 5 which were turned down were of a relatively minor nature.

It will take more than Mr. Benson's usual pious sermonizing and glib platitudes to disclaim his responsibility for the sad situation which prevails in American agriculture today.

His contention that he should not be held accountable for the mess he has made solely because Congress has not given him everything for which he asked is about as plausible as his claim that he did American farmers a big favor by cutting parity prices by $200 million in January.

With Mr. Benson having his way, the farmers of America would be better off seeking their living at the dice tables of Las Vegas.

After all, even a crapshooter wins sometime, which is more than one can say for the chances of the American farmer under the Benson farm program.

The Benson program has depressed farm prices below the subsistence level.

The Benson program has forced farmers to abandon their farms.

The Benson program has stimulated artificially high prices for consumer goods.

The Benson program has generated unmanageable surpluses of farm commodities.

The Benson program has robbed the United States of its world markets.

The Benson program has resulted in a farm depression which, as we saw in last year's recession, is making itself felt in all other segments of our national economy.

Our experience has proved conclusively that reduced acreage, reduced prices, and rising costs lead only to reducing farm income to a disaster level. It has shown beyond contradiction that it is impossible to reduce production by reducing prices, to control production by reducing acreage, or to bring supply into line with demand through research, which has the effect of increasing supplies.

An openminded appraisal of all the facts affords no other conclusion but that we in the United States have reached the point where it is essential to the future welfare not only of the farmer, but also of the taxpaying consumer, that an entirely new approach be undertaken to solve the Nation's farm problems.

Both the farmers and the consumers of the United States have repudiated the ruinous policies of Secretary Benson at the polls, and they have given Congress a mandate to write a bold, new law which will give farmers the protection they have been denied for the past 6 years withot placing an intolerable burden on the tarpayers of the country.

The farmer wants to be returned to a free-enterprise economy, with protection equivalent to that enjoyed by labor through the minimum wage and collective bargaining, and by industry through the tariff and Government subsidies and contracts.

The taxpayer wants a stabilized farm program which will give his pocketbook a break both in the marketplace and at tax time.

Our experience with Mr. Benson's ideas of farming stands as conclusive proof that those ends cannot be achieved through existing concepts.

To effect a realistic and permanent solution to our agricultural problems we are going to have to profit by our mistakes and take advantage of the lessons we have learned at so great cost.

We are going to have to discard completely the present patchwork of discredited farm laws, start all over again, and write an entirely new program which will get away from the compounded failures and the stereotyped concepts of the past.

My long and serious study of this matter has convinced me that such a program must have three fundamental objectives.

First, it must let the farmer farm.

Second, it must guarantee the farmer his proportionate share of the national purchasing power.

And, third, it must put American agricultural commodities back on the world markets at competitive prices.

Those objectives can never be achieved until the Federal Government is removed from the business of buying, storing, transporting, and selling agricultural commodities—which it is now doing at a yearly cost of $1.027 billion to the American taxpayers—and the responsibility for marketing farm produce is returned to the farmer and private enterprise where it belongs.

Those objectives can be achieved only by freeing the farmer to plant and sell his crops as he sees fit and by limiting the role of the Federal Government in agriculture to paying the farmer the difference between the prices he receives for commodities sold for consumption in this country and 100 percent of parity.

Those objectives are encompassed in the Talmadge farm plan which I first introduced during the 2d session of the 85th Congress and which I reintroduced with the cosponsorship of Senator OLIN D. JOHNSTON, of South Carolina, shortly after the beginning of the present 1st session of the 86th Congress.

The overwhelmingly favorable response which my bill has received from all sections of the country encourages me to believe that such an approach has widespread appeal not only among farmers but also among the general public.

While I would not say it can be enacted this year or next, I will make the prediction that when a new farm program is passed—and, if not before, one certainly will be after we install a Democrat in the White House in 1961—it will be along the lines of the measure I have proposed.

The Talmadge farm plan is exceedingly simple and can be understood by even the layman without the necessity of consulting

a Philadelphia lawyer or a certified public accountant.

It has five major points, as follows:

First, it would eliminate all acreage controls and Government loans.

Second, it would assign each farmer growing basic commodities a domestic production quota to be expressed in terms of unit measurements—pounds, bushels, bales, etc.—which would be the same percentage of the national consumption of basic commodities that the farmer's average annual production for the preceding 5 years bears to the total national average production for the same period.

Third, it would guarantee and pay to each farmer a sales price support of the difference between the price he receives for his domestic production quota and 100 percent of parity.

Fourth, it would require each farmer to submit a bill of sale with this application for sales price support payments.

And, fifth, it would impose a maximum of $25,000 on the amount of sales price support which any individual farmer could receive in any 1 year.

As an example of how it would work, let's take the case of an average cotton farmer who now has a 5-acre allotment on which he grows 3½ bales of cotton a year. Under the Talmadge formula, his domestic quota would be about 2⅛ bales which, when sold at current prices, would entitle him to a compensatory payment of $105 over and above the $315 he would receive in the market place. Those amounts would be in addition to his income from the sale of whatever additional cotton he might grow in excess of his quota to sell on the open market.

For cotton the Talmadge plan support price would be 40 cents a pound compared with the present market price of around 30 cents and the 81 percent of parity support price of 32.4 cents.

The actual amount of the compensatory payment to the individual farmer would depend upon the prevailing market price. If the market price went down the compensatory payment would go up and vice versa. The farmer thereby would have the firm assurance of a 100 percent of parity price on his domestic production quota regardless of the level of the market price.

The cost of my plan would depend upon the resulting free market price levels of the basic commodities, but in any event would be considerably less than that of the present program. It likely would vary between $1.5 and $2.5 billion and the agricultural experts of the Legislative Reference Service of the Library of Congress estimate its potential saving to the taxpayer at between $2 and $3 billion a year.

While costing less, it would put perhaps as much as $1 billion a year more in the pockets of the farmers. As paradoxical as that might seem, it would be the case because the high costs of administering the present bureaucratic program would be considerably reduced. For instance, one of the costs which would be ended would be the billion dollars a year now being spent to handle surplus agricultural commodities.

Furthermore, whatever its ultimate cost might prove to be, the Talmadge farm plan would assure that every farm program dollar went into the pockets of the American farmers which decidedly is not the case at the present time.

With particular reference to cotton, under my bill American textile mills would get an even break with their foreign competitors who can now buy subsidized American cotton $35 to $40 a bale cheaper than it can be purchased in this country.

In other words, the underlying philosophy of the approach I have proposed is to subsidize Americans instead of foreigners.

While I will match my humanitarian impulses with those of anyone, I do not believe in—nor do I believe the American people believe in—global philanthropy at the expense of the American farmer and the agricultural economy of the United States.

Even more important than the financial considerations are the intangible advantages to be derived from a free enterprise farm program bolstered by compensatory payments.

Such an approach is extremely simple and would take the redtape out of the farm program.

Such an approach would eliminate the regimentation and dictation imposed by acreage controls.

Such an approach would let the farmer plant what he wants and sell it as he pleases.

Such an approach would take the Federal Government out of the business of buying, storing, transporting and selling farm commodities and place the responsibility for marketing with the farmer and private enterprise where it belongs.

Such an approach would guarantee the farmer his proportionate share of the national purchasing power and restore agriculture to a free enterprise, competitive base.

Such an approach would end the accumulation of the national farm surplus which has glutted the Nation's markets and stagnated its economy.

Such an approach would make the national farm program an estimable budget item which would remain relatively stable over the years.

Such an approach would mean lower prices to both the consumer and industry and would put American agricultural products, both raw and processed, back on the world market at competitive prices.

Such an approach would give the farmer protection equivalent to labor's minimum wage and right to collective bargaining and industry's tariff and Government contracts and subsidies.

Such an approach would take the realistic view that the only justification for a farm program is to increase the income of farmers and would seek to do that by going in the front, instead of the back, door.

Such an approach would mark a new and fresh start which would release agriculture from the bonds of past mistakes and relieve the Nation's economy of the burdens of abortive farm laws.

There are those who contend that we should make agriculture entirely free and have no farm program at all. I do not share that viewpoint.

While I am enough of a Jeffersonian Democrat to believe that we would all be better off if our entire economy were freed and allowed to seek its own level, I am also, by the same token, enough of a realist to know that, with virtually every other segment of the Nation's economy protected by law, the farmer cannot be left as the only person without a legislative guarantee of his proportionate share of the national income.

If the farmer is to share in the general prosperity of the rest of the country—if he is to own an automobile, send his children to school, and give his family a reasonable standard of living—it is essential that a new farm program be devised which will give him that assurance.

The American standard of living is the highest in the world and to deny the American farmer legislative protection in the enjoyment of it would amount to putting him into direct competition with farmers in countries where living standards are minute fractions of our own and to make of him a virtual peon in a land of plenty.

While I would be the last to claim that my idea offers a complete solution to all the Nation's farm problems, I do sincerely believe that it affords a basis upon which agreement on a new national farm program can be reached. And I am now working toward that end with several of my like-minded colleagues in an effort to perfect my bill so as to give it the broadest possible base of support among all commodity groups.

I am hopeful that we can have an omnibus bill ready for consideration in the not too distant future.

Perhaps the most difficult of the problems with which we are wrestling is what to do about the $9-billion-plus surplus which Mr. Benson has accumulated.

My own idea is that a four-way disposal program should be undertaken.

The first step would be to have the National Security Council determine what portion of the surplus is needed as a national strategic reserve and make immediate recommendations to Congress for setting aside and preserving that amount of food and fiber for emergency use.

The second step would be to offer all local, State, national and international charitable, relief and welfare organizations and agencies donations of surplus commodities of whatever amounts they could utilize effectively in their humanitarian programs.

The third step would be to substitute surplus commodities for dollars in the conduct of the economic assistance phases of our foreign-aid programs, including long-term purchase agreements with underdeveloped countries like India.

And the fourth—and perhaps the most important—step would be to absorb the remainder of the surplus in the farm program itself.

The first three steps are self-explanatory and the fourth would be accomplished in this way:

Any farmer so electing could, by agreeing to put into conservation practices without payment the amount of land on which he would grow his domestic production quota, receive for sale on the open market at whatever price it would bring the equivalent of his quota from Government surplus stocks.

No compensatory payments would be paid on such sales as the farmer would have, in effect, received a payment in eliminating the cost of growing his share of the domestic market.

Under such an arrangement existing commodities would be substituted unit for unit for assigned quotas which would assure against disruption of normal trade channels. In addition, farmers electing the option would still be free to grow as much of any commodity as they desired for nonsupported sales on the world market.

Mr. Benson has seen fit in recent speeches to call the Talmadge farm plan "a long step toward a fully socialized agriculture," and to maintain that its proposal has joined the issue of "Goverment control versus freedom."

To the former assertion I would reply that Mr. Benson either is totally ignorant of the provisions of the Talmadge farm plan or he was looking in the mirror at his own program when he coined his description.

To the latter claim I would say that it is true that the issue has been joined but that the roles are the reverse of what he would have them be.

My recollection of elementary economics is that socialism is synonymous with nationalization or government ownership and control.

Now I ask you would American agriculture be more nationalized under my plan whereby the farmer could plant what he pleases and be held responsible for selling what he grows or under Mr. Benson's plan whereby the Government tells the farmer how much he can grow and then buys, stores, transports, and sells it for him?

My knowledge of the present farm program which stems from my own experience as a

farmer operating under it is that its basis is drastic and ever-constricting acreage controls.

Now I ask you would the American farmer have more freedom under my plan whereby the farmer would be free to decide for himself what and how much he would grow or under Mr. Benson's plan whereby the Government puts strict limits on his planting and subjects him to stiff penalties for failing to comply with them?

I think the answer is obvious from the observation that under the Talmadge farm plan Stanley Yankus, Jr., the Michigan poultry farmer who has been put out of business by Mr. Benson's regulations, would not find it necessary to emigrate to Australia to find enough freedom to run his farm as he wants to run it.

Mr. Benson in his statements and letters to newspapers has sought to label my proposal a Brannan plan.

Such a label is not supported by the facts of the matter.

The only point of similarity between the Talmadge and the Brannan plans is the compensatory payment idea and, if it is the intent of Mr. Benson to equate that feature of my proposal with the Brannan plan, then by the same logic it also could be called the Eisenhower plan, the Seaton plan, and, yes, even the Benson plan.

That is true because officials by those names have advocated a similar application of the compensatory payment idea to producers of metals and growers of wool and sugar.

It is most unfortunate that there are some to whom playing politics is more important than seeking to serve the best interests of the farmers of America.

The most lamentable aspect of the present national agricultural dilemma is that it is the end product of partisan politics.

The welfare of our farmers and the protection and preservation of our national economy are above any personal considerations. They demand that we cease playing politics with the farm problem and act in unison to restore to the farmer his freedom and his rightful place in the Nation's economic picture.

As Columnist Joseph Alsop recently pointed out with great sagacity the present situation has "sorely endangered" America's great asset of an "independent farming population." He declared with great truth that "socially, biologically, historically, this is a name well worth national investment."

The sands of history are littered with the wrecks of civilizations and nations which perished as the result of dissipating and destroying their independent farming populations.

The vitality of any people stems from the soil and it is an inexorable law of nature that it withers and dies when its roots are transplanted to a wholly-urban culture.

There is something about the tilling of the soil which nurtures in the human breast an appreciation of the true purpose of man's existence which cannot be instilled through any other pursuit.

As Thomas Jefferson put it: "Those who labor in the earth are the chosen people of God * * * whose breasts He has made His peculiar deposit for substantial and genuine virtue."

The worst fate which could befall our country would be for urban Americans to lose sight of the fact that their present and their future are dependent upon the maintenance of a vital and progressive agriculture.

The day we allow ourselves to be deceived by demagogic appeals into believing that the American farmer is an economic liability will be the day which marks the beginning of the end of our great Nation.

Americans must look beyond their own selfish personal interests and recognize the great truth uttered by Daniel Webster when he declared:

"Let us never forget that the cultivation of the earth is the most important labor of man. When tillage begins, other arts follow. The farmers, therefore, are the founders of civilization."

That is why we must look to our farms as the only source of a posterity which cherishes its heritage of freedom and is dedicated to its preservation.

That is why we must do whatever is necessary to sustain our farms as the roots of our great American civilization.

That is why we must insist that Congress act immediately and decisively to write and enact a workable and productive farm program which will assure for all time to come that those roots will continue to nourish and replenish the life's blood of our Nation.

Toward that end I have dedicated my every effort.

Toward that end I beg your advice, help and support.

I thank you.

President de Gaulle of France on the Berlin Crisis

EXTENSION OF REMARKS

OF

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. JOHNSON of Colorado. Mr. Speaker, on March 25, President de Gaulle, at his press conference in Paris, offered some profoundly significant observations in noting that two-thirds of the inhabitants of the earth lead a miserable existence, while certain peoples have at their disposal what is necessary to insure the progress of all. He asks what is the use of the dangerous wrangling over West Berlin and the German problem. For in our time, he says, the only quarrel worthwhile is that of mankind. He invites us to vanquish misery, to abolish poverty through international cooperation, and suggests that this should be the primary subject for the agenda of possible East-West conferences.

I commend to the attention of the Members the following official transcript of President de Gaulle's remarks:

The crisis opened by Soviet Russia on the subject of Berlin plunges the world into grave anxiety.

Three closely related questions are put by Moscow:

The possibility of measures which would raise an obstacle to the movement of American, British, and French military elements between West Berlin and the Western Zone.

The destiny of the German people, which would be profoundly affected by the formal separation of Germany into two states and by the fact that the former capital of the Reich would become incorporated in territories under totalitarian dictatorship or subjected to conditions which would lead to this servitude.

Finally, neutralization of a zone in Europe of which Germany would be an essential part.

Let us add that the Soviet Government, in pressing the West to open negotiations on the fate of Berlin and on a peace treaty with the two Germanys, made it known that it envisaged transferring its rights and responsibilities regarding the city to the Pankow (East German) authorities. In this case, the goings and comings of American, British, and French forces would have to be made in agreement with Pankow, a situation which Washington, London, and Paris would find themselves forced to recognize.

Should the Western Powers see the way barred to them and should they want to open it by force, they would come up against Soviet troops stationed in East Germany who, we have been told, are not there to play marbles.

This being so, it might be thought that France wishes to profit from the crisis and, joining the move to split the German people, insure for herself, at the expense of that country, advantages parallel to those which the Soviet Union seems to wish to seize for herself. That is a policy that others have been able to practice toward an unfortunate neighbor.

It is not our policy. If the present Germany seemed dangerous to us, then no doubt the memory of trials suffered by her actions and the desire to prevent their recurrence would motivate our demands. But Germany, as she is, in no way threatens us. We even think that with her capabilities, her energy, her resources, she constitutes an essential element in the life and progress of Europe and the whole world.

Even more, as is normal for two old adversaries who have given up fighting and destroying each other, France and Germany have resolved to cooperate. On this point, the policy of Chancellor Adenauer coincides with ours. Quite recently, Mr. Segni confirmed to me that it was also that of Italy.

We shall thus support nothing which would be such as to lead the German people to despair or to compromise its peaceful future or to wreck the hope which, after so many shocks and tears, has arisen on both sides of the Rhine.

One might think, on the other hand, that France might consider keeping out of the quarrel. Being without means of action, that is to say of destruction, equal to those in the hands of the Americans and the Russians, and thus, without the power to try and impose her policy, she might endeavor to keep outside the conficit and, should it come to that, out of the war. This would amount to France, in an attempt to keep her life, giving up her reasons for living. But also this would be to destroy the Atlantic alliance, an alliance which is unimaginable without the participation of France.

Thus nothing except atomic war could prevent Soviet domination from spreading over all Europe and all Africa, before it went on to cover the rest of the world. After which, the human race, or as much of it as would have survived, would everywhere be given up to the oppression of dictatorship and to the frightful upheavals brought about by dictatorial trends and leaders.

We prefer to maintain the alliance until the day when the future of peace is assured.

We hold it necessary in the first place that America, Britain, and France should not agree to allow anyone to put obstacles in the way of the comings and goings of their troops to and from Berlin. As a result of the victory, as well as of arrangements concluded in the past with Soviet Russia, the three powers have the right of passage. If anybody opposes this, they and all others who might come to support them would commit an act of hostility toward the Western Powers and would thus be responsible for the clashes which could follow.

As regards the fate of the city itself, we note that those of its inhabitants who have the opportunity to express their views are unanimous in wishing it to stay Western.

For this reason and for others, we would not allow West Berlin to be given up to the Pankow regime.

Furthermore, we are not prepared to recognize this regime as a sovereign and independent state because it could not have been born and could not exist except by virtue of the Soviet occupation and because of an implacable dictatorship.

From the point of view of the foreign relations of the French Republic, we cannot put on the same level, on the one hand, this arbitrary construction and on the other, the German Federal Republic, where citizens say, read, and hear what they like, come and go as they please and, in complete freedom, elect their representatives and their government.

The reunification of the two parts into a single Germany which would be entirely free seems to us the normal destiny of the German people, provided they do not reopen the question of their present frontiers to the west, the east, the north, and the south, and that they move toward integrating themselves one day in a contractual organization of all Europe for cooperation, liberty, and peace.

But, pending the time when this ideal can be achieved, we believe that the two separated sections of the German people should be able to multiply ties and relations between themselves in all practical fields. Transport, communications, economic activity, literature, science, the arts, the goings and comings of people, etc., would be the subject of arrangements which would bring together the Germans, within, and for the benefit of, that which I would call "Germanness" and which after all is common to them, in spite of differences in regimes and conditions.

As regards turning Germany into a neutralized territory, this extrication or disengagement in itself has no meaning for us which is of any value. For if disarmament did not cover a zone which is as near to the Urals as it is to the Atlantic, how would France be protected? What then, in case of a conflict, would prevent an aggressor from crossing by a leap or a flight the undefended German no man's land?

What narrow strip would remain between the Meuse and the ocean, in which to deploy and use the means of the West? Certainly, we are supporters of the control and limitation of all weapons of war. But, in order for these measures, apparently humanitarian, not to risk leading to our disappearance, they must cover an area deep enough and large enough for France to be covered and not, on the contrary, exposed.

On these different subjects and on others, I do not see, for my part, any objection of principle to the opening of negotiations, whatever precedents there may or may not have been. M. Couve de Murville would thus attend a conference of foreign ministers, should one be held.

If it were to develop that that conference, after thorough examination of the problems, succeeded in sifting out the elements of an agreement on important points, then, with Premier Michel Debré at my side, I could myself take part in a meeting of those charged with the supreme responsibilities of the great powers.

But it is clear that, in order to achieve something worthwhile, it is necessary to prepare the topics for discussion in such a forum, and discussions must be carried out in a peaceful atmosphere. In this matter, I am in complete agreement with what President Eisenhower said recently.

On this serious occasion, France feels qualified to speak clearly and calmly. First of all, because she has no feeling of competition or animosity toward the Russian people. Quite the contrary, she has a real and traditional friendship. In the next place, for the reason that in the matter of Germany, which is the stake in the crisis, she has been able to master her grievances and, taking into account the changes which have occurred there, to consider this country not as an enemy, but as a partner.

Lastly, because France herself does not yet have atomic bombs, and, unlike the three others, is not subject to the obsession of launching her bombs before those of the adversary have been able to accomplish their mission. In short, France looks at the present crisis in her own way, with clarity and even with impartiality.

That is why, speaking in her name, I am sure of speaking the thoughts of more than 2 billion human beings who think as she does. Because of, and in comparison with, the risks run by our species and of the immense human tasks that we could and should accomplish in common, any summons which might be addressed to the West with a view to obtaining abandonment by intimidation would be hateful and absurd. When, in both camps, everything is arranged so that means of destruction, capable of annihilating continents, could be unleashed in the space of a few seconds—at a time like that, creating a state of tension, such that any error, any incident might unleash the cataclysm, would be tantamount to presenting the very existence of humanity with an unpardonable challenge.

When two-thirds of the inhabitants of the earth lead a miserable existence, while certain people have at their disposal what is necessary to ensure the progress of all—what is the use of the dangerous wrangling over West Berlin, the East German Democratic Republic, and German disengagement?

For, in our time, the only quarrel worth while is that of mankind. It is mankind that must be saved, made to live and enabled to advance.

We, who live between the Atlantic and the Urals; we, who are Europe, possessing with Europe's daughter America, the principal sources and resources of civilization; we, who have the means to feed, clothe, and house ourselves and to keep warm; we, who have mines and factories going full blast, well-tilled soil, railways where run numerous trains, roads choked with cars, ports filled with ships, airports full of aircraft; we, all of whose children learn to read, who build many universities and laboratories, who form armies of engineers and technicians, who can see, hear, read what is of a nature to satisfy the mind; we, who have enough doctors, hospitals, medicines to ease suffering, to care for the sick, to ensure the life of most newborn infants—why do we not erect, all together, the fraternal organization which will lend its hand to the others? Why do we not pool a percentage of our raw materials, our manufactured goods, our food products, some of our scientists, technologists, economists, some of our trucks, ships, aircraft in order to vanquish misery, develop the resources, and help in the work of less-developed peoples? Let us do this—not that they should be the pawns of our policies, but to improve the chances of life and peace. How much more worth while that would be than the territorial demands, ideological claims, imperialist ambitions which are leading the world to its death.

It seems to me that this should be a primary subject for the agenda of possible East-West conferences. In case of agreement in principle, it would evidently be necessary to draw up a common plan of organization and implementation.

If we should hold a summit conference this year, I would be ready to speak of it with my friends, Mr. Eisenhower and Mr. Macmillan, and I hope that Mr. Khrushchev, whom I met some time ago in Moscow in the entourage of Stalin and who has come a long way since then, will be willing to take an interest in it.

Question: "How do you feel that the situation has developed in Algeria since last year when you offered the 'peace of the brave' to the Algerian rebels?"

There have been 130 years of vicissitudes in Algeria. For 4 years and more now, fighting and attacks have not ceased. We are living in an age when, on this earth, a gigantic organization is militating everywhere against the West, while the West often neglects to look after itself. We are witnessing a turmoil which, inside the Moslem world, sets many Arab countries against foreign peoples, many states and parts of states against others of the same race and the same religion, and many leaders against other leaders who, like themselves, and yet against them, claim to be the champions of unity. Under these conditions, I doubt that anyone has ever been able to imagine that peace and prosperity would come all of a sudden to a torn Algeria, or that all that was necessary, at the height of a persistant fever, was to shout down one slogan with other slogans in order that all the internal and external causes of the present war should disappear as if by magic.

Personally, I do not think that, and I never say it. On the contrary, I believe and I say that the destiny of Algeria depends upon a task of long duration, the task of a whole generation performed under conditions and in a spirit that are completely new and that are aimed at enabling Algeria to reveal herself to herself and to open herself to the world as it is. I believe and I say that such a task is inconceivable without the presence and the action of France. I believe and I say that France has made her resolve, that she is now following a clear and firm plan and that, while endeavoring to achieve pacification as soon as possible, she is working for a transformation that will enable Algeria to find her new self.

What has been done for this transformation? This is what has been done in 8 months:

From the political point of view, the way of equal and universal suffrage has been opened for the first time and forever to the Algerians, giving them the means of expressing their true will. Irreversible measures have established a single college for all women and men and given the Moslems the largest proportion of elected representatives in every kind of election. It was on this basis that the referendum, held last September, showed that the vast majority of the Algerian people trust me to secure for them peace, liberty, and dignity and to act so that Algeria will thereby remain linked to France. Legislative elections were held in October. The Algerian municipalities will elect their councils next month. Later, the general councils [of the departments] will be elected. Doubtless it may be objected that the war situation interferes with the objectivity of these various elections. It is nonetheless true that they are taking place, that the nature and the composition of all representative bodies have been profoundly altered by comparison with what they were and that thus the Algerians are henceforth ensured of self-determination as peace is gradually restored. That is a revolution if ever there was one.

With regard to economic development and social conditions in Algeria, anybody can see for himself that the implementation of the industrial and agricultural plan of Constantine has been started and that the Premier has just called attention to this fact. As it sometimes happens that France and progress share the same luck, by a happy concidence, the exploitation of Saharan oil and gas have just given Algeria the necessary means for getting things started. Algerians, take a look at your country as it still is. Soon, I promise you, you will see a very different Algeria.

From the point of view of education, the number of Algerian schoolgirls and schoolboys increased last year, will increase this

year and in each of the years to come by hundreds of thousands so that, before 10 years have elapsed, all the children will be going to school. At the same time, a great effort is being made to train professional, technical, administrative and military personnel. And what value should be given to the number and importance of human relationships, which are constantly becoming more numerous between all France and all Algeria? In these relationships, the Army—in which, I might mention in passing, serve 110,000 Moslems—plays a major role. Intellectually, socially, morally, Algeria is in a period of gestation. A body of young people is emerging there, which includes those who have fought on one side or the other—young people who will want to see the birth and growth of a new Algeria, that is to say, a modern, educated and fraternal Algeria.

As this new Algeria takes shape in body and spirit, her political destiny will appear in the minds and in the votes of her children. I am sure that the Algerians want and will want this destiny to be tied to that of France and that the latter also wants and will want it, because this fits in with the nature of things, with common sense and with sentiment. This is a magnificent task which calls for the efforts of all the Algerians, of all the communities and of the French of France. By comparison, the desperate continuation of combats and attacks appears each day more absurd, because this continuation no longer seems to have any justifiable aim and therefore can lead only to hatred, misery and death.

Yes, blood and tears still flow; yet, Algeria and France are marching together toward the future—a future which, I assert, will belong to everyone and in which no door will be closed.

Question: "Would you like to indicate what is the meaning and the scope of the decision taken by France to withdraw her Mediterranean fleet from NATO?"

This is neither the time nor the place to set forth France's position on how world security and the Atlantic alliance should be organized. Today I merely state that the zone of possible NATO action does not extend south of the Mediterranean. The Middle East, North Africa, Black Africa, and Red Sea, etc., are not a part of it. Who can deny that France may possibly find herself obliged to act in these different areas? She would, therefore, have to act independently of NATO. But how could she do so if her fleet were not available? Without her fleet, how could she carry on any type of action in the regions that I have just referred to?

I observe, furthermore, that the two other great world powers of the Atlantic alliance—the United States and Great Britain—have taken steps to prevent the greater part of their naval forces from being integrated in NATO. I add that Americans and British have kept in their hands alone the principal element of their strength, their atomic bombers.

The fact that France has taken back the power to dispose of her own fleet certainly would not prevent her from using it, should the occasion arise, in a common battle in the Mediterranean. Thus, there is nothing in this change that might weaken the alliance. Quite the contrary. Indeed, I believe that the alliance will be all the more vital and strong as the great powers unite on the basis of a cooperation in which each carries his own load, rather than on the basis of an integration in which peoples and governments find themselves more or less deprived of their roles and responsibilities in the domain of their own defense.

Question: "Mr. President, you stated earlier that the French Government would consider as an act of hostility any interference with the free passage of western troops to Berlin. Would you like to elaborate on this point and say whether you believe that such a conflict could remain localized or that, on the contrary, it would lead to a generalized conflict? What would be France's attitude in the latter case?"

I do not seek to reassure anyone. I see things as they are. I believe that if, in the present state of the world, hostilities broke out, it is difficult to see how it would be possible to limit them. In either case it is a gamble. It is perhaps better to say to each other, "Speak to me of love."

Question: "Given your viewpoint on the question of cooperation and integration within NATO, can you say whether you envisage doing the same thing regarding the presence in the Mediterranean of units of the ground forces or of the air arm?"

Well, you will see what happens.

With regard to the fleet, I have just explained to you what the situation is and the reasons for it. Should other changes occur, you would certainly be informed.

Question: "General de Gaulle, the question has been raised in the last few days of a possible meeting between you and the King of Morocco. Could you tell us what foundation there is to this rumor?"

You may have learned that His Majesty the King of Morocco has publicly expressed the idea that there would be an advantage for both countries in a possible meeting of the two heads of state. I can tell you that my feeling in this matter is the same as the King's. As to the time, the place, the arrangements, and the subjects of such a meeting, you understand that I cannot answer. But I can say that on both sides matters are considered with a feeling of sincere and deep friendship.

Question: "General de Gaulle, does the Government accept the principle of direct negotiation with the FLN (Algerian National Liberation Front)?"

What do you call a direct negotiation?

Question: "A negotiation for a cease-fire."

Premier Debré repeated, in the most formal and solemn way, yesterday and the day before in Algeria that the offer that I made in October of a cease-fire is still completely valid. I do not think it would be useful for me to say it again. It is quite clear and certain.

I would even add that I wonder why we don't come to that, since that is how the unfortunate situation will end.

Bids and Contracts in Connection With TVA Turbogenerators

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 8, 1959

Mr. KEFAUVER. Mr. President, recently, I made some remarks about bids and contracts in connection with turbogenerators for a TVA steam plant. Morris Cunningham, of the Memphis Commercial Appeal, wrote a subsequent article on this topic which bears out much of what I said.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Memphis Commercial Appeal, Mar. 15, 1959]

BRITISH FIRM'S CAPTURE OF TVA GENERATOR BID POINTS DISTURBING TREND

(By Morris Cunningham)

WASHINGTON, March 14.—The Tennessee Valley Authority's purchase of a steam turbogenerator from a British firm has spotlighted a situation that is becoming increasingly disturbing to State Department officials.

Simply put, it is the seemingly increasing frequency with which American industries are being underbid by their foreign competitors.

We like to think that American industrial know-how cannot be surpassed or undersold in any field. And in most instances, this is true.

But the growing German and Japanese industrial complexes are proving that it is not always true. Even with our tariff restrictions, these and other manufacturing countries are competing in American markets with American producers.

And in South America and other parts of the world, where the competition is on an equal footing, foreign industries are surging back to recapture their pre-World War II markets and more.

TVA's purchase of the steam turbogenerator was a particularly disturbing example of the trend because of the several significant factors that were involved.

TOP AMERICANS UNDERBID

Foremost was the fact that the American bidders on the contract were two of America's top industries, the huge, $4 billion General Electric Co., and the Westinghouse Corp.

Secondly, the purchaser was a Government agency, whose integrity in the transaction scarcely can be questioned.

But the most significant factor of all was the wide margin by which the British firm, C. A. Parsons & Co., Ltd., underbid the two American companies.

TVA announced the base bids were: Parsons (including about $1,500,000 in duties), $12,095,000; GE, $17,563,000, and Westinghouse, $17,633,000.

However, TVA said that after adjustments for differences in guaranteed efficiency of the machine, differences in escalation of prices, and willingness of the manufacturer to pay specified damages if the machine were not delivered on time, the evaluated bids were: Parsons (again including about $1,500,000 in duties) $13,140,700; Westinghouse $19,453,725, and GE $19,673,780.

Thus, the real amount by which the British firm underbid the two American companies, on an American Government contract, was more than $6 million and nearly 50 percent. And again there is the reminder that, to get the machine into the United States, the British firm must pay about $1,500,000 in import duties.

GE's public reaction to its failure, so far as has been detected, was not an announcement that it will strive for increased efficiency with the hope it can do better next time.

GE CRIES IN AGONY

Instead, GE attorneys hurried to the Federal office of Civil and Defense Mobilization with a petition to block the purchase. It argued that placing such orders abroad would undermine American capacity to make such machines.

Administration sources promptly let it be known that the petition has little chance of succeeding. And TVA, to its credit, proceeded with consummation of the contract.

Why did TVA seek foreign bids? The TVA Board of Directors answered that question with a formal statement detailing the whole transaction.

"For some time," the statement said, "TVA has been disturbed by the rising prices of turbogenerators. There are only three American firms which manufacture large turbogenerators. Since 1951, the prices charged by these manufacturers for such equipment have increased by more than 50 percent, while the average wholesale price of all commodities has increased only about 5 percent. It was this history of price increases by the only U.S. suppliers which led TVA to invite bids from qualified foreign manufacturers as well as domestic ones."

It said that invitations to bid were sent to the three U.S. manufacturers as well as the two leading British manufacturers. It received bids from GE, Westinghouse, and Parsons.

TVA said the Parsons bid was a firm price, while the GE and Westinghouse bids were subject to escalation clauses.

AMERICANS HAD BIG ADVANTAGE

TVA went on to point out that it specified that it would accept the lowest bid from a U.S. manufacturer if it did not exceed the lowest foreign bid by more than 20 percent. This, coupled with the $1,500,000 in import duties, gave the American companies a starting advantage of about $4 million. But, as it turned out, they needed a much bigger margin than that.

Beyond the surface evidence of the American companies' inability to compete, there are some puzzling factors in the transaction.

TVA's statement pinpointed one of these with a careful calculation of British and American electrical industry wage rates, and manufacturing times, which showed that the difference in labor costs in England and the United States on the machine would be only about $1,500,000.

TVA also pointed to the 50 percent increase in turbogenerator prices in the United States since 1951, compared to an increase of only 5 percent in the average wholesale price of all commodities.

Senator ESTES KEFAUVER, Democrat, of Tennessee, chairman of the Senate Antimonopoly Subcommittee, pointed to the closeness of the GE and Westinghouse bids, and blamed the situation on administered prices.

"Where big business gains an exclusive grip on the market," he told the Senate, "the price goes up, up, up."

Perhaps this is the reason the American firms were underbid so badly. If so, it is more reassuring, from the standpoint of national prestige, than the surface indication that American firms were unable to compete.

But if it truly is the reason, it would seem to merit the further attention of Senator KEFAUVER and his Antimonopoly Subcommittee.

Education and Freedom

EXTENSION OF REMARKS

OF

HON. NORRIS COTTON

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 8, 1959

Mr. COTTON. Mr. President, because it deals with a subject of such widespread interest to the Senate and to the Nation, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Manchester (N.H.) Union-Leader of April 2, 1959, entitled "Truly Remarkable Book." The editorial discusses Adm. Hyman G. Rickover's thought-provoking and forthright book "Education and Freedom."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRULY REMARKABLE BOOK

One of the most challenging books it has been our pleasure to read is Vice Adm. Hyman G. Rickover's "Education And Freedom". Although the book will draw the usual brickbats from professional "educationists," it nevertheless is a godsend for those who are sincerely interested in bettering American education to meet the challenge of the future.

"Education and Freedom" is a startlingly frank and honest evaluation of what is going into Johnny's head as compared with what should be going into Johnny's head. Admiral Rickover has no time for the progressive educationist's belief in "life adjustment" courses. Citing the challenge of Soviet technological progress, the father of the nuclear submarine says that what is needed is a change in our whole attitude toward education and a determination that our children shall emerge from high school with the proper tools necessary for higher education.

It would be highly presumptuous to attempt a full appraisal of Admiral Rickover's book in one editorial. Simply to mention some of the positions taken by Rickover in his book is to open up whole new realms of controversy: That we should imitate Europe, which was never rich in land or raw materials, yet achieved enormous power, prosperity and world influence "through cultivation of brain power;" that mediocre people belittle any one who is in any way unusual, thus our more gifted children are largely unappreciated and their educational needs unattended; that we waste too much time counting school desks rather than considering "what the children sitting at these desks are being taught;" that we put too much money into marble palaces and not enough into teacher salaries; that our schools do not perform their primary purpose—"to train the Nation's brain power to its highest potential;" that "educationists" have made "misfits" of talented children by emphasizing "the ideal well-adjusted group;" that we have closed our eyes to the advantages of European and Russian education; that the "spirit of (John) Dewey permeates our teachers' colleges and state boards of education," thus influencing "the training of our teachers and the formulation of school curriculums" and making "its pernicious influence felt in the steady deterioration of secondary-school curriculums, the prolongation of elementary schooling, and the denial to teachers of professional status;" that the school's concern should be with the intellect alone and that there is no substitute for a liberal arts education in properly preparing young people in this modern world; that there is a need for national standards, "a national agency to set standards for school curriculums and teacher qualifications;" that we should establish demonstration high schools "to test the advantages of separate education for the talented."

Admittedly, this is a very sketchy outline of the many important points so brilliantly discussed by Admiral Rickover in "Education and Freedom." We have read few books which so thoroughly demolish "accepted facts" about education which are not really "facts" at all.

"Education and Freedom" should be read by every parent, legislator, educator, school board member—and, yes, even by those who feel they have a stake in preserving mediocrity in American education.

Mr. Gore on Inflation

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, April 8, 1959

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Mr. GORE on Inflation," published in the Chattanooga Times of recent date.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. GORE ON INFLATION

Statistically, at least, the recession is over. Business analysts have the figures to prove it.

In dollar value of goods and services, the Nation is producing at the highest rate in its history. The gross national product (GNP) reached an annual rate of $464 billion in the first quarter of this year, about $11 billion over that for the last quarter of 1958 and almost $20 billion above the prerecession peak reached in the third quarter of 1957.

Personal income in February also rose to a record high, $364.5 billion figured on an annual rate. Consumer spending is up 7 percent over last year and expenditures for durable goods even more. Housing starts in February indicated an annual total of 1,300,000, some 200,000 more than the total starts last year.

The employment picture still causes concern. Despite gains elsewhere, 4.7 million workers or 6 percent of the labor force are listed as unemployed. Secretary of Labor Mitchell believes the jobless figure will recede to 3 million by October but few persons outside the administration are as optimistic.

But nowhere does there appear to be an end to the continued inflationary pressures which keep prices high despite an abundance of goods, availability of facilities to produce more if needed and the presence of a labor surplus to man the machines. What we have, as Senator ALBERT GORE recently asserted on the Senate floor, certainly is not the classical type of inflation, defined as too many dollars chasing scarce goods and services.

There is today $143 billion in circulation compared to $129 billion in 1952, Senator GORE said. But the amount in circulation in 1952 was 37.2 percent of GNP while the 1958 total is 32.8 percent. "Thus we have less money today in comparison with total goods and services produced than we had in 1952."

The Senator says the administration's use of monetary control as an anti-inflationary device has in itself proved inflationary. A smaller supply of money and a higher rate of interest, he said, has led major industries to finance expansion from profits swollen by price increases, rather than from borrowing. And, because installment buying has become a normal expenditure by the average person, labor unions have no compunction in asking higher wages when higher interest rates hit their members.

In his address, which he said would be one of a series, Senator GORE advocated, among other things, a stabilization of interest rates for both public and private financing, temporary controls on consumer credit, regulation of prices for basic heavy metals and appointment of a monetary com-

mission to give concentrated attention to the problem on this inspired inflation.

In the turmoil over the Berlin situation, Senator GORE's talk did not receive the attention it deserved. But because he is talking, and talking plainly, about a subject that touches every family where it hurts, he may well receive a better audience when he rises next to continue his series.

Arguments of the National Education Association for Federal Contributions to Education

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. THURMOND. Mr. President, the Greenville News, of Greenville, S.C., in an editorial on April 7 most ably pointed out the fallacies underlying the arguments of the National Education Association for Federal contributions to education. The NEA has apparently abandoned all hope for our republican form of government and has become a tremendous lobby group for big Federal Government. In order that all the Congress may be aware of the disservice this organization is performing, I ask unanimous consent that this splendid editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NEA GIVES UP ON THE REPUBLIC

Teachers and school officials who support the National Education Association may be surprised to learn that their dues money is being used to spread a doctrine of centralism as well as a program it says is aimed at better education.

NEA is no small-time operation. It is a giant organization which officially reported spending $85,788 lobbying in Washington in 1958. This was only some $3,000 less than was spent by lobbyists for the Association of American Railroads.

The greater part of NEA's activities in Washington were devoted to drumming up support for a huge program of Federal aid to education. This is a pet project of the Association and one in behalf of which it apparently will go to any ends.

It takes the position—sometimes tacitly and sometimes quite openly—that the States are on the retrograde, that they are quite unable to support even a minimum school program on their own, and that massive Federal intervention is not only desirable but even inevitable.

Heavily interspersed in the multitude of speeches and appearances before congressional committees which officials of the NEA make are tributes to the benefits of public schooling and dire warnings of the effect any decline in the health of education will have on the United States and its people.

With these latter sentiments no one can disagree.

We all concur with Ruth A. Stout, NEA president, when she says, "We cannot long endure as a domocratic, free, and responsible people without adequate systems of free public schools."

We all agree with Dr. Walter W. Heller, economic consultant to the NEA, when he says, "Higher and higher levels of education are required to supply a literate and well-trained source of military manpower in an age of electronic and nuclear weapons," and when he says that "without gifted and dedicated teachers at every level of the school system, our children cannot be prepared for the challenges they must meet."

But agreement with these premises does not prepare us for either President Stout's or Dr. Heller's conclusions. For their conclusions are contrary to both the spirit of the Republic and a good many of the facts of our present-day life.

Indeed, one is almost forced to conclude that they, and the NEA generally, have given up on the Republic. At least as they depict the scene in their testimony in favor of Federal-aid-to-education bills, they write the death warrant of the States.

The States, they heavily imply, are as outmoded as the dinosaur; queer, clumsy, inept creatures, strangly survivoring in a new world but obviously unable to meet its demands.

Says President Stout: "No longer can there be any question but that the Federal Government must assume a much greater role in the financial support of schools."

(Hush, you dissenters. The NEA has spoken.)

Says Dr. Heller: "* * * the Federal Government has at its command vastly superior administrative resources, division of labor, and the like. No State can match the inherent and adduced resources of the Internal Revenue Service."

(Kindly ignore the rude voice from the rear which shouted, "Sez who?")

In the 42 printed pages of testimony by President Stout and Dr. Heller we searched in vain for some acknowledgement that neither the Federal Government nor State or school district governments have any money of their own. The elementary fact that everything any of them may spend for education (or anything else) must come from the same place seems to have escaped them, incredible as this may be.

But it is from the taxpayers pocket that it all comes. If it goes to the Federal Government, it comes from his pocket; if it goes to the State or to a local district, it still comes from his pocket.

And if his pocket is as bare as the NEA sometimes claims it is, the Federal Government can pick it no cleaner.

The real reason that some States are so hard-pressed to lift their public school systems to the level they would like is that the Federal Government has usurped so many fields of taxation. And it has done so not because of its "vastly superior administrative resources, division of labor, and the like," but simply because a succession of left-wing Congresses has set out to destroy the States by taking away their sources of revenue.

But there is life in the States yet. Not by merely saying so can the NEA kill them. Not all of them are broke—not yet.

One of them, however, almost is broke. That is the State of Michigan and the NEA had the gall to sponsor the appearance of the man chiefly responsible for Michigan's sad situation before a congressional committee.

Gov. G. Mennen (Soapy) Williams was the willing handmaiden for NEA's aid-to-education bill. He echoed their line that the States are "virtually at the end of their financial ropes."

The NEA could have gotten no better authority on a bankrupt State. But the people know that Governor Williams is the man mainly responsible for putting Michigan in that condition. His advice on State finances is valuable only to the degree that it may indicate what not to do.

This insane act was only too typical of NEA's operations. It is a shame the organization doesn't stick to matters of education and leave alone the areas in which it has such an abundance of demonstrated ignorance.

The dues paid by its members would be better spent if it did.

Michigan: Hub of Transportation

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. MCNAMARA. Mr. President, an article in the Detroit Times of Thursday, March 26, describes how Michigan serves the world as a transportation center.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TRUTH ABOUT MICHIGAN—WE'RE HUB OF WORLD IN TRANSPORT

(By Will Hardy)

Michigan's channels of transport by air, land, and sea extend like arms from its assembly lines to points across the Nation and throughout the world.

Detroit Metropolitan Airport, most advanced in the world, is a pioneer outpost for the coming age of jet travel.

Michigan's growing network of highways ranks among the Nations greatest.

The Detroit River, our waterway link to ports around the world, next month will churn from the whirling propellers of massive ocean freighters plying the Great Lakes for the first time with the opening of the St. Lawrence Seaway.

Railroads, rising to meet the challenge of competition, are bidding to become links to both land and sea routes in a later-day revolution in their phase of the transport industry.

MORE JOBS AND PROFITS

All these developments are enhancing Michigan's position, already enriched by vast natural resources and ample labor supply, by creating free flowing lanes for the influx of raw materials and the output of our factories and farms.

The value and significance of these developments has been overlooked by the critics of Michigan's economic climate.

The real truth is that, while Utopian goals may not have been reached in all phases of transportation development, Michigan has made steady progress over the years.

This progress means savings to businessmen.

And in the highly competitive world of business and industry where fractional savings in costs per items multiply into millions of dollars in mass production, this savings helps produce profits for management and jobs for workers.

Oft-forgotten is the precept that American communities are built around their transportation systems.

When water transport was the only means of mass movement of materials, our Nation's first great cities were port cities.

In the late 1800's and early 1900's, railroads spurred the growth of inland cities.

Then came the automotive revolution, and highways brought new growth to hitherto remote areas and added to the transportation complex of the cities.

NATION'S NEWEST FOR JETS

Detroit and Michigan, ahead in automobiles, jumped ahead of the Nation in highways.

Now, with the air age blending into the space age, Detroit has soared ahead with dramatic development of the Detroit Metropolitan Airport as the Nation's newest and foremost landing field for jet-powered transport planes.

While other cities across the Nation lagged, Detroit Metropolitan officials jumped ahead, obtained a Federal designation for Detroit as an intercontinental expressway, and with Federal funds, built a 10,500-foot landing strip to handle the world's biggest and fastest airships.

Thus far, $26 million has been invested in the airport. American, Northwest Orient, Allegheny, Pan-American and British Overseas Airways Corp., now operate from the facility. Delta Airlines will begin using it Wednesday.

And the seven airlines still operating at Willow Run Airport are negotiating to make the move.

Except for local tax funds to acquire some of the land for the airport, and Federal contributions, Detroit Metropolitan is a self-sustaining operation. Revenues from airlines will pay off loans needed to finance construction. In fact, airlines will pay taxes to the county.

Meanwhile, there is underway a "shakedown" at City Airport to increase efficiency of operation and refurbish the facility and in the northeast part of the Detroit region, officials from Oakland and Macomb Counties are beginning to work cooperatively with Detroit and State officials to plan a new major northeast airport.

While air freight tonnage has been climbing steadily in recent years, it still represents no more than 1 percent of total freight tonnage in the area, Greater Detroit Board of Commerce officials estimate.

But the prospects for air passenger travel are fabulous.

Meanwhile, in roads, Michigan is making a staggering investment to keep cars and trucks moving freely. The State is currently nearing the halfway mark in a 5-year $1.25 million highway construction program.

This compares with $500 million spent in the 5 years previous to 1957.

Those who claim Michigan is lagging can't bear out their claim in this phase of development. The Bureau of Public Roads rated Michigan seventh in the Nation in total highway construction in 1958, and fourth in construction on interstate highways.

When the current highway construction program is completed in 1962, more than twice as many miles of four-lane divided highways will be completed as were built in the entire period 1905–57.

Nine hundred miles of expressways will connect all Michigan cities with population more than 50,000 and will provide through routes interconnecting 95 percent of the State's population and 90 percent of its industries.

The labyrinth of highways will pump new lifeblood into the core of Detroit, State Highway Commissioner John Mackie contends, and city officials agree.

They foresee a rebirth of industry along the expressway corridors in blighted areas and free-flowing avenues bringing revitalized commerce into the downtown area.

PIGGYBACK OPERATIONS

The railroads, emerging from doldrums in which their percentage of total national freight carried dropped from 75 percent to 48 percent of total volume, are developing piggyback and fishyback techniques.

Three Detroit area railroads have started the piggyback operation in which convertible vans are loaded from truck to railcar and vice versa, intact.

Wabash started the technique here 5 years ago. New York Central began it later, and the latest to announce Detroit area service is Chesapeake & Ohio.

While piggyback now constitutes only 1 percent of rail-freight volume, some experts say it will reach 35 percent in a decade.

Fishyback is certain to follow as port activity in Michigan Great Lakes cities grows with increased shipping through the St. Lawrence Seaway.

Despite belittling charges hurled during the port of Detroit development controversy, shipping is a great and growing industry both in the Detroit area and throughout the State.

Some 27 million tons of bulk cargo were handled through private terminals in the Detroit port area alone last year.

The coming season will tell whether voters were right in refusing to approve the use of public funds for development of Detroit port facilities.

Private operators will be put in the position of proving their contention that they can handle the new shipping potential created by the opening of the Seaway.

Port of Detroit Commissioner Director Carlis J. Stettin has announced that in the first 2 weeks of the navigation season, April 16 through May 3, 40 foreign ships have scheduled stops here.

That's nearly twice the number which docked in Detroit during the same period last year.

FROM ALL OVER WORLD

Half of the visitors will be from 3,500 to 9,000 tonners, newcomers that couldn't ply the Detroit River before because they could not get through the St. Lawrence River.

They will be coming from Alexandria, Egypt; Alicante, Spain; Damman, Saudi Arabia; Istanbul, Turkey, and a half-dozen other faraway places of exotic name and reputation.

A recent decision by the U.S. Maritime Commission subsidizes four U.S. lines to enable them to compete with foreign vessels for the Great Lakes area cargoes.

The import of all these developments—air, land, and sea—puts Michigan in an enviable position now and beckons great promise for the future.

The Foreign Aid Frown

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "The Foreign Aid Frown" which appeared in the March 28 issue of the Messenger and Inquirer of Owensboro, Ky.

The editorial is as follows:

THE FOREIGN AID FROWN

No sign exists that Congress in 1959 will be any friendlier to foreign aid than it has been for the last several years. So we can expect the lawmakers to bite fairly hard into President Eisenhower's $3.9 billion request.

Conservatives in both parties have a cumulative feeling that the aid program inescapably involves waste. They hope to minimize it by reducing the available total.

Others see cuts in foreign assistance as an easy way to win the economy tag without hurting themselves in the eyes of their constituents.

Some congressional liberals this time are said to feel that if foreign aid is slashed there will be more budget room for new programs they believe the voters want.

And there are those who have taken to objecting not because they dislike foreign aid or see it as an easy mark but because they feel the recent emphasis on military rather than economic help is a mistake.

The truth, of course, is that Congress as a whole grew so hostile to economic aid that it was slashed sharply, and the administration tries to work some of it back in each year by liberal interpretations of the phrase "defense support."

With assaults coming from so many quarters for such divergent reasons, only a miracle or an imminent threat of disaster somewhere among our foreign friends would be likely to salvage the President's whole program.

The program's prospects are not helped by the fact that its proponents seems to have lost most of whatever knack they had for presenting the case for foreign aid forcefully and persuasively.

We hear again and again that the Soviet economic challenge in the world is great, that there is a crucial testing between Red China and free India.

But the words the foreign aid advocates speak lack fire. They don't stir the blood of the citizen who wonders why he should care. The cause is made to sound tired.

The results of the voting in Congress will be tired, too, unless the supporters of the aid program find strong new drums to beat.

Annual Report of the Board of Directors for the Year 1958 to the Members of the America-Italy Society of Philadelphia, Pa.

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. BARRETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the annual report of the board of directors for the year 1958 to the members of the America-Italy Society of Philadelphia, Pa.:

ANNUAL REPORT OF THE BOARD OF DIRECTORS FOR THE YEAR 1958

To the Members of the America-Italy Society of Philadelphia:

The America-Italy Society of Philadelphia was founded in October 1956 with the simple and obvious desire to strengthen friendship and deepen the understanding between these two countries. It is a private nonprofit organization and the achievement of its aims will be arrived at through cultural channels. Thus both Italian and American contributions to painting and sculpture, literature and music, as well as progress in science, are the subjects stressed and highlighted. To this end it arranges concerts and exhibitions, lectures and film showings. Books and magazines are distributed and both Italians and Americans are helped to establish contacts in the other country. The fact that many people feel there is a genuine need for such a society has been amply shown by the magnificent response it has received from the

large and ever-growing list of members and their great generosity in helping the infant society to take its first steps.

Since its incorporation and to date, there are 12 life members, 31 sustaining members, as well as 6 patrons and 244 regular members. This is a total of nearly 300 with an increase of 100 over the year 1957. A glance at the treasurer's report, too, shows a distinct and reassuring improvement of the financial situation over the preceding year. This strong position, both financially and culturally, of the America-Italy Society in the life of Philadelphia owes much to the great encouragement and personal participation of Dr. Giovanni Luciolli, the Italian Consual General His wide knowledge of the Italo-American cultural relations, together with the assiduous help of his consulate staff, has been and continues to be of immeasurable benefit to the development of the society.

The past year also saw the establishment of a permanent address for the society. Through the acumen and quick action of Mr. Frank Carano, our treasurer, office space for the society's activities was rented adjacent to his own law offices. Mr. Carano's devotion to the society has been strikingly shown by the many services he and his office staff perform as an extracurricular and unrecompensed help in the day-to-day functions of the society.

And too, the society was extremely fortunate in securing the voluntary services of Mr. John S. Price III, as secretary. For nearly a year Mr. Price has administered the business and affairs of the society in a manner which is the admiration of all. On his shoulders falls the major burden of general work and to him we owe a great debt of gratitude.

In keeping with the announced aims of the society the past year has distinctly been one with cultural offerings. On February 10, the distinguished Italian author and critic, Persio Nesti, spoke at the Art Alliance under the joint sponsorship of that institution and the America-Italy Society. Being introduc ' by our board member, Mr. Jerre Mangione, the novelist and chairman of the Art Alliance's Literary Arts Committee, Dr. Nesti, of the faculty of the University of Florence, discussed modern Italian writers and their significance in connection with American literature.

A further item of literary interest was the exhibition in March at the Free Library, Logan Circle, of fine examples of Italian art books. On the opening night, Dr. David Robb, of the University of Pennsylvania, gave a lecture on medieval Italian manuscripts, a subject he had recently been working on in Rome in preparation for his forthcoming book.

In the autumn on a date similar to the concert of the Florentine Maggio Musicale Orchestra in 1957, the society sponsored the American premiere at the World Theater of Vittorio de Sica's new film "Il Tetto (The Roof)." The importance and excellence of Italian films in the postwar world is a matter of established cultural significance. We hope to obtain other films during the current year and in the future.

Interesting and valuable as all the foregoing events have proved, it is undoubtedly the spectacular success of the concerts by the Amerita String Orchestra that has brought the America-Italy Society into the front row of prominence in Philadelphia. Now in their second season this group of 16 first desk members of the Philadelphia Orchestra continue to present ancient and modern Italian music for small orchestras to the delight and admiration of the city's many music lovers. To Frank Costanzo, their manager, we owe special credit for his diligent research and for his superb choice of programs. Each concert features the work of an American composer of Italian descent which is in itself a contribution of great distinction. These concerts, apart from being sheer joy for the audience, are the most important factor in establishing and maintaining the prestige of the society.

But as has been true all through history, to maintain an orchestra has always been a luxury. The Amerita is no exception and if we are to keep it—and we must—we must devise some clever way to continue with it and a balanced budget. The 1957–58 season was only in very small part covered by the ticket sales. A most generous benefactor, Mr. Nicola D'Alonzo, gave a large donation which more than covered the deficit. While ticket sales are this year somewhat better than before, there still remains, however, the very real problem of financing these wonderful evenings unless we find other benefactors or draw heavily on our bank balance.

As one of the services to members many Italian magazines and publications have been sent gratis throughout the year, Provincial Art, Italian Scene, the monthly bulletin published by the Centro per Giornalisti Esteri, Italian Affairs, and the very decorative quarterly published by the city of Florence. We hope to be able to continue this feature, emphasizing those publications of artistic value and interest.

Another service, and one which is proving most popular, is the series of Italian lessons now being given weekly in the office of the society. As more members become aware of this excellent course, the attendance will undoubtedly increase.

Through the death of one of our earliest members, Dr. Domenico Vittorini, who was for 39 years a professor at the University of Pennsylvania and author of many books on Italian literature, we have lost not only a fine scholar but particularly a great promoter of friendship and understanding between America and Italy. It was thought fitting that formal recognition of Dr. Vittorini's unique talents should be made and some lasting memorial created. Accordingly, the society has established a scholarship fund, the income of which will make possible an annual award to some student of Italian at the University of Pennsylvania. Under the able chairmanship of Judge Eugene V. Alessandroni almost a quarter of the $20,000 goal has already been raised.

Thus we end the year with considerable pride in the high quality of what our young organization has been able to accomplish albeit in limited scope. For naturally the work of the society would be enormously extended if there were substantial increase in its membership. May I, in the name of the entire board, appeal to everyone who is interested in American-Italian cooperation, to try to the utmost to bring in new members in the coming year. While our main purpose is the deepening of understanding between two particular countries, in reality all fostering of international friendship is a basic force in promoting world peace. May the new Philadelphia society ever keep this broader goal in mind.

On behalf of the board:

HENRY CLIFFORD,
President.

Equality in Military Retirement Pay

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. ENGLE. Mr. President, the problem of equalizing military retirement pay has been troubling Congress for some time. Proposed legislation on the subject which I have cosponsored is now pending in the Armed Services Committee. I believe this legislation should go a long way toward remedying the inequities that now exist, and I urge quick and favorable action on it. The problems involved are complex.

Much has been written in an effort to clarify the issues. In the April 2 issue of the New York Times, I have just read an article on the subject by Hanson W. Baldwin, an eminent authority on military matters. The article contains a good analysis of the situation, and I commend it to the attention of my colleagues. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOYALTY: DOWN AND UP—ATTEMPT TO REMEDY EQUALITY IN SERVICE RETIREMENT PAY REACHES CRITICAL STATE

(By Hanson W. Baldwin)

The attempt to remedy what the Services widely regard as a governmental breach of faith has reached a critical state.

The Defense Department sent to the Bureau of the Budget almost 2 weeks ago what a high official described as a neutral position on proposed legislation to equalize service retirement pay. The Defense Department report indicated no objection to the legislation, but neither did it endorse it. In turn, the Department did not ask the individual Services to state their own positions officially. It is known, however, that each of the Service Chiefs has, in the past, strongly urged that retired pay be geared unequivocally on a fixed percentage basis to active pay. In other words that there should be a proportionate increase in retired pay whenever active pay is raised.

It was this tradition that was violated by the 1958 pay act. All those who retired before its passage were given the sop of a 6-percent pay increase. Those who retired afterward receive, in case of a major general, for instance, sometimes as much as $157 a month more than another retired officer of similar rank and length of service. Numerous protests from the Services, from retired personnel, and from other sources have been reflected in this session of Congress in many bills introduced privately by various members of Congress to remedy what has been widely called discrimination and injustice.

NEUTRAL POSITION

It was in response to these bills that the Defense Department's neutral position—in effect, a hands-off attitude—was adopted. The Budget Bureau's position has not yet been forwarded to Congress, however, and when it is, it is likely to be negative. For the principal reason for creating two economic classes of retired officers was budgetary: it was plainly a money-saving reason.

It has been estimated by the Defense Department that equalization of retirement pay would add less than $25 million annually to the military budget in the 1960 and 1961 fiscal years, decreasing gradually to less than $20 million annually by 1972. But the total cost over the lifetime of the legislation might be about $400 million.

There is, moreover, serious concern among some Members of Congress about what has been called by critics the astronomical increase in the costs of service retirement benefits. The total retirement pay budget increased from about $645 million in the 1959 fiscal year to $715 million in the 1960 fiscal year (caused, in part, by the 1958 Pay Act)

and some fear that military retirement costs will soon pass $1 billion annually.

NO CERTAINTY SEEN

Though there is great support, therefore, for righting the wrong that many feel was done to deserving retired personnel there is no certainty, by any means, of majority congressional support for the new legislation, regardless of what position the Bureau of the Budget takes.

The problem is further complicated by the likelihood that, even if the Bureau of the Budget takes a neutral stand on the proposed legislation, it is unlikely to ask for more funds to pay for the increased costs. There is no provision in the administration's military budget requests for the 1960 fiscal year for the $25 million additional required to equalize retirement pay. If the individual services had to fund this out of their budgets without extra compensation other projects would suffer.

Thus again, in this case, as in so many of the current issues dealing with defense, the problem is money. But the basic issue should be simple. The equalization of retirement pay represents money spent—not for hardware, not for bodies, but for human beings and for a principle. Every sort of effort is being made to increase the professionalization of the services and to improve the attractiveness of service careers.

Tradition and principle in the past have amounted to what the services have always regarded as an unwritten contract with Uncle Sam—that retirement pay would always be inextricably linked to active pay.

CONFIDENCE BROKEN

But at one stroke the 1958 Pay Act, which broke this tradition, also broke the confidence of many officers in the word of the Government. What has been done once could be done again. If retirement pay can be, in effect, reduced, or limited, or changed or made all things to all men depending upon the exigencies of the time, the economic security which the services once offered and which other recent legislation has attempted to enhance, could be a meaningless attraction.

It is true that you cannot buy patriotism, nor can you purchase the best kind of officers. But the services will never attract and retain the kind of men they want unless there is loyalty down as well as up, and unless there is a mutual sense of faith and confidence. Man is still the soul of battle, and the righting of a wrong is cheap at any price.

The Turnpike Killer

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article on highway safety written by Capt. Singleton Shaeffer, commanding officer, Troop C, District 2, Pennsylvania State Police. Captain Shaeffer points up the increasingly serious problem of permitting automobiles to operate on the Nation's turnpikes and highways with badly worn tires. He sets forth an excellent solution to this dangerous practice. This article first appeared in the magazine Traffic Safety, and was reprinted in the magazine Tires-TBA Merchandising.

THE TURNPIKE KILLER

(By Capt. Singleton Shaeffer)

There's a killer loose on our highways—especially on the turnpikes. This killer was once someone's friend and protector, a lifesaver in an emergency. Now, growing bald and losing its grip, the killer tire has become a public enemy in far more auto accidents than the public realizes.

Police are trained investigators, but too often this killer slips through the net of blame, masquerading under the names of "Too fast for conditions" or "Lost control on curve" or "Hazardous highway conditions." We need to strip off these disguises and identify this killer once and for all.

Bluntly speaking, my stomach turns over when I see a worn tire. It brings sickening mental pictures of the many dead and injured I have seen, spewed over our highways in their grotesque and ludicrous resting places, pinned in torn and jagged metal, horribly festooned with baggage, canned goods and children's toys. I feel the frustrating urgency of waiting for an ambulance which will whisk the broken bodies out of sight toward the merciful hands of hospital attendants. It all seems so senseless in this peaceful country of ours that I feel a compelling urge—even a moral obligation to speak out with what I know about the dangers of worn tires.

Believe me, I do know something about it. I'm no safety expert, but for 32 years I have been investigating auto crashes at the highway level.

First, let me point out that God, in his infinite wisdom, saw fit to place tread on the tips of your fingers. The loope and whorls of your fingerprints were not put there for identification alone. If they were eliminated, you would have difficulty holding a wet glass of water, a cake of soap, or a lifesaving grasp on any object you might reach for. This is a friction grip. On the highway it's called coefficient of friction. It's the difference between life and death on the highway.

My fellow troopers and I conducted the only realistic research I know of on the relationship of bald tires to accident frequency. The reports studied were our own accident investigations, checked and rechecked by competent traffic officers. Our laboratory was the Pennsylvania Turnpike. The results confirmed our belief that we not only had a State problem, but one of national significance as well.

BALD AS YUL BRYNNER

Even in Pennsylvania, with its outstanding program of compulsory semiannual vehicle inspection, faulty tires get by because we don't have a statute requiring tread on tires—only that the breaker strip, fabric or cushion gum is not showing. Amazingly, the spare tire is not included in the inspection at all. In other words, tires can be as bald as Yul Brynner, as long as they don't have a hole showing.

Since our concern with tires began several years ago, we have continued to gather data and experiment with remedial action. With a limited police force to patrol the 360-mile mainline of the turnpike, which carries almost an equal amount of out-of-State and Pennsylvania traffic, it is not possible to main each interchange or to stop traffic to check the condition of tires. However, spot checks were made at itnerchanges, at service areas, or when the police stopped a motorist for any reason. Thousands of written warnings were issued and hundreds were put off the turnpike with tires unfit for travel.

In 1956 faulty tires accounted for 29 percent of the fatalities on the turnpike. The relationship of good tread and weather was emphasized by the record during July and August of that year, when 68 percent of the fatalities involved bad rubber. Our deduction was simply that the 2-month period was unusually wet, coupled with the failure of vacationists to check their tires as thoroughly as they check their fishing tackle. Confirmation of this suspicion came when we visited one of the largest authorized service garages for the turnpike and found that 98 percent of the wrecked vehicles had bald tires. Some of the latest models with original tires were treadless.

In 1957 the percentage of fatalities involving tires was reduced to 19. The record would have been better if a wet autumn had not brought a rash of skidding accidents. As many as five persons were killed in one accident caused by bare tires.

What can be done? Our warning efforts have limitations. It's not primarily a police problem anyway. Controls must first come through proper laws in all States to prohibit the use of faulty tires. We have brake laws. Why not an adequate tire law? It is not enough to make sure your own car is safe. You are still risking a shattering, bone-crushing head-on collision if the other fellow skids into your path.

"WE DIDN'T KNOW"

The blowout, although bad enough to take several lives a year on the turnpike, is not the worst tire hazard to fear. It is the treadless, skidding, out-of-control vehicle that seeks its victims among the innocent travelers going in the opposite direction.

We interviewed thousands of motorists whose tires were considered unsafe. Not bent on killing themselves or anyone else, they had a common answer, "We didn't know they were that bad," or "Why didn't the garageman who inspected the car tell us?"

The No. 1 problem of the superhighways is still fatigue and lack of sleep. The many more thousands of miles of superhighway in the making probably won't change this situation. However, the constant No. 2 killer—too fast for conditions, with its hidden tire problem—can and should be brought under control now.

It is the prayer of those of us who patrol the highways that some immediate action be started among our legislators, safety groups, and administrators, which will end the reign of death of bad tires—at least one known cause of our Nation's traffic toll.

What you can do to help: Contact the State legislator of your district. Find out what protection you have against the use of a faulty tire under your State laws, and, if inadequate, you might suggest as a minimum the following: (1) That all vehicles operated on a public highway have at least a 16th of an inch of traction tread around the entire periphery of the tires, including the spare; (2) make it illegal to offer for sale a used tire not having a 16th of an inch tread as described or otherwise damaged in the sidewalls or casings, making it unsafe for use; (3) make illegal the resale of tire casings for recapping purposes that are not considered sound in the sidewalls and cords; (4) require a semiannual inspection of tire equipment, along with other safety features, that meet all the safety requirements above. Enlist help from local and State safety councils, motor clubs, and other safety-minded groups.

Remember this menace when you read your daily newspaper. It will unfortunately provide at least one tragic story of the mounting toll on our streets and highways. Seek out the real cause of the collision. You will be shockingly surprised how many times the owner of the car at fault was trying to get that last thousand miles out of a junkyard tire, thereby exacting the supreme price we pay for drivers who are not yet aware of the fact that the safest car on the road and its passengers are at the mercy of the worst junk heap that will run, where the public does not demand of its lawmakers the proper controls and from its enforce-

ment officers strict enforcement of the safety of all against the negligence of the few.

THE RESPONSIBILITY OF THE DEALERS

In a talk with Tires reporter, Capt. Shaeffer said that many tires are being sold today with fancy names that in his opinion were definitely unfit for turnpike driving. It is the responsibility of the dealers, he said, to sell tires of turnpike quality when they have the opportunity. He said he has spoken to many tire dealers and found them as anrgy as he is against the unscrupulous dealer who would recap a bad casing or sell a new or used tire that is unfit for the turnpikes.

"Dealers ought to clean up their own industry," he said. The advertising of dealers could make customers more aware of these problems, he thought.

All turnpike police cars are currently running on premium tires, he said. After experiences such as a new tire throwing a tread after only 50 miles of turnpike driving, all tires ordered have been premium quality. Ohio, New Jersey, and other troopers are doing the same, he said.

Legislation may be passed in Pennsylvania this month, he said, but until then troopers are watching for unfit tires at tollgates and on patrol, ordering thousands off the highways. Drivers are often grateful that their bad tires are pointed out.

In Defiance of Dictators

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 9, 1959

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks, I include an article appearing in the April 1959 issue of the VFW magazine, which contains an article by Mr. Robert K. Christenberry, acting postmaster of the city of New York, and chairman of the VFW Loyalty Day executive committee:

IN DEFIANCE OF DICTATORS

(By Robert K. Christenberry)

Let me offer a challenge to all freedom-loving Americans—a challenge that will not be easy to fulfill. It is a challenge to every man, woman, and child in the United States to stand up and reaffirm his or her loyalty on May 1, Loyalty Day.

This might sound silly to some, strange to others, and still others might ask, "Why do I, a taxpaying American, have to reaffirm my loyalty to the United States?"

To me the answer is simple, but to others it may be complex. I have reached the stage in life where I like to look back and recall the good times of days long gone. Days when, as a child, I troubled my parents with childish pranks; or the days as a young marine when I saw the horrors of war at Belleau Wood; or days of the roaring twenties, the hard thirties, and World War II.

But as I look back over all the good and bad I've seen, the better days and the poorer ones, too, I think how fortunate I am to be an American—a free American.

If you take into account the world's population, you'll realize there are very few of us who can call ourselves Americans, and even fewer who are willing to tell the world how proud we are to be what we are—loyal and true Americans.

Every member of the VFW proved his patriotism when he wore the uniform of his country and went to foreign lands to fight for the freedoms which we hold so dear.

But have we, veterans or nonveterans, ever examined these freedoms—freedoms that we take for granted? Have you ever paused to think what you would do if these freedoms were taken from you as abruptly as they have been taken from others? How would you feel if you did not have freedom of speech, or if you could not read the newspapers of your choice? Or could not worship where you please and when you please? Or were denied the right to assemble and, if necessary, petition?

The danger of losing these freedoms is possible, almost imminent, during this age of sputniks and outer-space vehicles. Why? Because we, as Americans, regard these everyday rights as part of our lives rather than as luxuries that most people do not enjoy or have not experienced. These freedoms have become our heritage; a heritage we must defend against all assaults.

As this day that has been proclaimed Loyalty Day approaches, it might be wise for all Americans to examine these freedoms and decide whether Loyalty Day means freedom or whether it is just another excuse to wave the flag.

Several hundred VFW posts across the Nation have indicated they will participate in a Loyalty Day celebration of some type this year. But if you consider the number of active posts in the Nation, this is a poor representation. VFW members know better than most how easily these freedoms can be lost, for they have seen the results firsthand.

In view of the current Berlin crisis, we should realize the importance of a unified country. The die has been cast. President Eisenhower has told the world, "We are not going to give one single inch in the preservation of our rights, and in discharging our responsibilities, in this particular region, especially Berlin." And yet, Nikita Khrushchev says that any "violation" of the East German borders would be treated by Russia as an act of war. Berlin is probably the most dangerous crisis since Korea, and we know that only strength repelled the Communist aggressors in Korea and saved the Far East from the Communist plague.

What would be a better show of strength now, when the country is facing a crisis such as this, than to have the American people stand firmly behind their government over the issue of Berlin? What would be a better way to show the free people of the world that Americans—regardless of race, creed, or color—stand united on this single issue, ready to fight, if necessary, to defend this symbol of freedom—West Berlin—that shines bright amidst the gloom of communism?

Recently Soviet Deputy Premier Mikoyan visited this country. He was accorded a warm and hearty welcome from many misguided Americans who believe that America can deal with these treacherous murderers in striving for peace. Reliable government officials who carefully followed Mr. Mikoyan's visit noted with distress that this dedicated Soviet leader gained the impression that the American people were not solidly behind their Government in either foreign or economic relations. These same officials quickly pointed out that no Communist official from Russia, or her enslaved empire, can fully comprehend our way of life or form of democratic government. From this misconception of our democratic government, Mikoyan has carried the word of "American discontent" to the ears of Khrushchev.

Many military leaders have predicted that if a third world war is to come, it will be brought about by miscalculation. This is exactly what high-level Government officials feel that Khrushchev has done—miscalculated the American people through the eyes of Mikoyan.

President Eisenhower has drawn the line. The United States will stay in Berlin. Khrushchev says we must go. The hands have been dealt, and now each must play his cards. The Soviet dictator believes the American people want appeasement as the road to peace, and that they will not back the firmness of the Government on the question of Berlin.

What would be a better way to show these disciples of the Devil that the American people are united behind their Government than for each person in this country to stand proudly on May 1 and reaffirm his loyalty to Americanism before the eyes of the world? What better show of strength than to have every man, woman, and child pledge allegiance to the flag of this country that is so vividly stained with the blood of Americans who died protecting this heritage we call freedom?

It is time for the American people to take an active part in these negotiations and to make their voices heard in the diplomatic chambers when the final hand is played. We cannot afford to let Mr. Khrushchev throw the entire world into a ghastly atomic war because he has miscalculated our unity as loyal Americans.

We are told that a future war will be too terrible to be invoked—even by the Communists. There is logic in this conclusion, but the stakes are too high to gamble on the hope that logic will always control the mind of a fanatic such as Khrushchev. Certainly all action must be taken to prevent a hot war. At the same time, we must do all we can to win the cold war, for we can freeze to death as well as burn to death.

Loyalty to our country means loyalty to ourselves, and this loyalty displayed before the eyes of these Russian terrorists will play an important role in winning the cold war. It is the concept of freedom—our loyalty to flag and country—that has forged America from a wilderness. The United States is no longer a piece of real estate. It is a complex of deep-rooted traditions and ideals, principles and preferences, a pattern of irrevocable commitments to the past, the present, and the future. The preservation of this Nation depends upon the conscience and sense of duty of its citizens.

For the first time in history, Loyalty Day has become a national observance officially. Through fate, it seems, Loyalty Day could become the strength the United States will need at the diplomatic conferences to prove America values her heritage more than she fears the threats of the Red dictators.

Every American should take an active part in this year's Loyalty Day celebration. If your local community has not planned such an observance, then get started on some type of program. Write to our Loyalty Day office, 610 Wire Building, Washington 5, D.C., We will gladly send you an information kit on how to organize a celebration.

Remember that a few short days after we celebrate Loyalty Day comes the day (May 27) when Khrushchev has said he will throw us out of Berlin. Let's now stand together and show this Red butcher that he has underestimated the readiness of the American people to unite against aggression, and to defend the freedoms we have fought so hard to gain and preserve.

Condensed Version of Speech by Dr. Alceu Amoroso Lima

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. KEARNS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include the following

remarks of Dr. Alceu Amoroso Lima at the Pan America Union on February 16, 1959. Dr. Lima presently occupies the chair of Brazilian studies at the Brazilian Institute of New York University and is one of Brazil's leading intellects.

CONDENSED VERSION OF SPEECH MADE BY DR. ALCEU AMOROSO LIMA AT THE PAN AMERICAN UNION, FEBRUARY 16, 1959

One of the great mistakes of our time has been to consider arts and letters as mere entertainment. Yet they are the true foundation of peace within our hearts and of kindness in dealing with our neighbors.

Another misconception, perhaps still more dangerous, is that culture should serve economic aims or function as political propaganda. Arts and letters are ends in themselves. They should never be made to serve other purposes.

It is in the light of these simple ideas that I should like to discuss the problem of relations between the United States and Latin America. From my personal point of view, there are six major causes for the disheartening decay in inter-American relations.

The first of them, it sems to me, is the ever-stronger feeling of nationalism in our countries. A modern social philosopher has applied to the economically prosperous civilization of the United States a term which has won wide acceptance: "the affluent society." In contrast, Latin America might be said to represent a diffluent society, rather like the clay jug and the iron jug of La Fontaine's fable. Even if we reject the fashionable but humiliating concept of an inferiority complex on the part of Latin America, it is impossible to disregard the sense of distrust awakened in the weak by the strong.

The second cause of the depression in inter-American relations is to be found in Communist infiltration and propaganda. As you know, everywhere in the world anti-Americanism is one of the conventional arms of Soviet propaganda. I do not believe that Latin American communism is an imminent political menace, much less an electoral force. Nevertheless, I see, as does everyone, the strong impact of its unremitting and unappeasable propaganda upon attitudes toward the United States in our countries.

The other totalitarian extreme in politics, fascism or neofascism, is a further obvious source of distrust of the United States south of the Rio Grande. It represents a much more immediate danger than communism. The formal, inflexible discipline of the Communist Party is not in keeping with the Latin American temperament, whereas neofascist trends have close affinities with the personalistic tradition of our dictators. Democratic institutions will never engender communism in Latin America, but dictators may well be the forerunners of commissars. The pursuit of a dictatorial policy in Latin America, even under the common pretext of combatting communism, is the easiest of ways to bring about a Communist coup de force.

A fourth cause of friction in hemisphere relations is a lack of tact on the part of some U.S. citizens in dealing with Latin Americans, whether in an official capacity or in matters of private business. This shortcoming may well be reciprocal. The success of the good neighbor policy at the time of the Second World War, as contrasted with certain previous historical misunderstandings, is a strong argument against any attempt to impose a new way of life on people of different traditions and background. Good relations in this hemisphere will result, not from similarities among Americans of the north and of the south, but from the ways in which they complement one another.

If progress has recently been made in this area, a new difficulty has arisen through the emphasis which has been placed on economic and financial questions to the detriment of cultural relations. I shall return to this point in a moment.

Last, and perhaps least among reasons for the present difficulties, is a fear of increasing intervention by the governments in fields that were previously the preserve of private institutions. The extraordinary work which the Rockefeller Foundation has done in Latin American could never have been performed by persons toiling alone. There could be no better news than that the Ford Foundation is taking a particular interest in the educational problems of our countries. The task of the governments is to support, with funds which not even the great corporations have at their disposal, these efforts which represent the best hopes of real international cooperation.

Each of these questions involved in the achievement of unity in our hemisphere—the unity which is essential to the accomplishment of our mission to preserve liberty and human dignity in the world of today—deserves special attention. However, I propose but one for your consideration today: the importance of cultural relations.

One of the most important steps in the development of inter-American relations was taken at Bogotá, in 1948 with the creation, within the Pan American Union, of a Department of Economic and Social Affairs and one of Cultural Affairs. Mutual understanding among people as human beings is a prerequisite to political or economic unity at the government level. This understanding can come about only through cultural interchange and reciprocal recognition of characteristic cultural values.

One of the oldest sources of misunderstanding in our hemisphere stems from the Latin American prejudice which holds the people of the United States to be materialistic, utilitarian, and lacking in soul. The greatest and most startling surprise that an unprejudiced Latin American receives upon coming to this country is a realization of the importance of intellectual and spiritual values in the life of its inhabitants.

* * * There is a need to expand insofar as possible the programs for the exchange of persons that are being carried out, with increasing success, by certain agencies of the U.S. Government, and, very particularly, by the Institute of International Education. The job done by the latter can only be classed as outstanding.

Another practical matter to which I should like to call attention relates to the kind of people the United States sends to Latin America. Two of our greatest deficiencies are a lack of technical accuracy and a want of cultural methodology. Specialists in these lines can therefore serve as the most effective agents of a true exchange of cultural values between Anglo and Latin America. It is of greater advantage to Latin America to receive young scholars recently graduated from the excellent universities and technological institutes of this country than to be visited by outstanding authors and professors.

As regards the latter, the need is different. It is their writing, and not their presence, that is required for effective cultural interchange. What is called for here is the translation of their books.

There is another practical problem relating to the dissemination abroad of the intellectural production of the United States—a production which is but little known in our countries, and of far greater importance than even the majority of our cultural elite supposes. This is the question of the acquisition of the United States books by Latin Americans. Even when we can afford to buy your books, it is quite difficult to find the books or to make the subscription. The opening of good American bookstores in the larger cities of Latin America would be one of the most effective means of promoting mutual understanding.

Music is deep in the blood of Latin Americas. The United States boasts not only popular music and musicians of world renown but also a number of the greatest symphony orchestras on the face of the earth. I can bear personal witness to the extraordinary impact of these orchestras and musical artists upon the Latin American public.

We must recognize that the only propaganda which produces sure and lasting results is the truth. If, as Socrates said 2,500 years ago, man's first duty is to know himself, his second is to know his brothers in order to love them.

Secretary of State Dulles recently declared that peace through law is better than peace through force. However, there are two other means of achieving world harmony, means which are basic to understanding among men: peace through love and peace through beauty.

Position on National Defense as Taken by the Association of the U.S. Army

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from Mr. J. D. Ackerman, president, Association of the U.S. Army, dated March 13, 1959, and a copy of a letter which Mr. Ackerman sent to Assistant Secretary of Defense Charles C. Finucane, dated March 12, 1959:

ASSOCIATION OF THE U.S. ARMY,
Colorado Springs, Colo., March 13, 1959.

The Honorable DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: I have noted with gratitude your interest in our national defense and am taking the liberty of enclosing copy of my letter to Assistant Secretary of Defense Charles C. Finucane. I believe the conclusions contained therein are entirely factual and I trust they are worthy of your support.

Again, our sincere thanks.

This chapter has 4,000 interested members.

Very truly yours,

J. D. ACKERMAN, *President.*

ASSOCIATION OF THE U.S. ARMY,
March 12, 1959.

Hon. CHARLES C. FINUCANE,
Assistant Secretary of Defense,
Washington, D.C.

DEAR SECRETARY FINUCANE: I am deeply indebted to you for your letter of March 5, 1959, and for your consideration of matters enumerated in my letter of February 4, 1959, addressed to Secretary of the Army Wilber M. Brucker.

I am very glad of your visits to Colorado Springs and Fort Carson because you are thereby better able to evaluate the excellent facilities at Fort Carson and the unexcelled training which is available here through the 9th Infantry Division.

With full faith I accept your statement "that the absolute maximum combat strength and readiness be maintained within

the authorized Army ceiling." Also your statement that "our ultimate goal is to provide the maximum military strength for the funds expended."

I have difficulty in reconciling these statements with certain facts and with present conditions in Berlin. It is a fact that Congress sought to head off the administration's announced plans to trim Army manpower, going beyond President Eisenhower's budget request. Congress provided extra funds to keep the Army at 900,000. Since that level was not made mandatory, the plan as announced by Secretary McElroy is a June 1959 Army strength of 870,000 men. Why not follow the desires of Congress and the judgment of our Army Chief of Staff and other informed military leaders?

Reference is constantly made to a reduction of 30,000 men. Natural attrition would accomplish that in a few months. The schedule, however, provides for the deactivation of a training division. There are now two: the 2d Division at Fort Benning, Ga., and the 9th Division at Fort Carson. If reduction in numbers is desired, the deferment of draft calls would accomplish that. These recruits are not ready for combat for a matter of months. Why not retain our trained battle-ready troops?

Is not the deactivation of an infantry division totally inconsistent with the present world situation and with the declaration of our Defense Department and Army leaders and spokesmen? Under date of March 3, 1959, Gen. Maxwell D. Taylor, Chief of Staff, stated: "Any fighting because of Berlin would be with conventional weapons and ground forces. The close proximity of the East and West sectors rules out initial use of more destructive modern weapons."

He further states: "Berlin may require mobilization of the entire nation if the Russians use military force this spring to prevent access to Berlin." General Taylor further stated that a scheduled reduction from 15 to 14 regular divisions would not provide strength. Is this the time to deactivate an old established battle-trained fully equipped infantry division? A division with immediate mobilization capabilities?

March 10, 1959, General Taylor testified his forces were being cut too deeply. He said he would not have enough men to carry out the Army's assigned missions.

Under the same date, Secretary Neil H. McElroy stated: "That the United States expected any fighting that might result from the Berlin situation would be a big war and not a limited conflict."

Does the threat of a big war and mobilization of the entire nation justify in any way deactivation of a combat-ready division at this time? To me it is unthinkable. If this were done the need again arose for that division, it would take months to put it together and millions of dollars to equip it. The division so activated would in no way compare with the capabilities of of our present seasoned divisions.

History has plenty of evidence of our failure to maintain proper armed strength, and its cost in lives and money. I cannot believe that those of you in charge of our security will permit this to happen again.

In Berlin, we have two battle groups of 1,600 men each. Facing these troops the East Germans have an army of 110,000 men. The Russians have at least 400,000 men in East Germany. I wonder what they think when they read we are deactivating 1 of our 15 infantry divisions?

Sincerely,

———— ————,

President.

Junior Chamber of Commerce Honors Outstanding Young Farmers

EXTENSION OF REMARKS

OF

HON. WILLIAM H. NATCHER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article entitled "Junior Chamber of Commerce Honors Outstanding Young Farmers" which appeared in the April 1959 issue of Kentucky Farm Bureau News.

The article is as follows:

JUNIOR CHAMBER OF COMMERCE HONORS OUTSTANDING YOUNG FARMERS

(By C. H. Fields)

On April 6, 7, and 8, 50 of America's outstanding young farmers will gather at Cedar Rapids, Iowa, for the national outstanding young farmers awards banquet, sponsored by the U.S. Junior Chamber of Commerce, and the American Petroleum Institute.

One of these 50 will be Kentucky's William T. Roark, of Simpson County, president of Kentucky's No. 1 county farm bureau—an outstanding young farmer, leader in his county and State.

This is the fifth year of the junior chamber of commerce's outstanding young farmer program. Each year, the JC's select an outstanding young farmer in each of four regions in the United States. A. D. Sprague, Jr., Sturgis, was named one of these regional winners in 1955, and many of Bill Roark's friends firmly believe that he will receive the honor this year.

BILL ROARK: OUTSTANDING FARMER

According to Barney Arnold, farm director of WHAS, Louisville, who visited the Roark farm in Simpson County recently, Bill Roark believes in being practical about farming. That's why many of the important operations on the Roark farm are electrical or push-button operations.

At the present time, Bill Roark and his father have 315 calves on feed on their 985-acre farm, which they operate on a 50–50 partnership basis. The other major enterprise on the farm is production of Ky–31 Fescue seed. With plenty of good, well-managed pasture, the beef cattle operation has become the principal enterprise during the past 4 or 5 years.

The Roarks maintain a 100-cow breeding herd, and buy 200 to 250 feeders each year. Feeding management on the farm includes the use of stilbestrol, implanted in each steer. An accurate set of scales on the farm helps to keep a regular check on feeding gains. At the last check, the Roarks were achieving feeding gains of 3.12 pounds daily gain and a dressing percentage of 59 percent. Bill says their goal is to feed out 500 to 600 head of cattle for market annually, with gains of 3.25 pounds daily.

CITIZENSHIP AND LEADERSHIP

But Bill Roark was not selected by the JC's in Kentucky as a nominee in the outstanding young farmer award program because of his excellent and progressive farming operation alone.

An outstanding citizen in his community, Bill is an active church worker, leader in local civic clubs, active in the local chamber of commerce, fraternal organizations; and an outstanding leader in farm organization. In addition to his leadership roles in agricultural education, conservation, cooperatives, and marketing, Bill has been president of the Simpson County Farm Bureau for the last 3 years.

Under Bill Roark's leadership, the Simpson County Farm Bureau was last year named as the "No. 1 County Farm Bureau in Kentucky" by the State organization.

NATIONWIDE PROGRAM

The Junior Chamber's outstanding young farmer program is nationwide in scope, but the program reaches into individual cities, where JC chapters select outstanding young farmers (21 to 35) to compete in the State contest. This year, 29 local JC chapters participated by submitting nominations to the State JC organization.

At the State level, the program is operated under the leadership of the JC's agricultural committee, under the current chairmanship of Paul Hamm, county agricultural agent in Boyle County. Members of the State judging committee this year were Hamm, who serves as ex officio chairman; Dale Scott, Kentucky Farm Bureau; J. O. Matlick, editor of Kentucky Farmer; Wilmer Browning, University of Kentucky; and Jack Crowner, farm editor, WAVE and WAVE–TV, Louisville.

STATE WINNERS SELECTED

Selected from the local nominees this year were William Roark, first place; Wayland Givens, Owensboro, second place; and Paul McCubbins, Cambellsville, third. Roark will vie for honors in Cedar Rapids, when four national winners will be announced by the U.S. Junior Chamber of Commerce.

The Real Early Warning

EXTENSION OF REMARKS

OF

HON. WILLIAM M. McCULLOCH

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. McCULLOCH. Mr. Speaker, long ago it was observed that you cannot see the forest for the trees. In view of our intense present interest in missiles and nuclear weapons, and other defense mechanisms, the observation is particularly pertinent to our everyday problems.

In this connection, a short editorial in the Washington Daily News of April 6, 1959, should be read and, at regular intervals be read again, by lovers of freedom everywhere. The editorial follows:

THE REAL EARLY WARNING

On the subject of alerts and early warning of a Russian attack, you hear a lot these days. It comes at us by way of congressional testimony, learned articles, and speeches. It's both frightening and dramatic.

But, if you want to know the truth of it, ponder the testimony of Gen. Thomas S. Power, commander of our Strategic Air Command, who has told Congress:

"Many people * * * still think they will get warning, strategic warning.

"I maintain that we got our first strategic warning in 1848 when Karl Marx and Fried-

rich Engels published the Communist Manifesto.

"The Communists told us then what they were going to do, and they have been doing it ever since."

Criticism of United States Rising in Berlin

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks I would like to insert a news dispatch which appeared in the New York Times by the distinguished foreign correspondent Drew Middleton.

This dispatch points out at some length the present feelings of the British toward the Eisenhower administration over the question of Berlin. We seem to have created the impression as a result of certain comments by various of our military leaders that there is nothing to negotiate between the East and West and that a detente between the Soviet bloc and the Western bloc is undesirable. This impression is a mistaken one.

I am sure that the United States is prepared to negotiate with the Soviet Union, but in a manner which will not mean the bartering away of the freedom and interests of the West Berliners and the Western Powers. I am sure that there are many Members of this body and the Parliament of Great Britain that hope that an important and creative role will be given to the United Nations by the powers involved in order to alleviate the present grave situation over Berlin.

CRITICISM OF UNITED STATES RISING IN BRITAIN: OUTBREAK OF PRESS ATTACKS MARS WEST'S UNITY PLEAS—PRESIDENT CALLED WEAK

(By Drew Middleton)

LONDON.—Suggestions that President Eisenhower is too tired or too ill to lead the Western powers at a summit meeting are among the more extreme aspects of a sudden outburst of press criticism of the United States in Britain.

This has developed just when the Western governments, including that of Britain, are emphasizing the importance of unity in the coming talks with the Soviet Union. The criticism is as harsh on the right as on the left.

Malcolm Muggeridge, one of British journalism's stormy petrels, described President Eisenhower as a "poor, meandering old President" in this week's issue of the New Statesman, a leftwing weekly.

A Washington correspondent of the Sunday Express, an independent conservative newspaper owned by Lord Beaverbrook, suggested today that the President might have to resign, since a few weeks' extra work had necessitated a holiday for him.

The succession of Vice President RICHARD M. NIXON might not be such a bad thing, the correspondent concluded. "There could be far worse fates for America and the West," he said.

ADMINISTRATION CALLED "DEAD"

Mr. Muggeridge's view was that "probably no powerful country in history has had quite so dead a Government as the United States has today."

The writer went on to speak of the "benign and platitudinous immobilism" that General Eisenhower represents and to picture the President as an exhausted man. Mr. Muggeridge expressed doubt whether Eisenhower had more than the haziest notion of what Prime Minister Harold Macmillan was talking about during the meetings of the two heads of Government in the United States last month.

This criticism of the President of Britain's most important ally is more extreme than that in other newspapers here. But there is a groundswell of criticism of the United States, and it seems stronger among ordinary people than at any time in the last year.

"You Yanks want us to follow you, and when we do what do we get?" a man in a pub in the New Forest asked yesterday. "We get it in the neck. Look at this B.O.A.C. business. Doesn't anybody have any rights but Americans?"

He as alluding to discontinuance of the British Overseas Airways Corp.'s trans-Pacific flights because of the refusal of the U.S. Civil Aeronautics Board to license them.

MANY PEOPLE ANGERED

This is a relatively small matter, affecting only one corporation. But coming on top of other reports of United States discrimination against British exports, it has angered many people.

Their feeling seems to be that if the United States wants an ally in Britain, then Britain must be treated as an ally, not as a satellite. This may be a gross oversimplification of a complex relationship, but it reflects the feelings of many.

Comments by U.S. generals and admirals on war with the Soviet Union also have annoyed many. The Daily Mirror, Britain's most widely read newspaper, assailed such comments in a front-page editorial last week. Its criticisms were echoed in the Sunday Express.

"Oh, these brass-hatted fire-snorters," John Gordon wrote. The Express columnist went on to criticize American bluster talkers and to attack Gen. Lauris Norstad, Supreme Allied Commander in Europe, for doing his vociferous damnedest to kill any idea of easing the tension in Europe by the thinning out of troops.

The Sunday Dispatch reported that U.S. officials had been upset at Mr. Macmillan's initiative in trying to solve East-West differences.

The general picture offered to the public is that of a U.S. Government opposed to real negotiation with the Soviet Union, dominated by military men eager for a showdown and ruled by a President too tired to act.

These extreme attitudes do not represent the views of the Government. But the Government has done nothing during the present parliamentary recess to paint a different picture of its relations with Washington.

Since intimate relations with the United States are the cornerstone of the Conservatives' foreign policy, this silence has struck observers as odd.

Some suggest that the Government's silence may be a result of its resentment over the reception of the Prime Minister's proposals in Washington. There is considerable concern in some important government departments over the sterility of some of the proposals for negotiation put forward by the United States, West German, and French Governments in the latest Washington talks.

Coal Conference Ushers in Era

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Ray Tucker which appeared in the Wilkes-Barre Times Leader of Wednesday, March 25, 1959:

COAL CONFERENCE USHERS IN ERA

(By Ray Tucker)

WASHINGTON.—Several of the once orneriest segments of American industry are now cooperating under a compact that may have a farreaching and constructive effect on the Nation's economy, politics, foreign trade, and the advent of the atomic age. This brash newcomer to the field of management-labor relations is the National Coal Policy Conference.

Not so many years ago, the bloody battles between the coal operators and the miners strained the hillsides and the homes of Colorado, Kentucky, and Pennsylvania. Within recent memory, John L. Lewis was fined $2 million because he as head of the United Mine Workers defied the Government. Harry S. Truman tried to seize the steel plants, over a dispute involving their captive coal mines.

Caught in the midst of these disputes were the Nation's numerous coal-carrying railroads that haul the bituminous and anthracite to the tidewater ports of New York, New Jersey, Pennsylvania, Maryland, Virginia, and the Carolinas. When strikes shut down the mines, the railroads and the communities they serve along the seaboard suffered.

Today, these once conflicting interests have united to maintain economic peace, and to act together in advancing the progress of the soft coal industry, including producers, haulers, and users. And the initiator of this grandiose idea was the onetime bad boy of American politics and economics—John L. Lewis.

He was given credit for this innovation by George H. Love, who heads the new conference, and who is board chairman of the Consolidation Coal Co. Joseph E. Moody, president of the Southern Coal Producers' Association, will be executive director of the conference.

Administration leaders hope that this hatchet burying will set an example for other key and concentrated industries upon which the economy relies for peaceful production, profits, employment, stable wages, and prices. Washington has in mind such vital segments as steel, automobiles, maritime operations, transportation generally—in fact, all the activities so essential to prosperity and national defense.

President Eisenhower and Labor Secretary Mitchell, as well as many of their predecessors, have toyed with the thought of forming industrial councils. Under this system, a Government representative would sit in at the bargaining table on wage-price negotiations, representing the public interest.

THREAT IN INDUSTRY

But such a plan connotes the highly objectionable feature of Federal compulsion. The coal conference method may serve as a satisfactory substitute, for it will have many dealings with the Government.

Otherwise, as previously noted here in connection with forthcoming steel negotiations, Uncle Sam may find it necessary to clamp on controls. The undermining of the economy by persistent inflation and the possibility of war with Russia, in the official viewpoint, outlaw paralyzing stoppages of production by management or labor.

The coal operators and union officials were driven into their unprecedented togetherness by several threats to their industry. These include a fall in consumption of their product, oil-and-gas competition, foreign tariffs on their exports and the approach of atomic power. In several areas, they believe that the Government discriminates against king coal.

They have already achieved a few gains. They persuaded Eisenhower to restrict imports of residual oil, which were displacing annual production of 71 million tons of coal. They induced C. Douglas Dillon, Under Secretary of State for Economic Affairs, to protest against West Germany's new high tariff on U.S. coal, and Bonn's plan to buy from Red Poland. Dillon has been unsuccessful so far, but they are keeping the pressure on him.

They will ask the Federal Power Commission to investigate the rates which the natural gas industry charges for industrial and household use. They maintain that the price to industry is kept low to undersell coal, and that the loss is offset by an artificially high rate for individuals. If FPC continues to refuse their request, they will seek corrective legislation.

The coal operation and union officials also complain about what they regard as plans for premature development of atomic power for civilian use. In 5 years, they note, the Government has spent $500 million on this program, as against only $74 million on coal research during the life of the industry.

Since atomic power costs about 10 times as much as coal, oil, or gas, and since these resources are sufficient for 1,000 years, they will try to persuade Congress and the Atomic Energy Commission to slow down in the atomic field.

Here is how an editorial in John L.'s weekly hails this new movement: "The king (coal) is dead? Who says so? Long live the king."

We Need a Secretary of Commerce

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. DEROUNIAN. Mr. Speaker, while the people await constructive action which will enable the U.S. Department of Commerce to serve effectively this Nation, the following serious article by Roscoe Drummond appeared in the New York Herald Tribune:

THE MOCK HEARINGS ON LEWIS STRAUSS
(By Roscoe Drummond)

The petty performance which the Senate Commerce Committee is putting on in connection with its mock hearings on confirmation of Lewis L. Strauss as Secretary of Commerce is, it seems to me, a discredit to the Senate and a disservice to decent government, any way you look at it.

What is happening is that by every devious and dilatory device some Democratic members of the committee are seeking to stall the hearings so interminably that somebody, somehow, will be able to turn up something discreditable to Admiral Strauss—or that he will be induced to resign in frustration. He won't.

Of course, the somebody who is most intensely eager to turn up the any tidbit which could be used against the Secretary-designate and who is busily working at it is one who has made an anti-Strauss crusade a personal preoccupation—you guessed it—Senator ESTES KEFAUVER, Democrat, of Tennessee.

Mr. KEFAUVER is not a member of the Senate Commerce Committee. Its chairman, Senator WARREN G. MAGNUSON, Democrat of Washington, by nature a man of good will and fairness, for some reason seems willing to play Senator KEFAUVER's little private game of "let's get Lewis Strauss."

I am not arguing that Admiral Strauss will be the greatest Secretary of Commerce since Harry Hopkins and Henry Wallace, appointed by President Roosevelt, or Averell Harriman, appointed by President Truman. I am not suggesting that every policy and every action which Admiral Strauss has initiated in a decade and a half of public service has been without error of judgment. I'd almost say he ought to be rejected if such a claim were true. But the facts which are pertinent are these:

Lewis Strauss has served three Presidents with equal loyalty and skill in posts of large responsibility.

When he was Special Assistant to Secretary of the Navy Forrestal, he did such a good job that he was decorated by both the Army and Navy.

When he was a member of the Atomic Energy Commission in the Truman administration, he found himself the lone supporter of the H-bomb, and when he won the backing of Mr. Truman, they together overcame the massive resistance to it.

When President Eisenhower in 1953 was looking for a way to demonstrate America's deep interest in further peace—not just talking about it—it was Admiral Strauss who helped devise and strongly supported the atoms-for-peace program.

At times Admiral Strauss has been a controversial figure. Any public official worth his salt will be.

Senator KEFAUVER, who seems to be biding his time to put in an appearance before the Commerce Commitee's hearings—which are being postponed for his convenience—is aiming to find some way to show that Admiral Strauss had an unethical part in the short-lived Dixon-Yates contract by which a private company, instead of TVA, would provide some power for the Memphis area.

I suspect that Admiral Strauss wishes the Dixon-Yates contract, later canceled, had never been born. But the Department of Justice—which you might consider prejudiced—and the Commissioner for the U.S. Court of claims—who is certainly not partisan and who examined the Dixon-Yates matter inside and out—found no evidence adverse to Admiral Strauss.

And the Commerce Committee's hearings on Secretary Strauss drag on. He was named last November. We are now almost into the fourth month of the present Congress and Chairman MAGNUSON has calmly adjourned everything until after the Easter recess, still waiting obediently for Senator KEFAUVER to unsheath his accusations.

None of this reflects any credit on the Senate.

It impairs the morale of the Department of Commerce.

It makes it increasingly difficult for any President to get able and honorable men to serve the government when a Senate committee shows such calculated discourtesy to an able and honorable public servant like Lewis Strauss.

The National Defense Education Act

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. DOOLEY. Mr. Speaker, I am inserting in the Appendix of the RECORD, for the information of my colleagues, the following letter from the Rev. Virgil C. Blum, a distinguished educator from Marquette University, with reference to the National Defense Education Act.

The letter points up very clearly certain defects in the act. It is regrettable that some features of the bill discriminate against the children, students, and teachers in exercising their constitutional prerogatives in the school they attend or in which they teach. In other words, private education, including children, students, parents, teachers, and administrators are not properly represented democratically in the provisions of the act.

The objections which the Rev. Virgil C. Blum has to the act might best be summed up by saying that in welfare legislation the Congress should not demand the surrender of the freedom of mind and freedom of religion as a condition for sharing welfare benefits. Congress has shown a respect for the fundamental liberties in its school-lunch program and in providing grants to veterans who are disabled. These beneficiaries of Government aid are free to make a choice of institutional care including care in denominational institutions.

Under the National Defense Education Act of 1958 there is enforced conformity to the philosophical and theological orientation of State schools as a condition for sharing in its provisions. This requirement seems to violate the academic freedom of millions of children and thousands of students and teachers, because it requires that they surrender their freedom of choice in education or in teaching as a condition for sharing in provisions designed to help strengthen the national defense. Hence, in a program originally devised to promote the defense of freedom, the Congress has violated in fact, if not in intent, the civil rights of children, students, and teachers to freedom of mind and freedom of religion in the choice of a school.

MARQUETTE UNIVERSITY,
Milwaukee, Wis., March 9, 1959.

Hon. EDWIN B. DOOLEY,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DOOLEY: Since I think that it is the duty of every American citizen to do all in his power to preserve our liberties, I am taking the liberty to write to you in defense of freedom of mind and freedom of religion. This subject, I know you will agree, merits the calm and studied consideration of every individual interested in the preservation of the Bill of Rights. It is a subject about which there exists a great deal of confusion. Much discussion is neces-

sary to dissipate the confusion. But an exchange of ideas serves little useful purpose unless it is open, sincere, and frank. So I hope you will pardon me if I discuss the matter of academic freedom with you in an open, sincere, and frank manner.

In our constitutional context freedom of mind and freedom of religion in the field of education constitute academic freedom. This freedom in the search for truth has repeatedly been defended against State invasions by the U.S. Supreme Court. The constitutional principle of academic freedom was enunciated by the Court in *Meyer* v. *Nebraska*, reiterated in *Pierce* v. *Society of Sisters*, and restated in *Prince* v. *Massachusetts* and in *Everson* v. *Board of Education*. Moreover, the fundamental doctrine of the freedom of the human mind from every form of government coercion was emphatically stated by the Court in *West Virginia School Board* v. *Barnette*. Justice Jackson, moreover, pointedly remarked that government must "let men's minds alone."

The Federal Government's relations with citizens should be based on a full recognition of the integrity of the human person, particularly in those things that touch the mind and spirit of man. In all its public welfare legislation Congress should, therefore, incorporate provisions assuring and protecting the freedom of the human mind and spirit. But negatively, in welfare legislation Congress should not demand the surrender of the constitutional rights of freedom of mind and freedom of religion as a condition for sharing in welfare benefits.

Until recent years Congress did not, in fact, demand the surrender of freedom of mind and/or freedom of religion as a condition for sharing in such benefits. Much to its credit it showed a scrupulous respect for the integrity of the human mind and spirit in the provisions of legislation making available welfare benefits for the needy aged, dependent children, and the blind. It showed an equal respect for these fundamental liberties in the school lunch program and in programs providing grants to veterans partially or totally disabled. All these beneficiaries of Government aid enjoy freedom of mind and freedom of religion in the choice of institutional care, including care in denominational institutions.

Nor did Congress demand the surrender of academic freedom as a condition for sharing in the educational welfare benefits of the GI bill of rights, of the War Orphans Educational Assistance Act, and of the Legislative Reorganization Act of 1946. Until last year Congress exercised a sensitive regard for the integrity of the individual person; it did not demand conformity as the price of welfare benefits. It did not penalize the individual who exercised his constitutional rights to freedom of mind and freedom of religion.

But now when our Nation finds itself in a life and death struggle with a government committed to the totalitarian control of the human mind and spirit, Congress for the first time, perhaps without due reflection, adopted a policy demanding the surrender of freedom of mind and freedom of religion as a condition for sharing in benefits which are designed to promote the security of the Nation. In the National Defense Education Act of 1958, it imposed enforced conformity to the philosophical and theological orientation of State schools as a condition for sharing in educational benefits. (Every school has a philosophical and theological orientation with regard to the most fundamental questions of life.) In so doing Congress has adopted a policy, unwittingly, no doubt, that seriously violates the academic freedom of millions of children and thousands of students and teachers. It demands that they surrender freedom of choice in education or in teaching as a condition for sharing in benefits designed to help strengthen the national defense. In a program ostensibly devised to promote the defense of freedom, Congress violates, in fact if not in intent, the civil right of children, students, and teachers to freedom of mind and freedom of religion in the choice of school.

Not even the most absolute of the absolute church and state separationists could object to the cancellation of 50 percent of a loan and interest (under title II of the act) for the independent schoolteacher who teaches physics, for example, and thus helps to strengthen the national defense. How does the partial cancellation of a personal debt incurred while attending Harvard, Southern Methodist, or Wisconsin University violate the first amendment merely because the teacher elects to do his bit to strengthen the national defense by teaching physics at Concordia Lutheran High School? The denial of such personal benefits to the teacher at Concordia merely because he teaches at a nonpublic school is an obvious violation of his freedom of mind and freedom of religion. His choice to teach at Concordia High School is penalized. He is, moreover, forcibly coerced through economic pressure not to teach at Concordia, but at some public school. Such enforced conformity violates academic freedom.

You are undoubtedly aware that the same discriminatory features are found in title V which provides for guidance, counseling, and testing institutes, and in title VI which provides for modern foreign language development institutes. In both of these titles Congress discriminates against teachers who are helping to secure the national defense by teaching in independent schools. If such teachers choose to improve the quality of their teaching by attending institutes they are, unlike teachers in State schools, deprived of the weekly $75 stipend provided by the act because they teach in nonpublic schools. In other words, a penalty is imposed on their efforts to strengthen the national defense in other than State schools.

Since the direct result of this penalty is to obstruct the fuller development of teachers and thus to obstruct the development of better teaching, the result of the discrimination is to obstruct the national defense effort. And yet, ironically, the act is called the National Defense Education Act.

Although under present interpretations of the first amendment direct support of denominational schools would raise constitutional questions, there is no reason why Congress could not by the use of contracts with independent institutions for the performance of specific academic tasks strengthen the national defense. State courts have repeatedly upheld such arrangements, and the Federal Government has repeatedly utilized this method of dealing with denominational institutions for the purpose of promoting the general welfare. Parents of independent school children are now subsidizing the education of their children to the extent of several hundred dollars. The Federal Government could constitutionally make direct grants to these parents to enable them to pay part of the cost of the education of their children. Such grants would not be a subsidization of the schools the children attend; they would merely relieve parents of a part of the penalty that Government has imposed on their exercise of a constitutional right.

These were some of the alternatives open to Congress to secure freedom of choice for independent elementary and secondary schoolchildren under title III. But Congress rejected them in favor of open discrimination against approximately 5 million children. The education of these children will suffer as a consequence. The national defense will suffer. This weakening of our national defense, based in large measure on brainpower, could well be the difference between Soviet scientific superiority and American superiority.

In this age when scientific superiority can well mean world domination, it is not fantastic to say that freedom in America and in the entire Western World may be lost because the Members of the Congress did not have the courage to provide freedom of mind and freedom of religion in educational assistance acts in the face of opposition by individuals and groups antagonistic to academic freedom.

We hope, however, that this Congress will amend the National Defense Education Act to remove the discriminatory features, that it will adopt a policy treating all students, teachers, and children alike regardless of their exercise of freedom of mind and/or freedom of religion in the choice of school. How a Congress that demonstrated such high regard for academic freedom in the Readjustment Act of 1944 and 1952, and in the War Orphans Educational Assistance Act of 1956 could set down conditions demanding the suppression of academic freedom in the National Defense Education Act of 1958 demands an explanation.

The giving of Government grants to individual citizens to enable them to purchase one or other of the principal needs of life violates no constitutional provision. The use of such money to purchase kosher meat, which is meat religiously oriented, or to purchase fish for a Catholic Friday dinner, does not violate the first amendment. The use of such money to purchase subsistent needs at Milwaukee's Home for Aged Lutherans does not violate separation of church and State. Nor did the use of GI grants for the purchase of education in the 474 Protestant, the 265 Catholic, the 5 Jewish colleges and universities of the Nation violate separation of church and State.

These are but a few of the many Federal welfare measures in which Congress incorporated the principles of individual freedom by subsidizing the individual directly and allowing him complete freedom of choice as to where he would purchase the needs of life. Both Federal legislative practice and constitutional law make it perfectly clear that when a person spends a Government grant to purchase personal needs at a shop, store, or institution, Government neither directly nor indirectly aids, supports, or subsidizes the establishment at which the purchase is made.

It seems to me that at a time when our Nation needs every bit of brainpower it can develop to meet the Soviet scientific challenge it is little less than national suicide to discriminate against millions of children and thousands of students in the distribution of educational benefits. And I think you will agree that such national suicide is doubly reprehensible when it is carried out to avenge (so to speak) those who have exercised their constitutional right in the choice of school. While Government experts testify that the Soviet Union could pinpoint cities in the United States with ballistic missiles fired from 5,000 miles away and thus to crush liberty, we cripple our scientific effort by penalizing students who exercise freedom of mind and spirit in attending independent schools. Even while we lag 5 years behind the Soviet Union in rocket and space technology (according to Dr. Wernher von Braun), our Congress spikes the slide rules of thousands of students who, under the first amendment, elect to attend non-State schools.

In our Nation's efforts to meet the Soviet challenge in the classroom, in the laboratory, in the engineering shop, and on the launching pad, we cannot afford, at the risk of national annihilation, to cripple the development of many of our best talents because they are nonconformists in attending independent schools and colleges. While our Nation is making every effort to meet the challenge of a totalitarian state that enforces conformity in things of the mind and spirit,

we obviously should not, through the use of economic penalties, violate the civil rights of millions of children and thousands of students by forcibly enforcing conformity in the things of the mind and spirit.

Confronted as is America with a Soviet challenge that threatens our very survival, it is high time, it seems to me, that Congress put aside the policy of expediency urged upon it by powerful pressure groups, as evidenced by contradictory principles found in titles II, III, and sections of titles V and VI of the defense act, on the one hand, and in title IV, and sections of titles V and VI, on the other hand, and adopt the rule of law that assures to all children and students equal rights regardless of their exercise of freedom of mind and/or religion in the choice of school.

I would like seriously to urge upon the Members of the Congress that in future measures providing educational benefits they be guided by the constitutional principles of the first amendment which guarantee academic freedom, that they follow the principles of freedom of choice which they have incorporated in many other welfare measures, and that they resolutely strive to achieve the national interest by giving to each and every child and student an equal share of educational benefits, regardless of the strong and vocal opposition of groups which are opposed to academic freedom.

You may be sure that I would very much appreciate hearing from you on this matter. Thank you for your kindness.

Sincerely yours,

VIRGIL C. BLUM, S. J.,
Associate Professor of Political Science.

The Real Test of Education

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "The Real Test of Education" which appeared in the March 31 issue of the Park City Daily News of Bowling Green, Ky.

The editorial is as follows:

THE REAL TEST OF EDUCATION

The great stir over the quality and quantity of American education, begun when the Russians stunned us with their sputniks, goes on and on, though at slower pace and with diminished fanfare.

Broad differences exist not only among statesmen and civic figures but among professional educators as to what sort of direction our education should take. The amateurs can hardly be expected to resolve these if the experts cannot.

Whatever the methods and programs that can best serve our aims, we can all agree that what we want is a nation of educated individuals.

As generally thought of, that means people who are well informed, capable of making wisely the choices they must make as the final source of authority in a democracy.

It means, too, being equipped to develop one's own capacities to the fullest, and to take all the rewards life offers.

Yet the word "educated" can take on a meaning above and beyond these things. Many have tried their hand at defining an educated man, and this is an effort that probably will never cease so long as men can think.

Perhaps one of the best tries was made a generation ago by an educator who asked himself, "What is the test of an educated man?"

His conclusion was simple. An educated man is one who allows himself to be guided by proven facts, wherever they lead.

It sounds easy, but actually it's the toughest test imaginable.

It means that false notions, preconceptions, prejudices, fragmentary information, even ideas celebrated and treasured, must be cast out firmly the moment they clash with facts.

If you have believed for 30 years that rain cools off the air, will you accept another idea if scientists demonstrate with ample evidence that it is actually the movement of cool air into a warmed area that produces rain?

By this definition, the man who will accept it, and likewise will accept a thousand and one new notions destructive of his old ideas, is truly educated.

You may or may not agree with this definition. But there's not much question that the man who can pass such a test regularly is a pretty openminded fellow. We could use a lot like him.

The 11th Anniversary of the World Health Organization

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. WILEY. Mr. President, yesterday, April 7, there was observed all over the world another important milestone for a member of the United Nations family that has probably done more to improve the health of people of all races, and thereby helped to promote international understanding and peace, than any other body in the United Nations. I am referring to the 11th anniversary of the World Health Organization.

As my colleagues will recall, I have been pleased on many occasions to call attention to this most constructive organization—composed of 88 member nations all over the world—whose basic philosophy is that "health is a state of complete physical, mental, and social well-being—and not merely the absence of disease."

Last year the anniversary marking a decade of WHO's founding was especially significant since for the first time the World Health Organization met in this country, for a 3-week session, beginning May 28, in Minneapolis. Shortly prior to that time, Members of Congress had gathered in Washington in an afternoon and evening assembly to pay tribute to WHO; and leaders in American public health, physicians and laymen, diplomats and foreign-policy spokesmen, officials, and private citizens joined in celebrating the decade of WHO achievement.

I should like to add that the public-spirited health officer of my own State of Wisconsin, Dr. Carl Neupert, served in the capacity of advisor with the U.S. delegation to the Sixth World Health Assembly in 1953.

Recently there was published an article in the Barron County News-Shield, of Barron, Wis., which concisely and effectively points out the outstanding accomplishments of the World Health Organization, and wisely emphasizes the vital part played by it in promoting world peace. I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Barron County (Wis.) News-Shield, Apr. 2, 1959]

Citizens of Wisconsin, and practically all members of the human race, for that matter, now enjoy better health with each succeeding year—thanks in part to the work of the World Health Organization.

Our present well-being, plus the fact that we can look forward to an even healthier tomorrow, certainly can be credited partially to the accomplishments of this vital, global agency, which is 11 years old on Tuesday, April 7.

The World Health Organization (WHO), consisting of representatives of 88 member nations, was founded on the philosophy that "health is a state of complete physical, mental, and social well-being and not merely the absence of disease."

Following this concept, it began work 11 years ago by tackling the problems of malaria, tuberculosis, and venereal disease control, the promotion of maternal and child health, and the improvement of basic nutrition.

What has the organization accomplished during the few short years since its founding? The answer is much—a 40 percent reduction of malaria from the 3 million deaths recorded in 1948; a 50 percent reduction of yellow fever between 1950–1955, and a marked decline in deaths of mothers and infants, to name only a few.

Though we are a fortunate people compared with those living in many parts of the world, we, too, benefit from the exchange of information and research to find causes, new treatments, and means of prevention of such major afflictions as heart disease, cancer, and many others.

However remote any of these accomplishments may seem, they affect all of us in one way or another. No one would deny that the state of health everywhere has a potential effect on our own.

Thus, by guarding against epidemic diseases elsewhere we are insuring ourselves against the spread of disease in our own country. At the same time we are not overlooking the potent force of health improvement as a substantial factor in furthering the world peace so important to us all. WHO deserves credit for helping us take immeasurable steps in that direction.

Albert "Albie" James Booth

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. GIAIMO. Mr. Speaker, at the annual dinner held in Cheshire, Conn., by the alumni of the New Haven Boys'

Club, a great tribute was paid to a member of that group who recently passed away—the unforgettable Albert "Albie" James Booth.

"Albie" Booth the athlete won national renown as one of Yale's immortals. But more important, I wish to pay tribute today to "Albie" Booth as a man who went on from the gridiron to become one of his community's most respected and revered citizens—a leader in every field, a man of great moral and spiritual stature who has been an inspiration to many, many thousands of people.

I wish to bring to your attention and to the attention of my colleagues a letter from the Assistant Secretary of Defense, Charles C. Finucane, to Mrs. Albert J. Booth, and a statement issued by the New Haven Boys' Club Alumni Association entitled, "A Free Spirit and Immortal," which will afford us but a brief glimpse of "Albie" Booth.

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C., March 12, 1959.

MRS. ALBERT J. BOOTH,
Hamden, Conn.

DEAR MRS. BOOTH: On behalf of the Department of Defense, I would like to express to you our heartfelt condolence and sense of loss at the untimely passing of your husband, Mr. Albert J. Booth.

His athletic exploits and continued dedication to the world of sports and physical conditioning, which plays such a vital role in the development of our young men, have long been an inspiration to the members of our Armed Forces. Wherever courage and a personal disregard for odds are admired, his name will be remembered.

Both in 1955 and 1958 Mr. Booth gave gratuitously of his time and talent conducting football officials' clinics for the Armed Forces in Europe. He had graciously agreed to return to Europe again this year to continue his fine work. This splendid contribution is warmly appreciated by the Department of Defense.

It is no small recognition of the esteem in which Mr. Booth was held by the Army and the Navy that he was a respected tradition at the annual Army-Navy game in Philadelphia, having officiated at four games since 1950, including the last three.

With the deepest sympathy, I remain,
Sincerely yours,

CHARLES C. FINUCANE.

A FREE SPIRIT AND IMMORTAL

Most people think of the famous Yale-Army game of 1929 when the name of Albie Booth is mentioned and this is, of course, understandable. This was Frank Merriwell come to life. And of late, his fame as a big time football official and a welcome guest at all kinds of sports and public functions has left a deep impression on all who had the good fortune to know him.

But for those of us who knew him all during the years of his sports playing at the Boys' Club and his career at Yale, he is much more than a popular, famous athlete and public figure. He was an effervescent warmhearted wonderful human being who stayed the same no matter what his surroundings and his companions of the moment.

The incidents we could recount would fill all the volumes of an encyclopedia the size of the Brittanica and still not tell them all. And it is really not necessary. One or two tell the whole story:

It was the practice at the New Haven Boys' Club on Friday nights during Phil Geiger's time to have a fun game after closing hours. Nobody saw these games and there was nothing in it for anyone in a material sense, least of all for the "Mighty Atom". And yet there he was, whenever he could make it, playing just as hard as though he was in the Yale Bowl. And for those of us who helped run the Boys' Club teams after the days of glory during Dick Lovell's regime, we will never forget going up to Worchester and walking into the crowded gymnasium to find that the attraction was not our New England Championship team but our taken-for-granted-in-New Haven Albie, who was such a lure to people everywhere as a symbol of the irrepressible spirit of the freeman. All this attention never went to his head and through it all he kept the same wisecracking, needling approach which kept all those around him warm and alive.

This terrible shock is the supreme test of faith in our belief in the immortality of the soul. And yet, it is not too difficult for those who have been blessed with the privilege of knowing this "Happy Warrior." For in his case it is clear that he will never be forgotten as long as men yearn for warmth, friendship and gaiety. And it is safe to say that he will be alive in spirit as long as there is spirit in man.

Coal by Wire

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Coal by Wire," which appeared in the March 31 issue of the Messenger of Madisonville, Ky.

The editorial is as follows:

COAL BY WIRE

Development of high voltage transmission of electric power that permits the locating of generating plants near coal mines is described in the current issue of Public Utilities Fortnightly. The article, "Coal by Wire," was written by A. W. Vogtle, vice president, DeBardeleben Coal Corp., Birmingham. People in coal fields like our own will be much interested.

Tracing progress in long-distance transmission of electricity in the past two decades, the article emphasizes the cost advantage of carrying electricity instead of fuel to consuming centers. It also notes that to obtain suitable plant sites near large metropolitan load areas is becoming increasingly difficult and expensive.

Mr. Vogtle points out that impetus to the development of high voltage transmission was originally provided in countries with large hydroelectric power sources remote from consuming centers. The 230-kilovolt power transmission network which Sweden inaugurated in 1936 has now been surpassed in numerous areas, with Russia's having recently installed an experimental line of 630 kilovolts.

As an outstanding example of progress in the field, Mr. Vogtle credits the 345-kilovolt lines of American Electric Power Co. with providing power reserve that bring important economies in capital and operating costs.

Meanwhile, he adds, improvements in mining equipment and methods have stabilized the mine prices of coal to electric utilities and "assure an adequate year-around supply, free of sharp fluctuations for the long future."

Multnomah County Medical Society Celebrates Diamond Jubilee in Portland, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. NEUBERGER. Mr. President, my home community of Portland, Oreg., is regarded as one of the great medical centers of the Nation. This is shown by the generous grant of $1,297,000 allocated this year by the National Institutes of Health for a medical research building at the University of Oregon Medical School in Portland, to be matched by an equal sum from the State government of Oregon. I am proud to have had a role in sponsoring this grant.

Dr. Arthur F. Hunter, president of the Multnomah County Medical Society, has furnished me with the brilliant and witty toastmaster's address made at the 50th anniversary banquet of the society in Portland on May 16, 1934, by Dr. Adalbert G. Bettman. This address was revived recently when the Multnomah County Medical Society held its 75th anniversary banquet on March 21, 1959—a quarter of a century later.

Dr. Bettman's address is worthy of inclusion in the Appendix of the RECORD if only because he mentions one of Portland's illustrious physicians, the late Dr. Harry Lane, who served in this Chamber as U.S. Senator from Oregon, during the years of 1913 to his untimely death in 1917. Senator Lane, an illustrious physician, was a Democrat. I ask unanimous consent, Mr. President, for that purpose.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ON A MEMORABLE OCCASION

(Remarks of the toastmaster, Adalbert G. Bettman, M.D., at the 50th anniversary banquet of the Multnomah County Medical Society, held in the old Hotel Portland, Portland, Oreg., May 16, 1934)

Half a century ago our colleagues established in the city of Portland a new medical society, to fulfill their desire for learning and discussing the latest medical knowledge so that their patients might receive, through them, the best possible medical services.

We are now celebrating that event. The Multnomah County Medical Society by its length of life has proven that an organization with these high ideals can live throughout the years. We are meeting in the same building in which many of its gatherings were held, and in the same room in which its members have often feasted together. We have met this evening to celebrate the 50th anniversary of our beloved society, and to honor the 24 followers of Aescalapeus who gave it birth. Of this noted group three are yet alive and in the active practice of our honored profession, and two of these, Dr. Josephi and Dr. Wheeler, are with us tonight. May they continue many years with the blessings of God upon them.

Let us pause a moment and give thought to each of these pioneer physicians, to those who have gone to answer their final call

with the Great Physician, and to those who are yet with us. I read their names:

Arthur Dean Bevan, Otto S. Binswanger, James Browne, Frank B. Eaton, E. P. Fraser, William Jones, Simeon E. Josephi, G. Cooke Lane, Harry Lane, Kenneth A. J. Mackenzie, A. I. Nicklin, Andrew C. Panton, R. G. Rex, William H. Saylor, H. C. Smith, John Smith, Curtis C. Strong, R. A. Urquhart, George M. Wells, John A. Watt, William B. Watkins, William H. Watkins, Cortez H. Wheeler, and Holt C. Wilson.

To paraphrase the immortal Lincoln we might say: We cannot dedicate our professional society. These men have done it with their daily lives. We cannot consecrate it. They have done it by their devotion to medicine. We cannot sanctify it. For that they have also done by their service to humanity. These far-seeing men and their successors, living and dead, who struggled with disease and who stayed the hand of death have set it far above other civic organization. Anything that we may say or think can have no effect on the glorious past of our society. We can, however, remember and revere those in whose paths we follow. The memory of their lives of devotion to their ideals stands out as a beacon in the night guiding us as we go on with their unfinished labor; a work that can never be ended so long as man is subject to disease, injury, and malformation. It is for us and our successors to forever continue their work, to battle as they battled, with constantly greater knowledge of the conflict, with better and better understanding of the ways of disease and always with improved mental and physical equipment for the struggle.

It is left for us to go on with the fight, to wipe out disease by prevention as well as cure, to lengthen man's years of life and to make them more comfortable.

From these honored charter members of our society and their coadjusters who carried on these many years, let us take inspiration in the furtherance of that cause to which we have dedicated our lives, and which we serve so completely and with such devotion.

Let their example be our guide, and let the members of this society carry on with new scientific facts as they become available, so that man may be freed of disease to live long upon the earth in happiness and peace.

May those whom we serve, in turn follow our example, and give a thought of service and devotion to their fellow men.

Utah Contributions in Connection With the Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from the Secretary of the Interior.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., March 9, 1959.

Hon. WALLACE F. BENNETT,
U.S. Senate,
Washington, D.C.

DEAR SENATOR BENNETT: We thank you for your letter of February 18, 1959.

Please be advised that the next annual report will contain, in an appropriate place, the contributions made by the State of Utah in connection with the Colorado River storage project.

Sincerely yours,

FRED G. AANDAHL,
Assistant Secretary of the Interior.

Three Hundred and Fiftieth Anniversary of Henry Hudson's Departure From Holland

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. WILLIAMS of New Jersey. Mr. President, just a few days ago men from three nations watched as a plaque was unveiled at the foot of a tower near the waterfront of Amsterdam in the Netherlands. The inscription recalled that Henry Hudson had departed in his sloop, the *Half Moon*, 350 years earlier on the voyage of discovery which led him to the river which now bears his name.

We of New Jersey, and our neighbors in New York, were highly pleased, I know, to see that our friends abroad have commemorated a voyage which is of special significance to us. I therefore ask unanimous consent to have an editorial from the Newark Evening News of April 5, 1959, relating to this subject, printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AT AMSTERDAM

Amsterdam is celebrating the 350th anniversary of Henry Hudson's departure in the *Half Moon* on the voyage of exploration that was to take him past what is now a New Jersey county and up a majestic river both bearing his name.

In the long struggle among the European powers for control of the New World, New Jersey was first Dutch territory, then Swedish, then Dutch again, and finally English. The English lasted longest, until George Washington came along.

New Jersey was Dutch for 30 years, beginning in 1624. Its first Governor was Cornelius Jacobsen Mey. Peter Stuyvesant was Governor when the English took over in 1664.

Dutch influence was never completely eradicated and it has continued to our own time. New Jersey's first Governor after independence, William Livingston, was of Dutch descent. So were Govs. Peter D. Vroom and Foster M. Voorhees. The Dutch settlers produced the still powerful Frelinghuysen clan, notable Senators and judges, including Chief Justice Vanderbilt.

It is appropriate for New Jersey to be represented at the Amsterdam festivities, for they recall its own origins. Its delegates include Donald V. Lowe of Tenafly, which is in the heart of the old Dutch domain, and Salvatore A. Bontempo, the founding of whose native Newark represented the beginnings of English sovereignty. Mr. Lowe also represents the Port of New York Authority. Mr. Bontempo, State commissioner of conservation and economic development, represents Governor Meyner.

They doubtless are finding it a pleasurable assignment. Amsterdam, always picturesque with its stately squares and palaces, its broad Amstel River and miles of canals running past medieval mansions, is at its best in spring. They are too early for the tulips, but everything else that Holland has to offer, including some of the world's best beer and cheese and exquisite cooking, is available.

In Amsterdam they can see what Nieuw Amsterdam might have become, had not the English turned it, perhaps for the worst, into New York.

Analyses of Last Election

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. AUCHINCLOSS. Mr. Speaker, as was to be expected, there were a great many post mortems held after the election last year which did not come out very well for the Republican Party. Many people expressed their opinions as to the reasons for the apparent change in public sentiment and the failure of some tried and true Republicans to be reelected to the Congress. Indeed the national committee has conducted research work on this subject along with others and, of course, many reasons were propounded explaining the results and various suggestions given as to what the Republican Party should do to regain favor with the voters.

One of the most constructive analyses of the situation was contained in an article appearing in a recent edition of the Washington Newsletter, which is published by the National Federation of Republican Women. It was written by our colleague, Representative JESSICA MCC. WEIS, of New York, and I am pleased to have permission to insert it in the CONGRESSIONAL RECORD. Mrs. WEIS is a lady of rare judgment, sound and practical vision, and experienced in the ways of politics; and I hope that the leaders of the Republican Party will take to heart the suggestions she submits in her article and incorporate them in a revised and forward-looking policy for the Republican Party. It is a great stimulus to all of us Republicans to have the benefit of JUDY WEIS' views.

(By Representative JESSICA MCC. WEIS, New York)

From many a pessimist these days one hears dire predictions of dark days ahead for the party, and from the worst of these comes the sad lament that the two-party system itself may be in danger.

I personally reject this kind of thinking; for if there is one thing that I have learned from my years of political activity, it is that the pendulum of political opinion is in constant motion. I do not fear for the life of the party, now or at any time in the future. However, the health of the Republican Party would be improved by a massive dose of political vitamin B. The women of the Republican Party and the National Federation have a great opportunity to help administer that dose. This is the time for some real soul searching and factfinding in order to

start that pendulum swinging once again in our direction.

The Republican Party, as a party, has managed only two congressional victories in the last 25 years, and has rather consistently given ground at every level. Even where we are still winning the margins are growing smaller, and unless we knuckle down and solve the political problem confronting us we are in very great danger of becoming a permanent minority party.

We can no longer delay in facing up to the grim fact of a weak internal party organization, particularly at the lowest, and most important, grassroots level. In 1958 we were simply outmanned, outworked, and outtalked, and in many cases, outfinanced. We cannot logically expect the opposition to be weaker in 1960. Therefore, it is imperative that we become a great deal stronger.

Since the 1930's, the regular party organizations of both major parties have been slowly disintegrating, but in the case of the Democratic Party, organized labor has been willing and able to take over the party apparatus, and today, the Political Action Committees and the COPE organizations of organized labor provide about 90 percent of the political workers and grassroots organizations for their party. We have yet to develop a comparable party structure, and this is the essential and overriding problem which confronts us. There must be a rebuilding of a strong, effective, dedicated party organization, starting from the ground up.

Having stated the problem, which is always relatively simple, it becomes imperative to look around for an adequate solution, and, in this connection, there are several things which must be done—the sooner the better.

1. We must decide precisely what issues we consider absolutely basic, and we then must enunciate them so clearly that every single citizen knows exactly what being a Republican means (and does not mean).

2. We must launch a fearless and constant attack on the inflationary big government philosophy that is motivating a great majority of the opposition. Here again, we must show in easy-to-understand language exactly how the New Deal-Fair Deal philosophy is slowly but surely stifling individual freedom and initiative, breeding a false sense of security, and corrupting those very economic and political principles which made this Nation great.

In other words—taking a page from the advertising industry—we must step up the selling campaign for our own product in two ways—by a clearer and better explanation of what we're selling ourselves, and by an equally clear explanation of what's basically wrong with our competitor's product. No matter how good the product—and ours is a good one—dynamic salesmen are necessary to do the job. Our salesmen must be appealing candidates, responsible, hard-working party leadership, and dedicated ward and precinct workers. This leads to a third important point.

3. We must make better use of our regular party workers, by providing them with solid, sensible, compelling reasons for putting forth more effort. We must instill in them a sense of purpose, a personal motivation for working as hard, and harder, than those who are being paid for, or coerced into, political activity.

4. Finally, not only must we have a greater effort from present party members, but we must actively recruit new membership, and leadership, for the party. At both ends of the age spectrum, we need new blood. Our party has a great deal to offer both the youth of America as well as our older, senior citizens.

In the final analysis, the only real answer lies in larger numbers of dedicated people with real convictions who are willing to roll up their sleeves and do the tough job of careful precinct-by-precinct organizing all over the country. And where is there a greater reservoir of such a dedicated, experienced and devoted group than in the National Federation of Republican Women? Hell hath no fury like a woman scorned, nor can any candidate withstand the onslaught of women when they are righteously aroused to the defense of those things in which they truly believe. The task will not be easy, but if we all pull together and work like mad, we will win; if not, we are in for another licking. The choice is clearly up to each of us.

The Four Horsemen of Cancer

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, April 8, 1959

Mr. NEUBERGER. Mr. President, an estimated 50 million Americans now living will be stricken by cancer. Nearly one-half will recover and live useful lives following application of new discoveries in the fields of surgery, radiation, and chemotherapy. But beneficial results of these techniques are usually dependent upon early detection and prompt treatment.

Dr. Louis M. Orr, of Orlando, Fla., president-elect of the American Medical Association, recently delivered an address entitled "The Four Horsemen of Cancer" before an American Cancer Society area medical meeting in Atlanta, Ga. He pointed out that these "four horsemen"—fear, apathy, ignorance, and quackery—are as deadly as cancer itself. He stated that only education of the public will rid us of these four enemies, which now too often prevent prompt, accurate diagnosis and swift, needed care.

As one who has consistently advocated increased Federal expenditures for research to discover the cause and cure for this dread disease, I found these remarks particularly petinent. Advances won in the laboratory are meaningless unless they are translated into treatment in hospitals and clinics. Public awareness of the nature and dangers of cancer and a readiness to obtain proper checkups and institute necessary therapy are major factors in insuring that the victories of the scientist become victories for humanity.

Mr. President, I ask unanimous consent that Dr. Orr's compelling comments be printed in the Appendix of the RECORD.

There being no objection, the excerpt from the address was ordered to be printed in the RECORD, as follows:

THE FOUR HORSEMEN OF CANCER

(Address by Dr. Louis M. Orr, of Orlando, Fla., president-elect of the American Medical Association, before an American Cancer Society area medical meeting in Atlanta, Ga., February 21, 1959)

American medicine had better realize it has a new enemy in the fight against cancer. This enemy has been working quietly but efficiently until it now can step forth brazenly into full view. We must destroy this newest but most dangerous of enemies—the four horsemen of cancer.

These four horsemen, as deadly as cancer itself, are fear, apathy, ignorance, and quackery.

Although each can help kill separately, all four are dependent on one another. Should one be slain, the others will weaken and perhaps die. All four are offspring of our own civilization. They prey on those cancer victims who might otherwise have been saved. Byron's famous line: "The Assyrian came down like a wolf on the fold," is a vivid image of the swift stealth of the four horsemen. Too often, the first sign that they have struck is the carnage left behind.

But we should study these evils more closely.

Ignorance is probably the least lethal of the four horsemen today. Ignorance has fallen victim to scientific progress during the last 50 years. But this horseman has drawn a new sabre and rides rampant under a different guise. Ignorance no longer thrives on a total lack of knowledge about cancer, but rather strikes in more restricted areas. People know what cancer is, but for too many, the acquaintance ends there. Ignorance befuddles people over the details of cancer—its symptoms, how to detect them, what can be done to cure cancer, and how to prevent it. Ignorance, however, has engendered two of the other horsemen, fear and quackery. The death of ignorance would cut the horses from beneath its offspring.

Fear, the heir of ignorance, makes its way into our lives over the well-worn roads of misunderstanding, half-truth, gossip, and "hush hush" secrecy. Fear keeps people from consulting a doctor about possible symptoms of cancer, or from requesting an examination. Fear breeds in gullible minds the fool's tale that cancer is like oldtime leprosy. Fear portrays the cancerous patient as a frightful disgusting creature, a social outcast condemned to a lonely death. Fear links cancer with inevitable amputation or dangerous surgery. But fear's worst damage is frightening or intimidating cancer sufferers to hide symptoms from their doctor in the early stages, or to avoid any discussion of cancer that might lead to a better understanding.

Apart from the other horsemen, apathy gallops across the plains and paths hewn by indifference and unconcern—the great American evils. Apathy can sap our strength and weaken the will. When it attacks health care, it greatly assists and encourages the flourishing of a disease such as cancer. Apathy presents a recurring obstruction to cancer consciousness, one that will be difficult to remove. Modern medicine can do little for the uninterested patient.

Quackery is the villian of humanity. It feasts on the fruits of ignorance and fear. Quackery brazenly displays its frauds under the banner of orthodox medicine. Victims of quackery are pathetic creatures. In delusion or desperation, they search for tangible pots of gold at the end of illusory rainbows. They seek rapid, simple or guaranted "cures" where medical science hesitates to speak dogmatically. Their inability to accept medical facts, sometimes jarring, leads them to the doorsteps of those who will promise anything in return for money. They are people whose lives might have been saved through early detection and treatment of cancer, but who have instead wasted precious time, squandered their savings, and perhaps sacrificed their lives because of a smooth-talking, quick-selling quack.

These then are the "four horsemen of cancer." That they should be destroyed is of no importance now. They must be destroyed.

Each one can be wiped out, or its power broken through public and professional education. Cancer consciousness will arm America against them.

Ignorance will be slain by knowledge, communicated to the public by an enlightened medical profession.

Fear will disappear as doctors reach out to their patients, utilizing their close personal relationship to install confidence and a clear understanding of cancer.

Apathy will die only after enthusiasm is implanted among doctors and patients by a vigorous, unceasing program of cancer consciousness and education.

Quackery can be trampled only by the honesty and determination of organized medicine. An open, uncomplicated explanation of cancer and cancer quackery to patients can be spread throughout society. Doctors should let their patients know why this or that "remedy" or guaranteed treatment is phony. And when a doctor must tell a patient that his case in incurable, the doctor should fortify his opinion in the patient's mind with as many different medical opinions as possible. If a patient can be told this unpleasant truth gently and intelligently, it is not likely he will waste hope and money on quackery.

The death blow for the "four horsemen" obviously will be education. I realize there has been a large output of educational material, such as slides, films, pamphlets and literature, which has been used in recent years to awaken cancer consciousness in America. But I think the time has come to intensify the campaign to adopt more vigorous means of reaching all the people and physicians.

The Indiana National Guard

EXTENSION OF REMARKS
OF

HON. FRED WAMPLER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. WAMPLER. Mr. Speaker, in tribute to the men of the Indiana National Guard for their heroic, selfless, and tireless flood-fighting efforts during the worst flood disaster to strike the State of Indiana since 1913, I am including in the RECORD today an article entitled "On the Flood Front," which appears in the April 1959, issue of the Indiana National Guardsman publication:

Indiana guardsmen had just completed clean-up operations in the aftermath of one of the most weird winter sessions in recorded history when torrential rains suddenly poured down on the State while the ground and streams were still in a deep freeze. The water ran off the frozen ground, filling the streams and flooding thousands of homes, industries and farmland.

The first flood forecast indicated that a flood was in the making but no one predicted that this situation was to suddenly develop into the worst flood since the year 1913. The city of Wabash was the first big community hit by the rushing waters of the Wabash River. National guardsmen were not even requested by the city fathers, as they were hit so suddenly that they were frantically working throughout the emergency period on the spot in a volunteer status.

Gov. Harold W. Handley, realizing that the situation could develop into a major disaster, ordered that a National Guard plane with observers fly over threatened area for the purpose of making an aerial reconnaissance to determine extent of damage and to determine the possible future effects of water on communities downstream. The observers made the flight beginning at Attica and following the Wabash River upstream to the city of Huntington, and then reported to the Governor that the situation appeared worse than what had originally been anticipated.

In addition to the immense amount of water, ice jams clogged the river at several places. The most serious jam was located between Delphi and Logansport. Governor Handley took immediate action and directed that the National Guard be made available for immediate duty, to assist in communities requesting assistance. He further stated that should a community believe that they were in danger, they should immediately inform him in order that he could have the adjutant general direct a seasoned qualified officer be sent to the area to determine what future assistance could be rendered by the National Guard and State agencies.

During a 7-day period, National Guardsmen were called out for duty in Fort Wayne, Logansport, Delphi, Lafayette, Terre Haute, Peru, and Oaktown. The National Guard threw all its resources into this battle to save lives and property. Helicopters, trucks, radios, sandbags, and personnel were a common sight up and down the Wabash River. The acts of humanitarianism and heroism are too numerous to mention here but the outstanding skirmish was fought at Terre Haute.

The Air National Guard, under the able leadership of Maj. George E. Myers, took immediate action when word was received that there was a possibility that the river might overflow the levees at West Terre Haute. Sandbags were placed by the thousands to reinforce and build up existing levees. All this prior planning and work was almost nullified on February 14 when a break developed in the hastily constructed levee, but due to the efforts of an unknown civilian who jeopardized his life by jumping into the river and placing some planks across the break, the guardsmen were then able to throw in sandbags to plug the break. After many days of labor by both the Air National Guard and the Army National Guard the battle was won in West Terre Haute.

On February 17, 1959, the threat of further flooding subsided and a tired, heroic group of guardsmen returned to their homes for a well-deserved rest. The citizens and authorities of the State were once again appreciative of the fact that they had a National Guard in Indiana, and they were officially thanked for their part in this disaster by the Governor, who published an open letter of thanks during National Guard Muster Day.

Headquarters and Headquarters Company, 38th Infantry Division, Indianapolis; Headquarters and Headquarters Detachment, 38th Infantry Division trains, Indianapolis; combat support company, Fifth Battle Group, 293d car, Peru; Headquarters and Headquarters Company, Fifth Battle Group, 293d car, Logansport; Company B, Fifth Battle Group, 293d car, Delphi; Headquarters and Headquarters Company, 538th Transportation Battalion, Terre Haute; Company C, 538th Transportation Battalion, Rockville; Company A, 538th Transportation Battalion, Brazil; Company B, 538th Transportation Battalion, Greencastle; Company E, Fifth Medical Tank Battalion, 152d car, Linton; Headquarters, Headquarters and Service Battery, Sixth Field Artillery Battalion, 151st car, Crawfordsville; Battery A, Sixth Field Artillery Battalion, 151st car, Darlington; Battery C, Fifth Howitzer Battalion, 151st car, Lebanon; Headquarters and Headquarters Battery, 38th Division Artillery, Indianapolis; Headquarters and Headquarters Company, 113th Engineer Battalion, Gary; Company A, 113th Engineer Battalion, Gary; Company C, 113th Engineer Battalion, Gary; 38th Aviation Company, Indianapolis; Battery A, Fourth Howitzer Battalion, 152d car, Vincennes; Battery B, Third Howitzer Battalion, 152d car, Spencer; Headquarters, Indiana Air National Guard, Indianapolis; Headquarters, 122d Tactical Fighter Wing, Baer Field; Headquarters, 163d Tactical Fighter Squadron, Baer Field; Headquarters, 122d Maintenance and Supply Group, Baer Field; 113th Tactical Fighter Squadron, Hulman Field; 122d Tactical Hospital, Hulman Field; Headquarters, 122d Air Base Group, Hulman Field; 122d Air Police Squadron, Hulman Field; 122d Communications Squadron, Hulman Field; 122d Food Service Squadron, Hulman Field; 122d Installations Squadron, Hulman Field.

I regret to say, Mr. Speaker, that tragedy and danger and loss of human life, private and agricultural property, the natural consequences of flood devastation, are still threatening the people of the Wabash Valley area.

The following press reports testify to the continuing plight of the valley and the surrounding territory:

From the Terre Haute (Ind.) Tribune, an April 1, 1959, report entitled, "Mass Typhoid Shots Given in Flood Area," describes the plans being made by the city of Rockford, Ill., to fight the threat of a possible epidemic resulting from the floods in that area:

ROCKFORD, ILL., April 1.—Fear of a typhoid fever outbreak led to plans for the mass immunization today of between 900 and 1,000 persons forced from their homes by the still rising waters of the flooded Rock River.

Flood damage already in this northern Illinois city of 107,000 was estimated by Civil Defense Director Eugene O'Malley at $500,000.

The crest was expected tonight.

The Rock River was flowing nearly 5 feet over the Fordham Power Dam, where most river stagings are recorded. The alltime high was 5 feet, 3 inches in March 1929.

Miles upstream at Beloit, Wis., the river rose about a half foot at the Wisconsin Power & Light Co. dam Tuesday and continued to rise very slowly.

Water to a depth of between 4 to 5 feet rolled around the homes in the exclusive North Park residential area and those in the Shore Drive section. Between 400 and 500 persons had been forced to evacuate their homes.

The muddy waters rolled over Blackhawk Island, 3 miles south of Rockford, to a depth of 2 to 3 feet. The island, about one-fourth of a mile wide, and three-fourths of a mile long, is the site of scores of small homes, many of them temporary structures in which transient laborers lived. About 500 persons were evacuated from the island by civil defense workers.

Plans for setting up a central evacuation center in which to house and feed the evacuees were abandoned after conferences between Red Cross, civil defense and Winnebago County relief officials. The agencies, however, provided housing and meals for all those who were unable to obtain other facilities.

None was injured in the orderly evacuation carried out by the volunteer workers in amphibious ducks and boats provided by the civil defense unit.

Rockford is 35 miles east of Freeport, where the Pecatonica River flooded about 40 blocks during the weekend. The Pecatonica flows into the Rock at Rockton.

The Pecatonica ebbed slowly today, and at Freeport receded from nearly all of the once submerged area.

And, from the Attica (Ind.) Ledger-Tribune of April 3, 1959, the following

item which is headed, "Fourth Round of Floods Rise in Hoosier Streams":

April rains persisted in Indiana today, building up the year's fourth round of floods in the upper and middle Wabash River, but at moderate levels.

The upper Wabash went 5½ feet over flood stage at Wabash Thursday but dropped more than 2 feet overnight.

No extensive damage was indicated from minor flooding expected at some downstream points—4 to 5 feet over flood stage at Lafayette Saturday, and 1 to 2 feet over at Covington Sunday and at Montezuma Monday. The White River may reach flood stage at Edwardsport Tuesday.

The Wabash was already almost 5 feet over bank top at Lafayette and near flood stage at Attica, Covington, and Montezuma.

Gusty northwest winds up to 42 miles an hour blew more rain clouds over the State, dumping another half inch of rain at Warsaw for a 2-day total of an inch and a half. Frosty temperatures in the thirties were forecast for tonight.

The Weather Bureau forecast fair skies and a weekend warmup from the damp, chilly weather, but more showers may fall Sunday, followed by another cool snap Monday.

Rains in the next 5 days are expected to amount to no more than a quarter to half an inch, with a possibility of a new round of showers Tuesday or Wednesday.

Protection of News Sources

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. KEATING. Mr. President, the Pulitzer Prize-winning paper, the Medford Mail Tribune, recently carried an excellent editorial written by a graduate of the Columbia University School of Journalism in New York, Mr. Eric Wentworth, on the subject of protection of news sources.

The editorial points out in practical terms the significance of such protection to the functioning of a free press. In the language of the editorial: "Unless reporters can track down these stories and relay them to their readers, the public's right to know is violated."

S. 965, which I introduced in behalf of Senator HUMPHREY and myself, would give explicit Federal recognition to the news reporters' privilege not to disclose the source of confidential information. It is premised on the assumption supported in the editorial that it is "sound public policy to sanction that privilege by statute."

Mr. President, I commend this editorial to the attention of all Senators interested in this important subject, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Medford (Oreg.) Mail Tribune]

PROTECTION OF SOURCES

A possible first step toward a law guaranteeing Oregon newsmen the right to protect confidential news sources has been taken this week.

The Portland Newspaper Guild voted Tuesday night to ask the State legislature for such a law. As proposed by the guild, it would apply to newspaper and press association reporters, radio and television reporters, and newsmen from other publications.

Twelve States, according to the guild, already have such laws.

Why does the guild—and many other reporters—want such a law?

Some news stories, often important ones, must be gotten the hard way—by going beyond those facts public officials or other news sources want people to know.

In accomplishing this the reporter relies on confidential sources—individuals willing to give him the facts he needs, or at least, valuable tips, but who are unwilling to be mentioned or quoted in the story when it is published.

The reporters give them his word he will not reveal his source. He knows how important this trust can be to his helpers—often their jobs are in danger if it becomes known they gave him certain facts, even though the public has every right to know those facts.

After confirming the facts and perhaps adding others, the reporter writes the story. He refers to his contacts as informed sources, or by some other nonrevealing phrase. Next time, these contacts will be ready to help him again.

If in providing the public with information it is found necessary on some occasions to protect news sources, then such protection, being a guarantee of public knowledge, should itself be guaranteed by law.

But this has not been the case recently in New York State. New York has no such law. A New York Herald Tribune columnist, called as a witness in a civil suit, has been found in contempt of court for refusing to name a confidential news source. This finding was upheld by the U.S. Court of Appeals. The case now appears headed for the U.S. Supreme Court.

"We find no reason," the appellate court said in its opinion, "to depart from the precedents, Federal and State, refusing to recognize such a privilege in the absence of a statute creating one."

Should the Supreme Court either uphold or decline to review the appellate court's opinion, a twofold threat is created.

The first is that the precedent will extend to other cases, and may even reach beyond the courts to legislative investigations.

Second, and more important, news sources will begin to run dry, still trusting the reporter but fearful of later implication. The more important or controversial the story at stake, the more likely this would be to occur.

Unless reporters can track down these stories and relay them to their readers, the public's right to know is violated.

Such a law creates a basic conflict. One side is the reporter and his source. On the other is the right of a court to elicit all the facts of a case in the pursuit of justice.

But there is precedent for such privilege. Doctors and ministers, for instance, cannot be compelled to reveal information given them in confidence. In the case of reporters, there is the added fact, that protection of the confidential sources is a protection of the people's right to know. As such, we believe it would be sound public policy to sanction that privilege by statute.

Situations where such a law would come into play are not common, but they are sufficiently frequent to justify affirmative action by the legislature.

It is a right of the people—a right to information—which is at issue.—E.W.

The Heritage of Maloney High School

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. GIAIMO. Mr. Speaker, on Sunday, April 5, 1959, the Francis T. Maloney High School was dedicated in Meriden, Conn.

It is fitting that this new high school should bear the name of a distingiushed former Member of this House from my State who though deceased is still with us in Connecticut in our memory and respect. Francis T. Maloney represented our State of Connecticut first in the House of Representatives and then in the Senate where he rose to such heights as to deserve the rarely given title of a "Senator's Senator."

It is fitting that this new school, dedicated to teaching our young people educational, moral, and civic values should be named after one whose intelligence, moral integrity, and sense of civic duty was and is a source of strength and inspiration to all of us.

In honor of Senator Francis T. Maloney, I insert in the RECORD the following editorial from the Meriden Record of April 4, 1959:

THE HERITAGE OF MALONEY HIGH

The dedication of our new Maloney High School holds a very special meaning for the people of Meriden who remember with affection and admiration the local statesman for whom it is named. Boys and girls who will enjoy the privileges of education in this building are too young to have personal recollections of Francis Maloney. It is the privilege of the older generation to tell them of the rich heritage of character and example with which their institution is endowed by virtue of bearing the Maloney name.

Like other great statesmen in American history, like all intelligent-thinking Americans, Francis Maloney was convinced that next in importance to freedom and justice is popular education, without which neither freedom nor justice can be permanently maintained. This concept is basic to our American way of life. But education means different things to different people. Francis Maloney had very definite ideas about the value of a classical education in preparation for whatever vocation a man or woman might choose as a means for self-support and medium for contribution to society in general. And those twin purposes for a vocation were in his mind indivisible.

Today, when the public at large is taking a new look at the type of education provided by our public high schools, it is good to look back some 15 years to see that Francis Maloney was not willing to subscribe to the then popular idea that the classics and classical language were for the "grinds"; that the increasing tempo of modern living required concentration on newfangled studies in the "art of living together." He felt that modern education must be tied to the classics, particularly Latin. He believed pleasure and profit in reading modern literature would be limited if not backed by some knowledge of the classical language. In his own profession, the science of government, he said a man was at a loss without some foundation in Latin. "An extra effort is necessary," he said, for the man who has not had the ad-

vantage of early education "tied to the classics."

Because the late Senator Maloney always regretted that circumstances in his boyhood prevented him from obtaining much formal education, the city of Meriden chose to honor his memory most appropriately by means of a living and perpetual scholarship memorial. The Maloney scholarship is awarded each year to an outstanding local student judged to have the potential for serving the community and his fellow men in the tradition of Senator Maloney. These boys and girls who might not otherwise be able to meet the cost of advanced education go out to colleges and universities grateful for the 4-year help toward tuition and other expenses proud of the honor paid them by their hometown and inspired by the example of the man whose reputation for public service earned him such a unique and continuing tribute.

Now the Senator's name is further perpetuated in the new high school which continues Meriden's high standard in educational facilities. Even under the new look beamed at high schools by educational experts such as Dr. Conant, the Meriden High School curriculum measures up most happily to the desired goal. A solid grounding in Latin, basic studies in the classics, the fundamentals of liberal arts, are readily available to young students willing to take advantage of their opportunities. It is with pride that we see the Maloney High School dedicated to its service in the years to come. It is with gratitude as well as great pride we accept its name in memory of a beloved fellow citizen who assessed so accurately the enormous value of the kind of education it makes possible for future citizens of Meriden.

Effect of Federal Interstate Highway System on Virginia's Road Program

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 8, 1959

Mr. ROBERTSON. Mr. President, when the Senate last year passed the bill to speed up the construction of the Interstate Highway System, I voted against it because I feared such a situation would be created that Virginia and other States would not be able to match Federal funds for the superroad system without impinging upon the very necessary work for other State highways and for the secondary road system.

I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Virginia's Secondary Road Fund Cut $5 Million—Highway Department Needs $25 Million Increase," published in the Virginia Farm Bureau News for March 1959. The article comments on the actual effect which the Interstate Highway System has had on Virginia's road program and confirms the fears which I had previously expressed.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VIRGINIA SECONDARY ROAD FUND CUT $5 MILLION—HIGHWAY DEPARTMENT NEEDS $25 MILLION INCREASE

Those who promote Federal aid programs as a way of solving State needs are in for a shock.

The Virginia Department of Highways finds itself forced to slice $5 million off of the secondary road fund, and the department needs an increase of $25 million in its overall budget if it is to continue normal operations next year, according to A. B. Eure, fiscal director.

The big reasons for this lack of funds are: (1) matching the Federal aid program and building Virginia's share of the Federal Interstate Highway System is taking 56.8 percent of all the department's money next year; and (2) the severe winter has caused breakup and heavy repair expenses for Virginia's road system.

Eure explained that the cost of building the Interstate System in Virginia is running over $1 million per mile. While the road is being jointly financed by the Federal and State Governments, 90 percent Federal and 10 percent State, it is still draining the Virginia highway budget to the core to put up its 10 percent. Of Virginia's total highway system of around 51,000 miles, about 1,100 miles are in the Interstate System. So, the Virginia Highway Department is being forced, under the program, to spend 56.8 percent of all its money on only 2 percent of its total highways.

FEDERAL ENCROACHMENT

Three years ago when the Interstate bill was passed by Congress, the Virginia Department of Highways was receiving 82 percent of its funds from local sources and only 18 percent came from Federal grants. But in the year beginning July 1959, only 42 percent of the highway department's budget will come from local sources and 58 percent will come from the Federal Government.

In other words, the Federal Government is now in a position to dictate where and how over half of the department's money will be spent. Under those dictates the secondary and primary highway systems in the State are suffering. These two systems include all of the highways in the State with the exception of the main arteries and city streets. Their funds for next year will be cut by about $16 million, $5 million on the secondary, and $11 million on the primary.

If the department is forced to continue diverting funds to the Interstate System instead of using them on the primary and secondary system, the State's highway system and the traditional pay-as-you-go method of financing are in danger.

Eure was asked what it will cost to match the Federal aid programs and continue under normal operations next year. "We'll need $25 million more next year," he said.

UPSETTING FISCAL STRUCTURE

Under the formula developed by the general assembly setting forth how much shall be spent by the highway department on secondary roads, the system must receive a minimum of 30 percent of all State and Federal funds, plus $2½ million, and excepting the interstate funds. Over the years, due to increased mileage and needs in the system, the department had increased the secondary system's proportion of the total funds to over 37 percent.

When the interstate bill was passed by Congress 3 years ago the Department foresaw the problem and began to whittle the percent off toward the minimum. But beginning next year the cut takes the amount back to the minimum. "We realize we're adding insult to injury to cut at this time," Eure reasoned, "but we simply can't quarter the apple anymore. We have cut to the core."

VIRGINIA PAYS

Virginia has been receiving some Federal aid on its highways for many years, but until the interstate bill was passed, the State actually paid more into the Federal Treasury through highway taxes than it received. In 1955–56, for instance, Virginians paid approximately $30 million in Federal gasoline and other highway taxes. Sixteen million eight hundred thousand dollars came back in Federal aid to our highways. But in 1959 we'll get back almost twice as much as we paid. We'll pay in approximately $65 million in gas and highway taxes and we'll get back $122 million.

It is really an ironical situation. All that the Federal Government has it must first take from the people. So the 90 percent, 10 percent matching arrangement isn't so ideal when we stop to think it all came from us in the first place. But it is even worse to think that our own money is being used to force us into a serious financial corner where it may become necessary to curtail the services to and raise taxes on a majority of the Virginia citizens.

PICK BUTLER.

Small Colleges Need Help

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I am inserting into the RECORD a fine editorial that appeared in one of Iowa's northeastern dailies. This editorial concerns the financial plight of the small colleges.

It is quite clear that small colleges are not getting the kind of help they should receive under the terms of the National Defense Education Act nor are they getting the kind of private contributions which would help these colleges.

The ideals that the small colleges instill in our young people are ideals that have made our Nation great. We should do all in our power to help these colleges stay in the business of educating our young:

[From the Oelwein Daily Register, Mar. 21, 1959]

SMALL COLLEGES NEED HELP

Failure of the Housing and Home Finance Agency to approve a dormitory loan for Upper Iowa University at Fayette sounds a warning note to all small colleges in Iowa and throughout the Nation.

Although Upper Iowa's financial condition met requirements, the Agency denied the loan after preliminary approval, on grounds that Upper Iowa University's financial position could not assume this added obligation.

Dr. Eugene Garbee, president of Upper Iowa University, explains the decided necessity of maintaining small colleges when he points out that, "we give service to a local area. Many small town and farm boys and girls want to stay near home, are actually afraid of the bigness of large colleges. They want to continue their education in an environment pleasing to them." This should be a strong reason for continued support of small colleges such as Upper Iowa University, which is independent and has no church or community affiliations.

Garbee also pointed out that, "one major problem which we face is that of misinterpretation to the public of the aid received by small colleges from various governmental and foundation programs. The public thinks that such assistance is available on request of the college. The refusal to grant Upper Iowa a second dormitory loan is an illustration."

The agency required that the charter of Upper Iowa University be renewed and that the bylaws of the university be rewritten to

meet the agency's approval. The agency also advised the university on other matters and during conferences repeatedly and very pointedly made clear to Upper Iowa University officials that they had not taken the advice of the agency representatives. Subsequently the loan request was disapproved.

Being a small independent college without tax support or organized group support must have influenced the agency decision. Instances have been cited by Garbee where large and tax supported institutions in New York State were granted loans.

The public was thoroughly indoctrinated that the National Defense Education Act would solve many of the financial problems of the colleges and universities. Individual giving to the small college fell off very markedly so the only area where the small college can participate is in the loan program.

Upper Iowa University contends that the small college simply does not get effective help although the general public is lead to believe that they do get all the help they need.

Upper Iowa contends, and we agree that the small college needs a champion in Washington. Too many legislators favor the larger cosmopolitan institutions of learning, to the detriment and almost the exclusion of the smaller colleges.

We are certain that the small college plays an important part in the education of our youth. It needs and deserves our support. Without it, many, many youngsters would not be able to obtain advanced education. And with the emphasis now on the utter necessity for continued education in the light of world conditions, small colleges assume an even more important role.

Surely, they are keeping pace with larger, State and tax supported institutions. They are not fading away. Increased enrollment, improved curriculum and faculties bear out the public desire for small colleges.

But universities in the situation of Upper Iowa, with no tax support, no church affiliation, need help. Government loans are the avenue through which they can survive. We urge that the administration, through hearing from local supporters of Upper Iowa, be informed of and made aware of the need for recognition and aid.

Miss Marlene Brazinski Representing St. Catherine's High School, Du Bois, Pa., Acclaimed as Winner of the American Legion's 1959 Oratorical Contest in the Keystone State

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. VAN ZANDT. Mr. Speaker, the city of Du Bois, Pa., is justly proud of the oratorical achievements of Miss Marlene Brazinski, winsome and talented daughter of Mr. and Mrs. Anthony Brazinski, who after a series of triumphs at the local, county, and sectional levels swept on to greater victory in being declared the Pennsylvania State champion in the annual oratorical contest sponsored by the Pennsylvania Department of the American Legion.

Miss Brazinski is a senior at St. Catherine's High School conducted by the Sisters of Mercy who for over 50 years have provided the faculty for one of the finest high schools in Pennsylvania. Prior to enrolling at St. Catherine's, Miss Brazinski completed her elementary education at St. Joseph's School in Du Bois staffed by the Sisters of St. Francis. Because of the shortage of teachers, St. Joseph's school was forced to suspend high school classes in 1952, but continued its grade school. The transfer of Miss Brazinski to St. Catherine High School and her splendid achievements scholastically and oratorically reflect due credit on the faculty members at St. Joseph's and St. Catherine's since they have played an important role in Miss Brazinski's life and share her joy in the high honor accorded her.

As Pennsylvania State champion, Miss Brazinski will compete at Washington, D.C., April 10, against State winners from Delaware, Maryland, and the District of Columbia in a national regional oratorical contest sponsored by the American Legion.

It is a pleasure to join with the residents of Du Bois and especially the faculty and student bodies of St. Joseph's and St. Catherine's schools in expressing hearty congratulations to Miss Brazinski and to her fine parents Mr. and Mrs. Anthony Brazinski who have many reasons to be proud of their daughter's fine accomplishments. It is my sincere wish that Miss Brazinski will continue to add to the laurels she has earned through study, zeal, and perseverance.

As part of my remarks I wish to include at this point the prize-winning oration by Miss Marlene Brazinski titled "I Speak as the Living Constitution" together with an article from a recent issue of the Du Bois (Pa.) Courier-Express saluting the 1959 oratorical champion of Pennsylvania:

I SPEAK AS THE LIVING CONSTITUTION

(By Marlene Brazinski, Du Bois, Pa., St. Catherine's School)

Permit me to introduce myself. I was not given on a Mount by the God-Man. I am not revealed law. I am human means. I am the right to life; the right to enjoy liberty; the power to maintain liberty. I am the Constitution of the United States, very much alive, and I plead with you to learn more about me, the bloodstream of your Government. Alive? Oh, yes, my qualities are alive, for they spring from the human heart and soul, and not merely from human intellect. My framers pledged their lives to liberty, when they saw the very light of liberty fading in America as States quarreled and threatened to disunite. These framers were chosen by their States to meet together. They were soldiers, planters, lawyers, physicians, merchants, and judges. Some of them were rich and others were poor. But regardless of occupation or financial status, each was human, and being human each had human failings. They were devoted to their individual States and their own local interests. Those from large States placed their interests in exercising the great strength of the large States. Those from small States shied away from a Union that might make them slaves of States greater than they. There were many clashing interests between the North and the South. Misunderstandings, jealousies, and selfish sectional interests cut off their desperate efforts to agree. Yes; my framers were almost in despair. All of their hearts cried out "Union." But their minds seemed to be overwhelmed.

Would they give up? Would they let your light of liberty die out? Why, I too, was in despair, fearing my outcome, if they decided to call this historical meeting to an end. But, no, at this terrible crisis, Benjamin Franklin suggested that they call upon the Almighty Father for Divine aid in moving them forward together in common sympathy.

And, alas, what their hearts really desired, their minds finally discovered. They found a way to make American liberty secure forever and ever. Their hearts directed their hands, and they brought me, the Constitution, into existence—into existence with a heart and soul.

Where, you might ask, is there any part that throbs with a human heartbeat? Where is my soul? In my every paragraph. All of my parts are mighty links that bind you, the people, in an unbreakable chain of Union. Just consider my preamble. I cannot tell you just whose brain produced it, but listen. It sounds like the heartbeat of my framers. It is the expression of their souls' desire.

"We the people of the United States, in order to form a more perfect Union." And why? To make your liberties safe and secure. For what length of time? So long as a human being exists. And for whom? For each and every one of you sheltered by the great American flag.

"Establish justice." Justice—the guardian of your liberties. Justice—the highest aspiration of the soul. Justice, an attribute of God Himself, for He said: "I, the Lord thy God, am a just God."

"Insure domestic tranquility." My people longed for harmony. I insure domestic order and peace, among them and among their States.

"Provide for the common defense." The protection provided by me, the Constitution, is a protection which a wise father provides for his family. Divided, you invite invasion. United, you constitute a nation capable of defending itself in every part.

"Promote the general welfare." Indeed, the promotion of the general welfare by unification of the States is manifested in nearly all of my paragraphs.

And finally, my preamble declares that I was established to "secure the blessings of liberty to ourselves and our posterity." Who are you? You are but the posterity of the great souls who brought forth your perpetual liberty. Can you say that the forefathers of America were selfish and heartless men, when 150 years ago they were thinking of you, their posterity and their heirs? Are you, John Brown, and you, Mary Smith, equally foresighted? Do you think about the posterity that will live 150 years from now? If you are ready to pledge your lives, your fortunes, and your sacred honor for your distant posterity, you are worthy of the forefathers who did that much for you.

Summed up, my preamble declares that your forefathers sought union, justice, tranquility, safety, welfare, and liberty.

Yes, it was a difficult beginning, but it was worth it, for my every word serves to safeguard you in your life, your liberty, and your pursuit of happiness.

My people, look at me and study me very carefully, and then tell me that you could not say with truth and price: "This was made for me. It is my fortress. When danger threatens my life or liberty I can take refuge in this, the Constitution. Into that fortress neither President nor Congress nor armies nor mobs, can enter and take away my life or liberty."

Look at me, my people, and tell me that you cannot be justly proud of your form of government, as you see many other countries

shifting to the right or to the left, toward communism or fascism.

Communism—a strong and fearful voice that teaches: "Nothing ever existed but matter, and that plants, animals, and men are the results of the blind interworking of the forces of matter. There is no place for religious beliefs. Atheism is the word. Capture youth with doctrines of darkness and hate. Abolish all private property. Extend this plan of government throughout the world."

Fascism—a voice that teaches: "Everything should be subservient to the national state. That among men, races, and nations there are degrees of superiority, and thus; there is one greatest nation, one greatest race, one greatest man. Private ownership should be permitted only as long as the owners belong to the superior race and obey the state. Extreme dictatorship is the only way to run a country."

Americans, which would you prefer? Communism or fascism? Or would you reject both, as any sane and sensible person would do? Do you now realize how privileged you are to be an American, and to live under your type of government, democracy, the government of which I am the bloodstream—the type of government which guarantees freedom of speech, freedom to assemble, free business enterprise, and freedom to love your God outwardly. The Communist and the Fascist both assert that all of these freedoms are drastic maladies. Each prescribes a different cure for the maladies, but either cure would produce the same result—the destruction of man's freedom. You should ponder well before answering Americans, and then say: "Thanks, but I'm not quite that sick. Besides, the condition of the patients who have tried your medicine—Russia, Italy, Germany, Egypt—show no sign of being cured. And if they are cured, then I think your cure is worse than the disease."

Being a living Constitution, I am subject, as are all living things, to error, failings, and sickness. At the same time I am able to grow and adapt myself to changing conditions. The fact that I have attained the age of 150 years, having lived through wars and turmoil of all sorts, proves that I am essentially a healthy organism. And that I can continue to serve my people for generations to come.

But, my people, I cannot do it alone. I plead with you, help to protect me from the foes that would kill me. Americans, see to it that I remain a living Constitution.

[From the Du Bois (Pa.) Courier-Express]

ST. CATHERINE'S SENIOR ACCLAIMED BEST IN STATE

Miss Marlene Brazinski, a senior at St. Catherine's High School and daughter of Mr. and Mrs. Anthony Brazinski, of 406 South Avenue, DuBois, gained the highest oratorical honors in Pennsylvania last evening when she won first place in the American Legion's 1959 finals in State competition held at Pennsylvania State University.

Miss Brazinski gained the right to compete for State laurels after having top honors in local, bicounty, and sectional competition which has covered a period of the past several months. In winning State honors, and representing the central division of the State, she competed against Gerald Miller, of the Norristown Senior High School, the eastern division finalist, and Elaine Nedlich, of St. Rosalie High School, Pittsburgh, the western district finalist.

Miss Brazinski in her prepared address spoke on "The Living Constitution" and in her extemporaneous talk on article 1 of the U.S. Constitution. Her address, as well as those of the other two contestants, was carried on WCED last evening.

The State finals in the Legion's oratorical contest were held in the Hetzel Union Assembly Hall and found several hundred persons in attendance. Judges for the competition were Prof. Robert Galbraith, professor of English composition; Mrs. Helen Hayes, representing the Federation of Women's Clubs; Dr. Paul D. Holtzman, associate professor of speech; Hon. Harry W. Price, Jr., representative in the general assembly; and Paul W. Rider, a counselor at law. Presiding was Clarence Ebert, department chairman of the oratorical contest. In addition to the judges and presiding officers there were also present official personnel of the district and State American Legion and official personnel of Pennsylvania State University.

As a result of winning the highest State honors Miss Brazinski will be awarded a 4-year scholarship in any one of four universities of her choice in Pennsylvania and will be eligible to compete for national honors in further competition under the sponsorship of the American Legion. She favors Penn State at the moment.

Sectional competition for national honors will take place in Baltimore and winners in these divisions will meet in national honors in San Francisco later in the summer.

"I want to thank the many persons in Du Bois who have encouraged me," Miss Brazinski said after last night's talk-off.

Du Bois has consistently produced winners in the district and sectional contest but this is the first State champion. Marlene transferred to St. Catherine's school after receiving her elementary education at St. Joseph's school.

So while Du Bois missed having a State champion in athletics, it snared another highly coveted State crown.

The Last Will of Capt. Henry T. Waskow

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, April 8, 1959

Mr. YARBOROUGH. Mr. President, Ernie Pyle, one of World War II's best known correspondents, once wrote:

In this war, I have known a lot of officers who were loved and respected by the soldiers under them. But never have I crossed the trail of any man as beloved as Capt. Henry T. Waskow of Belton, Tex.

And Captain Waskow once wrote:

Try to live a life of service—to help someone wherever you are or whatever you may be—take it from me, you can get happiness out of that more than anything in life.

The latter quotation was from Captain Waskow's last will and testament. He was killed December 14, 1943, defending his country on a battlefield called San Pietro Hill in Italy.

Captain Waskow's final words were recently published for the first time and his feelings concerning his service to God and his country can give all Americans pause and then deep humility and inspiration.

Woody Montgomery, a reporter for the Temple, (Tex.) Daily Telegram, obtained permission to publish Captain Waskow's last will and testament in the newspaper.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the last will and testament of Henry T. Waskow along with Mr. Montgomery's story which appeared in the Daily Telegram for Sunday, April 5, 1959, under the heading, "Family Reveals to Telegram Final Letter from Capt. Henry T. Waskow."

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From the Temple Daily Telegram, Apr. 5, 1959]

FAMILY REVEALS TO TELEGRAM FINAL LETTER FROM CAPT. HENRY T. WASKOW—BELOVED BELTON SOLDIER, ONE OF WAR'S MOST FAMOUS

(By Woody Montgomery)

Capt. Henry T. Waskow, one of the Nation's most famed soldiers of World War II, was killed on the battlefield in Italy December 14, 1943, and he was buried where he died, along with the men who had served with and under him.

The deeds of the 25-year-old captain from Belton and the story of his death were spread over the front pages of practically every newspaper in the United States and in many foreign countries.

Ernie Pyle, the war's best known correspondent, wrote the tender and moving story of Waskow's death in a dispatch from Italy after watching scores of enlisted men—and officers—who stopped at the body and expressed their feelings over his death.

Since that time, the Captain Waskow story has been reprinted in many books and newspapers and became the basis for the movie, "GI Joe."

The Veterans of Foreign Wars Post 4008 was formed in Belton in 1948 and named in honor of the Bell County soldier.

The War Department's telegram to the Waskow family, telling of the captain's death, came on December 29, 1943. The grief touched every member of the family deep in their hearts and was too much for Captain Henry's mother, Mrs. Frank C. Waskow. She died in February of a broken heart.

Newspapers, magazine and feature writers constantly sought out members of the family for information concerning the captain. They used the smallest bit of information and finally only one shred was left—the last will and testament of Capt. Henry T. Waskow.

The family regarded the cherished letter as so personal they vowed to keep it from the prying eyes of the public until it in itself might help some mother or her soldier son.

Last December 8, Captain Waskow's father died, not in such a brief time as the mother, but just as surely, of a broken heart for a son who had given his life in the defense of his country.

Recently, I had the privilege of being the first person outside the Waskow family to read the last will and testament of Capt. Henry A. Waskow. With deep humility, I prevailed upon the family to release the text of the cherished letter to the world, so that others might know why the captain was loved by so many men.

Still living are his brothers, August, who also was in the 36th Division and was wounded the day before his captain brother was killed, Paul, John, and George; and his sisters, Mrs. Estelle Barr, Mrs. T. H. Barr, and Mrs. Albert Tippit.

The brothers and sisters consented to allow the will to be presented in the hopes it would bring comfort to someone, somewhere—perhaps a mother who lost a son, or a soldier now serving in the same defense of his country.

"It's a great relief to unburden ourselves of the last shred of personal connection with Henry and to allow others to know

why he was worshiped by so many," a member of the family said.

To most people, he was just a hometown boy, grabbed up in defense of his country—just as so many others were. But they really didn't know Capt. Henry T. Waskow, company commander at the age of 25 when he was killed in action on San Pietro Hill in northern Italy.

Few persons remember Henry graduating at Belton High School in 1935 with the highest of honors. Only the family knew what a struggle it had been to see him through Temple Junior College and how he worked long hours to pay his own way.

In 1937, he was graduated after winning second place in the State oratory contest. He took other honors, too.

Few knew the times he had hitch-hiked from Waxahachie, while attending Trinity University there, to attend National Guard drills in Belton.

Henry was graduated from Trinity with a B.S. degree, major in English and minors in Spanish, history, and speech. But for 21-year-old teachers, there was little need, so he was a substitute in his hometown.

That's what he was doing when the National Guard's Company I, 143d Infantry, 36th Division was mobilized in 1940.

He was Corporal Waskow then and was sent to Camp Bowie for training. The men of Company I sweated it out just as much as Henry or his family when he took an examination for officers' training school.

Finally, in 1941, he was commissioned a second lieutenant and returned to his old company at Camp Bowie. It was a great day for the entire outfit—officers and enlisted men alike.

Then came a bitter pill for Henry—or Lieutenant Waskow now—to swallow. He was transferred to Company B and away from his beloved I Company.

But this feeling soon eased and he worked with even more determination to make Company B one of the crack units of the famed 36th Division.

Soon there was a long period of no letters to the family and his father and mother knew he had been shipped overseas. But no one—in those days of censorship—knew where.

Finally, they knew. It was Africa, where the battle-ready 36th Division was poised for the invasion of Italy. And it now was Captain Waskow. He had been promoted just before leaving the States.

As soon as he could communicate with the family back home, they knew he was thinking of them. There were cablegrams on birthdays, little gifts he had picked up and always letters.

He was homesick—his letters said as much. His letters were filled with praise of his men. He once wrote of how they saved their coffee rations for him. Enlisted men don't often do that—especially when the coffee was so hard to get and so relished as a sort of a luxury.

The letters became fewer and more time elapsed between them. Finally, they stopped entirely. The invasion was on. Then, the infrequent letters started arriving once more. They would be headed:

"From a foxhole we just chased a Jerry out of."

He was lonesome—you could read between the lines—but these, his men, "are the greatest bunch of Americans God ever produced," he would write.

Maybe you didn't know Capt. Henry T. Waskow.

"I'm just as cold as a wet puppy," he wrote.

"We wonder how we can go on at times, but God is always with us.

"The closer we are to the enemy, the better we feel 'cause we know he is just that much farther away from our loved ones at home."

Then, on that late winter day in December came the telegram from Washington, "the Secretary of War desires me to express his deepest regrets that your son, Capt. Henry T. Waskow was killed in action in defense of his country on December 14 in Italy."

Of his death, Pyle wrote:

"In this war I have known a lot of officers who were loved and respected by the soldiers under them. But never have I crossed the trail of any man as beloved as Capt. Henry T. Waskow of Belton, Tex."

Pyle told of the full moonlight night Captain Waskow was brought down the mountain trail, his body lashed to the back of a mule. Dead men had been coming down the trail all night. In war, especially, you soon become numb to seeing dead men. But finally there came another group of mules with their human cargoes. Soldiers at the base of the mountain stood silently.

"This one is Captain Waskow," one of the soldiers said quickly.

"The men * * * seemed reluctant to leave," Pyle wrote. "They stood around, and gradually, I could sense them moving, one by one, close to Captain Waskow's body. Not so much to look, I think, as to say something in finality to him and to themselves * * * it was hard to tell the officers from the men in the dim light * * *.

" 'I'm sorry, old man'," one of them said as he looked down into Waskow's face.

"Then," wrote Pyle, "the first man squatted down, and he reached down and took the captain's hand, and he sat there for a full 5 minutes holding the dead hand in his own * * * and he never uttered a sound all the time he sat there. * * *"

Pyle's famous column went on to describe the tender scene. His column touched the hearts of millions back in the States just as Pyle had been moved by the respect and love shown Captain Waskow.

In permitting the final letter—which actually was Waskow's will and testament—to be printed, one of the family remarked:

"This is it; it's all the public can ever know.

"Not that we don't appreciate everything that has been done and the honors bestowed on Henry, but it breaks our hearts everytime the subject is revived."

HIS LAST WILL AND TESTAMENT

Herewith my last will and testament:

GREETINGS: If you get to read this, I will have died in defense of my country and all that it stands for—the most honorable and distinguished death a man can die. It was not because I was willing to die for my country, however—I wanted to live for it—just as any other person wants to do. It is foolish and foolhardy to want to die for one's country, but to live for it is something else.

To live for one's country is to my mind to live a life of service; to—in a small way—to help a fellowman occasionally along the way, and generally to be useful and to serve. It also means to me to rise up in all our wrath and with overwhelming power to crush any oppressor of human rights.

That is our job—all of us—as I write this, and I pray God we are wholly successful.

Yes; I would have liked to have lived—to live and share the many blessings and good fortunes that my grandparents bestowed on me—a fellow never had a better family than mine; but, since God has willed otherwise, do not grieve too much, dear ones, for life in the other world must be beautiful, and I have lived a life with that in mind all along. I was not afraid to die, you can be assured of that. All along, I prayed that I and others could do our share to keep you safe until we returned. I pray again that you are safe, even though some of us do not return.

I made my choice, dear ones. I volunteered in the Armed Forces because I felt it my duty to do so. I thought that I might be able and might do just a little bit to help this great country of ours in its hours of darkness and need—the country that means more to me than life itself—if I have done that then I can rest in peace, for I will have done my share to make this world a better place in which to live. Maybe when the lights go on again all over the world, free people can be happy and gay again.

Through good fortune and the grace of God, I was chosen a leader—an honor that meant more to me than any of you will ever know. If I failed as a leader, and I pray God I didn't, it was not because I did not try. God alone knows how I worked and slaved to make myself a worthy leader of these magnificent men, and I feel assured that my work has paid dividends—in personal satisfaction if nothing else.

As I said a couple of times in my letters home when you remember me in your prayers, remember to pray that I be given strength, character and courage to lead these magnificent Americans. I said that in all sincerity and I hope I have proved worthy of their faith, trust, and confidence.

I guess I have always appeared as pretty much of a queer cuss to all of you. If I seemed strange at times, it was because I had weighty responsibilities that preyed on my mind and wouldn't let me slack up to be human like I so wanted to be. I felt so unworthy, at times, of the great trust my country had put in me, that I simply had to keep plugging to satisfy my own self that I was worthy of that trust. I have not, at the time of writing this, done that and I suppose I never will.

I do not try to set myself on a pedestal as a martyr. Every Joe Doe who shouldered a rifle made a similar sacrifice—but I do want to point out that the uppermost thought in my mind all along was service to the cause, and I hope you all felt the same way about it.

When you remember me, remember me as a fond admirer of all of you, for I thought so much of you and loved you with all my heart. My wish for all of you is that you get along well together and prosper—not in money, but in happiness; for happiness is something that all the money in the world can't buy.

Try to live a life of service—to help someone wherever you are or whatever you may be—take it from me, you can get happiness out of that, more than anything in life.

HENRY T. WASKOW.

The Berlin Crisis—The Timetable of Survival

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 8, 1959

Mr. SMATHERS. Mr. President, I ask consent to have printed in the Appendix of the RECORD, one of the finest editorials on the current crisis of Berlin that has thus far been written.

It appeared in the Sunday Tampa Tribune, March 8, and is entitled "The Timetable of Survival." This editorial lucidly and logically presents the reasons why there is a crying need for us to step up the defense budget in the field of missilry.

I think it well summarizes the well-known assertion that if we are to err, it is better to err on the side of too much than on the side of too little.

I happen to know that this editorial was written by a young man who worked on the Washington scene for a couple of years and thereby enriched his mind and increased his qualifications to pass judgment on such momentous subjects as are presented in the editorial. The young man's name is Jim Powell, now one of the chief editorial writers of this fine paper. It is evident from the editorial that his thought processes continue to grow and flourish.

I commend the editorial to the attention of my fellow Senators who will certainly find it informative and beneficial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE TIMETABLE OF SURVIVAL

President Eisenhower's current series of high-level conferences on Berlin attests once more to Washington's increasing concern for the threat which Nikita Khrushchev has posed to western security and world peace. It is only in extraordinary circumstances that one single issue so demands the President's attention, or evokes such expressions of bipartisan accord.

In 2 days, Mr. Eisenhower met first with the National Security Council and then with the four highest leaders of the Congress, even while announcing that Prime Minister Macmillan of Great Britain will be received here on March 20. Out of the congressional conference, the leaders of Capitol Hill emerged with a declaration that they stood solidly with the President in determination to hold West Berlin at all costs.

Republican and Democrat alike demonstrated once more that partisanship vanishes at the water's edge. "The upshot is," said Speaker SAM RAYBURN, "that we are united." There was no congressional hesitation in supporting Eisenhower's position that the United States is willing to negotiate but will not yield an inch in protecting its rights and responsibilities at Berlin.

Certainly SAM RAYBURN, while speaking for the congressional leadership, spoke for the Nation as well.

But if the President's determination to hold Berlin is beyond doubt, there remains still a question if he is fully impressed with the terrible urgency of this crisis, and if it should pass, of others to follow.

From all appearances, Mr. Eisenhower still clings rigidly to the proposition of balancing the budget. His administration is obsessed with fiscal balance at a time when such obsession could be sucidal, if it fosters the slightest neglect of national defenses.

Administration leaders contend the national defense is balanced, too, and that the United States is alert and capable of defeating Russia. They contend our strength is therefore enough to deter Russia from starting a war. Defense timetables for the future are also pictured as prepared for the swiftly changing techniques of pushbutton war.

These claims may be justified, and the Nation will pray that they are. Yet there have been disturbing signs, literally written in the sky, that the United States has no such place of security.

It requires no sicentific credentials to judge the race for space as it has developed so far, and to see that Russia is winning. Russia put the first satellite in the sky. The United States followed suit. Russia put the first satellite into orbit around the sun. The United States followed suit. In both instances, the United States came in second.

Certainly it is reasonable to ponder whether the country which is ahead in firing missiles for space exploration is not also ahead in firing them for purposes of war on earth.

In developing military missiles as well as space rockets, the United States seems fearfully deliberate. Intercontinental missiles are not yet practical weapons, stockpiled and ready for quick launching. The building program for atomic submarines is restricted. Antimissile missiles are still years away.

Columnist Roscoe Drummond says that the United States has allowed Russia a 3-to-1, 3-year lead in missiles, without making an effort to challenge it. In such circumstances, it isn't hard to understand why the Soviets have become so bold in Germany. Nor is it presumptious to predict that after the Berlin crisis, if it is somehow resolved, the Soviets will proceed with calculated bravado to blackmail the Western Powers again and again, while brandishing their superior ICBM's.

For the leisurely pace of our missile program there can be but one explanation—the administration's preoccupation with balancing the budget to fight inflation and quiet cries against Government spending.

In normal times, such concern for the budget would be praiseworthy but in these times it entails a deadly gamble.

There is no question that the United States, with its incomparable living standard, can afford whatever it takes to be first, not second, in military strength.

Nor is there any doubt about the capacity of the Nation for supremacy in any field. But the national productive genius, which brought enlightened capitalism to full flower, has been turned first to creating new conveniences and luxuries. It has not been a choice of butter over guns, but of gadgets over guns.

So it is that an immediate expansion of the defense program is demanded by the urgencies of the hour and will do no violence to the economy. The mere announcement of it should help convince Khrushchev of American resolution at Berlin and in crises yet to come. Billions more are needed for missiles and atomic submarines if not elsewhere. Questions of inflation, taxes and budgetary balance must fall.

We are not suggesting a Churchillian regimen of blood, sweat, and tears, for no such sacrifices are demanded. But the timetable of easy living can—indeed it must—wait a bit on the timetable of survival.

Tribute to the Late G. Harold Antrim

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, April 8, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a reprint of a letter addressed to me by Mr. Samuel W. Silverman, of Point Pleasant, N. J., which appeared in the Ocean County Leader.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LAUDS ANTRIM AND EDITORIAL

Samuel Silverman, national director, Department of Americanism, Regular Veterans' Association of the United States and organizer of the first American Legion post in the State, forwarded this letter to the Honorable CLIFFORD P. CASE, Senator, at Washington, D.C.:

"DEAR SENATOR: I am enclosing herewith an editorial as printed in the Leader, our only weekly paper in Point Pleasant Beach.

"This editorial concerns a great educator, who recently passed away, a very young man, but very few persons knew how he has benefited almost 8 million heroes that served their Nation in World War II.

"The following will tell you how he rendered great service to his Nation.

"On July 25, 1956, the GI bill, training veterans, came to an end. Almost 8 million veterans of World War II received additional education through the said GI bill, of which in the State of New Jersey alone, more than 40 percent of those that entered the armed services took advantage, for further schooling. Rutgers College alone had more than 30,000 students. This has cost the taxpayers of the United States more than $14 billion—money well spent. Of course, the GI bill gave the veterans other advantages which has cost our taxpayers many billions of dollars—again, money well spent.

"None of these advantages were given to World War I veterans, outside of the privilege to sell apples for a living, but true, through these hardships we were able to protect our sons and relatives and give them the benefit of our experiences.

"FOUNDER OF IDEA

"Now, as to the editorial that appeared in the Leader, there are very few of the 8 million veterans that received all of these benefits. Many of them are great men in various high political and business positions—many of them are lawyers, doctors, engineers, and what not. But just a handful knew that this little educator of Point Pleasant Beach, the superintendent of schools came to my house and spent several hours waiting for me to return from Washington, D.C., where I had attended a veteran conference on the GI bill of rights for the American Legion. He suggested that he had read in one of the papers that I was interested in veterans' affairs at Washington before Congress, and, concerned for his boys taken away from high school, he wanted to know if we could have Congress pass some kind of a bill providing for the education for these boys and others upon their return from service. I immediately left the next day and discussed this with the then legislative representative, General Taylor, of the American Legion, and conveyed to him the entire suggestion as outlined by G. Harold Antrim, and then we presented the subject to the congressional committee. 'What, spend money to educate a lot of rummies, etc.?' they asked. We wanted the education to apply to everyone, whether he went to school or not, as we believed that every veteran is entitled to that opportunity, and then after 8 months of quarreling we compromised and agreed that those who could not pass the test after at least 6 months or 1 year trial should be eliminated.

"Yes, it was the American Legion which first approached the subject and backed up by every veteran group. In fact, it was the harmony among all veteran organizations that put across this GI bill of rights, just as they did the bonus in the First World War.

"This great Nation of ours became great and received the most benefit by having an educated nation, which is our greatest asset of today. These 8 million veterans owe a great debt of gratitude to all of the leading veteran organizations in the United States as well as to the memory of that great educator, G. Harold Antrim, who actually was the father and founder of the original idea which was carried out by the American Legion and other veteran organizations.

"I believe that this editorial and my remarks should be placed in the CONGRESSIONAL RECORD.

"Sincerely yours,

SAMUEL W. SILVERMAN."

Abundant Opportunity

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. HUMPHREY. Mr. President, I have been pleased to see in recent months more and more interest and discussion on the important role which our surplus disposal program under Public Law 480 can play in our foreign aid program.

It has been my strong conviction that our food surpluses should not be considered as a curse, but rather as a blessing. Through an intelligent and imaginative program, surplus foods can be used not only to relieve the hunger of so many underfed people of the world, but also as a means of economic development in countries which are in dire need of capital.

The New Republic has a most interesting article on this topic in its February 23, 1959, issue entitled "Abundant Opportunity." I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ABUNDANT OPPORTUNITY

As a result of bumper wheat and corn crops the estimated value of surplus farm commodity stocks held by the Federal Government will soon reach an all-time high of $9 billion. And who will even guess when the end will be in sight? Farm groups searching for ways to broaden foreign outlets for accumulating U.S. stocks of food and fiber pushed through the surplus disposal program Public Law 480 in 1954, and Congress has renewed it three times. Although the program has included some famine relief grants ($1.1 billion) and barter deals for scarce ores through private trade channels ($900 million), the biggest single item has been the sale for foreign currencies of surpluses which were not selling in the regular dollar market. Two and one-half billion dollars worth of agricultural commodities had been sold abroad for foreign currencies as of the end of 1958.

The fact that the United States sells the surpluses for local currencies is to the farm bloc simply an unfortunate temporary expedient incidental to getting rid of the stocks. But Public Law 480 has acquired an altogether different significance for the countries receiving the surpluses. The less-developed countries which are the principal recipients are short on food and dollars: thus the program has the special virtue of simultaneously easing local food scarcity (and price inflation) and releasing dollars for capital goods imports. Moreover, roughly half of the sale proceeds accruing to the United States are reloaned to the recipient countries for U.S.-approved economic development projects (the remainder is used for United States local currency procurement, e.g., in military aid programs, and for educational purposes such as the Fulbright student exchanges). What was designed purely and simply as a disposal program has become, in short, an important part of our foreign aid program.

This dual significance of Public Law 480 has long been apparent to some farsighted aid officials and aid supporters who have doubted whether Congress would ever appropriate the large dollar sums needed for an effective U.S. economic contribution to the less-developed countries, and who have seen in a redesigned Public Law 480 a means for marrying desperate necessity abroad with political reality at home—not to mention reconciling the paradox of U.S. overbundance in a hungry world. But farm bloc sentiment for a broadened Public Law 480 program did not crystallize until very recently. With Secretary Benson using the high cost of storing the surpluses as one of his main arguments against price supports, the farm groups are now unanimously pressing for a Public Law 480 program placed on a more permanent basis than the present year-to-year schedule. The administration had been considering a special report on the possibilities in an expanded Public Law 480 program by Harvard agricultural economist John H. Davis when the political winds from Capitol Hill began to pick up velocity, and the result was an apparently last-minute decision to place food for peace in the President's farm message. But although the President has designated Secretary Benson to explore anew with other surplus-producing nations all practical means of utilizing the various agricultural surpluses of each in the interest of reinforcing peace—which might mean, in specific terms, a world conference of food ministry representatives later this year—the administration has no immediate plan beyond renewing Public Law 480.

In Congress, on the other hand, there are major legislative initiatives in the making. Representative W. R. POAGE, Democrat of Texas, has introduced an amendment providing for a 10-year surplus program on a loan basis with repayments in dollars over a period of up to 50 years. Senator HUMPHREY, Democrat of Minnesota, and Representative MCGOVERN, Democrat of South Dakota, have introduced resolutions affirming congressional support for a long-term surplus program as an integral part of our foreign assistance, and Senator HUMPHREY is readying an omnibus bill which would, among other things, set up a peacetime agency comparable to the War Food Administration—thus giving the program administrative independence and, equally important politically, budgetary independence from the foreign aid and agriculture appropriations. By attributing the cost of surplus disposal programs to some agency other than the Department of Agriculture, in the name of an objective other than farm price supports, Secretary Benson's misgivings about the high cost of surplus disposal (on top of supports) might be modified.

Senator HUMPHREY is, in our view, to be commended for his leadership on the surplus issue and his omnibus program will be studied with great interest. There are, however, very serious limitations inherent in any long-term program conceived essentially, as are all of the programs contemplated, in terms of loans. The less developed countries are aware that the United States does not know what to do with its abundance. Thus in this instance the often-mentioned preference of sensitive Asian governments for loans rather than grants is less weighty than their clear recognition that the United States could quite painlessly make the surpluses available as grants. This becomes peculiarly important in the light of the enormous accumulations of local currencies by the United States already taking place in the case of India, Pakistan, and Israel—which together claimed more than half of the Public Law 480 surpluses in 1958—and of the profound and growing uneasiness inevitably resulting from that accumulation in these newly independent countries. As Matthew Kust, former legal adviser to U.S. Embassies in south Asia, pointed out in these pages in the case of India, rupees acquired by the U.S. Government under Public Law 480 (and soft-currency development loan programs) might in the conceivable future exceed those held by the Government of India. The mere thought of this is politically explosive in India, which is now in the midst of a frenzied reappraisal of its economic, which is to say political, future. The main theme of Indian Communist propaganda is that the Nehru government is mortgaging itself to Washington.

At present 48 percent of Public Law 480 sale proceeds in India are reloaned for U.S.-approved economic development projects; another 15 percent goes for grants to non-developmental purposes (e.g., education and health); 12 percent for U.S. Embassy administrative expenses, and up to 25 percent for local currency loans to U.S. business operations in India (under the so-called Cooley amendment). Any substantially expanded Public Law 480 program would mean that the 48 percent allocated for economic development would become a larger and larger sum—looming larger and larger in relation to the totality of the Indian Government budget—and a sum increasingly hot to handle. Why, Indian leaders might well ask (and this is also true in Pakistan and other surplus-recipient countries), does not the United States follow the precedent of the Marshall plan? The Marshall plan was a grant program and the counterpart funds in European currencies accumulated under the plan belonged to the recipient governments. To be sure, provision was made in the program agreements for virtual U.S. control over decisions as to how the funds were to be spent; but this would be easier for the recipient governments to justify to their peoples than direct control of large sums of the national currency by the United States with all of its implicit political influence.

The Davis report now before the State Department recognizes this state of mind in the less-developed countries and recommends that the grant portion of Public Law 480 allocations be increased from 15 to 25 percent. In our view there is no reason why the increase should not extend to the 48 percent portion now being reloaned and perhaps in later years to the bulk of the proceeds.

There is danger that in the absence of a clear definition of food for peace as something different from a bigger and better disposal program—perhaps restyled food for economic development—some of the merit of the program may be canceled out. It may become an excuse for many Congressmen to vote against vital dollar aid appropriations (e.g., for an expanded Development Loan Fund) while not having the saving grace of the grant authority so necessary in the light of political realities in the less-developed countries. The National Grange frankly urges the Federal Government to "use surplus agricultural commodities whenever practical instead of dollars as a means of aid and relief." What the farm belt politicians are perhaps afraid of is an isolationist rural reaction against giveaways. But given the facts and some leadership we suspect that farmers could be won to a grant program. They have, after all, nothing to lose.

Military Air Safety

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. BEALL. Mr. President, military aviation safety is of vital concern to our Nation. This is true not only for eco-

nomic and humanitarian reasons, but also for the very practical reason that we must conserve our combat capability. Every military aircraft accident diminishes our ability to defend the Nation; some take precious lives, and all cost thousands of the taxpayers' dollars. As a Member of this Congress and especially as a member of the Senate Armed Services Committee, I have been keenly attentive to the measures and the precautions exercised by the military to prevent aircraft accidents. I feel that too often the public is made aware of accidents but is not told of the many thousands of safely flown missions. I am pleased to note, however, that on occasion the military receives some recognition for its dedicated and unceasing efforts to prevent aircraft accidents. Therefore, I request unanimous consent that an editorial from the Baltimore Sun of April 1, 1959, concerning certain aspects of Air Force air safety, be printed in the Appendix of today's RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AIR FORCE SAFETY

The bald statement that the Air Force has lost 5,000 lives in accidents in the last 5 years makes a striking headline. But unless it is analyzed, it obscures the great attention the Air Force gives to the factor of safety and the favorable results that have been obtained.

Overall military flying is, of course, not comparable to commercial flying. But one operation that is reasonably comparable is that of the Military Air Transport Service with the domestic commercial airlines. In 1958, fatalities on MATS were actually less (0.078 per 100 million passenger miles) than on the domestic commercial airlines (0.4).

Over the last 4 years there has been a decline in the actual number of fatalities among crews and passengers in all types of Air Force flying, including also the Air National Guard. Another impressive indication of safety progress is in the drop in overall accidents which in 1958 were down to 10.4 per 100,000 flying hours. Compare that with 20 in 1954, 44 in 1947, and 506 in 1922.

As against the vastly increased speed of the modern jets and the exacting performances demanded both of planes and pilots, there is the great improvement in airplane construction. Air Force people attribute much of this progress to the intensive investigation of every accident to find out what caused it and to correct any structural weaknesses found.

Pricing Ourselves Out of the Market?

EXTENSION OF REMARKS

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article from the March 30 issue of Newsweek, a news article from the Pittsburgh Press of March 29, and the Worthington, Oil City Division, Newsletter.

[From Newsweek, Mar. 30, 1959]

PRICING OURSELVES OUT OF THE MARKET?

In the greatest industrial Nation on earth last week, growing numbers of American businessmen were facing up to a new problem. All too often, they were being beaten at their own mass-production game. Foreign businessmen, using the same tools, techniques, and tough enterprise for which the United States is famous, were grabbing more and more markets. There was a spreading concern that the United States might be pricing itself out of world markets—indeed, even out of markets at home.

How sound are the worries? What lies behind them? What can be done?

The concern is real, and it reaches into high places. After a world tour last winter, Federal Reserve Board Chairman William McC. Martin reported that "40-odd central bankers and finance ministers that I've known for a long time," were convinced that American-made goods, "not necessarily at the moment, but in a fairly short time and more markedly in the extending future, were going to find themselves priced out of the market." Martin was not ready to accept that theory yet, but he could see lots of illustrations of the trend.

Indeed, anyone who cared to look could see examples:

Detroit exported fewer than 122,000 cars last year, down 42 percent from 1955. And 431,000 foreign automobiles moved into the United States, a 55-percent jump from last year.

West German barbed wire was selling in Cleveland last week for $40 a ton less than wire turned out by United States Steel—right in Cleveland.

U.S. cotton exports last year fed only 30 percent of the overseas market, against 60 percent during the 1920's.

International Harvester plans to bring in tractors made by its British subsidiary "to compete in Southeastern States against a tractor being imported by a competitor." The competitor? Ford, with tractors from its own British subsidiary.

Nor was that the end of it. World wheat prices regularly run 60 to 70 cents a bushel under U.S. levels, and American wheat exports—some 430 million bushels last year—might shrivel without subsidies. Japanese textiles coming into the United States in recent years have raised a cry among American producers for higher and higher protective quotas. Steel plate from Japan sells on the west coast at $20 to $30 a ton below U.S. tags. A Japanese mill has even snared an order from the U.S. Navy.

Foreign businessmen now are challenging one of the proudest achievements of American industry—the manufacture of machines for mass production. U.S. machine-tool exports skidded 33 percent last year (to $60 million). And H. G. Bixby, president of Ex-Cell-O Corp., the Detroit toolmaker, sees "portents that the years 1959, 1960, perhaps even 1970, will show similar declines." Francis J. Trecker, president of Milwaukee's Kearney & Trecker, cites one reason why: Small West German milling machines sell in the United States for $8,000 against $11,000 for American counterparts. The fact is, says Walter K. Bailey, president of Cleveland's Warner & Swasey, that "American machine tools are priced out of a large part of the world market."

For all this, American export markets, which paid for $16.3 billion worth of U.S. made goods last year and provided a livelihood for more than 4.5 million Americans, are not about to dry up overnight. Even the $3.2 billion drop in overseas trade last year was not as bad as it looked. Some 75 percent of the decline was in six commodities—oil, cotton, wheat, metals, coal, and autos. And some of these items had enjoyed unusual increases in 1956 and 1957 because of abnormal conditions. Examples: Oil shipments were accelerated by the Suez crisis, wheat shipments by a disastrous harvest failure in Europe.

NEAR THE DANGER POINT

Such a breakdown convinces experts like Economist William F. Butler, vice president of New York's Chase Manhattan Bank, that there is no evidence yet that we're pricing ourselves out of world markets in the overall sense. But even the most optimistic businessman would agree with Butler's genuine concern that if inflation isn't checked, then we'll reach that point before too long.

What has brought U.S industry so close to this peril point?

One basic cause is the fantastic recovery and modernization of the industrial machines of Europe and Asia during the 15 years since V–J Day. When U.S. Steel opened its $400 million Fairless Works on the Delaware River in 1952, Chairman Roger M. Blough recalls, "it was the last word in steelmaking efficiency." Today, he adds, "its counterpart can be found in Wales." A Simca auto plant outside Paris, notes L. L. (Tex) Colbert, president of Chrysler Corp. (which now owns part of this French company), is easily the most highly automated car-body line in the world.

COMPARISONS

One logical conclusion is that the success—or failure—of U.S. business in its struggle with foreign competitors will depend heavily on what happens to labor costs. "We have figured and figured," Chrysler's Colbert says, "and our experts tell us that 80 percent of the cost of a car is in labor" (including direct labor and the cost of the labor that produces the materials and parts that go into the auto). And the wages run high for the workers—from steel mills to assembly lines—who have a hand in turning out those cars. A Detroit assembly-line worker, for instance, averages near $3 an hour versus 65 to 75 cents an hour for a hand in Volkswagen's Wolfsburg plant. Steel-mill workers make some $3.65 an hour versus less than $1 for their European counterparts.

The steel industry has been dwelling on this theme as it heads toward its labor negotiations. One American Iron and Steel Institute advertisement, for instance, features Soviet steelworker Vladimir Petrov and asks: "Will he take away an American steelworker's job?"

Steel Union President David McDonald damns the suggestion as a smokescreen and throws up a smoke barrage of his own. If all the steel imported last year (1.7 million tons) had been made here, McDonald says, "better than 99 percent of the United Steelworkers unemployed would still be unemployed." The steel union has also taken to advertising in an attempt to convince the public of the importance of a pay boost. Sample ad, directed to auto companies: "Here is our 1959 model [contract]. One billion dollars in new money for your dealers and you."

WORDS AND DEEDS

Foreign competition is sparking more than mere arguments. It has also spurred U.S. businessmen into creating new ways of combating it. Most popular and successful: Setting up shop in the enemy camp. General Motors and Ford have long ranked among the top European auto producers and Chrysler has joined them with its Simca operation. (A good portion of the foreign cars now cluttering up the suburban commuter stations, in fact, are GM's own Opels and Vauxhalls, Ford's oversea models, and Simcas.)

U.S. automen are not alone overseas. National Cash Register last year spent $6.9 million overseas for property additions, most

of it to expand production facilities; the year before, it spent $8.9 million. Burroughs Corp. completed a 337,000-square-foot manufacturing plant in Cumbernauld, Scotland, in 1958. Atlanta's Scripto, Inc. (pens), has six oversea plants. Others hope to join the trek abroad, particularly now that Europe's common market is becoming reality. Elgin National Watch Co., convinced it can't sell U.S.-made watches overseas because of foreign tariffs, has asked Switzerland for permission to set up an assembly plant there. In all, American business had $25.3 billion invested abroad in 1957, against $11.8 billion in 1950.

Another string to the competitive bow is an old American story—the better mousetrap. Now that foreign manufacturers have about caught up with U.S. manufacturing techniques, says Robert A. Brown, sales vice president of Chicago's Borg-Warner International, "our future lies in new technological advances—in design and merchandising."

Diesel locomotives offer one example of what an efficient, well-engineered product can do. Alco Products, for instance, sold $74 million worth of diesels last year, 90 percent of them abroad. Right now, the firm claims 45 percent of the world's mainline engines outside of Europe and the United States. It expects to hold its own as the 80,000 steam engines still puffing around the world are replaced by diesels. In the past 10 years, says a spokesman for General Motors' Electromotive Division, No. 1 U.S. producer, no one has outbid the four U.S. enginemakers (GM, General Electric, Alco, and Fairbanks, Morse).

Most of these firms insist that they can handle the job without help from Washington in the form of higher tariffs (though many would like some kind of insurance or tax relief). Big Steel's Blough, despite his barbed-wire headaches, maintains that "increased tariff protection, in my opinion, is not the basic answer to this problem."

BARRIERS DOWN

Harvard economist Sumner Slichter, who thinks he may have the basic answer, goes Blough one better. Last week, he jolted a congressional committee with the sweeping suggestion that the United States abandon tariffs and all protection. This, he said, would help control inflation by making it tougher to pass on wage increases in higher prices, and hence would stiffen businessmen's resistance to wage demands. It would also put America in a better competitive position internationally.

Whatever the final upshot of increasingly strong foreign competition, some good is bound to come of it. "It will make us aware that our prices are too high," says an official of Chicago's First National Bank. The competition, he argues, is thus "a healthy one—if we believe what we are taught about competition. We'll have to change our methods to meet it."

[From the Pittsburgh Press, Mar. 29, 1959]

FOREIGN GOODS NOW POURING INTO UNITED STATES; HIGH LABOR COSTS, TAXES BLAMED FOR TRADE SHIFT

(By Ed Kandlik)

The United States, once the scourage of world trade with the outpouring of its low cost mass production factories, has become a lush market for foreign producers.

In autos, tractors, steel, and oil, this Nation once put the rest of the world to shame.

Today foreign autos sell in Detroit several hundred dollars below American makes, foreign tractors have appeared at $300 below American counterparts and foreign steel is taking a big bite of the market for fencing and construction products.

The tide of foreign oil was successively retarded by voluntary import controls and mandatory Government controls, aided by a small tariff.

FOREIGN PLANTS EXPAND

For some manufactured products this invasion of the United States has been slowed by the ability of foreign factories to produce. This market is so big foreign producers have had trouble getting a real hold on it.

Volkswagen for years limited the number of cars it would sell in the United States. It wanted to protect its other overseas markets. Now it is expanding.

U.S. demand for foreign steel has become so avid the last several months that buyers abroad have driven prices up by 10 to 20 percent.

Charges that the United States, through its spiraling of wages and continued high postwar taxes is pricing itself out of world markets appear to be well substantiated by developments of the last 6 months.

U.S. products are not only being priced out of overseas markets but more and more foreign made items are enabled to compete successfully in this market.

Hourly wage costs in the American steel industry now average about $3.22. In Germany they are slightly more than one-fourth as much—89 cents.

In Japan the steelworker gets 46 cents an hour. With such low-cost labor, the Japanese can buy scrap in the United States, ship it to their country for processing, ship it back and still sell at a profit.

In effect, they carry Newcastle coal back to Newcastle.

TAXES A FACTOR

High taxes, both at the local and Federal level, must not be overlooked as a factor in costs. To make up for inadequate depreciation charges in an inflationary economy, the large steel companies say they must make large profits. But they have to make $2.08 to keep $1 because of the 52 percent Federal income tax.

A look at the U.S. 1958 export-import figures doesn't give much cause for alarm. Exports of $17.9 billion compared with imports of $12,800 million leading to a so-called favorable trade balance of $5,100 million. Of this favorable balance, about $1,500 million was accounted for by foreign aid.

The drop of $3 billion in 1958 exports is in part explained by an abnormally high level in 1957, when domestic oil was sent overseas to alleviate the Suez crisis.

But the total of imports went down only $200 million. They should have dropped more markedly.

The trouble is in manufactured goods, which long have comprised the vast proportion of U.S. dollar exports but have been a small, and at times almost negligible, proportion of our imports.

JUST AS EFFICIENT

Many American manufacturers insist European plants are fully as efficient as ours for mass production purposes. While they use a higher percentage of labor, the American manufacturer admits he would do the same thing if he could obtain labor as cheaply.

Facing another round of steel wage rate increases and prices, U.S. manufacturers are anticipating further increases in their already disproportionate costs.

[Worthington, Oil City (Pa.) Division, Newsletter, March 1959]

In the last issue of our newsletter we listed some of the companies in this country which are direct competitors of ours.

We also face keen foreign competition. Some of the effects of this competition were described in an article published in the February Worthington Management Newsletter. We are reproducing that article on the inside pages for your information.

Foreign competition has been greatly publicized in the last few months. Probably we see the most direct evidence of it in the increasing number of small imported cars sold in America. We, however, have been unable to sell our Worthington products made at Oil City in overseas markets, particularly in Europe. Our costs and prices are simply too high to compete with European manufacturers in their home markets.

The best weapons we can use to meet the challenge of foreign competition in America are to increase our productivity and maintain our employment costs at realistic, competitive levels. In doing this we will insure continued work for our shops and so strengthen our job security.

WILLIAM F. WEINSAID,
General Manager.

SO WE HAVE OVERSEA COMPETITION, TOO

The Tennessee Valley Authority's recent acceptance of a foreign firm's bid for three generators drew much publicity throughout the country.

But TVA's action in awarding the 60,000-kilowatt generators to a Swiss manufacturer on its low bid of $2,639,000 drew not only headlines. It added to the growing realization that American industry is pricing itself out of world markets—and its home markets to boot.

Allis-Chalmers, a competitor of Worthington, was one of the concerned parties. This company had submitted the lowest bid of any American firm.

But A–C's bid was $4,290,180—or more than 60 percent higher than the Swiss firm's price.

This development, which could have meant employment for several hundred Allis-Chalmers employees on layoff, is not an isolated one on the American economic scene. Loss of business to foreign manufacturers, located in Great Britain, France, Italy, West Germany, and elsewhere, is increasingly affecting American firms, including our own.

AMERICAN AID OVERSEAS

Now for some years the United States has engaged in a massive program of pouring American dollars and know-how into foreign countries to raise the economic standards of underdeveloped or war-ravaged nations. As a result, new plants and equipment and modern methods have made many Western European manufacturers as fully efficient and mechanized—with comparable or even better tools—as our own firms here in America.

WAGE RATE DISPARITY

Meanwhile, while this rapid progress toward matching American technology has been going on apace, American employment costs (wages, salaries, and benefits paid to American workers) have risen so disproportionately over those generally prevailing elsewhere in the world that we have, for all practical purposes, become a high-cost producer in many lines of American products.

In a recent speech Ernest R. Breech, chairman of the board of the Ford Motor Co., cited this example of the problem: The cost per hour for purchasing automotive tools and dies from independent producers in the Detroit area is $7.90 per hour, as compared to $3 per hour in England, as low as $2.38 per hour in France, and $1.60 per hour in Milan, Italy.

In another recent speech delivered by E. J. Hanley, president of the Allegheny Ludlum Steel Corp., these figures were cited on wage rates paid in western European steels mills: 70 cents per hour in West Germany, 89 cents in England, and 69 cents in France.

Now let's be absolutely frank about where America's high production costs are taking us. They are leading us, rapidly, to the point where we could lose our ability to compete against aggressive, modern foreign firms in the sale of American-made products, both at home and abroad.

Restrictive measures of one type or another that frustrate world trade are not politically or economically feasible answers to this problem. Rather, the answer lies in the

ability of American industry to remain competitive in design, quality, cost, and price with foreign manufacturers.

STRENGTHENING JOB SECURITY

As a company, our part in meeting this challenge is to intensify our efforts to do things more efficiently through the use of better machinery and cost-saving techniques and methods. As employees, our part is to recognize the need for competitive costs and prices and for maintaining employment costs at realistic, competitive levels.

In so doing, we will be working for an economically sound future for ourselves by strengthening that most essential element in our lives: job security.

Missiles Are Not Everything

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD an editorial which appeared in the March 1959 issue of Machinery. This editorial was written by Mr. Charles O. Herb, editor of Machinery, and is entitled "Missiles Are Not Everything":

There is real danger that in the excitement about the development of missiles and the race for supremacy in space, the importance of keeping this country in the forefront industrially may be overlooked. Should Russia succeed in outstripping the United States productionwise during the next decade, as predicted by Khrushchev, the situation could be serious indeed. That this prediction cannot be discounted as an idle boast becomes evident when we realize that Russian industries do have one distinct advantage over American concerns.

That advantage stems from the fact that Russia, having started practically from scratch as an industrial nation, has its factories outfitted almost completely with new manufacturing equipment. Future expansion will be based on the most modern machinery available from time to time.

On the other hand, a great number of American factories are knee deep in obsolete and semiobsolete machinery. Automobile and aircraft plants in general operate with modern equipment but the plants of other industries less prosperous or not government subsidized have countless machines over 20 years old.

This is a serious plight because of the burden that existing tax laws place on the financing of new equipment. The Bureau of Internal Revenue allows depreciation to be charged only on the purchase price of equipment and it must be charged over too long a period of years. More important, however, the effects of inflation on replacement costs are completely ignored.

Most machinery costs approximately three times what it did in 1940. This means that a machine tool which cost $100,000 that year would be priced at $300,000 today. Where must the extra $200,000 come from when a machine is to be replaced?

To buy replacement equipment for such a machine out of earnings, a company must make around $400,000 extra and pay an income tax of 52 percent. Not until then can equipment be depreciated in accordance with today's costs. If a concern plans extensive replacement of aged machines, it has to earn many extra millions of dollars.

Under such unrealistic tax regulations how is our Nation going to expand industrially to keep pace with the Soviet countries? We must not be deluded by our apparently large annual expenditures for new plants and equipment. In 1956, for example, this figure was $39,200 million. Ninety percent of this amount was for replacement, not expansion. Ten percent expansion of production will not enable us to keep ahead of the Red countries at the rate they are going.

Hitler proved how effective adequate depreciation allowances could be in stepping up productive efficiency before and during World War II. By adopting more realistic depreciation allowances, the Government could do much to increase our productive efficiency and thereby help to insure continued economic supremacy for this country. Unlike the vastly expensive defense program, more rapid depreciation would cost the Government nothing because, in the end, the same amount of taxes would be collected.

CHARLES O. HERB,
Editor.

Letter From Utah Water and Power Board Upon Receipt of Annual Report on Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter which I send to the desk.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE STATE OF UTAH,
UTAH WATER AND POWER BOARD,
Salt Lake City, Utah, February 9, 1959.

The Honorable WALLACE F. BENNETT,
U.S. Senate, Washington, D.C.

DEAR SENATOR BENNETT: I wish to acknowledge your thoughtfulness in supplying us with a copy of Senate Document No. 8, which is the annual report of the Department of the Interior on the Colorado River storage project.

In your letter you invite comments, and I would like to call to your attention a matter which has caused us some concern. The item to which I refer is found in exhibit B of the document, under "Contributions in aid of construction," wherein the State or Arizona is shown as contributing $1,635,000, the State of Colorado $35,000, the city of Los Angeles $60,000. No mention is made in this exhibit of any of Utah's contributions, and I would like to state for your information that records in the regional IV office of the Bureau of Reclamation, Salt Lake City, indicate that the contributions by the States of the upper basin, in support of project investigations, are as follows: Utah, $373,355.40; Wyoming, $1,666.57 Colorado, $60,610; New Mexico, $2,321.16. In addition, the State of Utah has made expenditures on the Glen Canyon Dam access road, and the Flaming Gorge Dam access road. As of January 22, the State of Utah had expended $460,309.27 at Glen Canyon, matching Federal expenditures of $3,289,303.13, making a total expenditure of $3,749,612.40. We contend that the heavy expenditure by the State of Utah, and the early action taken on these matters were, in large part, reflected by the low bids for the prime contract at Glen Canyon.

Similarly, on Flaming Gorge, State expenditures to January 22 have amounted to $5,488.09, matching Federal funds in the amount of $102,130.82, for a total of $107,-618.91.

We do not seek to minimize the contributions made by the States of Arizona, Colorado, and California, but we feel that at some appropriate place the record should show the contributions made by the State of Utah in connection with this project.

Very truly yours,

JAY R. BINGHAM,
Executive Director.

Federalization of Public Schools

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. SMATHERS. Mr. President, for 2 years prior to World War II it was my great pleasure to work as an assistant in charge of the Miami office, for the Honorable Herbert S. Phillips, then the U.S. attorney for the southern district of Florida. My association with Mr. Phillips was one of great benefit to me. I learned a lot from him as a lawyer; I learned a lot from him as a man and a distinguished citizen of our State.

With the advent of the Republican administration in Florida Mr. Phillips was retired; he is now over 80 years of age and is a most remarkable man, in that he continues to maintain a lively interest in the affairs of our State and Nation.

As one would guess for a man of his background and past experience, he has strong convictions with respect to the segregation problem in our Florida schools. Recently Mr. Phillips wrote an article which was printed in part in the Tampa Tribune and which he has asked me to introduce into the RECORD in full. As usual, Mr. Phillips presents his views with vigor and persuasiveness.

Mr. President, I ask unanimous consent to have this article entitled "The Federalization of Public Schools—the Organizers, Promoters, and the Objective," by Mr. Herbert S. Phillips, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FEDERALIZATION OF PUBLIC SCHOOLS—THE ORGANIZERS, PROMOTERS, AND THE OBJECTIVE

(By Herbert S. Phillips)

The organization of a Federal Board of Education for the control of the operation of public schools and colleges in the United States was first made known to the public at its first public session held in the U.S. Supreme Court room, on May 17, 1954, at Washington.

Its organizers and promoters were the leaders of the NAACP, the Attorney General of the United States, Mr. Brownell, of New York, and other politicians and agitators who had been working to accomplish such a goal for many years.

The four public school segregation cases of *Brown* v. *Board of Education* (347 U.S.,

p. 493) and three other companion cases that had been consolidated, had been argued before the Court, but had been taken off the calendar without any decision being rendered. This condition had existed for about 2 years. The attorneys for the NAACP and their aiders and abettors were urging and demanding that said cases be put back on the calendar and set down for argument again. In the meantime Chief Justice Vinson died. The attorneys for the NAACP and their backers, including the Attorney General, realized the importance of having a Chief Justice who was against segregation in our public schools and colleges.

Mr. Brownell was the protege of Governor Dewey of New York. Mr. Warren had delivered the California electoral vote to General Eisenhower. Governor Dewey, who is credited with securing the nomination of General Eisenhower, was indebted to Mr. Warren for the California electoral vote going for General Eisenhower. The result was the appointment of Mr. Warren Chief Justice by the President. His confirmation was held up. Mr. Warren had never had any judicial experience.

Mr. Justice Vanderbilt of the Supreme Court of New Jersey, with an outstanding record as an attorney and judge, was preferred by many of the Senators, which resulted in the confirmation of Mr. Warren being held up. Mr. Brownell then flew to Sacramento, Calif., and conferred with Mr. Warren, who evidently assured him that if his appointment should be confirmed, his first judicial act would be, as it was, to order said school segregation cases placed back on the calendar and set down as the first cases to be argued.

Mr. Brownell then flew back to Washington and made known to the President and his steering committee the result of his conference with Mr. Warren. The confirmation of Mr. Warren immediately followed. Two months thereafter, to wit: on May 17, 1954, the said self-appointed Federal Board of Public Education for all public schools and colleges in the United States declared that "Segregation in all public schools and colleges must be abolished in order that Negro children be freed of an inferiority complex and thereby more properly fitted to adjust themselves to their environment."

Immediately after said edict was announced, Mr. Brownell flew back to California, and in a public address there on June 3, 1954, declared: "Communist charges of racial intolerance in the United States have been answered directly by the Supreme Court's antisegregation decision."

The question that naturally arises is why was the U.S. Attorney General so much more concerned about what the Communists thought than he was about the preservation of States rights?

In an effort to justify their action in taking over the operation of our public schools and colleges, Mr. Chief Justice Warren and his eight amen associates conjured up in their minds a fabulous interpretation of the 14th amendment based on the socialistic doctrine of the Swedish Socialist, Myrdal, who was brought to the United States by Carnegie Foundation to write a treatise on our race problems, who showed contempt for our Government when he said in his book:

"The Constitution of the United States is impractical and unsuited to modern conditions," which is exactly what Mr. Justice Warren and his eight associates held, thereby circumventing and annulling section 1 of article I and articles V and VI, and amendments IX, X, and XIV of our Constitution.

See Analysis of the Constitution of the United States, annotated to January 1, 1938, Senate Document 232 and cases cited on pages 717–722 and pages 762–770. Also the "Vanishing Rights of the States" by Joseph M. Beck, LL.D., one time Solicitor General of the United States, and also the briefs filed by Mr. John W. Davis and his associates in the school cases in which the edict of March 17, 1954 was issued, and the lectures of Chief Justice Hughes delivered to the law students of Columbia University in 1927, on the Supreme Court and its powers.

The nine men constituting the "Politboro" of Russia also valued the opinions and teachings of this Myrdal so highly that they appointed him Executive Secretary of the United Nations Economic Mission for Europe as a condition for Kremlin participation, but he became so blatant in his advocacy of socialism, which is an open door to communism, the members of the United Nations Association decided that the only safe thing to do for their political welfare was to have him resign, as they did.

In proof of my contention that segregation of the two races in our schools, churches, and homes should be preserved, and that there is no logical reason to the contrary, I submit the following:

In 1906, the Honorable Cabot Lodge, Ph.D., LL.D., as editor in chief, and 41 associate editors selected from the leading universities of the world, to wit: Oxford, Hopkins, Berlin, Cambridge, Wellesley, Kings College, London, Cornell, Yale, Brown, Wesleyan University, and the Director General of Statistics in India, prepared and had published the "History of Nations." The same was critically reviewed before publication by a number of outstanding writers and historians, all of which shows that the recitals, figures, and conclusions reached and set forth therein can be relied on as correct.

In volume 24, pages 873–4 and 5 of said history, they state with reference to the civil rights of the Negro the following: "In acquiring, holding and disposing of property, in entering into contracts, in making use of the courts, in his personal freedom, in the right to engage in any occupation, business or profession, that his inclination or capacity may allow; in short, in the right to all the benefits of equal protection of the laws, he is on equal equality with the white man." "In the benefits of the public school system, he shares equally with the white man, although he bears but an insignificant portion of the burden." "Most communities in the South today maintain public schools for the benefit of colored children and there is not a Southern State that does not maintain a university or normal college for the higher education of the young men and women of the colored race."

"It is only in social and political matters that it may be claimed that the Negro may be at a disadvantage. The Anglo-Saxon refuses to mingle with him on terms of social equality. But this is a matter that cannot be changed by legislation. The futile attempts of the reconstructionists to do this show how unavailing such legislation is."

Immediately after the edict was proclaimed, the press reported that Mr. Justice Jackson, now deceased, said: "Well, we have rendered a decision which will be the subject of litigation for the next 50 years." He could just as truly have added: or, as long as efforts are made to enforce it. His statement convinces me that he did not believe that their edict was constitutional. He knew, as did the other members of the Court, that it was a plan to destroy the last citadel of States rights; yet he, along with the other associate members, yielded to the demands of the NAACP and the hypnotic influence of the Chief Justice, to abolish the equal facilities plan that was working with satisfaction to all except the political leaders of the NAACP and their aiders and abettors.

The effect of the edict has been to inspire and create racial prejudice that had not previously existed and intensify that already existing, but dormant, and has also inspired acts of violence against property and life, which will continue in a greater and more serious degree, regrettable as it will be, as long as the Supreme Court seeks to enforce its edict, which has also inspired the leaders of the NAACP to declare with boldness and confidence, that they will have the Supreme Court declare that the laws of every State prohibiting the marriage of Negroes and whites, violates the 14th amendment because such laws deprive both races of the right of choosing a wife or a husband.

In time the NAACP and its political aiders and abettors will demand, through the Supreme Court, that every public school have as many Negro teachers as white, male and female, and that the white pupils must sit, eat, recite, play, and associate with Negro pupils in all activities of the school without any discrimination in any respect against the Negro pupils.

In short, the teachers in charge will be prohibited from seating or classifying Negro pupils in groups to themselves for any reason, and that if such is done the NAACP leaders will have a Federal judge issue a mandatory injunction against the teacher to abolish such discrimination at once, or be adjudged in contempt of Court, as has been done in connection with the operation of bathing beaches and pools, and golf courses, and everything supported and maintained in whole or in part by a city, a State, a county or an agency thereof.

Every member of the Court knew when they issued said edict that there would be thousands of white children, especially in the southern States, if it should be enforced, that would be denied a public school education unless they attended such schools with Negro children.

They also knew that white parents who would be financially unable to send their children to private schools, would, in desperation, yield to the cowardly brainwashing process approved by the Supreme Court, rather than have their children from 5 to 15 years of age, deprived of a public school education, at the most critical period of their lives.

Booker T. Washington, president of the Tuskegee Industrial Institute for Negroes, and the greatest leader, in my opinion, that his race has ever had, in a great speech delivered by him at the opening of the Cotton States Exposition, at Atlanta, Ga., on September 10, 1895, said:

"The wisest among my race understand that the agitation of questions of social equality is the extremest folly."

He had the welfare of his race at heart, which was his chief concern in preference to self-aggrandizement and self-glory. But the leaders of the NAACP of today, their aiders and abettors, including the Supreme Court, say that his teachings are out of date and cannot and must not be followed today.

No one can be justified in asserting that the nine men who promulgated their said edict are wiser and have a higher regard for the preservation of our Government than the learned men who framed our Constitution, and the hundreds of lawyers, judges, and learned writers who have interpreted and expounded it and the amendments thereto prior to May 17, 1954.

Those who advocate the gradual method of desegregation have evidently overlooked the fact that it is the same brainwashing methods that the Communists rely on to communize the world.

The gradualists are also overlooking the fact that gradual means "by degrees." They are also disregarding the well-known fundamental maxims, viz: "Environment speaks louder than words and in time is more effective and lasting." "Let me direct and control your thoughts, and I will control your actions." "As a man thinketh, so is he." "Train up children in the way they should go, and when they are old, they will not depart from it."

Justice Frankfurter, who was the policy adviser of the NAACP, with Thurgood Marshall, a Negro attorney as his assistant, for the 10 years preceding his appointment to the Supreme Court recognized the truth of

the above maxims when, in his opinion, given in the Little Rock case, he said: "local customs, however hardened by time, are not decreed in heaven. Habits and feelings they engender may be counteracted and moderated. Experience attests that such local habits and feelings will yield, gradually though this be, to education."

In further proof of the correctness of my position, I submit the following opinions given me in letters I received from able and fearless judges having the courage of their convictions, to wit:

Judge Samuel H. Sibley, of Marietta, Ga., now retired after years of service as U.S. district judge and as a member of the Court of Appeals of the Fifth Circuit, in his letter to me on July 25, 1954, said: "I have your article on the recent decision of the Supreme Court on the segregation question. I heartily endorse it and agree with what you say. The decision seems childish to me and, what is worse, a misapprehension of judicial power and principle that is alarming. The language of the 14th amendment does not fit education or require the overruling of the Plessy case. The tendency of the Court to make statutes and the Constitution mean what they think will be best is alarming to me. In the Florida case of Aubeteit (176 Fed. 2d 438), I boldly refused to enforce an opinion of the Supreme Court in said case on the ground that the Court had, by judicial legislation, added to and changed a criminal statute. My fellow judges agreed that this was true, but thought it unbecoming for them to do so. Therefore, I just had to dissent, which I did."

Judge Terrell, a long-time distinguished member and chief justice of the Supreme Court of Florida, in his letter to me on November 26, 1954, said:

"I thank you for your letter with the enclosures, all of which I have read with great interest. The more I think about the Supreme Court's opinion, the more I am convinced that it is unfounded in law; and not only that, but without any support in fact to fortify it. Anyone who has studied law, even though he be recently from a law school, is bound to come out at the point that the Court voluntarily went out and cooked up a reason to dispose of the matter on grounds that are not in the lawbooks and have no support except from books of sociologists and socialized reformers that know nothing about the practicalities of the situation."

Judge Dozier A. DeVane, U.S. district judge of Florida, in a letter addressed to me on August 3, 1954, said: "I have read your article on segregation and heartily agree with your view about the decision of the Supreme Court on the question. I consider the 10th amendment as important and as binding on the Supreme Court as the 14th amendment, and I think it is stretching the 14th amendment and negativing the 10th amendment to make the 14th applicable to the States and their administration of the school system."

U.S. District Judge Edgar S. Vaught, chief judge, Western District of Oklahoma, on March 17, 1955, in a letter to me, said: "I read your paper on the segregation question published in the Tampa Tribune on July 18, 1954, and I want you to know I agree with you 100 percent in your conclusions."

President Eisenhower, when he was a candidate in 1952, in a speech said: "The Federal Government did not create the States of this Republic. The States created the Federal Government. The creation should not supersede the creator, because if the States lose their meaning, our entire system of government loses its meaning, and the next step is the rise of the centralized national State in which the seeds of autocracy can take roots and grow."

He restated the above fundamental truth before a conference of Governors at Seattle in 1953.

After being elected and hypnotized and brainwashed by Chief Justice Warren and other aiders and abettors of the NAACP, he now advocates the sowing of the seeds of autocracy by recommending that the Congress appropriate $2½ billions for appeasing public schoolteachers and State and county school officials. To contend that such an appropriation can be used for such a purpose and leave the operation and control of public schools to the respective States and their counties, is to manifest an inexcusable ignorance of a deliberate effort to aid Federal Government officials to secure supreme control of all public schools and colleges, because it is well known that when the United States gives financial aid in support of any project or business, it demands and exercises absolute control of the project or business whatever it may be.

It is my opinion, after diligent research and study, that the only constitutional, fair and peaceable plan for the operation of our public schools and colleges is the seperate, equal facilities plan that had operated peaceably and satisfactorily until the NAACP political agitators succeded in stirring up dissatisfaction as dictators of the Negroes, and securing the said unconstitutional edict from the Supreme Court to aid them.

I know of no more destructive blow that could be dealt segregation in our Florida public schools than the closing of the Negro A. & M. College in Tallahassee, as advocated by the present Governor of Florida, because if that should be done, as he well knows, the students would have to be sent to the university at Gainsville, and the teachers turned out without employment, unless the integrationists should by some form of manipulation work out a part time plan of substitution, which would add fuel to the flame. Those who advocate the closing of existing colleges for Negroes cannot at the same time consistently, to say the least, claim that they are for preserving segregation in our public schools. If the money spent by, and in aid of, carrying out the NAACP plan to destroy segregation in our public schools and colleges had been spent in establishing and endowing schools and colleges for Negroes, something worth while and permanent would have been accomplished for the proper education of the Negroes instead of a retrogration that will continue indefinitely.

My contention is that the separate-equal-facilities plan is the only plan that will result in a fair and friendly rivalry based on the mental attainments of the two races in the elementary branches of education and the arts and sciences, athletics and initiative as advocated by Booker T. Washington.

The question that naturally arises is: How long will the Supreme Court continue to exercise such judicial tyranny? My answer is: as long as the judges of the lower Federal courts and the judges of the State courts and the county and State school authorities and the members of the American and State Bar Associations and those who privately declare they are for segregation, worship at the shrine of an unconstitutional edict on the pretext that it is the "Law of the land."

Better Forecasts—Better Farming

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 13, 1959

Mr. SMITH of Mississippi. Mr. Speaker, thanks to the foresight of the Department of Commerce Appropriation Subcommittee, a pilot weather program has been approved for the Mississippi Delta as a means of improving agricultural weather services. The program is now beginning its first full crop year of operation.

An outstanding meteorologist, Mr. Jack Riley, is in charge of the service and has done a wonderful job of explaining its value to the farmers of the area.

The Christian Science Monitor recently published a brief article outlining the work of volunteers who are assisting in this pilot program. Under unanimous consent, I am including this article:

BETTER FORECASTS—BETTER FARMING

A Mississippi small businessman may not be doing anything to change the weather, but he certainly is doing something with it. Oliver Woods, of Tunica, Miss., is 1 of 10 voluntary weather observers who are helping to chart a pattern for vastly improved weather forecasts for farmers.

This network of weather observers in the Mississippi Delta area is part of a pilot weather program established by Congress last summer to look into ways and means of improving agricultural weather forecasts. In addition to setting up this network of miniature weather stations, the Weather Bureau expanded its existing facilities in Memphis, Tenn., and Jackson, Miss. A research agronomist began work at the Delta Branch Experiment Station, Stoneville, Mass., to study the relationship between plantlife and weather conditions.

DEPENDENT ON WEATHER

Few people are as dependent on the weather as the farmer, since his production efforts must be tailored to fit its whims. Improved information can't change the weather, but farming operations can be altered to adjust profitably to the weather.

The sprawling Delta & Pine Land Co., Scott, Miss., one of the world's largest cotton plantations, offers an outstanding example of how weather information and farming practices can be combined successfully.

BETTER FORECASTS NEEDED

The 30-day Weather Bureau forecasts are used in estimating the amount of feed pastures will produce in early spring, making plans for land preparation, deciding on planting dates and methods, timing of fertilizer applications, and estimating needs for harvesting equipment. The 5-day and daily forecasts also are followed closely in timing a multitude of seasonal production practices, such as insecticide and herbicide applications and irrigations.

While present forecasts are generally helpful, the farmer still needs better forecasts. The pilot weather program is designed to uncover ways of giving the farmer more of the weather information he needs in his own particular area. Keymen in this program are Mr. Woods and his nine fellow weather observers.

The bulk of their work consists of gathering data, such as the evaporation rate, rainfall, wind direction and velocity, temperature, and humidity, and relaying this information to a central forecasting point. They keep track of the forecasts issued and compare them with actual weather conditions.

As a side effort to serve the community, Mr. Woods provides this basic weather information to farmers and businessmen in his area when they need it for various business operations.

Paul H. Kutschenreuter, special assistant to the local chief of the U.S. Weather Bureau, said: "It is giving us a chance to put into practice many of the ideas of forward-looking meteorologists and agriculturists for better utilization of weather and weather information in farming."

The Second Battle of Gettysburg: The Fight To Save the Battlefield From Unsightly Signs and Disfiguring Commercialization

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. YARBOROUGH. Mr. President, the battle of Gettysburg witnessed the high tide of Confederate courage and Union determination.

A second battle of Gettysburg is now being fought. It is to preserve the land on which this battle was fought, the land and the action which inspired President Abraham Lincoln to remark:

The world will little note or long remember what we say here, but it can never forget what they did here.

Today some of this hallowed land is being covered by a variety of unsightly signs and uninspiring type of buildings.

More and more land of special historic and scenic value in the United States is coming under private ownership. This means that to obtain that land for public enjoyment in the future, our Government will have to pay out great extra sums of money. However, if the land is acquired now, in many cases the price will be much lower.

I feel this country should obtain land for these historic spots for the education of everyone. Our heritage inspires and illuminates our lives.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Jean White which appeared in the Washington Post and Times Herald for Wednesday, April 8, 1959, under the heading, "The Second Battle of Gettysburg."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SECOND BATTLE OF GETTYSBURG

(By Jean White)

If they restage the Battle of Gettysburg on the centennial 4 years from now, some of Pickett's men may be making their charge through a custard stand or souvenir shop.

And the Yankees, retreating from the first day's encounter, would have to dodge through a brand-new housing subdivision amid splitlevels and ramblers.

And the laterday Gen. George Meade may have to hold a council of war in headquarters within 100 yards of a miniature golf course and manmade fantasyland.

New invaders are threatening to overrun parts of the hallowed and consecrated land where 160,000 men from the North and South fought a battle that helped determine a nation's destiny. The modern invaders are suburbia and commercialism. They already have won some firm footholds on the battleground.

To head off the advances of roadside stands and close-packed housing developments, the National Park Service is asking Congress for $750,000 for fiscal year 1960 to buy up 350 strategic acres around the Gettysburg National Military Park. The House whacked off all money for Civil War battlefield land acquisition.

The NPS is pinning its hopes on the Senate for restoration of the House-deleted funds. Hearings probably will be held this month before a Senate appropriations subcommittee.

It is going to be a race against time and the blight of progress.

An 80-acre tract of land—where most of the first day's action was fought out on July 1, 1863—will probably go on the market July 1 if the NPS doesn't get its land money. This is part of some 150 acres of farm and grazing land owned by Adams County. The county has given up agricultural operations at the county home and wants to sell the land to raise money for a home building.

Unofficially, the county commissioners have said they will hold off the sale until July. But after that, they say, they'll have to open up the market to other bidders because the county needs the money. The 80 acres of the first day's battle would be a perfect spot for a housing subdivision. The county has no zoning ordinance to control the type of such a development.

"We want the Government to have it," one of the commissioners said with a shrug of his shoulders last week. "But we also have to look out for our own problems. We can't wait forever."

Also on the market is the 125-acre Meals farm near the county home lands. Planted firmly in the center of the field is a sign: "For sale; building lots." Up to now, none has been sold, reports Franklin Bigham, one of the owners.

"The way I understand it," he said, "the Government can't even talk about the land until it has the money to buy it."

"If we lose those two tracts," says Gettysburg Military Park Superintendent James B. Myers, "the first day's battle will have evaporated. What we want is a perpetuation of the scene of 1863. As long as the county farmed the land, we had no worries. This was how it was at the time of the battle."

NPS, Myers emphasizes, doesn't want the land to raise more monuments (Gettysburg had 2,390 of these already, most the gifts of States and Civil War units). Most of the acres would be leased back to farmers to till the soil and rotate crops as others did before them back in that July of 1863.

Today the famous peach orchard, owned by the Government, still blooms and bears fruit under the care of one of the leasees.

NPS now owns 2,762 acres of Gettysburg battlefield land. Over the next 3 years it wants to buy 691 additional acres at a total cost of $2.4 million. Some of this money would go to clear out souvenir stands, beer parlors, and junkyards already edging on the battlefield site, particularly along Route 15 south to Washington.

Only last year the NPS bought 3.8 acres of land along the old Emmittsburg Road (Route 15) where a motel was already under construction. The price was $18,665 to save land over which Pickett's troops charged. Last week a bulldozer was at work covering over the foundations of the motel. The Government will lease it for farming.

The case for history at Gettysburg has to be made against a progressive town's growth and a township's need for taxes.

Businessmen in Gettysburg would like to see some light industries like electronic firms come to town to bolster the economy for the 8,000 residents. But they also recognize that tourism—some 800,000 persons came to the battlefield last year—is in itself a big industry.

The tax argument comes from Cumberland Township, where the battlefield site lies. The township is digging for school tax money, and a housing subdivision on the county home land, for instance, would pad the tax base. As county land, it hasn't been taxed up to now.

But, for the most part, residents apparently would like to see the NPS get the land. Most owners are willing to sell at a fair market price. But they say they can't wait forever and pass by good moneymaking opportunities.

Waukesha, Wis., Daily Freeman: 100 Years of Progress

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. KASTENMEIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to congratulate an outstanding Wisconsin newspaper which celebrated its 100th anniversary on March 29. It seems to me only fitting that we pause long enough today to pay our respects to this militant, dedicated and persevering newspaper, the Waukesha (Wis.) Daily Freeman.

This newspaper, founded 100 years ago on March 29, 1859, is marking its centennial with a series of special editions which depict the growth of the city of Waukesha, the County of Waukesha, and the Waukesha Daily Freeman.

The year 1959 is a particularly fitting time for the Waukesha Freeman to observe its centennial, because at no time since those first years of this newspaper has our country faced as serious a fight for universal recognition of individual civil rights as it does today.

For 100 years the Waukesha Daily Freeman has adhered to the principles of the abolition movement, and I might add that these principles are no less important today than they were 100 years ago. Through the years we have made considerable progress in the area of human rights, but recent newspaper headlines prove to us that we have not yet achieved in practice the theory of equal rights for all Americans, for all human beings.

The Waukesha Daily Freeman has made a major contribution to our democracy for its strict adherence for 100 years to its founding principles. The fact that this strength is still alive was well illustrated several years ago when the Daily Freeman, published in a community of some 28,000 residents, was nominated for a Pulitzer prize. Nomination for this coveted award throughout our land was based on the Waukesha Daily Freeman's ceaseless efforts to gain public access to local government records and meetings. In addition, this publication—though primarily local and State in news interest—has time and again stood in favor of this same free access to information at the Federal level. Its praiseworthy stand deserves the support of all persons interested in good government—at local, State, and National levels.

I wish to add only that it is my sincere hope and desire that the Waukesha Daily Freeman continue to be equally dedicated to the highest traditions of journalism in a free and democratic society for the next 100 years. This is a newspaper

which has fought for a full century for the rights of all human beings, and I have every faith in the leadership of its publisher, Mrs. J. H. Youmans. I know it shall continue to adhere to its founding principle for the next 100 years.

My heartiest congratulations go to Mrs. Youmans and the Waukesha Daily Freeman, and I know that my 435 colleagues in Congress join me in this greeting.

Government Research Laboratories Are a Waste of Money and Talent

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. OLIVER. Mr. Speaker, the furor caused by the Soviet achievement in launching the sputnik led to an agonizing reappraisal of our educational and scientific programs. It seems to me that the status of the science of oceanography needs similar reappraisal. Government laboratories have been criticized for their lack of effectiveness in the field of basic research. In view of the urgent necessity for expanded basic and applied efforts, something must be done to improve our Government approaches in these fields.

In recognizing the necessity for increased expenditures to promote an expanded program of oceanography, we must also emphasize elimination of the defects in the administration of our present program. We must be assured that additional expenditures in the field of research will be used to their best effect. Certainly, a comprehensive review of all our present expenditures for oceanographic research is required; however, we must not allow penny wise, pound foolish budgeting to becloud the basic necessity for additional concentration in this vital scientific field.

The following article, originally published in the New Bedford, Mass., Standard-Times, indicated the enormity of the problem our Government faces in revitalizing our basic scientific research programs:

SEA BATTLE 1958: KEY TO SURVIVAL, VIII—GOVERNMENT RESEARCH LABORATORIES ARE A WASTE OF MONEY AND TALENT

(By Everett S. Allen)

The Defense Department ought to get out of the basic-research business; it has a long record of wasted dollars and few results. Its laboratories, of extremely uneven quality, lay heavy emphasis on engineers, rather than scientists. The latter produce ideas; the former put ideas into application. In recent years, most U.S. Defense Department money has gone to practical application rather than into the critically important fields of new thought.

This is what many of the country's leading oceanographers, and other earth scientists, say privately and would say publicly if they didn't hope for Federal funds to insure their continued existence.

CIVILIANS CREDITED

But others say it publicly. Senator MANSFIELD, Democrat, of Montana, plans to recommend that all the armed services should be relieved of their responsibilities in research and development.

History reveals the reason. Nearly all this country's weapons, including the plane and submarine, and most of its communication and detection systems and firearms, have been discovered and developed by civilian agencies.

The Government needs prodding to be reminded of this; sputnik helped to do so—more U.S. funds ought to go into basic research which is where the ideas behind the weapons and systems originally came from.

Senator FULBRIGHT, Democrat, of Arkansas, commented: "The Russians, brutal though they are, have made their greatest progress of all in the field of educational and basic research. But the United States has developed a society in which truckdrivers, bricklayers, and factory workers are often better paid than professors, and in which an Elvis Presley makes more than the President."

U.S. LABS UNEVEN

The matter of Government laboratories is a touchy subject; they are very uneven—some good, some no good at all. Most Government labs, in the words of a topnotch U.S. scientist, "deal with gadgets that anybody could build, but they aren't good at getting new ideas. Most new ideas come from private laboratories."

A lot of the routine work which should be done by Government laboratories is farmed out to private labs, preventing the latter from getting on with the necessary basic research.

Government laboratory overhead is fantastic, compared to that of private institutions. Most private-lab research scientists don't want or need many assistants. Most private labs try to get as many full professors as possible, and as few janitors as they can get by with.

But in civil service, one's rating depends on how big an empire one can build up, so Government labs—where the pay scale depends on numbers of personnel—hire lots of janitors and few scientists. Any job costs a lot of money and, in many cases, takes a lot of time to do, too. There are plenty of Government officials with science money to spend who won't give it to Government labs because they know their dollars will go a lot further in private organizations.

VIE FOR PERSONNEL

Further, Government laboratories compete with private laboratories for personnel, to the ultimate detriment of U.S. basic research. A private laboratory director, annonymous because he depends on Government contracts, remarks, "We can't pay as well as the Government and we can find 50 darned fools who love pure science enough to work for us for less money, but if we had to find 100 darned fools, I don't think we could do it."

The U.S. Government ought to shut off the money it gives to service labs, and use these funds to establish a long-range relationship with private laboratories, which would be a mutually beneficial setup—the Government would get results, the private labs would get some of the financial security they do not now have.

Oceanography is a good example; it is about as expensive as physics these days, because of the need for ships. The national budget in this field before the war was about $350,000 a year; now it's probably $6 million, but the expansion has been only in personnel. There have been only two new buildings and no new ships since the war.

TIME IS A FACTOR

How should the Government spend its money in marine science? This depends, according to the best authorities in the field, on the amount of time available—specifically, how long is the cold war going to last?

If there is time, it would be a good idea to have more laboratories, because labs get less efficient as they get bigger. But it takes about 10 years to get a laboratory to the stage where it is producing. It takes time to staff it, too, because research is something new—it involves the new idea—and not every scientist is good at it—maybe 10 out of 100. You have to create a climate for them, sit back and hope.

Research science is built on the apprentice system, and you can't hurry it. You've got to catch these scientists young. Probably their imagination won't be fired until they've fooled around in the lab for 5 years after their university training—then, likely as not, they'll find they didn't take the right subjects to pursue what has interested them. So, they go back to school and learn what they need; then, maybe they produce, and even they don't know in advance what it may be.

ALLIES LACK FACILITIES

If there is time, probably the U.S. Government ought to spend some science money in Europe, among its allies. Science in Europe since the war, possibly excepting West Germany, has not been well-to-do; it has suffered terribly from the rise in the cost of living. Even the supply of laboratory nuts, bolts, glassware and similar equipment is inadequate; further, the tools of science get constantly more complicated and expensive.

As an example, if the United States helped our European allies might be able to build a big cyclotron, an ion accelerator used in atom-splitting. At present, they can afford only small ones and thus are losing out in the East-West science race.

In European laboratories, scientists are getting along with little in the way of electronic instruments, and the cost of building new ones continues to go up. Fully as critical, however, is the fact that the United States continues to "raid" their laboratories of scientists; about the time their graduate students get to the research age, an American job lures them out of Europe. In the common interest, it might be a good idea to halt this practice, if possible.

If there is time, the United States might finance a centrally located European laboratory for basic research, bringing to it selected European scientists from several countries. Scientists here, however, are dubious about the plan because in such research, you are dealing with unknowns—you can't put your finger on what's needed, and as one scientist remarked, "If you're going to dislocate people in that fashion, you ought to know what you hope to get out of it."

RESEARCH VERSUS ENGINEERING

If there is time, if this country is in pretty good shape vis-a-vis Russia, but perhaps the Soviets could pull ahead of us in 20 years or so, then it might be a good idea to build more U.S. labs and aid Europe in doing so.

But if the Federal administration considers America is in a real emergency, most U.S. scientists would figure we should not dilute our efforts either with new labs or by helping Europe.

Most oceanography is scientific research, not engineering. Most missile and rocket development is engineering, not research. The Russian exploits with sputnik have been principally enginering, not science. It remains to be seen whether the Soviet system is going to be good at finding out new things or merely at exploiting what already is known. Sputnik, for example, is largely a latter-day result of the German V-2 rocket of World War II.

If you figure we are to have a war tomorrow, all U.S. scientists should become engineers; for some time now, this country has been watering down its research with an eye on the practical applications of science.

But if there is time for research, let's see if the Government can't do better about providing an assured income for the laboratories that are set up to perform it.

President Clark Kerr's Observations on Asia

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article published in the March issue of the California Monthly outlining some important observations made by President Clark Kerr, of the University of California, while on a recent tour of Asia:

PRESIDENT CLARK KERR'S OBSERVATIONS ON ASIA

President Kerr, recently returned from an extensive visit to southern Asia, expressed considerable concern over the effectiveness of American foreign aid programs in the countries he visited. The occasion of the 40-day trip was a series of seminars on problems of labor-management and social policy in economic growth sponsored by the Ford Foundation.

"Present U.S. policy as regards underdeveloped countries seems often to reflect the current political situation rather than long-range goals. Aid by itself is not enough," said Dr. Kerr. "We need a fully developed policy and first-rate personnel to go with it.

"Our Public Information Service tends to tell only half the story. The people of Asia know what we have but not how we got it. They haven't been told that our standard of living is high and we work 40 hours or less a week because back in the beginning, when we too were underdeveloped, we were willing to work 60 to 80 hours a week. To give people an impression of our riches without mentioning the work that provided them does not give a wise or fair impression of America.

"The United States had better make up its mind to accompany its present monetary aid with fully developed policy or be prepared to watch its sphere of influence continue to dwindle. There is no crisis at the moment but at the rate things are going there may well be one in 10 to 20 years."

Turning to his reception in Athens, Istanbul, Beirut, Teheran, Karachi, Delhi, Calcutta, Djakarta, Singapore, Hong Kong, Tokyo, and Honolulu, President Kerr remarked on the wonderful friendliness extended his group. "The people are eager for answers to their problems. Their greatest need seems to be a sense of their own progress. The people can still be reached, but this atmosphere of willingness to work with the West may not last too long if we don't do a better job. The black Cadillacs of the U.S. Diplomatic Corps, driving through streets lined with starving people, give a disagreeable picture of conspicuous consumption. The Russians, on the other hand, are rarely seen.

"The people we met with in Asia were satisfied with our program of military aid, but they wanted more monetary help. They also wanted information. Leaders in universities, Government, and industry wanted to know how to develop businessmen in a country that had never had any, they wanted to know how to develop manufacturers and responsible trade unions. From the things I saw, I would judge that the United States gets its greatest return on what it spends on education in underdeveloped countries. Public health programs are fine, but it really isn't fair to come in and save thousands of children at birth only to let them die of starvation later on.

"Generally it seemed as though technical people working abroad were doing the best job for America. People in routine jobs seemed to show the least interest. By and large, our best people are where they count the most."

Dr. Kerr and his colleagues, Thomas H. Carroll, vice president of the Ford Foundation; John T. Dunlop, professor of economics at Harvard; and Frederick A. Harbinson, professor of industrial relations at MIT, met in seminar with representatives of universities, Government, and industry in Istanbul, Beirut, Teheran, Karachi, Delhi, Djakarta, and Tokyo.

At a typical seminar an American visitor would give a talk on developments in his field, say trade-union organization. Then the local people explained what they were doing and the problems they had encountered. A general discussion on how to improve conditions followed. Then another American would speak on his specialty. The average seminar lasted 3 or 4 days, and many sessions ran over into the evenings. Between sessions the visitors were entertained lavishly.

"The seminars were received with enthusiasm wherever we went," concluded Dr. Kerr. "We feel that the trip was mutually advantageous. Our findings as to the state of industrialization in the countries we visited will be published in book form later this year."

Address by Ambassador John M. Cabot to Latin American Agricultural Attachés

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. ALBERT. Mr. Speaker, during the Easter recess I had the privilege of attending the market development conference of the Foreign Agricultural Service of the U.S. Department of Agriculture held in Bogotá, Colombia. Present were not only those responsible for our Foreign Agricultural Service here in Washington and all U.S. Agricultural attachés on duty in Latin America, but also several representatives of agricultural trade organizations. These people met in Bogotá with a common objective, namely, to discuss ways and means of expanding markets in Latin America for the products of American farms. The potential markets for our agricultural products in that area are almost unlimited. Better markets mean greater prosperity for our own people and for those with whom we trade.

The conference was opened by a very splendid statement by our Ambassador to Colombia, the Honorable John M. Cabot. Ambassador Cabot's statement outlined the objectives of the conference and the responsibilities and opportunities open to our people in our dealings with our friendly neighbors to the south. Under leave to extend my remarks I include Mr. Cabot's address herewith:

WELCOMING TALK TO LATIN AMERICAN AGRICULTURAL ATTACHÉS BY AMBASSADOR JOHN M. CABOT, APRIL 1, 1959

All men were created equal in needing food. All men do not need and all men do not get the same amount of food or indeed, in many cases, what they need. Some eat too much; many more cannot get enough even to work efficiently. Far too many are hungry.

We are fortunate in the United States in having a surplus of food. Most of us here are of course taxpayers, and the $9 billion worth of food stored under our agricultural stabilization programs is a burden on our pocketbooks. But we have not abandoned our farmers to their economic fate, whatever it might be; and our agricultural measures have helped us to provide, for our friends and allies such as Colombia, the food which their people needed and did not have. With our surplus food we have saved many from starvation; and we have helped many more to save themselves from the spiritual starvation of totalitarian tyranny.

Tyrants can indeed feed their people on propaganda. It does not matter to them if their people starve; if, indeed, they take food from the hungry to export and thereby obtain foreign exchange. They herd them into communes, for the glorification of the State and the abasement of the individual. Notably, all of the great modern tyrannies have thought of guns rather than butter. It matters not to them if millions starve while a 5-year plan is achieved and progress is made toward subjugating new peoples to their yoke. If they achieve statistical results, what does the cry of a hungry child mean to them?

It is difficult for a half-starved man to fight for freedom. Indeed as we accumulate agricultural surpluses we should remember that a great majority of humanity is more likely to wonder where its next meal is coming from than about its freedom. If the cold war is a struggle between two ways of life, what better demonstration can we give of ours than by showing that free men eat better than totalitarian slaves?

In democracies the people decide what is to be done. We insist that the people receive the necessities of life. The food which we produce will not only make the free man a more efficient worker; it will strengthen us physically and spiritually to resist those who announce frankly that they will bury us. Sometimes we forget that they mean just that, as regards both our bodies and our souls.

Many of the people even in the free world are still hungry, despite everything that we are doing to feed them. The problem is not simply one of distributing the surpluses we have in the United States to correct deficiencies elsewhere. Great as our stocks and production capacity are in the United States, they are not remotely sufficient to fill present and future needs. We do, indeed, need to dispose of burdensome surpluses. Far greater, however, is the need to help other friendly countries produce themselves what they need. There will be cases in which this will hurt our national production. Nevertheless, it would not help the free world if we disposed of our food at the cost of discouraging adequate food production in the nations to which we exported it, or of injuring the legitimate markets of other friendly countries.

We must remember that a wise distribution of our surpluses is likely in the long run to increase both production and consumption in other lands. If in some cases this means that our exports will decrease, experience has shown that in many other cases increasing demand will outstrip increasing domestic supply. We should be happy in a prospering market if the absolute amount of our agricultural exports increases even though percentage in our share of the market drops.

You are here primarily to discuss expanding the markets for our agricultural products. I believe you will succeed primarily insofar as your efforts promote prosperous markets in this area. Latin America now buys as much commercially from the United States as it can finance by selling its prod-

ucts to the United States. We have seen in Colombia the disastrous results of buying more than can be sold and also how much can be bought if much is sold. With more mouths to feed, with more hands to work, with greater prosperity and a will to prosperity in Latin America there should be an ample market here for all that we have to sell, provided they can buy. We can stimulate demand, and incidentally, individual well-being, in Latin America, by judicious schemes for promoting the sales of our agricultural surpluses among our fellow Americans in our sister republics. But the thought I would leave with you is that their prosperity and our prosperity are inextricably linked; that if they feel themselves better off we are likely to find ourselves better off; that our food cannot only satisfy their hunger, it can help to keep them and us free.

It is in this spirit that I take the greatest pleasure in welcoming you here today. We are honored by the presence of a distinguished group of Senators and Representatives from our Congress. I am sure your deliberations will be fruitful not only in solving immediate problems but also in facing the fundamental issues which today confront freemen everywhere.

Where'd All Water Go?

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. BROOMFIELD. Mr. Speaker, in view of the action earlier this year by the House of Representatives in approving the diversion of extra water from the Great Lakes into the Illinois Waterway, I would like my colleagues to note an article which appeared March 27, 1959, in the Detroit Free Press. After reading this article, I don't believe that there should be any doubt in anyone's mind that earlier House action on this vital matter was hasty and ill-considered.

The article follows:

WHERE'D ALL WATER GO?

(By Joe Dowdall)

Boaters on the Great Lakes joked last year about "the guy who pulled the plug in Lake Erie."

The water level had dropped an inch from the 1957 level.

There's no joking now.

In both Lake St. Clair and Lake Erie, the water level is at its lowest point in 17 years. The water levels of Lake Michigan and Lake Huron are at their lowest in 21 years.

This time the old timers aren't shrugging their shoulders and explaining "It's just the 7-year cycle."

The U.S. Department of Lake Survey has charted the Great Lakes' water levels back to 1860 in an effort to determine whether there's a cycle of high and low water levels.

"The levels of the last 15 years are enough to disprove such theories," says Maj. Ernest J. Denz, district engineer of the Lake Survey.

"Not one of the lakes recorded had a high or low cycle. The only evidence of nature's effect on the lakes' water level is the amount of precipitation."

The 1958 level of Lakes Michigan and Huron has dropped 3.7 inches since the last high mark in 1952. Lake St. Clair has dropped 2.8 inches, and Lake Erie 2.6 inches in the same period.

The water level has dropped at least an additional inch in the first 2 months of this year in these lakes.

"We can't explain it," Major Denz said. "We know that unusually thick ice cuts the flow of water through the lakes, but the water isn't coming back now that the ice is breaking up."

The dredging of the Detroit River and the lakes along the St. Lawrence Seaway will help the commercial carriers. But the dredged channels must draw their water from somewhere.

The seaway project calls for an additional 2 to 5 feet of depth for 49 miles of the 78-mile stretch from the foot of the Detroit River to Lake Huron.

Some pleasure boaters contend that the dredging is siphoning water from the rivers and streams that enter into the Great Lakes.

Along parts of Fox Creek, the Clinton River and the Ecorse River the flow resembles that of a garden hose on a hot August afternoon. Just a trickle of water slips along the bed.

In St. Clair Shores many of the canals have dried up under the 30-inch layer of ice. Boaters report their boat wells are bone dry.

The condition hasn't been termed critical as yet because the first 3 months of the year are always the lowest.

The water level is expected to come back up, but it is doubtful that it will reach last year's level.

The heavy ice and snow that blankets northern Michigan is expected to bring some relief when it melts.

The boaters and the Army Engineers are praying.

Expenditures of the Executive Office of the President

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. RHODES of Arizona. Mr. Speaker, recently there has been much comment in the press concerning the expenditures of the Executive Office of the President. One columnist purportedly compared projected expenses for 1960 with the level of expenses for the year 1952, which was the last full year of the administration of President Harry S. Truman. At my request the Bureau of the Budget has furnished figures concerning actual expenses of the Executive Office in 1952 and estimated expenses for 1960.

A summary of these figures reveals that personnel costs for the White House actually increased more and at a greater rate during President Truman's administration than they have during President Eisenhower's administration, and this in spite of the fact that during President Eisenhower's administration Congress has twice increased the pay rates for Federal employees.

Employment figures for 1952 and estimates for 1960 are as follows:

White House and Executive Office of the President—Average employment, fiscal years 1952 and 1960

1952 White House and Executive Office total employment 1,256

	1952	1960 [1]	Difference
Employment decreases:			
Executive Mansion and Grounds	74	70	−4
Bureau of the Budget	493	430	−63
Council of Economic Advisers	38	32	−6
Emergency Fund for the President	82	5	−77
Office of Defense Mobilization	[2] 295	[3] 225	−70
Total			−220
Additional employment:			
White House Office	252	274	+22
National Security Council	21	27	+6
Total			+28
New activities established:			
Special projects (some part by transfer from existing agencies)		101	+101
President's Advisory Committee on Government Organization		6	+6
President's Committee on Fund Raising Within the Federal Service		4	+4
Operations Coordinating Board		[4] 49	+49
Total			+160

1960 White House and Executive Office total employment (excluding personnel acquired as result of merger of FCDA and ODM) 1,224

Summary

1952 total employment	1,256
1960 total employment	2,730
Difference	1,474
Increase as result of acquisition of FCDA personnel	1,506
Actual comparative decrease	−32

[1] Estimated.
[2] Includes National Security Resources Board, later merged with ODM.
[3] ODM merged with FCDA, an established independent agency, to form Office of Civil Defense and Mobilization in the Executive Office.
[4] OCB staff is included in NSC budget.

Subject: White House and Executive Office of the President, comparison of employment for the fiscal years 1952 and 1960.

The attached table shows that employment in all units in the White House and Executive Office of the President, with the exception of employment added to the Executive Office as a result of the merger of mobilization and civil defense activities in 1958, actually decreased 2.5 percent from 1952, the last full year in office of the preceding administration, to 1960. The merger in the Executive Office of Office of Defense Mobilization and Federal Civil Defense Administration (an established independent agency) added 1,506 employees, and this tends to make comparisons in total employment misleading.

THE WHITE HOUSE OFFICE

Average employment of the White House Office increased from 252 in fiscal year 1952, to 272 in 1955. Since 1955, employment has remained close to 272, and no increases above the current 274 are anticipated through 1960.

SPECIAL PROJECTS

Certain of the policy development and policy coordinating activities consolidated under "Special projects" in 1956 had previously been carried on in the departments and by interdepartmental committees. Personnel were charged to the appropriation of the agency providing the funds rather than to the White House. This was also a practice of previous administrations.

A part of the increase indicated is attributable, however, to new undertakings which were dictated by the national interest. These include the studies in science and technology under Dr. Killian, and the airways modernization activities headed by General Quesada, which have since been transferred to the Federal Aviation Agency.

NATIONAL SECURITY COUNCIL

Employment of the NSC increased from 21 to 27 during the period 1952–58. Beginning in 1958, the Operations Coordinating Board has been financed from this appropriation. From its creation in 1953 until 1958 financing for OCB was provided by represented agencies and personnel were distributed according to source of funds. The OCB assists in coordinating implementation of national security policies. Total NSC employment for 1960 is estimated to be 76.

OFFICE OF CIVIL AND DEFENSE MOBILIZATION

The consolidation in 1958 of the Federal Civil Defense Administration, an independent office created in 1950, with the Office of Defense Mobilization, within the Executive Office of the President significantly changed overall Executive Office employment. Total OCDM employment in 1960 is estimated to be 1,731, of which 225 relate to the former ODM and 1,506 to the newly merged functions from FCDA.

OTHER ACTIVITIES

Employment of other activities in the Executive Office has remained stable, with the exception of the Bureau of the Budget which will employ 63 fewer people in 1960 than in 1952.

Dismissing TVA as Socialism Is Retreating From Issues

EXTENSION OF REMARKS

OF

HON. FRANK A. STUBBLEFIELD

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. STUBBLEFIELD. Mr. Speaker, as we know, the House Public Works Committee recently ordered reported a bill to permit the Tennessee Valley Authority to finance additional needed power installations by the sale of revenue bonds.

Many critics of this legislation base their opposition on the grounds that the TVA power concept is a form of socialism. A very excellent editorial appeared in the Paducah Sun-Democrat of March 30, 1959, questioning the wisdom and validity of this argument and presenting a most cogent example of the situation that can—and often does—prevail as a result of the virtual monopolistic control of the private power companies.

I should like to take this means of commending the following editorial to the attention of our colleagues:

[From the Paducah Sun-Democrat, Mar. 30, 1959]

DISMISSING TVA AS SOCIALISM IS RETREATING FROM ISSUES

Some of the critics of TVA power oppose it on the grounds that it is a form of socialism and is ipso facto evil. Such a charge is at best a general one and contains many weaknesses.

For instance, just what do we mean by socialism? To some people, anything run by the government is socialism, but is the Post Office Department socialistic, or the Census Bureau, or the Bureau of Public Roads?

Some political theorists would call our Department of Agriculture socialistic. Others would say that it is not, but that the REA's, which were created by the Federal Government, are.

It is obvious then that socialism is a word with different meanings to different people, and because of its many shadings of interpretation, it is more a tool of demagoguery than an instrument of valid debate.

Actually many of the bureaus of our Government operate under varying philosophies of liberalism. To class these philosophies as degrees of socialism is to retreat from openminded consideration of basic issues.

There were many valid reasons for inauguration of TVA. One was flood control; another was improvement of navigation; another, to provide a yardstick to determine the cost of producing electric power. These are only a few.

While there are drawbacks to having such a vast Government-controlled agency, there are also very serious drawbacks to relinquishing production of power entirely to private companies.

The private power companies are virtual monopolies. Huge power combines that control subsidiaries over a multi-state are evidence of this. The people, then, are forced to pay the rates which they are charged and have no recourse from poor service.

These are not vague, general charges; they are based on fact. An example is a copy of a letter from the pastor of the Methodist Church of Columbus, Ky., to the trustees of his church. Dated March 3, 1959, it reads as follows:

"Gentlemen: May I call to your attention the excessive cost of electricity for the parsonage. We have just received our bill for the period, December 16, 1958, to February 16, 1959. It is $45.69. This is out of all proportion and reason when compared with the service received. What's more we were not at home for 16 days of the 61-day period, and our electricity was entirely, with the exception of water heater, cut off.

"I would recommend as your minister that you look into changing the house over to gas with the exception of lights only. My wife and I have been married 39 years come June, and this is the first time we ever have encountered electric service rates that are oppressive. This is in comparison, not with TVA, but with such as Alabama Power Co., West Texas Utilities, Detroit Edison, Oklahoma Light & Gas Co.

"Some time ago I finally induced the Kentucky utilities people to put a voltmeter on this line into the parsonage, and with the exception of just a few hours the line was underpowered. I knew it was, since it takes 75–100 watt bulbs here to get a 60-watt light, and furthermore it takes just about twice as long to heat an oven here, or to heat a bath, as the places mentioned. An electrician who saw the tape on the voltmeter reading said, 'Surely they'll step this line up.' This underpowered line 'gimmick' is a well-known kilowatt hour sales tool, since the ampere drainange is about doubled when the power is low.

"For your information, we have taken all the precautions recommended by anyone we have ever known to keep this within reason. But the situation is getting worse, and I do not believe anyone can remedy it and enjoy the rational use of electricity under the present setup. That is why I recommend that you take steps at once to change it to something that can be lived with.

"LOYD HINDS,
"Pastor."

We suggest that anyone who is opposed to TVA in principle consider whether he is in favor of the principles of charging a captive market "all the traffic will bear," maintaining substandard equipment, refusing to live up to contracts, and influencing legislation to make competition impossible. These are alternatives the people of this area face.

Why the Boggs Bill Would Benefit Industry, the Nation, and the Free World

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following reprint from the March 27, 1959, issue of Business International:

The most important feature of the Boggs bill (H.R. 5), the provision for the formation of a U.S. Foreign Business Corporation (FBC) which would pay no U.S. tax until it remits a dividend to its parent company, would result in little or no loss of revenue for the U.S. Treasury. This is the conclusion reached by BI editors during the past month in discussing this bill face-to-face with more than 100 U.S. manufacturers from coast to coast engaged in foreign business.

This FBC provision of the bill would make it unnecessary for U.S. firms to operate abroad through foreign base companies incorporated in profit sanctuary countries such as Panama, Canada, Venezuela, the Bahamas and Switzerland, which impose little or no tax on foreign income. Most alert U.S. manufacturers are operating abroad through base companies in these countries and pay no tax to the United States until these subsidiaries remit dividends to the U.S. parent. Most other companies doing substantial business abroad but not through foreign base companies are waiting to see if the Boggs bill passes; if it does not, they will soon organize such companies. Thus U.S. tax revenue will be much the same whether the bill passes or not.

The only practical question confronting the U.S. Government is whether it wishes to have the foreign operations of U.S. corporations directed by foreign base companies whose offices are located abroad—or by U.S. corporations located within the United States.

BENEFITS TO THE UNITED STATES OF THE FBC

This measure of the Boggs bill would advance a cardinal principle of U.S. foreign policy: the encouragement of private investment overseas. This is true because most corporations must earn from outside the United States the capital to invest abroad. They need every cent of capital they can earn or borrow in the United States for investment within the United States. Indeed, the amount of domestic private investment may well determine the duration of the present upward movement of the business curve. We have seldom had sustained prosperity without a steady, high level of investment in U.S. plant and equipment. Moreover, U.S. industry needs billions of dollars for new, modern equipment in domestic plants to achieve productivity gains necessary to stem inflation that the wage-price spiral otherwise would impose upon the country.

As a practical matter, therefore, future private investments abroad will be made largely out of profits earned abroad. Because this is so, alert U.S. manufacturers have established foreign base companies in profit sanctuary countries. Profits flowing into subsidiaries in these countries promptly flow out again in the form of new investments overseas, with little or no tax imposed while the capital is en route. In short, foreign base companies enable U.S. firms to move profits from one foreign country to another without the United States imposing a tax owing to the transfer. This is the modern way of investing and expanding abroad.

NO NEED FOR EXODUS

Ultimately, of course, dividends are paid to the U.S. parent, at which time the U.S. Treasury collects its share. In the meantime, U.S. taxes are only deferred—they are neither evaded nor avoided. But during the period of deferral, the money is put to productive use in advancement of U.S. foreign economic policy. The Boggs bill would permit this deferral to be used, and the management of U.S. business operations abroad to be directed, by a U.S. corporation—within the United States—with U.S. personnel paying U.S. income taxes, and using the services of U.S. banks, insurance companies and the like, which also pay U.S. income taxes.

The absence of legislation such as Mr. Boggs proposes is now forcing U.S. corporations to move their international offices out of the country—forcing U.S. executives to move out and to do their business and banking in foreign countries. It is forcing U.S. companies to make investments in productive facilities in other countries under Panamanian, Canadian, Swiss or other flags instead of the U.S. flag—and to lose the benefits of U.S. tax treaties, treaties of friendship, commerce, and navigation, and the protection of what is really U.S. property by the U.S. Government. Finally, operating through base companies in foreign countries is more exepnsive and less efficient than if these companies were located in the United States where they ought to be.

Here are the six major questions being asked about this feature of the Boggs bill—and the answers.

SOME COMMON QUESTIONS—AND ANSWERS

Question 1: How much revenue would the United States lose by enacting this provision of the Boggs bill into law?

Answer: Not much, if any. In the long run, the Treasury would collect more, since U.S. firms expand abroad for the purpose of ultimately paying larger dividends. When larger profits flow from the FBC to the U.S. parent, the United States would collect larger taxes. Meantime, the Treasury would have little revenue even deferred, because most U.S. firms that are not already deferring taxes through using foreign base companies will promptly organize them if the Boggs bill is defeated.

Question 2: Should the Boggs bill be rewritten to exclude export profits from the benefits of deferral?

Answer: Profits on exports constitute a major source of funds for investment abroad. Many existing foreign base companies are already engaged in handling exports, from both U.S. and foreign plants. To exclude exports would emasculate the bill and drive more companies abroad, where they would defer U.S. tax on export income in any case.

Question 3: Should the bill be rewritten to provide the benefits of deferral only for investments that flow into underdeveloped nations that are of strategic importance to our national security?

Answer: As a practical matter, most firms must earn abroad the money to invest abroad, and the place to earn it quickly and in the first instance is often in the more developed markets such as Europe. In the interests of U.S. foreign economic policy, there should be no geographic limits placed on the Boggs bill.

A GROWING LINE OF PRECEDENTS

Question 4: Will this law give unfair advantages to U.S. corporations over European competitors?

Answer: This question reveals an ignorance of what other countries now offer their businessmen. In 1957, the United Kingdom amended its Inland Revenue Act to provide for the creation of Overseas Trading Corporations whose profits are not taxed until dividends are paid to shareholders. The amendment resembles the Boggs bill. The Belgians, under certain circumstances, reduce the tax on foreign income by 80 percent. The Dutch, under certain conditions, do not tax foreign income of their corporations at all. The Boggs bill is needed to enable U.S. firms to meet foreign competition.

Question 5: Does the building of plants abroad rob U.S. workers of jobs?

Answer: No. U.S. manufacturers build plants abroad to sell goods that cannot be exported from the United States owing to tariffs, import quotas and currency restrictions imposed by other governments, or because U.S. costs and prices are too high to compete with foreign-made goods. Profits from foreign plants flowing into the United States have helped to stabilize employment as well as earnings of U.S. firms.

Question 6: Does the building of plants abroad rob the United States of export earnings?

Answer: For the immediate future, no—for the reasons given above. In the long term, higher living standards abroad, boosted by U.S. private enterprise, will create larger markets for U.S. goods. Canada's industrialization proves this to be true. Moreover, foreign exchange earnings from U.S. private investments will add further assurances that the United States will be able to balance its international accounts at a high level and permit it to import all the raw materials it will need to keep its factories humming and expanding.

By permitting U.S. corporations to operate abroad through U.S. foreign business corporations, as provided by the Boggs bill, the U.S. Government in the end would not only collect more taxes, but would make more effective use of the only instrument for foreign economic development that we possess which the Communists do not have and cannot duplicate: free enterprise building, owning, and managing plants abroad.

True, the Russians can and do build a few plants abroad for other countries. But not many. Very few countries of the free world are interested in making such arrangements with a Communist government. When the Russians build a plant, they insist that it be a socialized undertaking—that it be owned by the host government, which, in turn, is required to sign a note evidencing a long-term obligation to the U.S.S.R.

By contrast, when a U.S. firm builds a plant abroad, the host government does not promise to pay anyone at any time a single peso or rupee—let alone a dollar. It's the other way around—the U.S. firm promises to pay taxes to the host government.

When a new plant goes up, permanent jobs are created. Local industries are stimulated by the plant's purchases of raw materials, components, and services. Foreign exchange is saved by the substitution of local production for otherwise necessary imports. Sometimes foreign exchange is earned by exports from the plant. This is genuine economic development. And it does not cost U.S. taxpayers a cent. In the 3-year period 1956–58, foreign economic aid extended by the U.S. Government amounted to $6 billion. In the same period, U.S. private investments abroad increased by $10 billion.

Purchase of British Turbogenerating Equipment by TVA

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I wish to discuss the recent decision by the Tennessee Valley Authority to purchase certain large turbogenerating equipment from a British firm rather than an American supplier. Specifically, I will comment on the justification cited by TVA for the action it has taken in this matter.

Mr. Speaker, in a release dated February 27, 1959, the Tennessee Valley Authority undertakes to explain its award of a contract for purchase of a turbogenerator to a British concern. Parsons & Co., the British bidder, underbid Westinghouse and General Electric by approximately 31 percent.

TVA says that it was disturbed by the rising price of turbogenerators, claiming that the prices charged by the domestic bidders had risen 50 percent since 1951 while average wholesale prices had increased only 5 percent. However, if we look at wages we find an increase in the electrical machinery industry weekly wage from $61.48 in September 1950 to $85.36 in September 1958. This is an increase of 39 percent. These figures come from the Bureau of Labor Statistics and are much more in point than general wholesale prices.

The building of a turbogenerator is a custom job and labor costs represent a large part of value added.

In such custom jobs our large mass production industries lose a great part of the advantage that comes from mass production. The process of building such a generator cannot be called mass production merely because the contractor is a mass producer of other items. The competitive disadvantage of much higher wages paid in this country reflects itself precisely where our productivity is not boosted by mechanization or automation. It stands to reason that in custom-made items we enjoy little if any differential in productivity over the British.

It would therefore be expected that the British could readily underbid us by a wide margin and would do so unless they allowed for an inordinate profit. Our wage rates are in the nature of 2½ times those of the British in the electrical machinery industry.

To repeat, in custom-built items we largely shed the productivity lead that we enjoy in many mass-produced items. Moreover, wages represent a high percentage of total costs of producing custom-made items.

TVA says that Westinghouse estimated 1,080,000 man-hours to build the turbogenerators; and concludes that the difference in wages between the British and American companies would be only $1.5 million. To arrive at this result it was necessary only to multiply the number of man-hours by the wage differential. This calculation, however, covers only a part of the story. The materials used by our manufacturers also contain American wages all the way back to the mines and the soil whereas the British materials contain the much lower British wages through all the stages of production back to the raw materials.

Therefore should the domestic companies enjoy no advantage in productivity over what appears to be a highly efficient and reliable British company,

the advantage of the latter should be about 2½ to 1 costwise. If it is less than that, the British company is not as efficient as claimed by TVA; and our companies are penalized for their greater efficiency. To be sure, there is the duty of about 15 percent on the British product plus ocean transportation, marine insurance, and so forth; but none of these charges would span the 2½ to 1 ratio.

That Parsons should be able to underbid our domestic companies by only 31 percent is therefore a little surprising. That a handsome margin of profit could be hidden in such a bid seems easily possible. That possibility no doubt accounts for the company's ability to accept a penalty clause as noted by TVA whereas the American bidders would not do so even under their higher bid.

TVA's eagerness to send this contract overseas and its rationalization of its position by resort to transparent arithmetic is perhaps explained by its reference to our general foreign trade policy and our international relations.

That Executive domination of our foreign commerce, contrary as it is to the mandate of the Constitution, has now filtered through adminstrative capillaries to the various purchasing agencies is confirmed by the TVA award of the contract to a foreign company and its explanation of the fact. In the end, for example, TVA says that purchase of the power unit from Parsons strengthens the economic position of our ally, Great Britain. This, it should be noted, is an entirely different argument from the preceding ones and explains much better than TVA's ragged arithmetic the reason for the award to a British firm.

The part played by our Executive dominated foreign trade policy emerges very clearly. The State Department's diplomacy must be supported through thick and thin throughout the fabric of our Government. The totalitarian position thus given to our foreign trade policy must brush to one side all considerations of a domestic nature.

"For national security," continues TVA, "strong allies, a healthy world trade, essential industries strengthened by stimulation of competition, are likely to be at least as important as the location of specific powerplant repair facilities."

Westinghouse and General Electric had maintained that the national security would be jeopardized by creating dependence upon foreign sources for repair facilities. TVA was not impressed. It answered as just quoted.

Particular note should be taken of the fact that the view was expressed by TVA that the strengthening of essential industries by stimulation of competition, was desirable. Aside from the question whether TVA is by way of superseding the function of the Federal Trade Commission and the Department of Justice in seeking to assure the stimulaton of competition the question naturally arises whether competition is stimulated when a 40 percent wage level is pitted against one of 100 percent; or could it be argued that such competition is unfair, particularly if wages are not to be used as a source of competitive advantage. If it is the intent on the other hand to undermine the American wage system such competition could become a useful instrument.

Are we to assume that if the British company needs the great wage advantage that it has General Electric and Westinghouse are to be penalized because they are more efficient producers? They must indeed be more efficient if they can pay wages 2½ times as high as Parsons and yet bid only 50 percent higher on a Government contract.

TVA says it was willing to let the domestic bidders go 20 percent above the foreign bidder, as can be done under the controlling Executive order.

But why 20 percent? What possible relation is there between the production costs borne by Westinghouse and General Electric and those of a foreign competitor that operates under entirely different cost burdens? Let us suppose that the bidder had been not British, but Italian or Japanese. Would the differential that might then have been recognized still be one of 20 percent? Obviously, yes, since no discrimination can be drawn among different countries. Yet the 20-percent margin might have fitted even more loosely any other foreign bidder than it fit England.

The whole TVA position comes down simply to the desire, in keeping with our State Department's foreign economic policy, to give more public contracts to foreign countries. Otherwise why does TVA argue so elaborately the extraneous economic points that it presents and why does it bring in elements of foreign policy?

It says that—

It can reasonably be assumed that these dollars (those garnered by Parsons & Co.) will be used to finance British purchases of other goods either in the United States or in third countries which will in turn use the dollars to make purchases in the United States.

Here we see TVA becoming the Department of Commerce; but it must be said that the TVA economics, like its notion of relative efficiency, will not bear the light of reality. In the past 5 or 6 years some seven or eight billions of dollars have flown overseas and, with the exception of 1957, have shown no signs of returning. In 1958 alone we lost $3.4 billion in our international monetary balance.

In fact, the economics in the TVA reply and the references to foreign policy read very much as if they had been written in the State Department.

As for the conclusion that the higher bids by the domestic concerns represent unreasonable prices and therefore presumably exorbitant profit, there is, of course, no proof. The only yardsticks used are the increase in wholesale prices, allegedly only 5 percent between 1951 and 1959, and the margin of overbid in relation to a foreign bidder. Neither yardstick is suited to the thing to be measured.

Was the American bid price unreasonable? That is all the law asks; although it must be admitted that the regulations lay down an arbitrary measure; and, further, that TVA was bound by the regulations.

It was because of the unrealistic character of the regulations that the domestic companies made their plea on the basis of national security. On that ground TVA overruled them. The result is simply that the domestic industry loses the contract on grounds that penalize relatively higher productive efficiency. This result is achieved by using an irrelevant yardstick provided by regulations under the Buy American Act, but not by the law itself.

Through this loophole TVA is able to comply with the foreign economic policy of the State Department while at the same time going contrary to the domestic economic policies of the past 25 years, especially the part of it that has had the effect of raising wages in this country to the highest level in history.

By law wages have been taken out of domestic competition. Now the Government turns around and lowers the boom on is own creation. Foreign wages are free to compete and foreign industries paying low wages are free to take full advantage of the higher American level and win awards of public contracts by simple underbidding, a very easy thing for them to do.

Mr. Speaker, still another aspect of this problem has come to our attention and I wish to mention it at this point. My colleagues may recall receiving a letter recently from the United Electrical, Radio and Machine Workers of America. Among other things, the union attempted to prove that the contract in question was lost to American firms because their bids allegedly included an unreasonable percentage of profit, thereby enabling the Parsons firm to underbid their quotations by a substantial amount.

Mr. Speaker, I wish to include as a further extension of my remarks a letter which I have just received from Mr. C. H. Bartlett, vice president of the Westinghouse Electric Corp. The information supplied by Mr. Bartlett will serve to clarify the questions raised by the union. The letter follows:

WESTINGHOUSE ELECTRIC CORP.,
Pittsburgh, Pa., April 3, 1959.

Hon. RICHARD M. SIMPSON,
House of Representatives,
Washington, D.C.

DEAR MR. SIMPSON: Since our dinner in Washington on February 26 at which time we discussed the problem of the import of heavy electric power apparatus, many members of the Pennsylvania delegation have shown an interest in this matter. Therefore, we feel in order to keep the record this letter in order to keep the record straight.

You have received, I believe, a letter from the general president of the United Electrical, Radio and Machine Workers of America, on the subject of the 500,000-kilowatt steam turbine generator ordered by TVA from C. A. Parsons & Co., Ltd., of England. In this letter, this UE official has done a great disservice to the union's membership and to the Nation with absurd charges of 265 percent profits in the electrical industry of the United States. The letter presents an argument based on false assumptions, incorrect figures, and distortions of fact. Its resulting conclusions are ludicrous.

For example, while the UE does not deny that U.S. electrical manufacturers pay wages at least 2½ times those paid in England, they somehow calculate that our labor costs on this $18 million job are only $91,000 more than Parsons labor costs.

They calculate further that the total cost of building this giant steam turbine generator would be only $5,300,000. The fact is that this amount wouldn't cover the cost of materials—to say nothing of wages and salaries, the costs of providing and operating our factories, and their great number of machine tools, transportation, research and development, and many additional expenses.

I am sure that Westinghouse stockholders would be delighted if our profits could be a little closer to the 265 percent that UE says we earn, instead of the 4 percent or slightly less that we actually have earned in the last several years.

The UE letter bases its charges of profiteering on what it says are company figures. It then quotes a statement by Mr. A. C. Monteith which appeared in the Westinghouse News to the effect that the TVA order in question would have meant 1,080,000 man-hours of work for Westinghouse employees at the Lester and East Pittsburgh, Pa., plants and 375,000 man-hours of work for employees in plants of supplier companies.

What the UE does not say is that these figures represent only the direct factory labor which would have been involved in production of the steam turbine generator—the labor of those factory employees who would have been working full time on this particular job and who are directly affected by the loss of this order. When we cited these man-hour figures to show the possible effect of this lost order on employment, we were intentionally conservative, limiting the figure to direct labor only.

The figure does not include the host of service personnel such as crane operators, materials handlers, production clerks, plant guards, supervisors, and others. Such indirect labor costs are at least double the direct labor costs. This means that the total labor cost of manufacturing this type of giant electrical equipment is approximately three times the actual direct labor cost. And that covers only the people in the manufacturing plants. In addition, there is the cost of the people in the research and development departments and laboratories whose efforts keep American electrical apparatus ahead of the world in reliability and efficiency. And there are sales costs and administrative costs. The UE letter ignores all these.

As a second step in its series of miscalculations, the UE takes this small portion of total labor cost and multiplies it by several industry-average wage figures—which also are incorrect when applied to the Westinghouse plants involved. The skilled employees who build these giant machines earn well above the average industry wage.

Then, to muddle even more the already completely inaccurate calculation, the UE applies a mythical productive efficiency advantage which, they imply, the heavy electrical manufacturers in this country have over similar plants abroad. This, they claim, is 244 percent. If such an advantage exists in the production of heavy electric power apparatus, we are not aware of it. And judging from the low bids of foreign electrical manufacturers, they haven't heard of their great disadvantage either.

It is indeed unfortunate that the officers of a national labor union who represent thousands of American workmen spread this type of economic nonsense which can only work against the best interests of their members in a segment of industry where reduced employment has been and still is a problem.

Such propaganda is serious also in that it encourages those who fail to see the dangers involved in our Government buying heavy electric power apparatus from foreign companies which could not provide the necessary repairs and maintenance in time of war.

The UE letter dismisses the security question as a hypocritical issue raised to justify our inability to meet the low bids of foreign suppliers. We are willing to leave to your judgment whether or not the continuous supply of electric power to key defense production areas of the country during a national emergency is a real or a hypocritical issue. In 1957, TVA supplied more than half the power used by the U.S. Atomic Energy Commission, for example.

Despite TVA reassurances on the ability of foreign suppliers to provide service, the fact remains that the Parsons company does not have a steam turbine generator manufacturing plant on this continent. Nor is there any plant in Canada capable of handling major repairs of large steam turbine generators. Parsons, in its bid, said it has just three technical men in all of North America to handle repairs and maintenance. By contrast, Westinghouse has more than 1,000 field service engineers, and, in addition to our major manufacturing plants, we have service and repair plants throughout the United States. Any major repair or replacement on such a steam turbine generator as the TVO Colbert Station unit would require Parsons to ship the unit overseas or ship parts from overseas—something which could be impossible in time of war or other national emergency.

This very real issue of national security should not be screened from view by the smoke of misinformation emanating from UE or any other source.

Sincerely yours,

C. H. BARTLETT,
Vice President.

NATO's 10th Birthday

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. MADDEN. Mr. Speaker, as our international problems over the last 12 years are reviewed, one more and more realizes that NATO, the United Nations, Marshall plan, and so forth, has up to 1959 curbed the Soviets in their drive for world domination.

It has been a great sacrifice and hard battle for the United States to unite the free world against the Communist international conspiracy. Millions throughout the world today are beginning to wake up to the threat of Communist enslavement.

Under leave to extend my remarks, I include the following editorial:

NATO's 10TH BIRTHDAY

The Council of the North Atlantic Treaty Organization is meeting in Washington today. On Saturday will come the 10th anniversary of the signing of the treaty which brought that organization into existence.

"It has been a great week's work in the history of the world," said British Foreign Minister Ernest Bevin as the Western nations completed their 1949 sessions in New York and initiated the NATO pact. Nothing that has happened since has contradicted his words, even though the NATO alliance has not developed into everything we then hoped it would be.

Twelve nations joined at first in the North Atlantic Treaty and, at the same time, made plans for U.S. military aid to Western Europe and agreed on the basic plans for a free West German Government.

Harry S. Truman then called the compact "a long step toward permanent peace in the whole world." NATO was expected to build an armed force that, in event of war with Russia, would hold back Soviet forces until the U.S. Strategic Air Command could go into action.

This "shield against aggression," as Truman described it, has never been fully realized. Within a year after the pact was signed Russia broke the U.S. nuclear monopoly, and various factors have contrived to keep NATO military forces at far below their intended size. The original goal was 100 ground divisions by 1954; it has been cut to 30, but today NATO has ony 21 to face an estimated 175 Soviet divisions available for Eastern Europe.

Despite the fact that the NATO forces are seriously undermanned, they have been a strong deterrent against war in Europe. Each soldier has been a symbol of the common Western strategy for rebuffing aggression. And there has been no westward expansion by the Soviet Union since 1948.

No one understands better the psychological barrier raised by NATO than do the men in the Kremlin. They have tried, time and again, to break it down. Their unrelenting endeavors to destroy NATO are the best tribute that could be paid to it.

So an appraisal of NATO on its 10th anniversary finds much to be said in its behalf, even though it has not developed into the military shield expected in 1949. It has been extremely important in maintainng the peace in Europe.

But the anniversary also finds an increasing recognition that the North Atlantic compact must be developed into far more than a military alliance. It should not be only a defensive network. Ties should be strengthened in the economic and political fields, in the areas of social and cultural affairs.

Thus far little has been done in this direction. The Atlantic community of free nations is not being knit together as it should be. This is the effort toward which our NATO allies, now 15 in number, should direct themselves in the next decade. The success of their efforts will determine whether April 4 is to have significance among the free nations such as July 4 has within the United States.

Launching of the "Sea Diver"

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. BURKE of Massachusetts. Mr. Speaker, on Sunday, April 5, 1959, there was launched at the Quincy Adams Yacht Yards at Quincy, Mass., one of the most remarkable vessels ever to take the water. She is called *Sea Diver* and is the first boat built from the keel up especially for use in underwater exploration of historical sites. Her owner is the famous inventor of the Link trainer, Edwin A. Link, president of the General Precision Equipment Corp. He gave the vessel his personal supervision and built into it special equipment, some of which he invented himself.

I had the great privilege of being present when *Sea Diver* slid down the ways.

She is not a yacht but a work boat constructed for serious scientific purposes.

Made of heavy steel, with the care typical of New England craftsmen, she is 91 feet long, with a 20-foot beam, and will draw about 6 feet. There is ample accommodation for 14. Her cruising range, without refueling, will be more than 7,000 miles. She is powered by two diesel engines and there are two other diesel engines to operate the special equipment. She has radar, sonar, and loran for navigation. She has an underwater viewing compartment, a bay at the stern from which divers can descend, a device called an air lift which can suck sand from the bottom of a harbor so that the sand can be strained through a sieve to recover small objects and a crane capable of lifting 6 tons. In addition, she has a water jet which can be used for excavation under water or on land.

Mr. Link and his wife, Marion, already have made extensive and fruitful explorations off the Florida Keys and in the Caribbean. One of their achievements was the discovery of a 15th century anchor, possibly the anchor of Columbus' flag ship, the *Santa Maria*. Mrs. Link has told the story of their earlier explorations in a book recently published by Rineheart & Co., appropriately entitled "Sea Diver," the name of an earlier and smaller boat which they used in their adventures. She is donating her royalties toward the operating expenses of new expeditions.

The new *Sea Diver*, which I saw launched, soon will depart on a shakedown cruise to the Caribbean and will be used in the exploration of the sunken city of Port Royal in Jamaica under the auspices of the Smithsonian Institution and the National Geographic Society. Port Royal suddenly vanished under the water as the result of an earthquake in 1692. In 1956 the Links did some investigation there and now, with the new boat and equipment, will carry on a more thorough exploration.

It is possible that they will make a further contribution to history.

Upon leaving Port Royal, Mr. Link has told me, he intends to take *Sea Diver*, under her own power, to the coast of Israel, there to explore the sunken harbor of Caesarea, under the auspices of the America-Israel Society, an educational organization of which a number of my colleagues in the Congress of the United States are founders and sponsors and which has its headquarters in the Willard Hotel, here in Washington.

Caesarea was the favorite city of King Herod the Great and the port from which St. Paul sailed on his mission. The Links made a preliminary survey there in 1957, using light diving equipment. They were inspired to do so by the fact that fishermen had been bringing up in their trawls along the coast, jugs, known as amphorae, dating back more than 1,500 years before the Christian era. They found evidence that objects of great interest to archeologists lie buried in the sand beneath the harbor waters.

I am proud that a shipyard in my own State of Massachusetts was chosen for the construction of this unique vessel to be used in the cause of the advancement of knowledge. It seems to me, too, that *Sea Diver*, in exploring the historic past, hitherto hidden from us by the waters of the seas, will demonstrate, wherever she goes, the interest that we Americans take in peaceful pursuits and thus will make a contribution to good will and better understanding wherever she may drop anchor.

The Quincy Adams Yacht Yard is owned and operated by its president, Edward D. Whiting, 363 Adams Street, Milton, Mass. Mr. Whiting has over 35 years in boat building. He has been associated with the Lawley Ship Yards where he directed the boat building program for many years and has served as president of the George Lawley Ship Yard. Edward Whiting is owner and president of the Nevins Yacht Yard, City Island, N.Y., and is also owner of the Quincy Adams Marine Sales, Inc.

Born in South Boston, Mass., Edward Whiting has spent an entire life time amongst those who participate in yachting and boating in the South Boston and Dorchester coastal area.

We in Masachusetts are proud of Edward Whiting and his many accomplishments.

A great future can be predicted for the Quincy Adams Yacht Yard.

The Man From Tennessee

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent article written by Mr. William V. Shannon, entitled "The Man From Tennessee." The article pays tribute to the public service of one of our esteemed colleagues, the senior Senator from Tennessee [Mr. KEFAUVER]. Mr. Shannon has a keen insight into the fine public service and public career of the Senator from Tennessee [Mr. KEFAUVER], and I am very happy to associate myself with the contents of the article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Post, Mar. 29, 1959]

THE MAN FROM TENNESSEE

(By William V. Shannon)

WASHINGTON.—The announcement this week by Senator KEFAUVER, Democrat, of Tennessee, that he would not enter next year the New Hampshire presidential primary, which he has won twice before, marks a major turning point in a remarkable career.

During the decade of the fifties, and these have been dreary years for liberalism, KEFAUVER has been an extraordinarily useful and positive figure. The failure of his long personal campaign for the Presidency, a quest he has now abandoned, should not obscure the value of his contribution.

In 1950–52, the gray fag end of the Truman administration, a period when the wrong kind of political professionalism and a few shabby scandals were putting shadows across a magnificent record of 20 years of liberal accomplishment, KEFAUVER helped keep the record straight.

His slashing attack on organized crime reaffirmed the half-ignored fact that, for liberals, good government must always mean honest government, that there can be no permissible alliance between welfare state liberalism and the gangsters' code. Being for public housing or the repeal of Taft-Hartley does not make a politician a liberal if he is also for slot machines in the corner candy store and a fast buck for the racketeers.

There were elements of sensationalism in the Kefauver committee's crime investigation and the committee indulged in some practices in public hearings that were debatable from the civil liberties standpoint, but KEFAUVER, on balance, performed an important service for our country's liberal tradition in piercing the smoggy atmosphere of complaisance and collusion between gangsters and some big-city political machines.

When KEFAUVER waded into the primaries against the express opposition of President Truman, the congressional oligarchs, and most of the State organizations, he served to remind the professionals that the party belonged to the people and not to them. Moreover, the Democratic Party in its modern incarnation has become the rallying point of a rebel, the chronic dissenter, the wayward political independent. KEFAUVER'S candidacy, in its own way, did as much as groups like the Stevenson volunteers to keep alive the picture of the Democratic Party as a place where mavericks and independents of all kinds, even the thorny Harold Ickes variety, would always be welcome.

KEFAUVER has been almost unique in his ability to make the economic case against the Eisenhower administration become tangible and readily comprehensible.

It was no small feat, for example, for him to take political charge of the incredibly complicated Dixon-Yates contract. He took this unpromising issue, kept it alive for more than 2 years and made it politically hot for everyone concerned, including General Eisenhower himself.

During much of this time, KEFAUVER had no instrument to use except the virtually paper Subcommittee on Monopoly and Antitrust which had no appropriation, no staff except Sidney Davis, its indefatigable volunteer counsel, and no support from any other Senator, except for the erratic good will of ancient "Wild Bill" LANGER, Republican, of North Dakota.

Nevertheless, KEFAUVER finally forced the President to cancel the contract, forced the Justice Department to accept his arguments as its own in defending the Government against a subsequent damage suit by Dixon-Yates, and helped build the opposition that ultimately forced Admiral Strauss out of the Atomic Energy Commission.

KEFAUVER is currently on his way to achieving a comparable success on the issue of administered prices. For more than a year, he has been plugging away at the theme that prices and wages in the basic industries are everybody's concern. He has held endless hearings and received much technical testimony from economists.

For a long time, it seemed hopelessly dull stuff and not likely to lead anywhere, but KEFAUVER has persisted. He has skillfully popularized the idea of Economist Gardner Means that prices in the big industries are administered, not set in the marketplace, and that these administered prices are heavily responsible for inflation. On the basis of President Eisenhower's remarks on steel prices at his Wednesday press conference, KEFAUVER even has the President beginning to use his language.

KEFAUVER succeeds on these issues because he is a man of bed-rock convictions, because he is a prodigious worker and because he has lots of courage. He has not hesitated to dissent from his fellow southerners on racial issues.

During the McCarthyite craze, KEFAUVER several times stood alone in voting against bad legislation that was falsely labeled anti-Communist. And when it comes to fighting for what he wants or believes in, he has had no lack of guts in defying the entrenched Senate leadership.

The congressional inner club and the southern machines paid him back at the 1956 convention by voting against him solidly in the vice presidential contest. Liberals expressed their esteem by voting for him and putting him on the ticket.

It is not likely that the Nation as a whole will have the opportunity again to vote for ESTES KEFAUVER. But if Tennessee does not turn against one of its greatest sons in next year's Senate election, the Nation can look forward to further achievement. The end of KEFAUVER's presidential ambitions ought not to mean the end of a remarkable career.

Alaska Adopts Model Court System With Independent and Nonpartisan Judiciary

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. NEUBERGER. Mr. President, as a Senate sponsor of the bill providing for Alaskan statehood, I am proud that our great new State in the North has adopted a model code for its judicial and court system. Alaska is to have an independent judiciary with a minimum of political interference. It will be nonpartisan in character.

This whole new apparatus for courts and trials in our 49th State has been informatively described in the August 1958 issue of the Journal of the American Judicature Society by my friend, Thomas B. Stewart, who is an able member of the Alaska bar. Mr. Stewart also served as secretary of the constitutional convention at Fairbanks, which drafted the organic law under which Alaska's judiciary has been created. Thus, he is well qualified to write this article entitled "A Model Judiciary for the 49th State."

Mr. President, I ask unanimous consent that Mr. Stewart's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A MODEL JUDICIARY FOR THE 49TH STATE

(By Thomas B. Stewart)

Article IV of the constitution of the State of Alaska, entitled "The Judiciary," sets out in concise detail the general organization of the judiciary conceived for the new State, the manner of selection and tenure of its judges and related personnel matters, and the authority for rulemaking and for a unified administration of the judicial system. The main features of this court system are unity, simplicity, efficiency, accessibility and political independence, which combine with an ultimate responsibility to the people in making the system in large measure an expression of the best in modern concepts for the efficient administration of justice.

This court system was carefully designed by the delegates to the Alaska Constitutional Convention, meeting at the University of Alaska, near Fairbanks, from November 8, 1955, to February 5, 1956, to eliminate the frustrating delays and technicalities common in the complicated court systems of many of the older States. To reach this goal the delegates sought to apply principles proposed and backed by the American Bar Association, the American Judicature Society, the Institute of Judicial Administration, and other professional and civic groups dedicated to improvement in the administration of justice. The people of Alaska, in voting to ratify the constitution on April 24, 1956, endorsed without recorded public criticism or dissent the plan for a judiciary as conceived by article IV of the Alaska constitution.

To understand the circumstances producing this design for the Alaskan judiciary and for an adequate explanation of its features, some review of the history of its making may be helpful.

In March of 1955, when the 22d session of the Legislature of Alaska by law called for the holding of a constitutional convention, Alaska was totally without a judiciary of its own and without an organized association of members of the bar. Its court system, in contrast with that of the States of the United States and of its sister Territory of Hawaii, was provided for it entirely by the Federal Government, except for magistrates courts in certain of the cities. The judges of the U.S. District Court of Alaska, sitting in four geographical divisions, were appointees of the President and often not residents of Alaska nor members of its bar.

This situation of the court system remains intact today, on the threshold of formal admittance of Alaska as a State, but in the imminence of establishment of the new judiciary lies a history of effective action by members of the Alaska bar.

ALASKA BAR AND ARTICLE IV

In that same 1955 session of the territorial legislature, the lawyers of Alaska successfully sponsored the creation of an integrated bar association, and by late May of 1955 the Alaska Bar Association was a reality. One of the first committees appointed under direction of the board of governors was assigned the duty of preparing a proposed article on the judiciary for submission to the then forthcoming constitutional convention. Members of this committee of the bar association were later to serve on the convention's committee on the judiciary, and their proposal encompassed many features found in article IV of the constitution.

Simultaneously with the work of the Alaska Bar Association toward preparing a judicial article for the new constitution, the Alaska Statehood Committee, an official agency of the Territorial Government assigned the duty, amongst others, of preparing constitutional studies for the use of the convention delegates, had engaged qualified consultants to assist in the drafting of a judicial article. The statehood committee, shortly before the convening of the constitutional convention, issued an informational news release intended to assist all the people of Alaska in understanding the issues to come before the convention; this statement both reflected the inadequate character of the existing judicial system and suggested the scheme of the new judiciary which was in the minds of the majority of members of the Alaska Bar Association and which has in fact been realized by the constitution. Because of this relation to the judiciary as ultimately designed, the statement is here set out in full:

"One of the greatest challenges, and simultaneously, one of the rarest opportunities, will face the delegates of the Alaska Constitutional Convention in the problem of designing a judiciary for the future State of Alaska. The challenge is great because in the judiciary rests the ultimate protection of the fundamental rights of persons traditionally guaranteed by our American Federal and State constitutions; only a well-designed judiciary can efficiently and fairly perform this guardianship function. The opportunity is rare because Alaska, not having as a Territory its own judicial system, is free to choose from the best of modern concepts of a judiciary without being hampered by that resistance to change which so often characterizes long-established systems.

"The people of Alaska have grown accustomed to a Federal judiciary provided by presidentially appointed judges and a system of district commissioners. With statehood, some of these services must be replaced by a State judicial system. This is a crucial changeover. Not only must the new State judiciary administer justice promptly and impartially, but it will have the added task of interpreting the new constitution. These interpretations can have an important effect on the future of the State.

"The issue of what principles and concepts might be embodied in the constitution in a judiciary article can well be considered in terms of three basic topics: (1) the organization of the court system; (2) the personnel of the system, including qualification, selection, tenure, and related matters; and (3) administration of the system created.

"In recent times there has developed a surprising unanimity of opinion among both practitioners and theorists as to the remedies for defects in existing State systems. Practicing attorneys, judges, legal theorists, and laymen, have come to strikingly similar conclusions as to the proper and necessary elements of a sound judiciary. And so it is possible to suggest such elements for the consideration of the Alaska Constitutional Convention with a confidence enhanced by a great weight of respected, supporting authority.

"As to the organization of a court system, it is generally agreed that there is need for at least three basic levels of courts. At the highest level is a court of ultimate appeal, in which parties to cases may obtain a final review of the determinations of lower courts. The issues before the Alaska delegates on the creation of such a court, often called the supreme court of a State, will include questions on what should be its composition and on what should be its jurisdiction.

"At the next level there is need for a court of general jurisdiction in which criminal and civil cases are originally brought for consideration and trial. While the authority of such a court would properly extend over the entire State, it could be set up in divisions to function in the various populated areas of the State.

"The remaining question concerns the provision of localized judicial services to consider misdemeanors, civil cases involving relatively small sums, traffic violations, and like cases. The convention delegates must determine whether these cases, which daily affect the lives of a great many more people than do the more serious cases, should be considered in terms of a lower level of courts established especially for this purpose, or whether the court of general, original jurisdiction may be expanded to handle this case load.

"But whatever courts may be created, whether on varying levels or with varying special functions, modern authorities have agreed that all courts should be a part of and within an integrated or unified system which would exercise all of the judicial powers and authority of the State.

"The constitution should also provide a basis for selection of the judges, at least for

those who will serve on the highest court of the State. Probably the principal issue to be resolved is whether judges of the highest court should be elected or appointed. Each method has its advantages and disadvantages. There is considerable interest in the so-called Missouri plan, which provides for appointment by the Governor from among nominations made by a panel selected "partly by the Governor and partly by the existing court system or laymen. The judge selected by the Governor serves 1 year, and then his name goes on the ballot, without opposition, with the voters saying 'yes' or 'no' to the question of whether or not he shall continue in office for a regular term. The delegates to the Alaska Constitutional Convention may well give careful consideration to this among other possible arrangements.

"Judicial administration is the third area which in addition to judicial organization and personnel will confront the framers of our Constitution. Inadequate provision for judicial administration, in many States, has resulted in a huge backlog of cases and unreasonable delay in adjudication of cases brought before the courts. Provisions for centralized administrative responsibility, with opportunities to assign judges according to litigation needs, plus administrative aids such as court administrative officers and judicial councils have speeded and made more effective the administration of justice in many States.

"Alaska wants and needs, when it attains statehood, an honorable and efficient court system to fill the void that will exist with the withdrawal of U.S. Commissioners and the limited jurisdiction of U.S. judges when Alaska becomes a State. Alaska can profit from the experience of other States in establishing a sound judiciary."

The suggestions found in this public statement were substantially those found in the recommendations of the committee of the bar association which worked on the problem of the judicial article. When the constitutional convention assembled and organized, there were five lawyers amongst the seven members of the convention's Committee on the Judiciary, and the first proposal offered by this group as an article on the judiciary was in substance very close to the terms of article IV. The principal changes made in the first proposal were stylistic only, to render the manner of statement consistent with other language of the constitution. Thus it can be seen that Alaskan lawyers and laymen were well prepared to accept the standards for a modern judiciary even at the outset of the deliberations of their constitutional convention.

COURT STRUCTURE

Turning now to a review of article IV and some explanation of its main features. Section 1 first establishes the basic court structure. It also provides needed flexibility for future enlargement by the addition of such local or other courts as the legislature may deem necessary. But in any case, the entire court system is to be unified for operation and administration, which is in accord with the fundamental and minimum standards of judicial administration approved and supported by the American Judicature Society and the American Bar Association.

There has been some disagreement expressed over the language of section 1 which provides that the jurisdiction of courts shall be prescribed by law. The concern is that this may render the courts subservient to the whim of legislature and make of the judiciary a relatively impotent branch of the Government on important issues. It should be noted that section 2 provides the Supreme Court with final appellate jursdiction and that section 3 declares the superior court shall be the trial court of general jurisdiction. To what extent these provisions may be held to limit attempted legislative restrictions on jurisdiction of the courts can only be known in the test of time.

The provision in section 2 for future enlargement of the Supreme Court by the legislature is qualified by the provision that such enlargement be requested by the Court. A similar provision is found in the new constitution of Puerto Rico and is designed to prevent the number of justices from being increased for any purpose other than to meet the needs of judicial business.

Section 3 places general trial jurisdiction in a single court, with as many judges thereof as may be necessary to handle the volume of cases. This is in line with modern development and is reversing the former trend toward a complex structure of specialized courts that has so greatly impeded efficient judicial administration in many States. The legislature will be free, however, to create lower or other courts as may be necessary, and to determine the jurisdiction of courts and the geographical extent of their authority.

The main features of the plan for judicial selection sponsored by the American Bar Association and embodied in the Missouri plan, are summarized in the association's handbook on judicial administraton as: "(1) Appointment by governor from list submitted by a nominating committee, the nominating and appointing authority being divided between two agencies; (2) periodic submission to the electorate with no opposing candidate, or running against the record." Both of these features are incorporated in the selection plan set out in sections 5 and 6 of article IV of the Alaska constitution.

Initial drafts of the judicial articles had provided, among the qualifications for judges, a minimum period of residency in the State of at least 5 years. The rigidity of this policy was reduced by the provision adopted, that judges must be licensed to practice law in the State. The legislature, however, is empowered to fix additional qualifications.

In order to allow time for selecting a successor as well as for completing the judicial business remaining before a judge's service terminates, a period of 90 days is allowed after the election at which a judge or justice is rejected or for which he fails to file. The provision for having a justice or judge file a declaration of his intention to be a candidate to succeed himself is a feature of both the Missouri and the California constitutions. The details of such declaration such as its form and the time limits for its filing are left to the legislature.

THE JUDICIAL COUNCIL

Sections 8 and 9 of Article IV deal with the selection of the judicial council and its powers and duties. Selection of lawyer members by the state bar association and of nonlawyers by the Governor, both groups on a geographical representation basis, is a recommended feature of the Missouri plan and has been adopted in the Alaska constitution. Since the establishment of the judicial council must precede the nomination of any judges, including the chief justice, the latter cannot become an ex officio chairman until after his appointment has been effected. Thereafter he will serve as a seventh member of the council. In the event of his incapacity to serve, it is contemplated that rules of the council will provide for an acting chief justice as his interim successor.

The term of office for the members of the council is fixed at 6 years, but the initial appointments are to be staggered as provided in section 16 of article XV, the schedule of transitional measures. Since a Governor serves only a 4-year term, no one Governor will be able to appoint all of the nonlawyer members during any such term, and thereby control to that extent the personnel of the nominating body.

At the time of adoption of the constitution by the delegates, some concern was expressed over the fact that a majority of the judicial council would consist of lawyers, three of whom would be selected by the small group composing the governing body of the organized State bar. This was felt by some to be too narrow a base for determination of the persons eligible to be appointed as judges.

In addition to its duties relating to the selection of judges, the judicial council is empowered and directed by section 9 to recommend needed improvements in the structure and operation of the court system.

Retirement for incapacity is provided for by section 10. It is becoming increasingly recognized that provision should be made, as this section does, for relieving a judge from his judicial duties when, as very occasionally happens, his retirement for reasons other than age or misconduct becomes necessary to protect the administration of justice. The procedure for retirement of a supreme court justice requires recommendation of an outside board, rather than by the court itself, similar to the procedure adopted in the Constitution for Hawaii. For other judges removal by supreme court proceedings, similar to the Constitution of Puerto Rico, has been provided.

The retirement laws for State judges have tended increasingly to adopt 70 as the mandatory retirement age, and this is done by section 11. However, a retired justice or judge may still be called upon for temporary service or special assignment, and this section permits such service to be made possible by court rule.

The procedure for impeachment of judges and justices is provided by section 12 and is made to accord with that for other State officers.

Section 13, relating to compensation for judges, recognizes that this matter should be prescribed by law but that compensation should not be susceptible of arbitrary diminution during office. Under the provisions of this section compensation is subject to increase readily as future needs dictate, but it is subject to decrease only when a general reduction applying to all State officers becomes imperative.

A prohibition against the practice of law or holding other office by full-time justices and judges is fixed by section 14. Such a provision has been widely advocated and is contained in the proposed new judicial article for the State of Illinois.

RULEMAKING POWER

It is well known that one of the major factors in New Jersey's remarkable achievement in bringing its trial calendars and court business up to date, and in simplifying and expediting the administration of justice, has been the vesting of the rulemaking power in the Supreme Court, and the exercise of such power by the Court in adapting the Federal Rules of Civil Procedure to State court practice. The American Bar Association has strongly advocated, as its first and keystone recommendation in its program for reform of judicial procedure: "That practice and procedure in the courts should be regulated by rules of court; and that to this end the courts should be given full rulemaking powers." Section 15 of article IV places primary responsibility for such rulemaking in the Supreme Court, reserving to the legislature a power to change rules of procedure by a two-thirds vote.

Finally, section 16 establishes administrative authority over all courts in the Chief Justice of the Supreme Court. To assist him in supervising the management and housekeeping functions of the courts, both statewide and local, and to furnish him with accurate and current statistics on court

business, he has been provided with the essential element of an administrative director, who will serve at the pleasure of the Chief Justice. This plan has proved successful not only in the Administrative Office of the United States Courts but also in nearly a third of the States, which have followed the example of the Federal system.

Many Alaskans believe that the provisions contained in article IV of the constitution of the State of Alaska place the new State in the vanguard of jurisdictions whose judicial systems typify the best and most modern principles of efficient judicial administration. And they are confident that article IV will provide a guarantee of a strong, fearless and independent judiciary.

Federal Aid: A Help or a Snare?

EXTENSION OF REMARKS
OF
HON. WILLIAM K. VAN PELT
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. VAN PELT. Mr. Speaker, the April 6 edition of the authoratative U.S. News & World Report contains a thought provoking answer to the question: Is the Government in Washington enticing States and cities along the road to bankruptcy?

Under leave to extend my remarks, I include this article in the RECORD, as follows:

WILL STATES GO BROKE MATCHING FEDERAL FUNDS?

States and cities are finding: The free money they get from Washington is far from free. Every time they get a grant of Federal aid, it winds up costing them money.

Year by year, Washington's giveaways get bigger.

Now, some State and local taxpayers are wondering how much more Federal aid they can afford to accept.

This question is beginning to be asked: Is the Government in Washington enticing States and cities along the road to bankruptcy?

Michigan recently ran out of money. New York was forced to raise taxes sharply to be able to pay its bills. State governments all across the country are in trouble financially. Taxpayers resistance to higher taxes is growing.

Why? Can't expenses be cut to balance budgets?

Ask those questions of State officials, and you often get this reply: "If we don't match the free money that the Federal Government offers us, we lose out, and some other State or city will get it. We can't afford not to step up spending if that means we get more free money."

At this time, the Government in Washington holds out more than $6.5 billion in gifts to State and local governments if those governments will match the Federal spending in whole or in part. It also offers low rates of interest if States and localities will build dormitories at colleges or undertake a variety of other spending programs.

Now, if Congress has its way, these giveaway and loan programs are to be expanded still further. Congress, in turn, is prodded by State officials who continue to be attracted by the idea of cheap or free money from the Federal Government.

In proposals now before Congress, cities and towns will get bigger subsidies to build bigger airports. Depressed areas will get aid and low-cost loans to lure new industry into those regions. There will be more money for public housing. The Federal Government will help with financing of water systems, sewer systems, and other programs to help cities expand.

President Eisenhower, as well as some Congressmen, is urging States to increase unemployment benefits, which will add to payroll taxes on employers.

The facts indicate that spending programs—once started by the Federal Government—tend to grow in good times and bad. As the giveaway grows, the amount of money that States and cities must put up tends to grow, too. Result: financial trouble. Governors gradually become aware of the fact that the Government in Washington can create the funds it wants to spend simply by increasing the money supply, but that States—just like individuals—can spend only what they actually have in the bank.

RELIEF COST: RISING

Take the matter of public relief. This item has increased year after year as standards for getting on relief rolls have been relaxed, and as benefits have been increased to adjust to higher living costs. Back in 1937, when the Social Security System was in its infancy and when relief was viewed as an emergency problem, the Federal Government paid a little more than $140 million for public assistance, with State and local governments putting up about $635 million. Last year—1958—the Federal cost of these programs came to nearly $1.8 billion, with States and localities contributing about the same. This year, State and local costs for public assistance are likely to go to almost $2 billion.

These costs for relief have increased steadily, despite the fact that the country has enjoyed general prosperity through most of the period since World War II. Relief payments now are going to the aged and indigent, to dependent children, to the blind, and—since 1950—to the disabled. The program for the disabled required Federal contributions of $17.9 million in the first year, with States and localities contributing $20.1 million. Last year, this cost the Federal Government $124.6 million, with States and localities paying $113.4 million.

THE COST OF ROADS

Highways put a growing strain on Federal, State, and local treasuries. The Interstate Highway System was adopted in 1956, and for this program the Federal Government put up 90 percent of the money, with States giving only 10 percent. But, on highways built with Federal aid, States must match the Federal payments dollar for dollar.

The result is that Federal funds to highways have grown from $754 million in 1956 to an estimated $2.7 billion in 1959. Matching funds required of States have risen from $667 million in 1956 to $1.1 billion in 1959. To raise these matching funds, States have been steadily increasing their bonded debt.

Several States, meanwhile, have been forced to slight secondary-road systems that get no Federal help. These States have all they can do to raise the money necessary to match Federal payments.

AIRPORT RIVALRIES

Airports provide another example of how States and localities get squeezed when they take Federal money. Airport grants by the Federal Government were $43 million in 1958 and are due to rise considerably under programs now before Congress. Federal funds for airport development must be matched by local funds.

Actually, localities—usually cities—pay a great deal more than the Federal grant for airports. They must meet the cost of utilities, road changes, and other improvements connected with new or expanded airports.

The result is that, to get Federal money for airports, cities have increased their bonded debt and saddled themselves with continuing interest charges. Yet pressure persists for airport expansion, backed by arguments that a city that rejects aid will be at a disadvantage while other cities accept it.

HOW FREE IS "FREE"

States and cities thus are finding that Federal grants are seldom free. Even in public housing and slum clearance projects, Federal aid has strings attached. Public housing projects require cities to exempt the land from local taxes. Slum clearance and urban renewal programs call for donations from cities equal to about 50 percent of the Federal total. This may include gifts by local governments of land, improvements, and public utility installations.

Federal aid for school construction in areas heavily populated with Federal workers turns out to be not completely free. The schools are built at Federal cost, but communities find that the expense of providing teachers and other school services often outruns the Federal grant.

When it comes to underwriting school lunches, the Federal Government donates surplus foods, such as milk, eggs, flour and butter. It also offers some cash, but schools must provide $3 for every $1 contributed from Washington. Many school districts raise their funds by charging pupils for the lunches, but still must meet the expenses of operating cafeterias and other services.

OUTLOOK FOR 1960

Federal aid of various kinds has been in a sharply rising trend in recent years. Back in the 1948 fiscal year, Federal aid was reported at $1.9 billion. In the present fiscal year, ending June 30, aid is likely to reach $5.9 billion, and in the year ahead it is expected to go to $6.5 billion.

This aid, however, has been accompanied by an increase in State and local spending that has been just as great, or even greater. In 1948, State and local governments spent about $17.7 billion. Last year they spent an estimated $44.5 billion, and a sizable proportion of that went toward matching Federal grants.

This trend in total spending by governments is raising the question whether States and cities can afford any additional Federal aid. Several States already appear near the end of their financial rope.

Cannot Give District of Columbia Back

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following timely editorial from the San Mateo (Calif.) Times of April 2, 1959:

CANNOT GIVE DISTRICT OF COLUMBIA BACK

It is a sad commentary on a Nation's state of affairs when its Capital City is offered back to the State from whence it came—and is refused. That is what happened recently in a farflung congressional dissertation on what to do about the voteless status of the District of Columbia.

One solution advanced by Representative MCMILLAN, of South Carolina, Chairman of the House District Committee, was that Washington should be returned to Maryland's fold. The land was originally ceded to the Nation by Maryland in 1788.

That land would not be recognizable by those who proudly presented it to the fledgling Republic 171 years ago. Teeming population, a swollen Federal bureaucracy and neglected by the Congress which governs it have turned the picturesque farm land into a modern city of high taxation, high crime rates, and growing malcontent, with its populace trying frantically to flee to the suburbs.

It is little wonder Maryland is willing to forgo any claims to its onetime possession.

Maryland's Senator BUTLER was quick to respond to Representative MCMILLAN'S proposal, lest the idea gain favor among congressional colleagues. Asserting that taxpayers of his State were "unwilling to assume the burden of additional taxes to put Washington back on its feet," the Senator tossed the suggestion back into the laps of the House committee members. "They run the District into bankruptcy and then want to give it back to Maryland," he said.

A poor fiscal position was not the only reason given by the Senator for rejecting any intervention by his State in solving the difficulties the governing fathers have built up around themselves. As a poignant tribute to the high incidence of crime prevalent in the District, he added: "Not do we want to inherit a city where a high rate of crime drives thousands of people indoors after nightfall."

Washington—the city which above all others should be the showplace of America's political and economic systems—has become a no man's land of inept congressional management. Giving the citizens of the District the vote is not the solution. What is needed is a general overhaul of the Federal Government's role as the capital's overseer.

NATO: Still the Best Hope

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Greensboro Daily News of of April 2, 1959:

NATO: STILL THE BEST HOPE

For all its shortcomings, the North Atlantic Treaty Organization, which celebrates a 10th anniversary Saturday, has accomplished its main objective: It has kept the peace in Europe.

In the decade since that dark day in April 1949, when 12 North Atlantic allies met in Washington and banded together against threatening Soviet aggression, the Organization has lost its original, exclusively North Atlantic character. Two Mediterranean powers—Greece and Turkey—have been admitted; and a former enemy, the then prostrate Germany, has become the keystone in the defense of Western Europe.

Also in the process the United States abandoned historic and traditional isolationism, the groundwork having been laid by the late Senator Arthur Vandenberg who in 1948 called for the "association of the United States, by constitutional processes, with such regional and other collective arrangements * * * as affect its national security."

And despite weaknesses, NATO has deterred Communist expansion in Europe. This far and no farther, said the North Atlantic powers, and the NATO line was never breached. Soviet leaders raged at NATO as an aggressive alliance, but the organization's purpose—peace—has always remained the same. All the partners have specifically pledged not to use force, or threaten to use force, in any manner inconsistent with the purposes of the United Nations. Ten years of peaceful actions and purely defensive designs in Europe prove the point far better than Kremlin propaganda can add or detract.

Yet for all its accomplishments NATO's record of unity within the ranks is spotty. True, the three-cornered dispute over Cyprus was healed in time for the NATO Council meeting in Washington this week, but no one in NATO could prevent the British-French-Israeli invasion of Egypt.

France, aspiring again to glory under General De Gaulle, recently withdrew the French fleet from NATO command. Even more important, De Gaulle had earlier refused to allow IRBM's to be stationed on French territory. (As a bit of good news for the 10th anniversary, Italy agreed to accept these weapons—the only continental NATO power to carry out the pledge made at the 1957 NATO Council meeting in Paris.)

Moreover, French insistence that the big powers have a larger voice in policy and strategy runs smack into the current complaint of the smaller members that they be given a greater voice in NATO decisions.

NATO, too, has failed to achieve the advance state of unified command and integrated forces once hopefully predicted. Nor have the 100 active and ready reserve divisions blueprinted some years back been called into reality. Not even the 30 divisions on the German front are fully manned and equipped.

Since 1949 there have been other changes. The United States has lost its atomic monopoly, and the missile has replaced the bomber as the principal threat to Europe. The U.S. shift to the strategy of nuclear deterrent, Dean Acheson, who as Secretary of State in 1949 had so much to do with the founding of NATO, believes, is bound to destroy the alliance. Would Americans be willing to sacrifice New York and Chicago for Berlin if the chips were down? Europeans wonder.

Still, NATO has faced changes and inner contradictions before. Adaptability, determination, all-out support, and a willingness to subordinate some national interests can yet make of NATO the kind of alliance its founders envisioned. After 10 trying years, it remains the West's best hope against Communist ambitions in Europe.

Sustained-Yield Policies in Lumber Industry

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, April 8, 1959

Mr. NEUBERGER. Mr. President, the importance of sustained-yield operation to our Pacific Northwest lumber industry has been effectively emphasized in an editorial in the Salem, Oreg., Capital-Journal of April 2, 1959. The editorial, written by George Putnam, editor emeritus of the Capital-Journal, is entitled "Another Ghost Town," and it describes what can happen to lumber communities when prudent policies of timber conservation are not followed.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Salem (Oreg.) Capital-Journal, Apr. 2, 1959]

ANOTHER GHOST TOWN

An often repeated story in our once heavily forested regions is being reported in Eastern Oregon where the "ghost town" of Pondosa, located between Baker and La-Grande on Highway 203 has been placed on the auction block by the Valsetz Lumber Co.

The town of Pondosa has outlived its usefulness. It includes 50 homes ranging from two to four bedrooms, a two-story hotel, a general store, a sawmill, a planing mill and other mill equipment.

Pondosa was built in 1928 by the Stoddard Lumber Co. and sale will be by individual units. Had Senator McNary's Public Law 273 passed in 1944 for sustained yield cutting of forests and establishment of tree farms been in effect when the town was built, probably it would still be flourishing.

Most of our pioneer lumbermen knew nothing and cared less about forest conservation. All they were interested in apparently were quick profits by which a large percent of future profits were sacrificed and the deforested hills left for erosion to create deserts and ghost towns which followed their operations as the night the day.

That old system is fortunately on its way out though still sought for by some timber operators, as shown by their recent opposition to sustained yield system for the Klamath Indian Reservation forests bill in Congress.

Foreign Aid for Foreign Tax Cuts

EXTENSION OF REMARKS
OF
HON. RICHARD H. POFF
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. POFF. Mr. Speaker, the American taxpayers, who have been told that they can expect no tax relief this year, have just received news that the British Government has granted their citizens a 6-percent tax cut. This will be the sixth tax reduction the British people have received in the last 8 years, whereas, in that period American taxpayers have received only one tax cut in 1954. Yet, England has received from the United States more than $341 million under lend-lease arrangements and nearly $3.8 billion in foreign-aid grants. Every cent of this money, together with additional billions of dollars appropriated under the economic foreign-aid program, have been dollars which America had to borrow and which she still owes as a part of her $280 billion debt. America's national debt is not only greater than England's national debt, it is greater than the combined debts of all the nations of the world to which America extends foreign aid.

Included in the British tax cut was a reduction of 2 pence a glass in the duty on beer. Thus we find that the money of American taxpayers which apparently is insufficient to solve the unemployment problem of American workers is being

used to subsidize more beer for British workers.

I have today introduced a bill which would prohibit the loan or donation of economic foreign aid appropriations or foreign aid counterpart funds to any foreign country that reduces taxes on its own citizens during the current fiscal year.

The Two Germanys and Berlin

EXTENSION OF REMARKS
OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I am introducing into the RECORD an article that appeared in the Washington Post this morning by the great columnist Walter Lippmann. The article is quite provocative and bears careful, critical thought. It is interesting to note that with others, Mr. Lippmann feels that the United Nations should be brought into the picture in Berlin. I hope that our Government will give serious consideration to those suggestions that include a role for the United Nations in the discussion over Berlin:

[From the Washington Post and Times Herald, Apr. 8, 1959]

THE TWO GERMANYS AND BERLIN—III

(By Walter Lippmann)

(Walter Lippmann has just returned from Europe, where he has taken a look at the Berlin crisis. This is the third of a four-part report.)

The preceding articles have made the point that for the indefinite future the two German states cannot be reunited in one German state with its capital in Berlin. There will be the German Federal Republic of the West with its capital at Bonn. And there will be the German Democratic Republic of the East with its capital at Pankow, which is a part of East Berlin. These two German states now deal with one another in many economic and technical matters. Thus for example, for some considerable time West German traffic to West Berlin has been controlled by the East German Government. With the assent of Bonn it exercises the right not only to stamp the identification papers but actually to inspect the cargoes.

There is every reason to suppose that there will be an increasing intercourse and communication between the two German states. But they do not recognize each other as legal and legitimate sovereign states.

We must, therefore, accept the fact that for years to come—it might be for a generation or more—these two German states will have to live side by side with a frontier on the line fixed by the armistice which ended World War II. From the frontier of East Germany to the city of Berlin is a distance of 110 miles. The basic problem is how to protect the future of the West Berlin community, which consists of 2½ million people. They must expect to live for an indefinite future, perhaps for the rest of their lives, in the heart of a Communist state.

In my view, the future of West Berlin cannot be secured adequately by a determination to stand firm on a policy of standing pat. No doubt, we can prevent the Soviet Union and the East German Government from blockading West Berlin. We can threaten to go to war if they do. But that is not good enough. West Berlin lies in a strategic trap, and its security cannot be protected adequately by military measures alone. It can be secured against blockade and outright aggression. But it cannot be made secure against harassment and a perpetual war of nerves and the feeling that there is no hope.

West Berlin is a highly complicated economic and political community. It enjoys the institution of private property. There is free enterprise in investment and in banking and in the management of capital. If the division of Germany is to last for the indefinite future, we must find ways to provide the West Berlin community with a dependable order of things. We cannot expect the West Berliners to depend for their whole security upon what over the course of a generation or more we may be able and willing to do with our Strategic Air Force.

The West Berliners cannot go on for years waiting to hear what the Pentagon will say about going to war whenever an East German official harasses them. There has already been some considerable flight of capital since the Khrushchev note of last November, and the economy of West Berlin will wither if, whenever there is a sign of trouble, the best we can do for it is to threaten World War III.

My conviction is that the future of West Berlin must be protected not by standing pat but by our insisting that West Berlin needs and is entitled to have a new status. When Mr. K. tells us that the present status of Berlin is obsolete, it is a mistake for the West to act as if any departure from the status quo would be a defeat and a surrender. It might be an improvement. At present the status quo is from our own point of view extremely unsatisfactory. The right answer to Mr. K. is to propose that we negotiate a new charter or statute in which West Berlin is guaranteed an ordered future by the presence of Western troops acting under international auspices.

A new statute for Berlin is needed because the existing arrangements were improvised, rather incompetently, by men who regarded them as temporary. Nobody planned them for a long future. Nobody supposed that there would be two German states with Berlin in the middle of one of them. Only last week we had an example of how ramshackle are our agreements about access to Berlin, when Soviet fighters buzzed an American plane, which was flying, apparently for the first time, above the customary ceiling of 10,000 feet.

In negotiating a new statute, we should begin by establishing the principles under which we have a right to be present in West Berlin and to participate in determining its future. For some extraordinary reason we have chosen to argue that our rights in Berlin rest upon the right of conquest. That is, if I may say so, a poor reason for the defenders of civilization to invoke. If we choose to stand on the right of conquest, we shall live to regret it. It will boomerang. For where would we be if the Soviet Union, which is also a conqueror of Germany, chose to invoke for itself the right of conquest? The whole of Germany was surrendered to the conquerors, and if there is a right of conquest, it is not limited to West Berlin.

There is no need for us to resort to so primitive and brutal and repellent a principle as the right of conquest. We have good and sufficient civilized reasons for being in Berlin and for remaining there. We are in Berlin because it is the capital of Germany. We are entitled to stay there until it is once again the seat of a united German government. During our stay in Berlin we have in the course of time acquired a special moral obligation to the 2½ million inhabitants of West Berlin. This obligation we intend to honor and we could well say to Mr. K. that he would despise us as we would despise ourselves if we did not honor it.

For us, negotiation must start from these two fundamentals: The need for a long future of steadfastness and stability, and the need for a change which reflects the new realities. This can best be done if a new statute is negotiated in which the future of Berlin is put in trust with the United Nations. The new charter or statute should begin with an explicit declaration that the United Nations trust will last until the two German states agree to restore Berlin as the capital of a reunited Germany.

Then, in the new statute the right of access, the conditions of coexistence, the relations between the two Berlins and the two Germanys, the presence of Allied and United Nations token military forces, should be spelled out. Though it is a complicated thing to do, it is not an impossible thing to establish a city within a city and within a foreign state. The most striking example, which could well be used as a suggestive model, is the treaty signed in 1929 between the Holy See and the Kingdom of Italy. This was the Lateran Treaty which established the Vatican City. The state of the Vatican is a quite separate sovereign juridical entity although it is in fact entirely surrounded by the Italian city of Rome. The treaty regulates the whole problem of access across Italian territory, and it does so with a precision which anyone must envy who knows something of the fuzziness of our position in Berlin.

I think I have reason to say that a solution of this sort would be acceptable in West Berlin. Whether the Russians would accept it there is no way of knowing until we try to negotiate it in concrete terms. But the signs are not altogether unfavorable. Mr. K. has mentioned the U.N. in connection with Berlin, he has acknowledged that the West has rights and obligations in Berlin, and he has not rejected the idea of a western military presence.

Both sides have much to gain from such a settlement. For us it would mean that the West Berlin community was guaranteed physical security under a new and much more authoritative statute than exists today. It would mean also that the future was not foreclosed, and that the prospect of Berlin's becoming again the capital of Germany would be reaffirmed with the sanction of the world society. The West Berliners would have a reason for carrying on. For they would have hope, which, in affairs of this sort, is as important as hydrogen bombs.

The Russians for their part would get a good deal too. They would get, as we would get, the relief that comes from straightening out a dangerous muddle. They would get a provisional but durable acceptance of the fact that there are two Germanys. Since a United Nations statute would have to be agreed to both by the Soviet Union and by the Pankow government, they would get a de facto recognition of the East Berlin state by the U.N. This might mean much to them in that it would help to stabilize their situation in Eastern Europe.

Neither side would win. But neither would lose. Each side would hold within its sphere of influence what it now holds, and neither would surrender to the other any territory or any people. But we would get a new legal, political, and moral foundation and framework which takes account of the hard facts of life—that there will long be two Germanys and that Berlin must be protected in a special way while Germany remains divided.

Welcome to Italian Foreign Minister Pella

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. CELLER. Mr. Speaker, it is noteworthy that an agreement has been concluded between the United States and Italy to permit the setting up of Jupiter intercontinental ballistic installations on Italian soil. This is a good omen, especially at this time, when we celebrate the 10th anniversary of the signing of the North Atlantic Treaty, of which Italy is an important component. This momentous event is also accompanied by the arrival on our shores of Guiseppe Pella, Italian Foreign Minister and famous diplomat, who comes here to participate in Washington ceremonies commemorating this anniversary.

The decision of Italy to set up these intercontinental ballistic stations within her territorial confines required tremendous courage. It is the result of the foresight of men such as Premier Antonio Segni and Guiseppe Pella. It was only natural for the Italian Communists and Moscow to criticize Italy for this action.

Foreign Minister Guiseppe Pella has been a consistent champion of the Western Alliance among European statesmen. It is interesting to note that despite changes in the heads of the Government in Italy, that country has consistently lived up to her commitments in NATO and the Western alliance. That fact should be taken into consideration by the executives in our own Government in this forthcoming conference of Foreign Ministers prior to the so-called meeting at the summit. Italy should be a successful candidate for one of the positions at the Foreign Ministers' conference table.

I had the proud distinction of meeting Giuseppe Pella during one of my visits to Italy. Here we have a peasant's son who has risen to one of the highest official positions in the Italian Government. His life story is a most interesting saga. He was born in the foothills of the Alps—in Valdengo—in 1902 and as a mere stripling, helped his parents who were sharecroppers. He attracted the attention of the village priest with his brilliance of intellect and industry and the prelate induced the lad's parents to continue his education. He made the decision to work in a cotton mill, to help him pay his tuition. He kept his nose glued to his books and received a diploma as an accountant at the University of Turin, where he won high honors in finance and economics. When Giuseppe Pella was 30 years of age, he was more than self-sustaining and made considerable money as an adviser to large firms on their financial and other business matters. He entered politics at the end of World War II and became a member of the conservative wing of the Christian Democratic Party. He was elected a member of the Chamber of Deputies in 1946. His ability as a Deputy and a student of government attracted the attention of De Gasperi and he became Foreign Minister in his Cabinet.

He held that position until the fall of the De Gasperi Cabinet and thereafter, became Prime Minister of Italy, Minister of Foreign Affairs, and Minister of the Budget. He again became Foreign Minister in the present government on February 15 last. I am sure we are all glad to have him in our midst. We roll out the carpet for him and wish him and his dear ones well.

Chicago Pays Tribute of Appreciation and Affection to Hon. Thomas J. O'Brien

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. O'HARA of Illinois. Mr. Speaker, my colleagues on both sides of the aisle will be pleased to learn of the tribute of appreciation and affection given the Honorable THOMAS J. O'BRIEN, beloved dean of the Illinois delegation at a notable luncheon in his honor at the Palmer House in Chicago on Friday last. The luncheon, sponsored by the president and the board of trustees of the Metropolitan Sanitary District for his leadership in lake diversion legislation, was attended by the leaders in the public and civic activities of the city of Chicago. It was an outstanding event, marking the great esteem in which the dean of our delegation is held in the city of his birth and of his life-long devotion.

Following is the resolution passed by the Metropolitan Sanitary District, an engrossed copy of which was presented to Congressman O'BRIEN in a speech by Trustee Casimir Guiglik:

Whereas the Honorable THOMAS J. O'BRIEN, Congressman from the Sixth Illinois District, dean of the Illinois House congressional delegation, has consistently and with persistence and outstanding ability in the 83d, 84th, and 85th sessions of Congress led the fight for the vitally needed diversion of water from Lake Michigan at Chicago to improve the polluted conditions in the Illinois Waterway; and

Whereas the diversion bills in the 83d and 84th Congresses, having both been approved by the House and Senate, were vetoed by the President, and Congressman O'BRIEN's bill in the 85th Congress (H.R. 2) was approved by the House in the first session but failed of passage in the Senate in the closing hours of the second session; and

Whereas despite these discouraging actions, Congressman O'BRIEN, on aJnuary 7, 1959, at the opening of the 1st session of the 86th Congress, on behalf of the Illinois House delegation, again introduced the diversion bill patterned to meet the objections heretofore raised to the preceding bills by the various opponents, which bill was given the significant designation of H.R. 1 in respect to its sponsor, Congressman THOMAS J. O'BRIEN; and

Whereas at Congressman O'BRIEN's urging, the House Public Works Committee conducted open hearings on said H.R. 1 on February 17 and 18, 1959, and March 3, 1959, to enable all proponents and opponents ample time to present their respective views, and thereafter said House Committee on Public Works favorably recommended the adoption by the House of H.R. 1 by a vote of 19 to 11; and

Whereas the House of Representatives on March 13, 1959, after due debate on the merits of said legislation, concurred in the recommendations of the House Public Works Committee and adopted H.R. 1 by a vote of 238 to 142: Now, therefore, be it

Resolved by the board of trustees of the Metropolitan Sanitary District of Greater Chicago, in regular meeting assembled this 19th day of March 1959, That we do hereby formally express our sincere personal and official appreciation to Congressman THOMAS J. O'BRIEN for his outstanding labors in Congress on behalf, not only of all of the people of the city of Chicago and of the Metropolitan Sanitary District of Greater Chicago, but the people of the entire State of Illinois; and be it further

Resolved, That, in recognition of Congressman O'BRIEN'S outstanding services, particularly on behalf of this vitally needed additional diversion legislation in view of the impressive opposition, these resolutions be spread upon the official records of the permanent proceedings of the Metropolitan Sanitary District of Greater Chicago, and a copy hereof suitably engrossed be presented to the Honorable Congressman THOMAS J. O'BRIEN.

Board of Trustees: Walter S. Baltis, John A. Cullerton, Vincent D. Garrity, Casimir Griglik, John G. Henneberger, Wm. S. Nordburg, William F. Patterson, Christopher C. Wimbish, Frank W. Chesrow, President.

I am further extending my remarks to include TOM O'BRIEN'S heart-to-heart, straight from the shoulder talk to his fellow Chicagoans who had met in this imposing gathering to pay him honor. I am sure that every Member of this body in which TOM O'BRIEN has served so long and with such distinction, and in which he is beloved and respected by all, will wish to read his remarks in this memorable occasion. Here is the full text:

Mr. Chairman and friends, I want to thank all of you for the many nice things you have said about me and for this testimonial.

I am particularly proud of the many gracious things said to me by Dick Daley. I have lived in the city of Chicago all my life, and it has been a long life. I have been in politics a long time—as a matter of fact, I was elected to the Illinois Legislature over 50 years ago. I have known all the mayors of Chicago during my political life and I want to say here and now that the city of Chicago never had a better mayor than Dick Daley. I mean it. Those of you who know me know that I speak directly and to the point. I say without a doubt that Dick Daley has been the best mayor the city has ever had.

I am being honored today, and yet a goodly portion of the honor which you bestow upon me today is attributable to the mayor. He has worked unceasingly for the lake diversion bill and it is because of his wish that I filed it. He has cooperated and worked with me and with the other members of the Illinois delegation like no other mayor ever did. As a matter of fact, until Dick Daley came into office, the Illinois congressional delegation never knew officially that a mayor of Chicago existed. They never asked us to help them with any legislation; they never communicated with us as Dick Daley has done, on the housing bill, on the airport construction bill, on the lake diversion bill, on the National Medical Library bill, on public housing, on appropriations for urban renewal and development—Dick Daley has been in the center of the fight of all of these bills, and has been working with us. That is why I say I

am particularly honored that the mayor should say the nice things he did about me.

I really didn't want this ceremony—but that doesn't mean that I am not grateful for it. I must say in all honesty, right at the start, that although it is I who am being honored, the testimonial should go to all members of the Illinois congressional delegation—Republicans and Democrats alike. Mrs. CHURCH and HAROLD COLLIER fought just as hard for this bill as any of us did, and deserve as much credit for its passage by the House on March 13 as any of the Democrats. This is a nonpartisan bill. I once heard President Truman say that the Illinois delegation in Congress is the best congressional delegation in the country. That is still true today.

Yes, we have the bill passed by the House. And before we came home for the Easter recess, Sid Yates and I went over to the Senate and asked Senator KERR to set the bill down for hearing before his committee. He promised us that he would do it as soon as the Congress reconvened. I know we will get a fair hearing from Senator KERR.

But I would not be fair with you if I did not tell you that I believe the bill is in trouble—in much more trouble than it was in the last session of Congress, because at that time the Government of Canada had declared that it had no objection to the bill. The entire executive branch was with us then—the State Department, the Bureau of the Budget, the Army Engineers—as a matter of fact, it was at the suggestion of one of the representatives of the executive branch that the 3-year period of diversion was cut down to 1 year. It was represented to us that if this was done we could obtain the approval of the State Department and the President would not veto the bill.

And we did it—we changed the bill in accordance with that suggestion. Nothing has changed since that time. The conditions are exactly the same. The present bill provides for 1-year diversion and yet, for some unknown and mysterious reason, the Government of Canada is against it, the State Department is against it, the Bureau of the Budget is against it, and the Corps of Army Engineers is against it. What has happened to make all these people change their minds? I don't know, but I shall certainly ask Senator KERR to try to find out the reasons for this reversal.

I cannot understand the attitude of the Government of Canada to this bill. Canada is a great country. Its people are among the finest in the world. We have enjoyed the friendliest relations with our great neighbor to the north in every respect. I read in the paper on Wednesday night that the Canadian Consul General had declared that "Chicago is more closely tied to Canada than any other part of the United States." He said that "Chicago has become the very hub of this great American-Canadian trade and industrial relationship. * * * There is more trade flowing back and forth between the Chicago Midwest and Canada than any other area in the United States." That is what the Canadian Consul said the other night and I agree with him. There is no reason for any difference between Canada and Chicago on any matter—and that includes the lake diversion matter as well.

The experiment which we are proposing in the lake diversion bill will harm no one and can only bring beneficial results, because the problem of sanitation and water pollution is of tremendous importance to every metropolitan area in the country. This experiment may very well furnish the basis for new methods of disposing of wastes.

I cannot believe that Canada is serious in contending that this study will be harmful to navigation and will injure its shipping and power interests. We do not propose a permanent diversion in this bill. We seek only to divert an additional 1,000 cubic feet per second for a period of 1 year to permit the study to be made. The Corps of Engineers—certainly, a most reputable agency—has declared that the experiment would have no significant effect upon navigation and the lowering of lake levels. The most that any lake level will fall as a result of the additional diversion of water contemplated in my bill is a quarter of an inch or less. How can it possibly be said that this will be hurtful to navigation or shipping.

There is an additional point which must be made and which demonstrates conclusively that navigation and shipping need not be affected. The report of the Corps of Army Engineers printed in the Senate as Document No. 28 of the 85th Congress, 1st session, declares, in paragraph 197, that "lowering of lake levels resulting from an increase in diversion considered herein could be compensated for on Lakes Michigan, Huron and Erie. Such compensating works for Lakes Michigan and Huron could be built in the St. Clair River at an estimated cost of $1,530,000. The gated control dam above the cascades in the Niagara River now under construction under the supervision of the International Joint Commission could be operated to compensate for the reduction in the Lake Erie level. The levels of Lake Ontario will be regulated in connection with the St. Lawrence Seaway and power project. The plan of regulation can be modified as required to accommodate the reductions in outflows within the range of stage established for Lake Ontario levels under regulation."

The Engineers' report says, further: "Coordination and agreement with Canada would be required to accomplish either of the above."

So, you see, Canada has it within its own power by agreement with the United States to regulate the levels of the lake and to prevent any damage to navigation and shipping. Even if the sill is in the St. Clair River, to which the Army Engineers refer, is not constructed, the damage to Canada's navigation and shipping interests can be eliminated almost entirely during the period of diversion proposed in my bill. Therefore, there is no basis for protest on this score.

The other objection raised by Canada, namely, the loss in power revenues, is similarly subject to adjust. The report of the Corps of Engineers indicated that over the 15-year period during which time the proposed diversion is supposed to have an effect, the loss in revenues to both Canadian and American interests would average $36,000 per year. I ask you—how badly would Canadian and American power interests who are protesting this bill—how badly would they be hurt when their projected loss of $36,000 per year compared with total power revenues accruing to them of $100 million per year? One hundred million dollars is the anticipated annual earnings of the Canadian and American powerplants.

When one compares this small most uncertain injury with the tremendous earnings of the huge power operations, how pertinent becomes the statement made by the House Committee on Public Works in its report on my bill, when it said: "The value of helping to solve one of the most pressing problems of a great metropolitan area far outweighs whatever slight temporary loss, if any, might be sustained by adjacent areas."

But the possibility of minimizing this loss even further exists for the power interests by adjustments in the rate of flow over the Niagara Falls. Amounts of water are apportioned at certain times of the day in greater quantities because of tourists. Why could not the possible damage be compensated for by adjusting the flow to permit slightly longer diversion of the water for power purposes? The amount of loss to the tourists would be infinitesimal in terms of their enjoyment of the grand spectacle.

Thus, there are a number of ways in which parties willing to work together can find a solution to this problem. We want to work together with Canada. I agree with Counsel General Newman that "Chicago is more closely tied to Canada than any part of the United States"—and we want to keep it that way. That is why we ask Canada to keep an open mind on this matter which is of such vital importance to the people of Chicago and Illinois, rather than permitting the historical antagonisms of the past to shut out any possibility of coming to an agreement.

I hope we can persuade the Government of Canada to withdraw its protest. Chicago is destined to become the No. 1 city of the world, and its growth must not be impeded by what must be described as an illogical and unwarranted protest by the Government of Canada. If Canada holds dear Chicago's friendship—as Chicago does Canada's—it will not arbitrarily throttle the natural expansion of a thriving metropolis by filing a stony and final protest, rather than seeking a meeting place where the minds of friends may agree upon a reasonable solution of a pressing problem.

Chicago will never stop growing. It will never stop because its people are so vital and dynamic—because its people have pride and confidence in themselves and in their community—and because we have leaders like Mayor Daley.

I want you to know that I will continue to fight for the people of Chicago and for the passage of the lake diversion bill. I am sure that all of my colleagues in the Illinois congressional delegation join me in that pledge.

To all of you, to Mayor Daley, to President Chesrow, to all the members of the Metropolitan Sanitary District of Greater Chicago, I say in the words of Speaker RAYBURN: "Thank you from the bottom of a grateful heart for your graciousness and generosity in bestowing this great honor upon me today."

Rear Adm. Leonard Frisco

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an article published in the February 1959 issue of the Rudder Club News of New York. The article is entitled "The Man of the Port" and is about my very good friend, Rear Adm. Leonard Frisco.

Here is the story of a man who put in a total of 48 years of service for his country, 23 years on active duty in the U.S. Navy and 25 years with the merchant marine. This is a record which very few can match. Admiral Frisco was raised in his youth in a cosmopolitan neighborhood in New York, like myself, and had to fight his way up the ladder of success every inch of that long and tortuous road. His diploma comes from the school of hard knocks.

Admiral Frisco is the best example of rugged individualism that I know of. He was a tough youth, a tough seaman, and a tough officer, yet always a man with a kind heart. He was generous to his boys in the service and sought to inspire them to leadership and responsibility. He is beloved by all of them and by his

many good friends, who wish him long years of health and happiness.

The text of the article is as follows:

[From the Rudder Club News, February 1959]

THE MAN OF THE PORT: REAR ADM. LEONARD FRISCO

From apprentice seaman to rear admiral, U.S. Navy, and from third mate to master in the U.S. merchant marine, a total of 48 years of service connected with ships, and served 23 years on active duty in the U.S. Navy and 25 years connected with the merchant marine, having entered the merchant service after resigning from the U.S. Navy in November 1921. Returned to active duty in the Navy as a lieutenant commander in 1940.

After performing 5 months of service as third mate in 1922, with the Moore & McCormack Lines, he entered the Black Diamond Lines service as second mate in January of 1923, chief officer in 1924, and master in 1926 and left the Black Diamond in 1940 to reenter the U.S. Navy. Retired from the Navy on January 1, 1953, and reentered the Black Diamond Lines as marine superintendent and promoted to operating manager in January of 1956.

Upon reentering the U.S. Navy, he served as executive officer of the U.S.S. *Henderson* for 1 year and in November of 1941 was ordered to duty on the U.S.S. *Wright*, serving on that ship as navigator, executive officer, and commanding officer in that order for a period of 15 months and then ordered to command the attack transport *Ormsby*. All the above service performed in the central and south Pacific and made all the landing operations from Tarawa to Leyte, Philippine Islands.

Having completed 4 years in the Central and South Pacific, he was detached and reported to New York in January 1945 to command the U.S.S. *Monticello* (ex-Italian luxury liner *Conte Grande*). Fitted to carry 7,200 troops and, after several voyages to Europe on the *Monticello* finishing out the war at sea, was transferred in August of 1945 to Washington, where he served in several capacities at the Bureau of Personnel and in his first shore assignment.

Upon completion of his Washington duty, he was detached and ordered to duty at the Third Naval District, New York, as the merchant marine Naval Reserve program officer, with additional duties as president of the general courts-martial board in the district, and numerous details on promotion selection boards in Washington, D.C.

As head of the merchant marine Naval Reserve section of the New York district, he was instrumental in having over 200 American merchant ships staffed with sufficient Reserve officers for the ships to fly the merchant marine Naval Reserve flag, such ships including the steamships *United States, America, Independence, Constitution,* and numerous others that made New York their port of call. He was also instrumental in having many Reserve officers retain their commissions and keep up with Reserve matters in which case such officers now receive a small or modest retirement fund from the U.S. Navy, believing such legislation would be passed, and as a matter of fact did.

During the summer of 1946 he was given command of the Point Barrow, Alaska, Resupply Expedition and with the crews of the ships consisting of young recruits put ashore in landing boats a total of 12,000 tons of cargo in 6 days. Some pieces of equipment weighed as much as 38 tons.

Again in the summer of 1947 he was assigned as senior technical adviser to Commander Amphibious Transport Division 12 and to command the task unit that took an icebreaker and an LST to Barter Island near the Canadian border across the Arctic Ocean through the ice field and through the Islands Lagoon where the LST was beached and secured to remain as living quarters for the island's detachment. He organized the expedition in that it landed at Point Barrow 24,000 tons of cargo by the use of landing boats and pontoon barges in less than 6 days and also landed at Barter Island 1,500 tons of equipment.

Retired from the Navy with a total service of 35 years, 24 of which were performed on active duty. Holds many letters of commendation and campaign ribbons all the way from Mexico 1914 to Korea, plus the Legion of Merit for combat in World War II—served on destroyers all through World War I.

Holds membership in the Veterans of Foreign Wars, the American Legion, the Marine Society, Council of American Master Mariners, where he held the post of president of that organization of experienced master mariners for 2 years. He is also a member of the Downtown Athletic Club, and most all of the associations connected with shipping, including the Maritime Association of New York and the Rudder Club.

Strange as it may seem, the admiral spent 34 years on actual sea duty before coming ashore and is the only one of a large family that went to sea. However, his own son is connected with the merchant service, holding a chief engineers license and a daughter married to a captain in the U.S. Navy. Two grandsons bless the family.

A resident of lower Manhattan most all of his life, left Public School No. 21 in Manhattan at the age of 13 to obtain work, joining the Navy in 1911 at the age of 16, married to Margaret O'Brien in 1914 and both now reside in lower Manhattan.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Lincoln Day Address by Hon. Barry Goldwater, of Arizona

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on Lincoln Day, in Phoenix, Ariz.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mayor Williams, Governor Fannin, and Congressman Rhodes, distinguished guests, and fellow Americans, fellow Republicans, fellow Arizonians, I can't tell you how good it is to be home, but, tonight it is a better feeling than I've ever had. The warmth of Arizona's sun is surpassed only by the warmth of its people and tonight after days of the freezing cold of the east both sources are more welcome than at anytime I can remember.

This evening as we gather to honor the memory of Abraham Lincoln and to ponder our responsibilities to him and to our Republic I am reminded of a story. President Lincoln, you know, wore a tall silk hat. One day as he got up to speak he put it down in a chair and a rather large lady came along and sat down on his hat. When Lincoln was finished speaking he came back and saw this crumpled topper of his, he merely looked at it and said, "Madam, if you would have just asked me first I could have told you it wouldn't have fit." The question that comes to my mind now is can we fill Lincoln's hat, shoes, and most important, his ideals? I think that is the question that is in front of our country today. I think we are at a crossroads pretty much as we were at a crossroads in the days of Lincoln when unity was needed in the country; when the people of America were faced with the task of either keeping the Republic alive or having it torn apart by people who refused to see and understand the need of unity. I think tonight that unity is equally important not only to the country but to the Republican Party as well. I think we have to strive to create unity within this party just as Lincoln strove to create a Republican Party. We now cannot see the Republican Party die because there are some small differences of opinion as to what this person should be doing or how or what that mission should be accomplished.

Now let me illustrate what I am talking about. I travel around this great country and speak to a lot of Republicans. In fact, this is the fourth night in a row and I have three more left before I finish this week. And this is one of the few places in America where I can stand up before a Republican group and say what Republicans think and not go away feeling I have stepped on somebody's toes. When I go into some other communities I feel pretty much like I'm having to walk on a crate of eggs. I'm careful to ask the chairman whether this or that will upset my listeners and then I am careful to ignore the touch subjects.

We have reached a pretty disturbing period in our history as Republicans, when a Republican who has been a Republican all of his life has to worry about his remarks before a group of people who travel under the title "Republican". Now I realize that in this country there are people who accept me suspiciously; and some not at all. Now why is this true. And I think this is the important part, not because it's Barry Goldwater, but because I am a conservative and I'm not ashamed of it and I talk about it. The opposition in this country, not the opposition in the Republican Party, not the opposition of Jeffersonian Democrats, but those radicals in this country who intend to destroy us have made a very bad word of "conservative". Bad to the point that conservatives won't stand up and be counted. They have put an onus on this word that actually should be on their philosophy and not on ours. So I think tonight as I start, I would like to outline briefly to you what I believe in as a conservative republican. I have been attempting to do this across America recognizing that there are people in this audience, people who will hear this, who now classify themselves as liberals and say "Oh, I can't agree with anything that fellow says, he's too conservative, he's too reactionary."

I have asked audiences to bear with me and compare their philosophies of being a Republican and an American with those of mine and then see if the word "conservative" doesn't pretty much describe their own feelings also. Now what does my conservatism encompass?

First, I believe in the full concept of the Constitution, as it was written 180 years ago—not as it is being interpreted today. I believe, and accept with a full heart, the words of Thomas Jefferson in the Declaration of Independence when he said "We hold these truths to be self evident, that all men are created equal, that they are endowed by their creator with certain inalienable rights, and, that among these are life, liberty, and the pursuit of happiness."

I accept our freedoms as coming from God and I recognize that we've become a great people because we've been a spiritual people and we have been materially strong only because we have been individually spiritually strong. I believe in decentralized government. I believe firmly that the 10th amendment to the Constitution is the bulwark upon which our form of government is based. Individual freedoms rest with the freedoms of the State and I decry the fact that we are drifting more and more away from States rights into the concept of centralized government. I, as a conservative Republican desire the preservation of individual liberties rather than seeking paternalistic security for the people in this country. I believe it was intended that this great Government was to be built upon the idea that you and I are free people because God intended it that way, and that we are not free people because we belong to this or that church, or because we are black, or we're white, or we're yellow or red, or because we come from this country, that country or some other country. We are free because God intended it that way, and we are free as individuals, not as members of a collective group. That I firmly believe in. Those of us who believe in that, or in those basic principles are called reactionaries. Now it is hard for me to understand how a person who believes in those things can be referred to as a reactionary. This, ladies and gentlemen, is the new idea. There is nothing old about this. It's only 200 years old. In fact it has only been written about 180 years. This is the new idea, that man as an individual has dignity and has freedom, and he doesn't obtain those things by being a member of groups. He obtains them from the Lord himself. So I defy those who say that conservatives who believe in the freedom of the individual are reactionary. No, its the radicals of this country who want to return to the day of group identity, pigeonhole life if you will, that are the reactionaries of our country, and they wrongly call themselves liberals.

I believe in the free enterprise system. Good men, well intentioned, controlled by a limited number of rules and regulations, can make work well at all times. It has produced more for more people than any other economic system in the world and yet today there are those people who decry it and want to see it done away with.

Having outlined these few brief points, I don't think there is anybody in this room who can fundamentally disagree that these concepts are wrong for America, and yet, I know there are people here who are as proud of their liberal interpretation of Republican philosophy as I am of a conservative interpretation of the same philosophy.

I think it's time now to look at what the liberal of today is, and I'm not talking about the honest liberal, the man who builds his liberalism on the concepts of Thomas Jefferson or even a Bob LaFollette in the later years. I am talking about those people in both parties who have more or less bastardized the name "liberal," and have tried to hide the real meaning of what they are, "radicals."

Now, what is a liberal supposed to be? He is supposed to be a man who is constantly looking for more freedom for the individuals of this country, but in looking for it he pursues the Constitution; he pursues the American thinking and the American ideals. The conservative, on the other hand, is a man who wants to go ahead on the proven factors of the past. He doesn't want to experiment as much as the liberal: that is why the man is called a liberal. Now, let's see what we have in the country today, and I might say here and now that I believe firmly, that we need in this country a strong, true liberal movement, and we need a strong, true conservative movement. But let's see what these so-called liberals preach in this country and let's make up our minds whether or not they are liberals. They are the ones who are preaching minority versus majority. They say that freedom rests in minority groups or majority groups. They don't recognize that the individuals of those groups are the ones whose freedoms we should be constantly aware of and constantly fighting for. They are the ones who want to régress. They are the reactionaries who want to go back to the group, to tribalism; they are the ones who preach the "common man." When I ask, who is the common man in this country, they will say, "well, he is the farmer." And I say, "Well, what does

he farm." "Well, he farms cotton." All right, so I ask "Does he farm long staple or short staple." And when they begin to see the light I say, "Now who is the common man." Well, they say, "The common man is the miner." So I say, "What does he mine." "Well, he mines coal." I ask, "Does he mine hard coal or soft coal." That about ends the argument. The truth of the matter is, folks, that we're a 170 million of the most uncommon people that were ever placed on the face of the earth. And if we ever succumb to this idea of oneness, and commonness, this country will be through.

I am glad today, in reading the remarks of people whom I recognize as real liberals, to see that they are interpreting the actions of so-called liberals as dangerous in this one area among others because the so-called liberals are tending to preach the idea of commonness. Now what else do they preach? Whether they like to admit it or not, they preach government control. Get in a little trouble in this country. They want the Federal Government to help out. They want centralized government and they want the concentration of governmental power on the banks of the Potomac and not in Phoenix or any other capital of this Nation. Federal aid—oh, there is the most dangerous siren of them all. Federal aid to everything. We've got one suggested now—Federal aid to distressed areas. That means that this great State of Arizona, the thriving city of Phoenix, all of us going ahead on the initiative of men and women, going ahead with courage, recognizing that we have to make advances on proven policies, will have to begin to pay for the backwardness, the laziness and dependency on a Federal paternalistic attitude of people in other parts of our country. I don't like that. I don't think anybody likes to pay for the shortcomings of other people unless those shortcomings be caused by conditions over which they have no control, and yet we are proposing today Federal aid to distressed areas; Federal aid to schools. Now why should taxpayers in Arizona pay for the school buildings in the South where they refuse to build buildings of their own. Why shouldn't we say to those States, "Grab your own boot straps, Buster, and pull yourself up." Federal aid to the farmer. Federal aid to farms in ruining one of the greatest economic opportunities in Arizona by closing the foreign markets for cotton, and yet we can't make our brothers in the South and the North see that Federal aid to farming is killing the farmers of America. And let me tell you, far more than the economic damage is the moral and spiritual damage it is doing to the people of this country as they say to themselves, "I can't do it, but Uncle Sam can do it for me." That wasn't the way our Nation was built. The so-called liberal, the radical and real liberals along with all of us are concerned with the civil rights of the Negro in the South, and I say that that is rightfully our interest no matter what our philosophy may be. But at the same time, these people are ignoring a civil rights problem of the North. You say, "What's he talking about." This is what I'm talking about. The Republican member of a union in Detroit who has his money taken away from him in the form of dues to be spent on a Democrat candidate. Now if that isn't tampering with the franchise of Americans, I don't know what is. And let's apply it to the South where nomination in the primary is tantamount to election in the general. What about the Democrat member of the union who pays his dues only to see that money go to defeat a Democrat that he would vote for. Those are the things I talk about when I talk about the so-called liberals who refuse to see the whole problem, but who again are playing race against race, color against color, creed against creed, only because it might produce a few votes come election time. That, I remind you, was not the philosophy of Lincoln. Who then today, I might ask you, is the party of special privilege. I think the Republicans at one time could have rightly been called that, but it has been a long, long time. I ask the so-called liberal of today, "What difference is there between the corporate baron of the early 1900's buying elections for the Republicans and the union barons of 1958 buying elections for the Democrats?" What difference is there? There is none.

Let us look now at their attitude toward fiscal soundness. I call it on their part, "massive irresponsibility." You have on a card tonight, a new penny. If that penny were worth 1 cent it would be fine, but it is worth about 48.6 percent of 1 penny now, and it's worth that because of the irresponsibility of the opposition party. And I might say that yesterday I got quite a laugh out of my good friend LYNDON JOHNSON. I like LYNDON. He is a very able, capable man. But he comes from Texas, and you know that down in Texas they aren't satisfied with anything small. I think that LYNDON just got to thinking the other day that "Well, by golly, I'm down in Texas and this can't be true; we couldn't have cost these people all of this money. We're not fiscally irresponsible." And he got that Texas mind of his going around and around and he came up with the suggestion that the Democrats had cut $22 billion off the Eisenhower budgets in the last 6 years.

Well, I wish that I were back there to remind him of it, but if he is talking about what has been cut, $12 billion of that was cut by the Republican 83d Congress off of Truman's budget. Now I will have to admit that in the 85th Congress the Democrats did cut about $5.6 billion from the amount that was requested. But then we get into the fiscal slight of hand. We find that 1⅓ billion of that was only a paper cut and that they turned around and authorized the expenditure of it from existing capital. And then offsetting further the 5.6 billion, was action that totaled more than that. For instance, 1 billion for housing that wasn't asked for; 1.8 billion for further appliances on the housing act. Two hundred thirty five million dollars direct to the highway act. And then there was legislation requiring more spending than what was authorized. For instance $444 million in retroactive Federal pay increases. A hundred million dollars for a super liner, and then by failure to adopt the President's suggestions we went $700 million more in the hole in the Post Office and $725 million more in the hole in the Federal highway fund. And in addition to that they wanted to spend another $6 million. So as a result of the action of the irresponsible radicals in the Congress, you are going to have about a $12 billion deficit this year. In fact, Congressman RHODES will tell you that last year in the House of Representatives alone, there were almost $156 billion of bills introduced that, had they been passed, would have added that amount to your tax rolls in the next 5 years. And while it's not according to school-tie etiquette to mention names in the other House, a tall thin man slightly bald, who wears glasses, whose father was a President, introduced almost $33 billion worth of these bills. And I don't want to ignore the Senate. We totaled nearly $43 billion in the bills that were introduced by eager radicals, eager and ambitious to deflate the value of the dollar in this country.

That's probably their greatest hallmark. The fact that these radicals have absolutely no conception of what a dollar is worth. And you know the surprising thing to me, and I think Congressman RHODES will comment on this. I have always been amazed at the rich Socialists we have in this country. It very rarely fails that a man who inherits money, suddenly gets ashamed of it, and he has to think of ways to deprive everybody else of their money, just because his father was a success. But that's true across this country. It's a sad commentary. One other thing they do that I think you and I can disagree with. They have been very successful in selling this Republic of ours as a democracy. We hear speech after speech by people who should know better exhorting the virtues of our great democracy. Now ladies and gentlemen, find me the word democrat, democratic or democracy in the Constitution of the United States and I'll sit on the top of John Mills great flag pole up here on Saturday afternoon and eat the Constitution. But it does mention Republican, in a small case. Not the Republican Party but the republican type of government, our form of government.

I remember here just a few years ago when my nephew Timmy came home one night. He said, "Uncle BARRY will you help me write a theme 'I Speak for Democracy.'" I said, "Timmy, let's have some fun with your teacher. Go back tomorrow and tell her that you can't do it because we are not a Democracy." Well the next night he came back and he said, "Uncle BARRY, don't ever tell me to do that again." But they have been able to teach our young people and many of our old people that we are a democracy when we are a republic. And if we want to go part way, we are a democratic-republic. Both small case.

I don't think there's any question in the minds of anybody in this country, who will soberly think over our history, and you have to think of history in evaluating present position and future position, who will not agree that under conservative government, mostly under Republican government, this country has been better off. Therefore, a conservative approach of some type is best for America.

But we haven't been doing a good job of getting that story told. We have conservatives of all hues and we can go from the middle of the road to the extreme right. In that category we have not been telling our story and I think that it's time that we do. Why? Because we, in this country, whether we like to admit it or not have gone a long way toward socialism. It's very difficult for us to think tonight of a business that isn't touched in some way by governmental support. It is very difficult for businessmen of any type to think of a day or a week that doesn't go by without the hard, hot hand of the Federal Government on their books and in their business. And let me remind you of what Lincoln said, I don't recall the exact words, but it has been said down through the history by all great philosophers of government that "freedoms are not lost overnight." You are not going to wake up some Sunday morning and read in the Sunday morning paper or hear it over the Sunday radio or see it on the Sunday TV, that we are no longer free people. No, it doesn't happen that way. It happens like termites eating in a house, and the first sign of trouble you see is when grandma put her foot through a step. That's the first inkling you have and it's usually too late. We will lose our freedoms, ladies and gentlemen, by being attacked from within. We will never lose our freedoms, as long as we believe in them, by any force outside the United States. There are some other signs that are disturbing in these days that I want to mention as to what the radicals have wrought. The growing dependency on the Federal Government for the solution of all of our problems, from the home to the top levels of government. Solutions that once were made at home. Why, I can remember, and I am certainly not old by any standards except by

possibly physical standards, when they built the first hospital here and they met in a man's house right across the street from this hotel and as a result the hospital was built. It wasn't as expensive in those days, but it was comparatively so. We did things then. We had the same obstacles. We had the same troubles to contend with; the same apathies; the same lack of interest. But things got done and today we say write our Congressman. He'll solve our troubles. Oh, he will. He'll trade your troubles for something real.

What's another sign? What's happening to patriotism in this country, folks. You know, there is a sign up at West Point on the parade grounds, "When the flag passes, gentlemen will remove their hats." Watch the coming rodeo parade. See how many hats you see still on when the flag goes by. And you ought to walk up and knock them off. How many new buildings have flagpoles? How many flags fly on the days they should? How many people talk with feeling in their hearts about America and what it stands for. Those are signs, ladies and gentlemen, that we might be further down the road than we like to think or admit. They have derided free enterprise and the American businessman is so beaten down he won't rise up and fight back. And I watch them come to the Halls of Congress as John does and testify before our committees as whipped dogs. You businessmen have made America and will keeping making it, but not when you are cowards. You are in business to make a dollar. Don't be ashamed of it. And the free enterprise system is the only vehicle that can provide profit and can provide jobs for the millions and millions of American workers who along with management, have made this enterprise work. Don't be ashamed of it. Talk about it. Preach it to your employees. Preach it to the young people in the schools and the young people in the communities.

Now, those are some of the signs. I think that right now we might have a short estimate of our situation as Republicans. I always liked that part of the military when you stopped and took a look at what you were doing; what the enemy was up to; and what you might do to get around him. Lincoln said something about it too. He said, "If we could first know where we are, and whither we are tending, we could then better judge what to do and how to do it." Now let us Republicans look at ourselves very quickly. We have won only one national election since 1928, and that was in 1946. I don't think we can call the elections of 1952 or the election of 1956 a party triumph. I think that it was a deserving recognition of a great American who had served his country well in time of need. And I think that he could be relected again if he cared to run and if we didn't have an amendment preventing it. We must dismiss the Republican victories except for 1946. Now, answer then, this question. Why? Starting back with the creation of the Civil Service Act we started to deprive both parties of patronage. Now, I'm not arguing for the patronage system as such. I think it has a place in politics. But I don't think that it has the massive place that it once had. I think that it would be disrupting to modern government. But nevertheless a great void was created in both parties, where we couldn't say to our loyal precinct workers, "there's going to be a job for you." Well, he would get out and work like the devil to get that job, to see that his man won or that his party won so that he could have that job. As a result, in the early thirties the Republican Party and the Democrat Party had no great pool of workers. Now, there has stepped into the Democrat side though, the newly created force of organized labor and their politically minded leaders, and they filled the void in the Democrat side to the point where the Democrat Party today in many States exists only as a hollow shell and in it work the people of the Committee on Political Education, financed by the vast sums available to the organized union movement. Now, this has been more and more evident as we have been losing elections across America in the strong Republican States like New York, Pennsylvania, Indiana, Ohio, Illinois, Iowa, Kansas, Nebraska, Colorado. All of these States that for years would never tolerate a Democrat being elected to office at any level. We have seen, for almost 25 years a loss in county seats and a loss in State legislative seats and it was only a matter of time until we lost Governors, Congressmen, and Senators, and come 1956 and 1958 we saw that occur.

I suggest the answer to that, nationally, is what we did in Arizona in 1958. We are imploring our party nationally, and as you can see, they are taking steps to do it, to do precisely what we did when Dick Kliendienst and Jim Wood and the other leaders of this party recognized that we had division in our party and then called Republicans together and formulated an eight-point statement of principle on which we could all stand. They did away with the divisive effects in a political party and in 1958 we marched to the polls united, even though there might be some people who wouldn't agree entirely with everything their candidates stood for, they worked for the Republican Party because they knew what the Republican Party in Arizona stood for.

Now, what to do. I'll say first that I'll echo what John Rhodes said, what Jack Williams said, what Paul Fannin said. Let's not yield to the temptation of the opposition philosophy. Let's not look at their grass and say that it's greener than ours. It isn't. It's dead, dirty, dried-up grass that should have been swept out of both political parties years and years ago. We cannot compromise with principle. I think the Republican Party and Republican candidates should take the attitude that this is going to be a long haul; this isn't going to be done by magic; but if we recognize we're in for a hard rough job, I am convinced that by sticking to principle the Republican Party can put itself across. And if we forget our principle, ladies and gentlemen, there will be no more Republican Party. I think that we must remind the people that we are a party of peace. Now by that I don't want to imply that the opposition party is a party of war, but under the Republican Party by peculiar coincidence we have always managed to have peace. Yet this peace now is one that you and I and all Americans don't like; we have to recognize that we are in a cold war with a philosophy that does not recognize God where ours does. We are at odds with a philosophy that doesn't recognize the freedom of the individual where we do, and that this isn't a war that is going to be fought and won on the battlefields or in the skies or on the oceans or under them. It's a war that's going to be fought in the minds and hearts of men. And when the American people can demonstrate to this world that the concepts of Jefferson and Franklin and Washington and all of those great men who founded this country, are as true today as they were then, then I suggest to you that the idea of freedom will prevail over the dirty idea of communism. We have to come to it; we can't do it by force anymore than they can subdue our ideas by force. We have to tell the people, and remind them and prove to them that we are a party of all the people. We are not a party interested in dividing the American people into cataloged groups so that we can pull them out at election time for this purpose or for that purpose, but that we are constantly interested in the individual freedom of every American living in this country. We have to remind the American people that under a conservative approach to the fiscal problems of government, good business exists and that under the spend and spend philosophy of the radicals we have in the opposition party today disaster is the only end result. No, good business, long prevailing good business, comes under our philosophies.

In closing I want to mention one thing: one area where this party, or the other party, or both of us have to provide corrections. Some party has to stand up to the illegitimate use of power by some of the union bosses in this country, and that party should be the Republican Party, and I hope and pray that it is.

I might remind you that Walter Reuther made a statement yesterday decrying the amount of unemployment in this country, and everybody should be concerned with unemployment, but he proposes a vast new program and nobody knows what it is, but if you want to see the result of the political and economic philosophy of Walter Reuther, look to the once glorious, industrious State of Michigan where I spoke 2 nights ago. A State that is so bankrupt that they are asking their businessmen to pay their taxes in advance so that they can pay their governmental employees. A State that is asking $140 million more in taxes from already overburdened taxpayers, never thinking for one moment that they might stop some of their foolish spending in order to get their State in order. You need no other example, ladies and gentlemen, of the end result of the socialist political planning of Walter Reuther than to look at the once great State of Michigan, and as I told them up there that night, "You keep your solidarity house and Reuther; we'll take your water." Here is the unbridled power of one man able to destroy a sovereign State of the United States and nobody seems willing to stop him.

And then we have James Hoffa on the other side with his economic power, thumbing his economic nose at decent citizens all over this country, threatening to organize all means of transportation and if need be, tie up the business of this country to get it done. Now, ladies and gentlemen, power was never a part of the concept of government under our Founding Fathers. It's something we fled from, to get away from, as it existed in Europe and yet tonight, in 1959, it is working to the detriment of the American people and we cannot get a political party with the courage to stand up and say "This has to be done." Now I know about this power.

I sit on the Labor Committee. I am the ranking Republican member. And if you think for one moment that any bill that is before that committee is going to stop Jimmy Hoffa or Reuther or any other power-mad union boss—stop fooling yourself because it won't happen. We are flirting around with the symptoms, not the disease. The disease is unbridled, illegitimate power given to these bosses by the law of the United States and we have to make it equal to the power of the rest of the citizens.

I want to close by reminding you that we faced these times before in our history and we have come out of them. Back in the Revolutionary days we were faced with problems worse than we are faced with today, but it took courage as it's going to take today to solve them. I recall some place in history the question was asked, "Where do you stand?" We don't ask that question tonight of Republicans and Democrats. We ask it of Americans. "Where do you stand?" Do you want America to remain a free Republic so that our two-party system, our economic system and the theory of individual freedom can exist or are you going to be a member of the lazy, indifferent throng that says, "It can't happen here." It happened to Rome, to Egypt, to Greece, it al-

most happened to France and it might yet, it almost happened to England and it might yet, and there's nothing historically different, ladies and gentlemen, in 1959, than there was 500, 1,000, or 2,000 years ago. The problems are wrapped up in human beings. And it is up to people to say what they want in government; not organized groups or masses by the people themselves. And I have faith in people. I think the answer to "Where do you stand, sir?" will be a resounding "With freedom, sir."

Address by Under Secretary of the Army Hugh M. Milton II, at the Conference of the Military Government Association in Augusta, Ga., October 25, 1958

EXTENSION OF REMARKS
OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. THURMOND. Mr. President, last year's annual conference of the Military Government Association was held at the Bon Air Hotel in Augusta, Ga., October 24–25, 1958. The speaker for the banquet on the evening of October 25 was the Honorable Hugh M. Milton II, Under Secretary of the Army. Secretary Milton delivered a very able and outstanding address. It is so important and timely that I think it would be of interest to many people throughout the Nation and the world.

Mr. President, I ask unanimous consent that Secretary Milton's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. HUGH M. MILTON II, UNDER SECRETARY OF THE ARMY, BEFORE CIVIL AFFAIRS AND MILITARY GOVERNMENT ASSOCIATION CONFERENCE, AUGUSTA, GA., OCTOBER 25, 1958.

Gentlemen, it is indeed an honor and a distinct pleasure to be with you tonight to address the annual conference of the Military Government Association at the conclusion of its meeting here in Augusta. As I looked over your most impressive program which you have followed since you opened your conference yesterday, I could not restrain a feeling of utter humility for being included as a participant since, although I have been associated with many aspects of civil affairs and military government, particularly in the Reserve components for many years, it is my colleague and good friend in the secretariat, the Honorable George H. Roderick, to whom I must defer as the expert in this field. So, Senator Thurmond, General Gailey, and Colonel Newman, thank you so much for including me on your program.

By the way, I observed from your agenda that you have been addressed by several eminent and knowledgeable authorities in the field of military government who, I am sure, have covered much more adequately than I could their particular specialties. So with your permission, I will limit my remarks to how you, as influential citizens who hold important positions in local, State, and National Government, as well as in the Military Establishment, fit into the overall scheme of our Nation's defense.

But, if I may digress for a moment, I think it altogether fitting that this conference is being conducted here at Augusta, Mayor Beckum, for you have a city of which you, its citizenry, and the entire southland may be duly proud. Widely known as the watering place of Presidents and for its preeminence as the golfing capital of America, it is also a booming center of business in the agricultural and industrial heartland of the great Southeast. Nearby is one of our Nation's most vital centers devoted to insurance of our survival in the atomic age—the Savannah River atomic energy plant. And nearby, too, is located Fort Gordon which has played a significant role in World War II and thereafter by developing many of our Army troops into a high state of combat readiness. And last, but not least, among other activities at Fort Gordon is the school of civil affairs and military government which is imparting to CAMG students the latest in doctrine and techniques which are applied to this highly significant field under conditions of atomic warfare.

As we winged our way out of the beautiful city of Washington—and, having seen many of the world's major cities, I am convinced that our Nation's Capital is the most beautiful of all—I was overwhelmed with the mosaic of brilliant color that unfolded beneath us all along our route. To me, autumn is the loveliest season of the year with nature trying to outdo itself in one last burst of glory before winter's cold fingers caress mother earth into restful slumber. I believe it was Ralph Waldo Emerson who said, "The beauty that shimmers in the yellow afternoons of October, whoever could clutch it? Go forth to find it, and it is gone; 'tis only a mirage as you look from the windows of diligence." Again, it is our pleasure to share the beauties as well as the hospitality of the city of Augusta.

My friends, with your experience and training in government, complemented by your military background, you, I am sure, have brought to this conference a better understanding of the philosophy of civil affairs and military government in modern warfare. Your knowledge, your ability, your willingness to take time out from your day-to-day duties to assist in the development of a sound defensive structure are urgently needed, as has been so ably pointed out to you today by your other speakers.

Today our country requires the support and the assistance of its leaders in every field of our national life. We are engaged in building a protective means of resistance against the possibility of our destruction by a form of social existence totally foreign to us. We are threatened by a way of life which is completely different and absolutely opposed to all of the fine concepts and beliefs on which this great Nation is founded.

There is nothing that we stand for in America, no resource that we can possess, no future plans that we can make, nothing material or spiritual that we can hope to pass on to our children and our children's children that is not under attack this very moment by the supranational concept called communism. Is it any wonder then, that you have been asked to put aside your personal affairs briefly and assemble here in Augusta for the purpose of bringing yourselves up to date on new developments in the field of military government and your role in future warfare?

A number of you are members of our Reserve components. I have often said and heard said that our reservists are dedicated men. In my position where I deal daily with Reserve component affairs, I have a better vantage point than most to see evidence of that dedication, that devotion to duty, that desire to maintain a strong and virile Reserve which members of the USAR are demonstrating.

I would remind you, however, that the Communist is also a most dedicated man. He has no life apart from his organization and his rigidly systematic ideas. Everything that he does, everything that he has—family, job, money, beliefs, friends, talents; yes, even his life—is subordinate to his unswerving devotion to communism. He is not a Communist just on election day or at the party headquarters; he is a Communist 24 hours a day, 7 days a week, and 52 weeks throughout the year. And, if by some misstep, he falls from favor and ends up before a firing squad, he probably dies still believing in communism. This is what we are up against.

I was not invited, nor did I come here today, to lecture you on the theory of communism, but we would be remiss in our thinking if we did not consider the dangers of communism. For it is this threat constantly confronting us that demands the vast expenditure of money, time, effort, and materiel which we must drain from our national economy and apply to our defenses if we are to remain free.

It follows quite logically that the only force which can restrain them, which they will respect or fear, is a power so evident and so real that they have certain knowledge that to attack it would bring upon themselves certain destruction. Our free world will exist only so long as we have that strength ready and quite visible. World domination is the undisputed goal of the Kremlin. Khrushchev's threat to bury us was no empty, meaningless boast. He means to do just that if he can, and just as certainly we mean to stop him and prevent communism from continuing its insidious encroachment upon the free world.

In the United States our military forces are instruments of our Government, which is to say, our people. It might be said that our military constitutes an instrument of policy. But, because we are a peaceful people, God-loving and trusting, we have in the past always permitted both our Active and Reserve Forces to remain at low strength and to consume only a minimum of our resources until a shooting war has required a sudden buildup. Now we are engaged in a costly and dangercus cold war that may suddenly erupt into a shooting conflict on any one of a dozen faraway fronts where communism and freedom stand face to face.

Of course, all of us realize that should war come, there would not be time for the previous hasty expansion which we were permitted in the early days of World Wars I and II. We have had to develop a military system that our economy can sustain on a permanent basis and out of that requirement has come the Reserve components as we know them today, and in which many of you are playing such a significant role. You have come here to better acquaint yourselves with the many changes that are constantly occurring in the technological and organizational structure of our Armed Forces. The concepts you have considered here during the course of this conference should add immeasurably to your understanding of the problems of modern warfare.

Although all of you occupy positions of responsibility in your various walks of life, your professional growth must continue if you are to be effective in assisting in the defense of our Nation. And you realize, I know, that the unending search for an effective defense is the primary reason for the existence of your organization. If it ever becomes necessary to fight another war, you gentlemen are destined for important assignments in the various areas of our defense efforts. It is vital that you be informed in your respective areas of interest in order that you may be prepared to cope with the tasks that lie ahead. While the added knowledge that you have received here will be a

valuable aid in that direction, we realize, of course, that it is an unceasing task to keep abreast of our specialties in this constantly changing age. It is my fervent hope that your knowledge will contribute immeasurably to the continued professional growth of the realtively young field of military government. You must particularly concern yourselves with the many new and complex problems that face us in the future. Of course, we have no idea what our future portends. As military men, we must consider the impact upon our defense posture of the many important advances that have been made in warfare during recent years. These changes are having a profound influence upon our organization, our supply problems, and upon the strategy and tactics of actual combat.

In the past when the changes that our scientists evolved were mainly improvements or refinements of existing weapons and equipment, it was possible with a fair degree of accuracy to predict the direction and scope of the impact resulting from the change. Today, the magnitude of our technical advances is so great that the guidelines for the future are not as clear as we might wish. Experiences of the past are of little help, in many respects, in planning for the next war. The importance of accurate foresight is more critical than ever before. Never before in history has there been a greater need for men of vision, of courage—a need for leaders with the ability to overcome the obstacles which lie in the path of freedom, right, and justice as we understand these concepts. The skill and training that you bring to your particular assignment is, therefore, of extreme importance to our national welfare.

I have been asked to discuss with you tonight some of the aspects of our Reserve program. I know each of you is interested in the overall Reserve program as it is presently constituted within our Army. In your busy day-to-day activities, it no doubt is most difficult for you to keep abreast of trends affecting our Reserve components, so I would like today to briefly outline to you and bring into sharper focus the mission of the Army Reserve and its current organizational structure.

Let us first examine the mission of our Reserve components and then take a look at what we have done and are doing to carry out this mission.

Our Reserves have a dual mission to perform; first, to provide units in accordance with Department of the Army mobilization plans in such a state of strength, training proficiency and so equipped as to be prepared for deployment within a minimum of time after mobilization. The second mission is to provide trained individual reinforcements, both officer and enlisted, in the numbers required by current mobilization plans to replace initial combat casualties, to reinforce Active Army units, and to provide trained reinforcements for Reserve units called to duty after M-day.

You will note that I said "current mobilization plans." To maintain these plans up to date requires a continuous reexamination of our program. We must never feel satisfied with what we have done. Yesterday's preparation for today may be as obsolescent as the horse and buggy. We must continually prepare for tomorrow. Our troop program units of the Ready Reserve must be manned, well-trained and adequately equipped; individual replacements must be equally ready and available. Of course, this requires that we make the most effective use of our limited funds and drill-pay spaces. Our No. 1 problem, then, is for our Reserve units to be ready when they are needed. To insure this readiness, the responsibility is placed on the Active Army to provide the means for training, the facilities with which to conduct that training, and supplies and equipment necessary to fully round out the program.

You may ask how far we have come along in the Army in this get-ready program. You and I know in the last 5 or 6 years the Army Reserve has expanded to a remarkable degree. If we measure this progress by the distance we have come—by what has been accomplished in recent years—our record is good. But, if we measure our progress by the distance we have yet to go, it will readily be seen that we still have a stupendous job ahead for all of us.

Just a few short years ago, the Army Reserve consisted almost solely of officers. We had very little in the way of enlisted strength. We had many paper units. There was no such thing as USAR schools, and when officers went on active duty, for training, the Active Army units with which they served were often confused as to how properly to use their services for the 2 weeks' tour. We have come a long way since we first got our troop basis, since we first instituted the system of drill-pay spaces, since enlisted strength began to build up in our units, and since money was allotted and plans made for our first Reserve training centers.

Today we have 10 combat divisions, 13 training divisions, two maneuver area commands, and several thousand company-size units of a support nature. We are now engaged in carrying out the same pentomic reorganization of the Reserve troop structure that the Active Army has just completed.

It should be remembered that, while the reservist is frequently associated with the long historical traditions of the citizen-soldier, he is in fact a member of a very young organization which because it is growing so rapidly is suffering growing pains.

The Reserves require manpower, dollars, equipment, and training facilities. Formerly, when they lay dormant, they caused no strain on our national budget. When the Army Reserve was only a paper organization represented by thousands of cards in filing cabinets, it posed no fiscal problems, and was a headache only to the filing clerks. Today Reserve units must have meeting places, hardstands for their trucks and tanks, gasoline for the engines, storage space for weapons, and ammunition to use in those weapons. Today, we have Reserve cooks operating messes, Reserve AG's making out reports, Reserve finance sections preparing payrolls, and, of course, the Reserves are playing their part in the maneuver areas and training fields.

We have high priority units in being which are ready upon mobilization to join our Strategic Reserve for immediate deployment wherever needed. We now have over 280,000 Army reservists participating in drill-pay status or in the 6-month training program on active duty for training. This represented a gain of some 40,000 over the November 1957 figure—a direct result of an aggressive recruiting program in which many of you played an important part. Attendance at annual unit training was over 90 percent last year, and I am confident that the reports will show that it will be even higher this year. In fact, I feel sure that this year we will see the largest number of reservists on active duty for training that we have ever had in peacetime history.

We have established a goal for both units and individuals to be self-sufficient, and I am happy to say that this goal is being met in many areas. For instance, our Reserve units now handle nearly all of their training requirements, a large percentage of their administrative requirements, and I believe this year they will exceed last year's figure of 50 percent of the handling of their mess operations. The reason for this improvement can be found in the high percentage of enlisted strength with both basic and MOS training now in our units. Also, the increased issues of equipment have made possible better training during the precamp cycle.

During this last fiscal year, our Reserve construction program saw a total of 81 Army Reserve Centers placed under contract—the laregst number so far contracted for in any 1 year. These training centers plus those already constructed, combined with leased facilities, provide training quarters considered adequate for more than 135,000 reservists. Slowly but surely, we are approaching our goal in this field. It must be kept in mind that without facilities, we cannot properly store and safeguard the equipment that is required for training. Without proper equipment we cannot give our personnel adequate training, and without a sound training program it is difficult to maintain the interest of our personnel in their duties.

There is one plain fact that we must face. Our beloved country is the main barrier in the Communist path to global conquest and the enslavement of mankind. The Soviets have clearly demonstrated their technological capabilities, and we are thoroughly convinced that no moral considerations will slow their efforts toward world domination. The grim reality of this danger makes it imperative that all of us exert our best efforts toward the maintenance of an effective defense posture.

George Washington, our first President, set the example in our fight for freedom. He helped establish this Nation. He helped to make the Declaration of Independence the guidepost for our way of life, until today it is an accepted principle of a way of life which we of the western democracies desire.

None of us can follow the career of George Washington, who strode his solitary way to greatness, without a warming glow in our hearts. He sought no royal road to achievement; he traveled no short-cut to success. He had a great mind, a keen ambition, and an earnest and humble heart. He was a strong leader of unshakeable will and tireless patience.

That cold winter at Valley Forge was truly a struggle; almost a fourth of Washington's army became casualties from freezing and starvation. Because of their suffering and their defeats, the American troops were sorely tempted to abandon their cause, but this great leader, George Washington, never lost faith. As a result of his victories at Trenton, Valley Forge, and Monmouth, there is little chance that the march toward freedom which he inspired will ever be halted.

In one field of military technology, years of pioneering experience are paying handsome dividends in the development of guided and ballistic missiles and rockets. One of the outstanding examples of the U.S. Army's achievements in this area is the great Jupiter intermediate range ballistic missile which is now in production and will soon take its place in the line of American defense, and it was the Jupiter C rocket which hurled into orbit the free world's first earth satellite in January of this year—followed by Explorer III in March and yet another—Explorer IV—in late July.

Yes, we are focusing our eyes into space, but we are still keeping our feet on the ground, for with all the advancements of modern science—in this era of orbiting satellites, rocketry, ultra sonic speeds, nuclear weapons, the myriad of innovations in modern warfare—it is still the man; yes, the individual soldier, sailor, marine and airman possessing the strong moral fibre, the intestinal stamina and fortitude and the clear-eyed intellect to employ those complex tools properly, who holds the key to victory in any war of the future.

I see before me today a stirring example of the type of leadership ready to fill this need, drawn together in mutuality by a bond

of common belief in the cause which we are dedicated to defend. You and other splendid Americans like you, both in service and out, are the ultimate weapon. In you and your fellows rests the fortune of our great heritage in any future conflict in this nuclear age.

Recently, I had called to my attention, a formula credited to Chairman H. W. Prentis, Jr., of the Armstrong Cork Co., which reduces the rise-and-fall cycle of great civilizations to the following simple pattern:

From bondage to spiritual faith;
From spiritual faith to courage;
From courage to freedom;
From freedom to abundance;
From abundance to selfishness;
From selfishness to complacency;
From complacency to apathy;
From apathy to fear;
From fear to dependency;
From dependency back to bondage.

Ladies and gentlemen, this formula is not mathematical or so rigid to the extent that it cannot be arrested at the "freedom and abundance" level. That decision rests with you and me—all of us—to see that it does not run the full cycle for our democratic civilization.

And, I say to you today, as I have said on many occasions, that upon the plains of apathy bleach the bones of the victor who sat down to rest.

My friends, I have described to you briefly during these few moments with you the mission of our Reserve forces and the progress which is being made to build those forces into a virile and effective organization as a vital element in our Nation's scheme of defense. Our Armed Forces today stand ready to discourage further aggression or to respond to it promptly wherever it may occur. I know that each of you here joins me in praying that this Nation shall never be called upon to wage another war; however, I know that you are equally as determined in your belief that we must never be in such a position that we could not win a war if one were forced upon us. In your hands and those of all our great American people rests that decision. By heroic leadership, loyal and courageous devotion, and intrepid example of men of character imbued with an unflinching belief in Almighty God, the men of our Armed Forces—backed up by the American people—will strive as a team to perpetuate for future generations the way of life which abounds so freely in this wonderful land.

Minshall Opinion Poll Shows 23d District Ohio Supports President's Defense Budget, Berlin Stand

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. MINSHALL. Mr. Speaker, tabulation is complete on the fifth annual Minshall opinion poll. This poll went to the home of every registered voter in the 23d district, 108,000 homes in all. Response was truly remarkable: more than 20,000 questionnaires were completed and returned.

Mailing of the poll was timed so that a sampling of opinion was possible before and after President Eisenhower's televised speech on the Berlin crisis and his defense budget. Prespeech returns showed 75.5 percent support of his Berlin stand; postspeech returns showed that support had risen to 77 percent. Before the President's speech, returns indicated 61.8 percent were satisfied that the defense program is adequate; after the speech, the total reached 63.5 percent.

Both foreign aid and Federal aid to school construction slipped in the voter's favor. Foreign aid support dropped from 50 percent in 1958 to 48.5 percent this year. Support of Federal school aid fell off from last year's 45 percent to a mere 36.8 percent.

Many of the returns carried marginal comments in which the voters further amplified their views both on national issues and on their own individual problems with the Federal Government. They were very nearly unanimous in calling for sensible economy in Federal spending; many, in particular, deplored the huge farm subsidies doled out under our antiquated agricultural laws.

The results of the poll follow:

Results of 1959 Minshall opinion poll

	Yes	No	No opinion
1. If the fiscal 1960 budget is not balanced, would you favor increasing taxes to eliminate the deficit?	34.4	60.6	5.0
2. Do you favor a higher Federal gasoline tax to maintain a pay-as-you-go basis in Federal-aid highway construction?	48.8	47.9	3.3
3. From information available, do you believe this country's defense program is adequate?	62.5	22.2	15.3
4. Do you favor Federal aid for local school construction?	36.8	58.0	5.2
5. Are you in favor of amending the Social Security Act to include all medical expenses, the financing to be shared by the employers and employees?	37.4	56.9	5.7
6. Do you favor repeal of that section of the Taft-Hartley Act which presently permits States to enact their own right-to-work laws?	22.3	69.2	8.5
7. Should the cost of air passenger terminals be paid by the airlines rather than from Federal-local funds as at present?	75.1	16.9	8.0
8. Do you believe we should continue our foreign aid program which calls for expenditures of $3,200,000,000 in military and economic assistance during fiscal 1960?	48.5	46.8	4.7
9. In case of a blockade, do you believe we should employ military force to maintain our position in Berlin?	76.1	13.3	10.6
10. Do you favor repeal of the 22d amendment, which limits the Presidency to 2 terms?	25.1	69.3	5.6
11. Do you favor expansion of public power against private power (for example, TVA)?	25.1	65.4	9.5
12. Are you in favor of stronger civil rights legislation?	39.0	40.5	20.5
13. Do you favor removing the Federal Government's present regulatory control over prices producers can charge for natural gas?	18.3	70.9	10.8
14. Are you in favor of a law guaranteeing union members the secret ballot in the election or removal of union officials, and in other vital union matters?	91.4	5.2	3.4

Taxation of Cooperatives

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement made by former Representative Jerry Voorhis on the proposals of the President of the United States and the Secretary of the Treasury with respect to the taxation of cooperatives. Many of our friends will remember Mr. Voorhis, who is now executive director of the Cooperative League of the U.S.A., as a Representative from California for 10 years.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT, JANUARY 21, 1959, OF JERRY VOORHIS, EXECUTIVE DIRECTOR, COOPERATIVE LEAGUE OF THE U.S.A.

In his budget message Monday, President Eisenhower proposed that cooperatives pay corporate income tax on some of their members' income.

Under this unusual proposal, the administration declares it is opposed to co-op members' investing their refunds in their own businesses for longer than 3 years. The administration similarly declares it is opposed to co-op members investing their refunds in their own businesses at less than 4 percent interest.

If co-op members go ahead and do either of these things—(1) invest their refunds for more than 3 years or (2) pay themselves less than 4 percent interest on these invested refunds—then their co-op must pay a penalty. The penalty is for the co-op to pay corporate income tax on these refunds as if they had never been made at all.

The President didn't indicate how much additional revenue this penalty tax would produce—or even whether it would produce any. He did say that this change plus some tightening of other taxes would yield $50 million in added revenue. This is six-hundredths of 1 percent of the Federal budget.

At best, co-ops have only limited access to capital markets. Investors aren't interested in co-op securities because their value never rises above par. Nor do they care for fixed-interest-bearing equities, such as co-op shares.

So co-op members have little choice as to how they will finance their joint enterprises. They have done what they can, and this is to finance their co-ops by investing some or all of each year's refunds. For all practical purposes, the President's proposal would destory such financing. It would mean that the people's principal means of capitalizing their co-ops is gone.

The President has recommended his budget as one that will encourage people to work, to save, and to invest. Yet in this same budget he proposes to penalize the 13 million families who own U.S. co-ops if they choose to invest their co-op refunds for more than 3 years or at less than 4-percent interest. What kind of encouragement is this?

The President's proposal would affect nearly every kind of co-op. It would hit farmers' marketing and purchasing co-ops hardest. A recent study shows that more than 60 percent of their equity capital comes directly from members' invested refunds.

More than 70 percent of these co-ops pay less than 4-percent interest on any money their members invest, and in virtually none of the co-ops do members invest their refunds for less than 5 years.

The President's proposal would also wipe out the capital credits plan that most electric co-op members use to finance their systems. For these rural people are now investing their annual refunds for longer than 3 years and they pay themselves no interest at all on such investments.

Nor would the President's proposal leave consumer co-ops in our cities unscathed. A co-op supermarket would pay income tax on refunds its members invest for more than 3 years or at less than 4-percent interest, without regard for whether these refunds, if not invested, would be taxable income to its members.

This indicates to me that the President is no proposing to plug a tax loophole nor to correct any tax inequity. What he is proposing is to destroy the principal means that co-op members have found to finance their co-ops and, in the process, to destroy co-ops themselves.

The President's proposal seems particularly high-handed because of the extremes to which his administration has gone to coddle investors in any other kind of business. If Congress should by some stretch of the imagination adopt it, ordinary people of small means who want to invest their co-op refunds in their own mutual, self-help enterprises would find a new tax obstacle thrown in their path. Nor would they receive any of the tax deductions and credits that investors in profit motivated businesses have enjoyed since 1953.

When Dwight D. Eisenhower was a candidate for the presidency in 1952, he told an audience in Superior, Wis., that the matter of co-ops and their taxes was "well and soundly settled by the Revenue Act of 1951." This pledge was evidently campaign oratory. In fairness to the President, I think he has been victimized by bad advice. He has permitted himself to be imposed upon by people who lack appreciation of the great role that cooperatives have played in preserving a free economy.

Last week in New Orleans, one of the three remaining members of the President's original Cabinet, a man in whom he has placed unlimited confidence—Agriculture Secretary Ezra Benson—said: "I have little patience with those who argue that cooperatives do not pay their fair share of taxes." Yet within 6 days of the Secretary's statement, the Chief of this administration was arguing before the Congress of the United States that co-ops should pay more taxes than they do. "Let not thy right hand know what thy left hand doeth."

Reduction of Price Supports on Peanuts

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement before the Subcommittee on Peanuts of the House Committee on Agriculture made by Hon. John P. Duncan, Jr., president of the Georgia Farm Bureau, on Tuesday, April 7, 1959. Mr. Duncan is one of the most able and conscientious farm leaders in the country and his statement effectively demonstrates that Secretary of Agriculture Benson's reduction of price supports on peanuts by $19.70 a ton now has the farmers producing peanuts below the cost of production.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman, and other members of this important Subcommittee on Peanuts. On March 4, 1959, the Secretary announced that peanuts would be supported at an average price of $193.50 per ton reflecting 75 percent of modernized parity (this includes 1959 administrative changes in the parity index), as compared with a 1958 average support price of $213.20 or 80.8 percent of parity. This means that peanuts will be supported in 1959 for $19.70 per ton less than they were supported in 1958. In the United States this would mean a loss in income to our peanut farmers of approximately $16 million.

We fully realize that the Secretary has rather broad discretion in determining the support price and that he no doubt is in the limit of the law. We doubt very much, however, that he has used the best of judgment in estimating, which is the basis of such announcement, the amount of peanuts that will be consumed this year, or the carryover as of August 1, and certainly his estimate of production appears to us to be out of reason.

The Secretary has spent a good part of his time lately traveling throughout the country and in many of his speeches, he speaks of peanuts. He made the statement at Cornell University on March 24, 1959: "The farmers are producing more peanuts than consumers will buy at the prices which peanuts must be supported." In other speeches he has said that if the prices of peanuts were substantially reduced, there would be an increase in consumption.

By using the trend of only the last 4 months, the Secretary has estimated that the consumption of peanuts for the coming year would be about 713,000 tons. Since 1954 the consumption of peanuts has increased approximately 40 million pounds (shelled basis) per year. From last August 1 until March 1 of this year, the near record level of 426 million pounds were consumed as compared with 415 million for the same 7 months during the 1957–58 season. We contend that the consumption figure should be 733 million pounds based on the chart shown in exhibit B. The peanut farmers of the southeast and the Virginia-Carolina area are paying out of their pockets approximately $500,000 per year to increase the sale and use of peanuts and to expand their markets. With this in mind, we do not believe the Secretary's action, in reducing the price of peanuts, an exhibition of cooperation or a source of encouragement to farmers.

The manufacturers of peanut products are completely satisfied with the price they paid for the 1958 crop. They do not request any reduction in the support price and have no complaints.

In the Secretary's estimate of production for the crop year of 1959, the crop year of 1954 was completely left out. Therefore, his estimate of production for 1959 does not run true with actual production over the past 5 years. It is true that the average production per acre for 1958 was good but there is no fact to back up that the same will exist for 1959. Why should he leave out 1954 which was a bad year when we produced only 727 pounds to the acre and put in 1958 which was an exceptionally good year when we produced 1,213 pounds to the acre? We could very easily have another year like 1954 as much so as we could have another good year such as 1958.

The Secretary is estimating that the 1959 production of peanuts will be 820,000 tons, which is estimating that the production of peanuts will be greater than during any year except 1958, even going back as far as 1951.

In studying the production of peanuts one can easily see that there is no consistency in one year compared to another, either in yields per acre or total production.

Over the years the Secretary, in estimating the production of peanuts, has used the figure of 91 percent of the total allotment (1,610,000 acres) would be planted and harvested. This being the case, and we have no reason to doubt it, and using his own figure of 1,118 pounds per acre yield (which appears to be much too high) would not come out to his estimated total production of 820,000 tons.

In the Southwest, for example, the Secretary, out of the clear blue sky, has increased the estimated production per acre some 20 or 30 pounds per acre just because they have had a rain or two in the last few months.

Farmers are in no position incomewise or otherwise to sit idly by and let someone, not connected with production of peanuts, determine their income just because they think it might rain.

Actually the actual average production of peanuts per acre since 1952 through 1958 in the United States is only 997 pounds per acre. The Secretary is estimating that the 1959 average per acre production will be some 1,118 pounds per acre.

With such estimates as these, the Secretary will cause the income of the U.S. peanut farmers to drop some $14,875,500, based on average production since 1952 or a drop of $18,647,240 from 1958, based on 1958 production. (See exhibit A for the production figures and average in the United States since 1952.)

By observing the production of peanuts by years, it is very obvious that his estimates are much too high.

Now, Mr. Chairman, in the determination of the 1959 support level one can easily see that by just a mere stroke of a pen a farmer can be completely put out of business.

The Department of Agriculture has been buying from shellers No. 2 stock peanuts and placing them in cold storage, at tremendous cost, in order that they might be on hand August 1 to help justify his action. However, we understand that this process has been slowed tremendously in the last 2 weeks since this hearing was announced. We realize that in the crushing of peanuts for oil that we must consider also what this will do to the price of cottonseed oil and soybean oil. We realize that these other commodities should be taken into account but we firmly believe that there is still plenty of time before August 1 to divert all surplus farmers' stock peanuts and No. 2 shelled peanuts purchased by CCC to oil without affecting the price of these other oil products. In the last few days there has been a reconcentration of approximately 10,000 tons in 2 warehouses to help get ready for the August 1 carryover.

Gentlemen, I am sure all of you realize that the farmer's cost of production is steadily increasing each year.

Are we farmers to continuously pay more for the items we purchase and continuously take less for the products we sell?

Back at alltime high as reported by the U.S. Department of Agriculture last week, the Department said the index of prices paid by farmers for commodities, interest, taxes, and farm wages rose one-third of 1 percent during the month ending March 15. The advance, due primarily to high prices for production goods, lifted the index back to the record high first established in January of this year. It was nearly 2 percent higher than a year earlier.

At this point, Mr. Chairman, I would like to give the members of this committee some actual figures on the cost of producing an

acre of peanuts. These figures are the average given to me by good peanut farmers in Georgia. These farmers keep accurate records and these figures are based on a 5-year average.

Preparing land	$5.00
Preemerge weed control	3.00
Fertilizer	8.00
Seed	24.75
Cultivating (4 times)	8.00
Hoeing	6.00
Harvesting	21.00
Hauling to market	3.00
Dust	4.00
Lime and land plaster	4.50
Taxes, land rent, interest on investment	6.75
Total	95.00

Now using the U.S. average yield for the past 5 years of 997 pounds per acre and based on the announced price by Mr. Benson of $193.50 average per ton, this will mean a margin of only $3.50 per acre. The above figures you will notice do not consider repairs on machinery, cost of procuring the above items, and so forth.

Now, Mr. Chairman, this $193.50 is the average price for all types of peanuts, and several types will be supported at a much lower price. For example, I estimate the supports on runner peanuts will be $180 per ton, and after $9 is deducted a grower will receive a net of $171, which is $19 less than the actual cost of production.

Peanut farmers, like other farmers, in times of national emergency have been called upon to produce, and I believe everyone will agree that the farmers have responded to the needs. Now that an all-out emergency does not exist, the farmers are being told that you should do the best you can do.

Mr. Chairman, I am sure that the members of this committee realize that peanut farmers have not been receiving the announced support price dollarwise in the past. For example, if the support price is to be $193.50, the farmer will only receive $184.50, because of what we call a $9 deduct that is deducted for storage, insurance, etc., for 8 months, even though a warehouseman may move the peanuts in, say, 30 days.

Peanut producers have taken a drop in price for peanuts of some $50 or more per ton in the last 3 or 4 years, and during the last 5 years costs of production have increased approximately 20 percent. The Secretary's action clearly indicates that this is a further move to completely destroy our peanut program. Earlier the Secretary completely revised the parity index in order to lower the price. I am sure you are familiar with this action.

We further realize that such moves by the Secretary does not, as he so often indicates, give the consumer a cheaper product at the expense of the farmer.

Gentlemen, on behalf of the peanut farmers we would greatly appreciate any relief from this deplorable situation.

We appreciate the opportunity to appear before your committee and express our views.

EXHIBIT A

U.S. production of peanuts, 1952–58 [1]

Crop year	Acreage picked and threshed	Yield per acre	Total production
	Acres	*Pounds*	*Tons*
1952	1,443,000	940	677,900
1953	1,515,000	1,039	787,088
1954	1,387,000	727	504,248
1955	1,669,000	928	774,005
1956	1,385,000	1,160	803,905
1957	1,481,000	970	717,972
1958	1,537,000	1,213	932,362

[1] Above figures obtained from U.S. Department of Agriculture, Oils and Peanut Division.

EXHIBIT B

Shelled peanuts used in peanut products

[Pounds]

Year	Peanut candy	Salted peanuts	Peanut butter	Total
1948–49	104,015,000	120,557,000	250,279,000	481,663,000
1949–50	124,128,000	116,771,000	251,544,000	501,779,000
1950–51	119,927,000	132,653,000	276,009,000	534,957,000
1951–52	120,806,000	140,650,000	275,803,000	543,727,000
1952–53	119,197,000	147,450,000	286,821,000	560,147,000
1953–54	118,935,000	149,118,000	297,539,000	572,401,000
1954–55	110,843,000	143,254,000	299,929,000	563,302,000
1955–56	118,597,000	146,327,000	325,661,000	600,096,000
1956–57	136,061,000	163,382,000	317,424,000	646,251,000
1957–58	138,149,000	170,881,000	355,818,000	693,768,000
Estimated increase in consumption				40,000,000
Total				733,768,000

1. Peanut butter sandwiches and other minor products not itemized, but is included in the totals above.
2. Figures for 1958 will not be available until August or September, but the figures for Aug. 1 to Mar. 1 show a near record level of 426,403,000 pounds as compared with 415,857,000 pounds for the same 7 months during the 1957–58 season, or an increase of over 10,000,000 pounds.

American Parents Committee Calls for Adequate Federal Aid for Education

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. NEUBERGER. Mr. President, the extremely able journalist, Mr. George W. Oakes, who has written and published numerous articles on education in the United States, recently testified before the Senate Subcommittee on Education on behalf of the outstanding National Council of the American Parents Committee, of which he is a member. Mr. Oakes delivered a brief but cogent statement pointing out the responsibility of the Federal Government for insuring that our future citizens are able to obtain the education which will fit them for the complexities of the missile age. He emphasized that provision for adequate academic training is not only a national duty to fulfill our obligations to individual citizens, but a necessity if we are to survive successfully the cold war with the Soviet Union. I ask unanimous consent that Mr. Oakes' testimony be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TESTIMONY ON FEDERAL AID FOR SCHOOL CONSTRUCTION, BY GEORGE W. OAKES, OF THE AMERICAN PARENTS COMMITTEE, INC., BEFORE THE SUBCOMMITTEE ON EDUCATION OF THE SENATE COMMITTEE ON LABOR AND PUBLIC WELFARE

Gentlemen, I am George W. Oakes, a free-lance journalist writing on education and a member of the national council of the American Parents Committee, Inc. I am here today to testify at the request of George J. Hecht, chairman, who regrets that he could not come in person.

The American Parents Committee is what its name implies, a national committee concerned with Federal legislation for the health, education, and welfare of the Nation's children. The position of our organization on legislative items is determined by majority vote of its board of directors. Last November the board decided that one of the committee's top priorities should be to work for legislation providing for Federal aid to relieve the shortage of classrooms throughout the Nation. Consequently, I am not here to oppose or support any one of the particular bills before your committee, but rather to urge that you report as soon as possible a bill which will provide adequate financial assistance for school construction.

The American Parents Committee has consistently advocated that the Federal Government assume its full share of the responsibility for educating its future citizens. It has maintained that since the Federal Government collects three-fourths of the tax revenues, education must not depend on insufficient local and State funds.

Last summer Mr. Hecht, the chairman of the American Parents Committee, took the leadership in forming an Emergency Committee for the National Defense Education Act. That committee composed of Eric Johnston, former Senator William Benton, Mrs. Albert Lasker, and Mr. Hecht, helped to coordinate the support behind that bill into the strenuous last ditch effort which finally put the bill through just before the session ended.

We think the National Defense Education Act can provide great assistance to education, providing Congress appropriates sufficient funds to carry out its provisions. But that act cannot provide the desperately needed classrooms.

Two years ago the Senate passed a substantial school construction bill which the American Parents Committee supported. Today the shortage of 140,000 classrooms is almost as great, but 2 crucial years have been lost. The United States has made no real headway in providing adequate school facilities for our children.

We all know the seriousness of the world situation. We all know what Soviet educational and, as a result, remarkable scientific achievements have accomplished during these same 2 years. We all know what the chances for this country to survive and meet the worldwide challenge in the future depends probably more on our ability to set and maintain the highest educational standards for as many children as possible than on any other single factor.

The American people realize that education is the key to our future. Billions for defense will prove meaningless without properly educated and trained manpower.

We cannot educate our children adequately when 4 million are studying in dangerous firetraps, in overcrowded classrooms, under conditions whereby the school day must be cut to permit half-day sessions. What

chance has a gifted pupil if he is buried in a crowded classroom of 50 or more students?

The need is urgent. The situation has hardly improved at all, while we have deferred action. You know that the school age population is rapidly increasing. The past 2 years have proved that this problem cannot be solved by the States and local communities. At the present rate of construction there will still be a major shortage in 5 years according to Secretary Flemming.

The School Construction bill which the Senate voted 2 years ago will undoubtedly require more funds today because of rising building costs. Every day we wait makes the task more expensive and means that it will take that much longer to put our educational system in shape.

Does anyone think that education of our children is less important than roads or housing or airports or urban renewal? Does anyone think that this country cannot afford today the school construction program that failed by only five votes in the House in 1957 when our future was less threatened than now?

The American Parents Committee calls for sizable and adequate school construction legislation now, this session. We urge a Federal grant program to the States at least as large as nearly passed 2 years ago.

We face a big educational job. We will not meet the issue by ducking facts which the administration presented and Congress almost accepted in 1957. Only through large scale Federal grants can this school construction program get under way quickly. And speed is made more imperative with every passing day. We cannot risk waiting another year until the next session. In February of last year Senator LYNDON JOHNSON said education should be the first order of business for Congress. This is even more true now. What are we waiting for?

We urge that Congress pass such legislation this session and place it before the President. We do not believe the President will veto what he supported less than 2 years ago.

Mr. Chairman, we are confident that your committee will do its part to prevent another precious year being lost in giving our children the school facilities they require and deserve.

In the Right Direction

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. HILL. Mr. President, in the Birmingham Post-Herald of March 30, 1959, there appeared an editorial captioned "In the Right Direction." The editorial was most thoughtful and timely, and dealt with the matter of hazards to our people from radiation and radioactive materials.

I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IN THE RIGHT DIRECTION

A proposal to give responsibility for radiation control-fallout, X-rays, industrial usages, disposal of radioactive wastes, etc.—to the Public Health Service seems to make sense.

This suggestion by a national advisory committee on radiation should receive careful consideration by Congress—not only because of the continuing controversy over fallout from nuclear weapons tests but also because of the lesser known hazards of radioactive materials in many fields.

So far the Atomic Energy Commission has been the principal evaluator of radiation hazards—from tests and other means. At the same time it has been the principal producer of radiation. Thus it has been its own policeman—deciding what information to release and how much emphasis to place upon it.

The advisory committee's suggestion is that the Public Health Service be given top responsibility for evaluating information which would continue to be collected by various organizations, including the AEC.

There seems to be only one certainty about the long-range effects of fallout—that the information available is too sparse to form a solid judgment.

Thus the committee urges that a major program of radiation control be started under PHS auspices. The objective would be to increase research on radiation hazards and formulate regulations for handling radioactive materials and machines.

The committee, for example, is concerned about the very sharp increase in X-ray usage and the lack of adequate rules for operating such machines.

By the time the Joint Congressional Atomic Energy Committee starts its new set of hearings on radiation this spring, we assume it will want to discuss this advisory committee's proposal in detail.

After years of confusion and controversy over radiation, it is encouraging to see movements in a constructive direction.

NATO's Future and Ours

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial entitled, "NATO's Future—and Ours." This excellent editorial, which appeared in the Chattanooga Times, summarizes in a most effective manner the accomplishments of the North Atlantic Treaty Organization during its first 10 years.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATO'S FUTURE—AND OURS

The greatest case that can be made for the North Atlantic Treaty Organization, on the eve of its 10th anniversary, is its own success; the greatest argument that can be made for its continued maintenance and constant strengthening is the simple acknowledgment that the future remains of greater importance than the past.

When the treaty was signed April 4, 1949, British Foreign Minister Ernest Bevin commented on it as the result of a "great week's work in the history of the world."

And indeed it was. Twelve nations, whose shores are washed by the same tides and whose people are buoyed by the same great ideals of human worth and freedom, agreed to consider an attack on one as an attack on all. For the United States, especially, it was an historic departure from a long tradition of avoiding peacetime alliances.

Russia then said NATO was openly agressive. It has not changed its mind. President Truman called the alliance a shield against aggression. NATO has not altered its purpose.

Militarily, NATO was designed to become a deterrent to the massive Russian armored thrusts until the U.S. Strategic Air Force could strike at the Communist heartland with atomic bombs. That concept withered with the American monopoly on atomic weapons.

Now, NATO's proposed strength on paper is still far greater than its strength in being, which may be likened more to a spear than a shield. But its "essential purpose of halting the expansion of Soviet imperialism in Europe without the need to resort to force," as Secretary General Paul-Henri Spaak points out, has been attained.

"Soviet imperialism, which chalked up one conquest after another in the period from 1939 to 1948," he said "has made no further progress in Europe since the day the Atlantic alliance was born."

But if the field forces of the present cannot be considered perfect protection against an attack, they are an enduring pledge that the whole partnership remains ready to risk World War III rather than accept Communist domination of any NATO area. What other meaning could be read into President Eisenhower's March 11 statement that "we certainly are not going to fight a ground war in Europe"?

More hopefully, there has emerged from the continually closer collaboration within the alliance a common strategy with substantial agreement on the problems closest at hand and a willingness to work for the same degree of cooperation on those more distant. This is a result of meetings of NATO's permanent council, held without fanfare and at frequent intervals.

Here, then, is an example of collective diplomacy at work, matching the concept of collective security with which this Nation entered into the alliance. It is, perhaps, the most hopeful aspect of the whole picture, for out of such consultation and agreement can come the resolute firmness the Atlantic community needs to match the single-mindedness of Red Russia.

Prize-Winning Script of Mr. Sanford Orkin in the 1958–59 Voice of Democracy Contest

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. CLARK. Mr. President, the National Association of Broadcasters recently named the winners in the 1958–59 Voice of Democracy scriptwriting contest. I am happy to note that a young man from my own State, Mr. Sanford Orkin, was one of the four finalists. I was especially impressed by his achievement when I read his prize-winning entry.

To renew our perspective as to the wonderful heritage we enjoy as Americans I can suggest no better way than to read the script written by this young

Pennsylvanian. I ask unanimous consent, therefore, Mr. President, that the text be printed in the Appendix of the RECORD.

There being no objection, the script was ordered to be printed in the RECORD, as follows:

VOICE OF DEMOCRACY SCRIPT

(By Sanford Orkin)

I am a Hungarian immigrant.

My mother and father died fighting in the streets of Hungary. Freedom fighters they were called.

This, you see, is one of the greatest mysteries of all. My mother and father found it necessary to give their lives in the great fight for freedom, a freedom which they were never to witness.

I now live in America, the land of freedom. I have lived in this great democracy for almost 3 years and yet I don't quite understand it, for such words as liberty and freedom are very bewildering to me.

Listen to my words, America, and perhaps you'll understand. Among the many books in this country, it would not be unusual to find two of entirely different character. Books with different political and social attitudes toward America and its people. Yet, the men who read these different books and who are in accord with them, live together in peace and happiness.

In America, there are two major political parties. During the campaigns before the elections, one party may speak out against the other. Now one might think these men are bitter enemies; but after the election, they shake hands and live together in peace and happiness. For, these men realize that their political parties are not an end in themselves, but merely a means of choosing the best qualified individuals to perform the tasks required in a Government which benefits all Americans, regardless of political affiliation. These men also know that America's Government will remain constant and fluid at the same time, constant toward basic law and order, and fluid toward improvement of human life.

In one part of the city in which I live, there stands a Catholic church, while in other parts of the city there is a Jewish synagogue, and a Protestant church. Many religions with many ways of worshipping one God. Yet, as Americans, these men live together in their community in peace and happiness.

In this country, there is no distinction made between a man's physical power, financial ability, or social standing; and although these differences in fact do exist, these men live together day by day in peace and happiness because they are reasonable men who possess a great deal of understanding of their fellow man.

Now, at first glance a stranger might think this democracy inconsistent and illogical in some ways. But, perhaps this lack of logic is America's very greatness, and perhaps one word might characterize this greatness, "energy," a spontaneous energy, as individuals seek individual pursuits. Men unrestrained by one way of doing things, realizing that by experiment, trial, and error come the very things that make their great freedom possible.

This energy then results in movement, tiny sparks becoming big fires dotting the land all over.

A very bewildering sight, this bright bursting activity; but then this is democracy and the greatest words of praise might be: "This is the land of happy surprises; of bewildering differences."

So, my happy, my peaceful, my freedom-loving Americans, this is my conclusion: my bewilderment and yours, my happiness and yours, is the voice of democracy.

Legislation for Relief of Economic Conditions

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. HENNINGS. Mr. President, I ask unanimous consent that two editorials from the St. Louis Post-Dispatch relating to proposed legislation passed by the Senate before the Easter recess be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch, Mar. 25, 1959]

TOO CLOSE A CALL

The most remarkable thing about the vote in the Senate in favor of the bill to provide Federal assistance for economically depressed areas with chronic unemployment was its closeness—49 yeas to 46 nays. This of course is far short of the two-thirds majority which would be required to pass the bill over a veto by President Eisenhower. Since the Senate bill provides some seven times the funds recommended by the White House, a veto is a probability if the lower chamber does not reduce the extent of the assistance.

Substantially the same bill passed Congress last year by the much wider margin of 46 to 36. How then was it that the 1959 bill had the 49–46 close call in a Senate reflecting the Democratic landslide for Congress last fall? The answer is in the voting on the Republican side. This time the only Republican Senators to vote for the bill were BEALL of Maryland, COOPER of Kentucky, LANGER of North Dakota and Smith of Maine. Seven Republicans who voted for the counterpart bill last year voted against the 1959 version. They were DIRKSEN of Illinois, ALLOTT of Colorado, MORTON of Kentucky, YOUNG of North Dakota, JAVITS of New York, CASE of New Jersey, and AIKEN of Vermont. Excepting only DIRKSEN, these Republicans all are in the progressive wing of their party.

The explanation for this reversal by these seven Republican Senators must be pressure from the White House in some form or other. Apparently the administration hoped to defeat the bill in Congress and therefore spare the President a second veto. The tactic almost worked but not quite. We hope the House of Representatives will recall the margin by which it passed the bill last year. The relief of those who live in the depressed areas deserves more than narrow, grudging support.

[From the St. Louis Post-Dispatch, Apr. 1, 1959]

WITH POLITICS ON THE SHELF

President Eisenhower's signature on the bill to extend for three months the payment of Federal emergency unemployment compensation benefits comes in the nick of time. Had the bill not been passed by Congress and approved at the White House, more than 400,000 jobless workers would have been cut off at midnight, March 31, the period of their benefits having been exhausted. The legislation is no more than simple justice and it is inconceivable that it would not have been enacted. Even so it shows how easy it is for a Congress of one party and a President of the other to work together when the cause is right and partisan politics is relegated to the shelf.

Milk Resolutions by Delegate Body of Land O' Lakes Creameries

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain resolutions with reference to milk passed by the delegate body of Land O' Lakes Creameries at their annual meeting on March 13, 1959.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

TAXES ON PATRONAGE SAVINGS

Whereas the net proceeds from returns after deducting expenses of a cooperative belong to the patrons on a patronage basis; and

Whereas any amounts retained by the coerative are for operating and fixed-capital purposes only, and are not in any sense income to the cooperative; and

Whereas in the form of patrons' refunds such amounts are taxable to the recipient patron: Now, therefore, be it

Resolved, That Congress be urged to continue and, if necessary, clarify the purpose and intent that earnings or savings through the cooperative are income to its patrons only, and are not income to the cooperative; and be it further

Resolved, That the Congress be urged to recognize the fact that capital requirements for cooperatives vary widely depending on the nature of the business in which the cooperative is engaged, value of products handled, and the type of plant and equipment which are necessary to conduct this business. Because of the wide variation in capital requirements, there can be no fixed period for the return of retained capital to patrons; and be it further

Resolved, That a copy of this resolution be sent to the Secretary of the Treasury and other interested Government officials.

PRICE RELATIONSHIPS FOR MILK

Whereas the spread between prices for milk for fluid consumption and prices paid for milk used in manufactured dairy products has generally increased from year to year for several years: Now, therefore, be it

Resolved, That the Secretary of Agriculture be requested in the administration of programs for milk, under the Agricultural Marketing Agreement Act of 1937, and programs for milk under the Agricultural Adjustment Act of 1937 as amended, to give consideration in pricing to the use of criteria which will:

1. Improve the price of manufactured dairy products in the interests of farmers; and

2. Stabilize the price of milk for use for fluid consumption and products in fluid markets in the interest of consumers; but

3. Maintaining in the combination of these prices a narrower margin between the prices for milk for manufacturing and the price for milk used for fluid consumption in those markets where the spread has been increas-

ing and maintain a blend price which will provide an adequate supply of pure and wholesome milk for all uses.

MANUFACTURED DAIRY PRODUCTS

Whereas the use of manufactured dairy products for reconstitution for the production of low-fat milk, and the manufacture of cottage cheese, ice cream, and other products in the various markets has increased; and

Whereas it is in the public interest of consumers and producers that the use of such manufactured products for these purposes should be increased both from the point of view of reducing the cost of food to consumers, and from the point of view of increasing the size of the domestic market for producers of milk: Now, therefore, be it

Resolved, That we request the U.S. Secretary of Agriculture, in the administration of Federal Market Orders and Agreements, to review his program and adjust it to the end that both whole milk and skim milk products manufactured from grade A milk, and acceptable for human food under suitable quality standards administered by the United States Department of Agriculture, shall be acceptable for such reconstitution and for manufacture into dairy products in all markets without economic, geographic, or health limitation either by the imposition of quotas or by the imposition of any other regulation including compensatory payments of any kind.

SANITARY MILK STANDARDS LAW

Whereas milk of superior quality is produced in many areas; and

Whereas the use of this milk for fluid consumption is sometimes limited either to regulated or unregulated markets, by the rulings of the local public health officer; and

Whereas the bases for such rulings are sometimes arbitrary and open to dispute; but

Whereas, in the marketing of milk, there is no procedure for the arbitration of disputes or the redress of unrealistic and arbitrary decisions: Now, therefore, be it

Resolved, That we are in favor of the passage of national milk sanitation legislation which will set up a public health standard for milk in interstate commerce applicable to all markets, and place the supervision and administration of this law in the hands of a qualified authority of the U.S. Public Health Service to be administered by existing qualified public health authorities.

PUBLIC LAW 480 AND THE MUTUAL ASSISTANCE PROGRAM

Whereas Public Law 480, the Agricultural Trade Development and Assistance Act, and section 402 of the Mutual Security Act have been useful in moving substantial quantities fo dairy products into foreign markets; and

Whereas during the foreseeable future, there will be need for markets abroad for the disposal of surpluses, because it is in the interests of the American consumers that surpluses should be produced in order that supplies for domestic consumers will at all times be ample; and

Whereas the present instability of value of foreign currencies and inflation of prices within the United States retard development of such foreign markets; and

Whereas citizens of the many new nations which have come into being since World War II will need assistance in the development of their food supplies and living standards; and

Whereas the long-time interest of American dairymen as well as American consumers lies in the production of products for the development of these markets which can best be accomplished under Public Law 480 and the mutual assistance program: Now, therefore, be it

Resolved, That we recommend that Public Law 480 and the mutual assistance program be continued with adequate funds both for the disposal of existing surpluses, and for the development of new markets in those areas where public sentiment and rising standards of living over the years will make such markets useful.

PROTECTION FROM IMPORTS OF FARM PRODUCTS

In a nation such as the United States, where farm products are produced in surplus, it is inconsistent that imports should be allowed to damage or obstruct the proper working of programs designed to further prosperity for both farmers and the national economy.

We recommend the revision of section 22 of the Agricultural Adjustment Act, as amended, to provide positive and mandatory protection from imports whenever such imports endanger, penalize, or retard the accomplishment of the objectives of farm price support under any of the operating programs.

AGRICULTURAL PRICE SUPPORTS

The need for price supports for farm products has been continuous for many years including all of the period between World War I and World War II. During this period, a very severe and prolonged national depression showed the need for support for the entire national economy in several sectors to prevent widespread lapse of personal income with attendant hunger and sickness.

The Congress, in its wisdom, created economic supports for the national welfare including old age and survivors pensions, minimum wage rate increases, bank deposit insurance, and farm price supports. These and other programs were considered good and proper for the long-time benefit of the economy and the citizens of the United States. In this field, these supports have been successful to the end that no comparably long and disastrously severe depressions have occurred.

The present price support programs on a few commodities have been instrumental in preventing much greater price declines on all agricultural products. Farmers' purchasing power and nonfarm purchasing power in many instances have been maintained at a higher level for the benefit of everyone than would have been the case without such price supports. It is therefore considered desirable that the price support programs be continued at a level which will:

1. Provide an adequate standard of living for farm families.

2. Promote and provide incentive for technical progress and efficiency within agriculture.

3. Conserve our national agricultural resources, and

4. Provide a reserve supply of food for all the citizens of the United States in order that an adequate supply will be available to everyone at all times and at a reasonable cost in the best interest of the entire national economy.

FARM PRICES AND INFLATION

Whereas inflation is a national problem which requires solution. Food costs to consumers since 1951 have increased, but payments to farmers for this food have remained relatively unchanged; and

Whereas the number of persons to be fed increased by 17 million since 1950, but a declining number of farmers provided food for 11 percent more persons in 1957 for approximately the same number of dollars as in 1951; and

Whereas farm prices for milk used in the production of butter and cheese have not contributed to the rising cost of food or of inflation in any way, but have in fact contributed to stability in domestic food prices; and

Whereas it is in the best interests of consumers that price supports be continued since a surplus of production assures an ample supply of milk and dairy products; and

Whereas in the management of surpluses by CCC the costs would be reduced if more surplus were in dairy products and less in feed grain: Now, therefore, be it

Resolved, That price supports for milk have not contributed to inflation or been a burden to consumers, but in fact are a proper form of compensation to farmers for their stabilizing contribution to food costs during the inflationary years; and be it further

Resolved, That an increase in the price for milk used in manufactured dairy products is in the best interests of both producers and consumers. Such price should be at least the price support level in effect during the marketing year 1957, or higher.

MARKET ORDERS AND AGREEMENTS

Whereas an adequate supply of pure and wholesome milk is in the public interest; and

Whereas the provision of this supply of milk in the national interest should be by those dairy farmers most efficient in milk production and distribution; and

Whereas in the administration of market orders under the Agricultural Marketing Agreement Act of 1937, limitations on supply areas are sometimes unnecessarily restrictive, to the detriment of other dairy farmers and local consumers; but

Whereas marketing orders and agreements under the Agricultural Marketing Agreement Act of 1937 have, in the long run, been conducive to stability and orderliness in marketing: Now, therefore, be it

Resolved, That we favor the use of marketing orders and agreements in the marketing of milk; be it further

Resolved, That the Secretary of Agriculture be asked to review his program of market orders and agreements to consolidate wherever feasible, and thereby increase the supply areas under each Federal order to recognize the existence of improved transportation knowledge and equipment in hauling of both raw and processed milk and make the administration of Federal orders more consistent with the advance in research and development which has become operative since World War II.

THE FARMER COOPERATIVE SERVICE

Whereas cooperative marketing associations have contributed extensively to farmers' prosperity as well as to the appreciation of consumers' needs in buying and using the products of the farms, and

Whereas the development of good principles and practices in cooperative marketing and management are essential to effective cooperative growth and efficiency as well as to the extension of this highly desirable business relationship between farm producers of food and their nonfarm customers; and

Whereas the principles of cooperation in the conduct of business are in accord with the high national objectives of our constitution with reference to the pursuit of life, liberty and happiness; and

Whereas the Farmer Cooperative Service of the U.S. Department of Agriculture has contributed broadly and effectively to the provision of information useful to farmers in developing and managing their cooperative marketing associations: Now, therefore, be it

Resolved, That we commend the Farmer Cooperative Service for valuable work and assistance and recommend to the Congress and to the Secretary of Agriculture the support and strengthening of this cooperative marketing activity.

RURAL ELECTRIFICATION ADMINISTRATION

Whereas there are bills before the Congress to raise interest rates on loans to rural electrification cooperatives; and

Whereas the authority of the REA Administrator has been limited in approving loans within the Department of Agriculture; and

Whereas many dairymen, members of Land O'Lakes, are served by REA-financed cooperatives: Now, therefore, be it

Resolved, That the Land O'Lakes Creameries, Inc., is opposed to restriction of the field of operation of the REA, and therefore request that the interest rates not be raised; and that the REA Administrator regain the full authority to approve loans, which authority was granted to him in the original REA Act of 1936; and it is therefore

Resolved, That a city of this resolution be sent to Senators and Representatives of the States in which Land O'Lakes has members, and that a copy be sent to the REA Administrator.

Compensation of Retired Service Men

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. YARBOROUGH. Mr. President, the members of the Armed Forces of the United States have always answered this country's call in time of need and have done justice to their undertaking.

However, America is not doing justice to her retired service personnel. The current payment plan for military retirement allows some personnel to receive more money than others who served the same length of time.

I believe all will agree this is unfair. So I am cosponsoring S. 541, a bill which would equalize the pay of these retired service personnel and correct the injustice done by the Career Compensation Act of 1958.

To illustrate the current inconsistency in payments to retired personnel, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which was printed in the San Antonio (Tex.) Light for February 3, 1959, under the heading "Shortchanged," and an article by Col. E. Ernest Dupuy which appeared in the Army-Navy-Air Force Register for February 21, 1959, under the heading "We've Two Classes of Retirees Now."

There being no objection, the editorial and article were ordered to be printed in the RECORD as follows:

[From the San Antonio (Tex.) Light, Feb. 3, 1959]

SHORTCHANGED

Retired officers and other ranks from all branches of the U.S. Military Establishment are understandably concerned over a provision of the armed services pay act which, in effect divides retired personnel into two economic classes.

Those who retire after June 1, 1958, benefit from the customary method of computing retirement benefits as a percentage of active service pay.

But those who retired before that date were given only a token 6 percent increase of their previous rate of pay.

How this works out in practice is cited in the cases of Colonel A and Colonel B, both with identical service of more than 30 years.

Colonel A retired on May 28 and Colonel B on June 3. But because of the arbitrary June 1 date, and in spite of their equality in rank and service, Colonel B automatically gets $1,560 more a year than Colonel A.

This cannot be dismissed as merely an instance of the way the calendar flips. It has connotations far more important than the personal feelings or fortunes of the two officers.

The Armed Service Pay Act was designed to make military careers more attractive to able and highly trained men who, because of low pay, were being attracted in large numbers to private industry.

Now this development is bound to make them feel that they may be subjected to similar treatment in the future.

If this double standard in retired pay were to save the country a vast amount of money, it would at least have financial justification.

But actually it saves only .03 percent of the Department of Defense budget, and there is no assurance whatever that the saving might not be offset by increased costs of replacements.

For the first time since 1861, retired armed services personnel has not been included in pay increases equivalent to those still in service. Confidence in the security of retirement benefits, until now considered explicit, has now been cast in doubt.

The best way to correct this unfortunate situation, and the consequences it threatens, is to restore the just and proper rate of retired pay to length and service and to all members of the Armed Forces—without regard to arbitrary dates and the discrimination they inevitably impose.

[From the Army-Navy-Air Force Register Feb. 21, 1959]

WE'VE TWO CLASSES OF RETIREES NOW

(By Col. R. Ernest Dupuy)

Isn't it about time we come right down to cases on the subject of retired pay?

The Military Pay Act has arbitrarily divided retired personnel of the Armed Forces into two classes—the haves and the have-nots. Let's go military and dub them "Retired 1st class" and "Retired 2d class," depending upon the date of retirement.

All individuals already on the retired list prior to June 1, 1958, have automatically become "Retired 2d class," True, beginning June 1 their pay—calculated on 75 percent of past pay schedules, was upped 6 percent.

But all those retiring as of June 1 or later receive 75 percent of the new and—justly—increased active duty pay. They become "Retired 1st class."

Its as simple as all that. So what's the fuss?

Well, this reporter, for one, having become a "Retired 2d class," doesn't like it. From the military ghetto he sounds off upon the peculiar circumstances surrounding the drafting of this bill.

The present pay act was charted by Pentagon planners. In its original form it contained no provision whatsoever for people already retired. They, it seemed, were to stew in their own juice, regardless of living costs. Had it not been for remedial congressional action there would not even have been that 6 percent sop.

So let's look at the Pentagon. Obviously, those uniformed inmates concerned were not retired. The way they drafted the bill their own futures would not be affected. The civilian Pentagon inmates were, of course, creatures of the administration. The administration was resolved upon economy, particularly such economy as would not result in awkward repercussions.

There were, in effect, no repercussions. Those individuals slated to become "Retired, second class" saw the dark cloud rising, but most of them laughed it off. "They can't do this to us," was their slogan.

Their ranks included officers and men who had fought in two world wars; many of them had helped win World War II for the very people now running the administration. They felt (how stupid can one become?) that loyalty would run down as well as up.

So Humpty Dumpty came tumbling down.

Our "Retired, second class," include many of the people of whom Winston Churchill, in generous recognition, said:

"I saw the creation of this mighty force * * * victorious in every theater against the enemy in so short a time and from such a small parent stock * * * [with] leaders and vast staffs capable of handling enormous masses and of moving them faster and further than masses have ever been moved in war before * * *."

Our "Retired, second class," also include individuals who, following the great depression of 1929, for several years suffered payless furloughs with loss of 8⅓ percent of pay and an additional 15 percent pay cut together with a freeze of all longevity pay increases.

Unjust as that might have seemed, it was taken without a whimper. The Nation was in trouble; everyone was feeling the pinch. So the Armed Forces made do, as they always have, and they continued to build for the future protection of the United States. There was no mention then of under-the-salt status for retired folk.

The present situation is something else again. It has shaken the entire structure of our regular services. It constitutes a flouting of both custom and of contract.

That statement requires some explanation.

The question of retirement and retirement privileges goes back more than a century, when Lt. Gen. Winfield Scott, in the 1840's, started working on the problem.

Scott, who during his long service, did more for the betterment of the regulars, commissioned and enlisted, than any other officer before or since, lived in a period when no thought was given to retirement.

Superannuated fuddy-duddies remained in harness until they died; embodyment of Kipling's much later excoriation of "heavy-sterned amateur old men, who 'amper and 'inder and scold men." Yet these were men who had devoted their entire lives to their country's service.

Not until August 3, 1861, did Scott's long-continued efforts to stimulate promotions and at the same time to recognize and reward long and faithful service bear fruit. The Congress, faced by Civil War emergency, established Army retirement, with pay proportioned upon active duty pay. In 1862, an omnibus bill similarly established Navy retirement.

From that time until 1958, this proportional relationship between active duty and retired pay has persisted. Never has Congress tampered with it, as pay bills of various sorts came through the hopper. [The disproportionment between pay and allowances is something else again.]

And one of the most efficient sales talks for military careers has been the certainty that the retired man would, for the remainder of his life, receive three-fourths of the current active duty pay of his grade and length of service.

There is not the slightest reason to believe that Congress would have deviated from this principle had the Pentagon included it in the present bill. But the administration pulled the chain. There is no reason to believe that administration approval will be granted the present efforts of a number of Members of Congress—well-wishers of the Armed Forces—to remedy this injustice.

Let both Pentagon and administration take heed to the words of an English writer of 500 years ago, John Skelton:

"That byrd ys not honest/That fouleth hys owne nest."

Address by Hon. Barry Goldwater, of Arizona, Before Edison Electric Institute, at New Orleans

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the Edison Electric Institute, in New Orleans, on April 6.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, members and guests of the Edison Electric Institute, I am happy and privileged to be with you today.

This morning I want to discuss what I consider to be this Nation's most fundamental problem and to relate that to the difficulties facing your industry.

History—the experience and lessons of the past—should help us as we analyze and search for the right answer to current political problems.

Just a couple of weeks ago there was an interview in the Washington Post quoting that wonderful classical scholar of ancient Greece, Edith Hamilton. Here is what she said about the reasons for the collapse of that once great democracy:

"I think it was mostly because Greece no longer cared to fight for anything. In the end the Greeks wanted security more than they wanted freedom. They wanted not to give to the state but to receive from the state. They just wanted to be comfortable."

Today we may feel a comfortable sense of security under the protective cloak of our Constitution and Bill of Rights. History, however, should dispel any feeling of complacency we might have. We are not the first people to have written sacred contracts to protect the rights of the individual. Governments in times gone by have thrown up even stronger safeguards than ours against dictatorship, only to see the barriers first lowered, then destroyed, as the people permitted more and more power to be concentrated in a tyrant or in an all-embracing central government. And even we, I fear, have forgotten the centuries of fighting and conflict that led to the freedom we enjoy today. The one clear lesson to be learned from the total experience of mankind is the folly of believing that any government, given excessive power, will for long remain benevolent. Government has nothing to give except that which it has first taken away.

America's way in tomorrow's world will depend greatly on the outcome of the contest currently waging between those who believe in "belly politics"—the materialists—and those who believe that man's needs go deeper than material things alone. So much depends on the strength of our belief in principle and our willingness to fight for the things we believe in. I personally have great faith that the dignity and rights of each human being will be preserved even as government itself grows and expands to cope with problems properly in its domain.

Your industry and what happens to it at the hand of government will provide an important clue to our future course. In covering this subject, there is no need for me to take you back over the history of Federal encroachment in your field. One single fact tells the whole story. A short generation ago the Federal Government produced less than 1 percent of the power consumed in the United States. Now it produces almost 15 percent, and the ratio mounts steadily.

This trend continues even though the electric companies have made a tremendous contribution to progress in the past and are destined to do even greater things in the future as we move into a new era of electronics and electrical living. You are doing and are capable of doing a good job for the people of this country, yet government is constantly moving in on you.

Why?

Electricity is a complex subject—something very difficult for the people generally to understand. Few recognize or regard it as a manufactured commodity. It does not package and sell like soap or carry a brand name. It has its own particular method of delivery which is unlike other commodities.

Its technology and economics are highly complex and, therefore, difficult to explain. Even the framework of regulation—State and Federal—within which you operate is not clearly understood.

Moreover, when a man buys or rents a dwelling, electricity is a necessity and taken for granted. Therefore, people seem to have a different economic attitude in buying electricity than they do in buying, say, a pair of shoes, or an automobile.

These characteristics, unfortunately, make the function of supplying electricity easy prey for those who believe government should do more things for people. They argue that electric service can be provided cheaply only by government. This is pure propaganda, of course, for you are providing the American consumer with excellent low-cost service.

Yours is one of America's truly great industries. I have had the pleasure of knowing some of your leaders and I have found them to be outstanding examples of what businessmen should be. I have found your industry to have a standard of ethics unexcelled by any other and equaled by few. Maybe you have been forced into that, I do not know, but the fact remains you have it.

From my observations, your companies usually take the lead in community development. Your officials are either heading up or assisting in drives for local charities and community betterment. I know of your efforts to create new industry. You have anticipated our future electric requirements for years ahead and are ready to provide it. You have provided us with adequate capacity during every national emergency. You have helped the local and national economy by courageously investing and building for the future at times when more timid souls would have pulled back.

But how much credit does the American public give you as an industry for those splendid accomplishments?

When your company is largely responsible for bringing a new industry into your service area, does it get the credit or does that go to some other group of citizens?

Does the public know that it has been industry and not Government that has made the technological advances which have kept the price of electricity at 1939 levels?

Does the public know that electric companies serve over 40 percent of our farms directly and furnish power for more than 50 percent of the remaining ones?

Do your customers understand that they pay heavy Federal taxes when they buy electricity from you, taxes that are avoided by those who get their power from Federal or public power bodies?

My point is this: If you received the credit you justly deserve, your troubles would diminish. The public is not going to permit an industry which is a valuable citizen to be kicked around. But it does not realize your value. It appears you have a job to do here.

Another obstacle you face is that your opponents speak with one voice on all issues, whereas you do not. Maybe it is impossible for you to achieve the same unity of action and thought. Perhaps this is as it should be, for the nature of private enterprise is such that it does not lend itself to regimentation and, certainly it proves there is no power trust.

But in facing up to what unquestionably is a public power trust, you must strive for singlemindedness of purpose.

Your opponents are one for all and all for one. They are for Government power in any section of the United States and help each other whether their area is affected or not.

I am sure that some electric companies have taken no interest in national affairs that affect the industry as a whole. Others have become active only when some Government operation starts breathing down their necks.

If you do not make an all-out effort every time a company is faced with Government competition or encroachment, even if it is 3,000 miles away, you are going to be picked off piece by piece, company by company. Although a company may not seem in danger now, there is no telling when it might be.

There was a time when the vehicle used for Government competition and expansion was hydroelectric development; but that time has passed. You now have the atom. That puts the threat of a Government powerplant in any area, be it Maine or Chicago.

Why are Government power advocates so active in supporting Federal development of power from the atom? It is not because of a present or foreseeable shortage of power from conventional fuels. It is not because it means cheaper power.

Look at it this way—the Federal Government has constructed steam electric plants in only one area—the TVA. Today it would be very difficult to pass legislation authorizing Federal construction of conventional steamplants in any other area; but the atom is something else.

It is argued, and many people think it is logical, that the Federal Government should take the lead in constructing atomic powerplants. So the atom may replace hydro as the vehicle to get the Government into the steampower business. Your opponents know this; that is why they are working so hard toward that end. Therefore, no single company enjoys the security it once thought it had from the threat of Government encroachment. For that reason, it is even more important today that you present a united front in opposing Government power developments.

As a businessman who has spent the last 6 years as a U.S. Senator with more than a passing interest in your affairs, I have sometimes felt there is a timidity on the part of some utility executives in making contacts in Congress and in participating in utility legislative efforts.

You cannot expect the employees you send to Washington, or those you have permanently stationed there, to work without benefit of your help. This is your job—your responsibility—and you need never hold back or apologize in defending the position of your company and your industry in Washington. In this respect public power is not the least bit modest.

Without question, you are concerned about the efforts being made in Washington to silence you. I would only say this: If Congress doesn't grant some tax relief for your advertising and legislative effort, I hope this won't deter you from participating up to the hilt in such programs. There is no place in this fight for timidity. Those who are timid will lose their shirts.

We are talking here of matters you can do something about. You have top-flight executives to head up your operating, engineering, financing, and other divisions. Since politics now is one of the most important, if not the most important activity that confronts you, is there any reason why you should not select a top official to handle this field as his primary responsibility? I do not believe you can leave this to an already overworked executive or to your lawyer. It requires full-time attention.

An advantage you have is your coverage. You operate in every State in the Union except Tennessee and Nebraska. I know of no other industry with this same advantage. You have responsible representatives in almost every congressional district who are, or should be, well acquained with local officials and opinion leaders.

One of your opposition groups has organized what it calls minutemen to work for its legislative objectives, many of which are designed to put you out of business. It would appear to me that you already have your minutemen. The question is, are you using them?

Talking with your Congressmen and Senators is a very important function. We are busy people, so never assume that we are fully informed on the subjects in which you are interested. If we are busy and tied up, talk to our administrative assistants. They will get the word to us. But do not be hesitant about coming to see us. Most of you do not come around often enough. Some come only when they want something. So long as your visits are informative and helpful, you cannot visit our offices in Washington too often.

To continue in this practical vein, you are not going to win issues or stave off disaster without votes, and you do not have them now. Although the climate of opinion with regard to your industry in Washington has improved compared to earlier years, it has not improved enough to prevent your industry from losing ground. I must say you have been remarkably successful on the whole in Washington. And this, in spite of the fact that your industry has only a minority of stanch supporters in the Congress.

It will take votes to stop the trend. I am not suggesting that you run for political office or support candidates of one particular political party. But I do suggest you maintain a continuing interest in the philosophy of those who seek office.

Most legislators who continually support ideas and legislation that lead us nearer the welfare state would be highly indignant if accused of undermining our free-enterprise system. But their votes are the more detrimental because the result chisels away at our system of government a little at a time while pretending to support it.

So far we have not even touched on labor and I am sure you would not expect me to speak to you without mentioning the subject. Certainly it ties in with some of your problems that we have been discussing.

Some labor leaders and some of my colleagues consider me a labor-baiter. I am not. I defy the contention that any man in the labor movement or in Congress has any more concern for America's working men and women, both union and nonunion than I have. My concern is for the worker. I fear some of my critics—those who parade as the champions of labor—are more concerned with the personal power of the labor boss and the influence he may have on their political fortunes than they are in the welfare of the worker.

I am not against the labor leader so long as he is the duly elected representative of labor and confines his activities to those things that concern the ones he represents. Where we part company is when the labor boss uses his position to defraud those he represents and to promote his own political ambitions.

As you know, I am a member of a select committee of the Senate—the McClellan committee—investigating labor-management affairs. Some of the things we have turned up are scandalous. Laboring people—members and nonmembers of organized labor—have been intimidated, beaten, and murdered. Money extracted from union members has been borrowed, never to be returned, or stolen outright. Union money has been used to elect or defeat candidates for public office. Criminals have held high office in labor organizations. Criminals, thugs, and other racketeers have used organized labor to force their will on employers and employees who wanted no part of them. Unfortunately, some employers have connived with unscrupulous labor leaders to sacrifice the welfare of the working people.

These things should be corrected by Federal law and yet as widely as these sickening atrocities have been publicized over the past 3 years, remedial legislation has yet to be enacted. You wonder why? The answer is very simple. The leaders of organized labor have become so politically powerful they are able to stop or to tone down proposed legislation to where it will not do the job.

Do not infer from what I have said that I think all leaders of organized labor are bad. Quite the contrary. The rotten apples we have dug out of the barrel comprise a very small percentage of those connected with labor. But the disturbing thing to me is that even upright leaders oppose corrective legislation because they are afraid it might infringe on their power.

Let any organization once acquire power, it will fight to keep it—that goes for either business or labor. There was a time in this country when business became too powerful politically. It abused that power to the extent that the people in righteous wrath clipped its wings. Now labor has reached the point where its powers must be controlled, otherwise we will soon be under a labor government, irrespective of what political party brand it may use for the purpose.

The State of Michigan has been taken over by labor through its control over the Democratic Party in that State. But labor is not satisfied with Michigan. It spent millions of dollars last year to influence elections in other States, including my State of Arizona, and overall it enjoyed an alarming degree of success.

Now where does all of this fit in with electric company problems? Organized labor should have no specific interest in promoting government power. Its interest really should be with the electric companies. You furnish 85 or 90 percent of union members with their personal power requirements, to say nothing of the power they use on their jobs to increase their productivity. I understand the unions representing your employees have publicly opposed any expansion of government power—Federal, State, or local. They have found their members fare much better under company ownership and operation than they do under government.

One would think with this being the case, other unions not directly connected with the electric power industry would take the same position. But they have not. They oppose the things that might benefit workers in your industry and support all types of government power. They do this in their publications and before committees of Congress.

Why do they? Obviously this stand fits into the general pattern of seeking political favor by seeming to give people something for nothing. Too often people seeking power are willing to cast principle aside in the interest of political expediency.

Government power is paraded as giving something to the people as their due. It matters not that the majority have to pay for it through taxation to give to a minority.

This giveaway theory is bait for votes. There is nothing new in it. It was used in ancient times and it is being used today. Votes win elections. If union leaders can influence election of public officals, they build up their own political power and that is their objective. If you have to be sacrificed in the scramble, that's it.

These are among the reasons why it is so important for us to redefine and restate our values. We can do this and we must if we are to survive.

Where have we fallen down? Why is it that conservatism—belief in the ultimate importance of the individual human being—or free enterprise—call it what you will—finds itself on thin ice today? It is not that our principles have failed, but rather that we have failed to translate them and make them meaningful in terms of today's problems. As certainly as we sit here today, if we don't find the answer to this, we won't be here tomorrow and there won't be any private electric companies.

The core of this problem, it seems to me, is to decide, and to help people decide, where to draw the line on what the Government should do and should not do. The answer is not to have the Government do nothing, but to have the Government do the right thing.

One thing we have failed to point out convincingly is that Government programs are always directed at the group and tend to submerge the individual. Yet when we lose sight of the individual we destroy all the important values we cherish.

We only have to look around us to see how far we have gone in this respect—growth of conformity, the decline of individual incentive, the search for security at all costs—these things are everywhere.

The philosophy of some leading labor officials is the perfect example of what happens when the individual is lost sight of in the search for security for the group. Labor has directed its attention at getting the most benefits, the most security for its group, and within its own framework has deprived the individual of liberty, freedom, and individuality. Where laws permit, the laboring man is deprived of his right to work unless he joins a union In many unions he has no control over his union dues and is often deprived of the right to elect his own officers. He is deprived of recourse to law and justice through fear of brutality from union leaders. Often he is deprived of his right to feed his family when ordered out on strike, no matter how hard pressed he might be financially and irrespective of his individual desires.

It becomes urgent for us, therefore, to swing the focus of attention back to the individual as an individual.

Obviously we cannot lose sight of the material needs of people, but until we rediscover the individual, we will not make progress. Government cannot be a friend of the people if it ignores the individual.

Where, then, do we draw the line between Government doing things for all the people and the individual doing things for himself? It seems to me this administration has developed at least one standard to guide us: namely, if people can do something for

themselves, then there is no need for Government to do it.

Now the electric power field is one clear-cut area in which this line can be drawn. You know as well as I do that there is no need for the Government to assume a full and complete utility responsibility. Here, without question, people themselves are able to supply the Nation's electric power needs.

This is where your interests merge with national policy and this is where your most vital problem of communication lies. And this is why it is important that you continue to exist within the framework of free enterprise, not because you are free enterprise, but because you are not government.

As long as you are not government you still stand for those values which place the individual first, which offer him the greatest opportunity for material and intellectual growth and, consequently, the most freedom and progress. Government cannot do this.

If at times I have given you cause for pessimism, don't think for 1 minute that I am pessimistic. In what I have been outlining I see hope for the conservative cause. We know with unshakable certainty that what we believe in is good. The pseudoliberals, who argue continually for greater government responsibility, have nothing to offer except more and more government. This is the only road they can take if they remain true to their philosophy. The ultimate result of this course is so obvious it needs no elaboration.

We conservatives, on the other hand, offer the only opportunity to go forward. Our beliefs are founded on proven values—values which have never failed in the past. Conservatism is based on the belief that only to the extent the individual's whole personality is developed to its ultimate potential can society advance in the best interests of all the people. The reason I am optimistic is because I know that what we stand for is sound. Let us never weaken in this belief.

Capt. Donald K. Slayton, U.S. Air Force

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. PROXMIRE. Mr. President, America stands on the threshold of the awesome age when man will travel through outer space. In the vanguard of this new development in our civilization are seven men from our Armed Forces, handpicked for the special training that will make one of them the first American, and, we dare hope, the first of all mankind to orbit the earth.

I am proud that one of these seven brave men of destiny comes from Sparta, Wis. He is Capt. Donald Kent Slayton, of the U.S. Air Force. I ask unanimous consent to have his biography, which appeared in today's issue of the New York Times, printed in the Appendix of the RECORD.

There being no objection, the biography was ordered to be printed in the RECORD, as follows:

CAPT. DONALD KENT SLAYTON OF THE AIR FORCE

His home town is Sparta, Wis., where he was born March 1, 1924. His wife is the former Marjorie Lunney of Los Angeles, Calif. They have one son, Kent, 2.

He attended primary and high schools in Sparta, graduating from Sparta High School in 1942. He entered the University of Minnesota in January 1947, and was graduated with a degree in aeronautical engineering in August 1949.

He entered the Air Force as an aviation cadet in 1942 and after instruction at Vernon, Tex., and Williams, Ariz., won his wings in April 1943. He flew 56 combat missions in B-25's in Europe with the 340th Bombardment Group (Medium). He joined the 319th Bombardment Group (Medium) and went to Okinawa in April 1945, where he flew seven combat missions over Japan.

Following his graduation from the University of Minnesota, he was an aeronautical engineer with Boeing Aircraft Co. in Seattle until recalled in early 1951 to active duty with the Air National Guard.

He spent a year and a half at 12th Air Force headquarters as technical inspector and a like period as fighter pilot and maintenance officer with the 36th Fighter Day Wing in Bitburg, Germany. He returned to the United States in 1955 and attended the Air Force Flight Test Pilot School at Edwards Air Force Base, Calif. Since January 1956, he has been an experimental test pilot at Edwards, where he has flown all jet fighter-type aircraft built for the Air Force. He has 3,400 flying hours, 2,000 in jets. He holds the Air Medal with cluster.

Patience Pays Off

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. HENNINGS. Mr. President, recently an interesting editorial concerning the industrial empire of Krupps' appeared in the Cape Girardeau Southeast Missourian. I commend it to the attention of my colleagues and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PATIENCE PAYS OFF

When the war ended in 1945 the giant industrial empire of Krupps' lay practically in ruins. The firm which from a small plant in Essen founded in the days of Napoleon had grown into a vast complex of steel, coal, and armament enterprises, was laid low.

The Allies decided that this company which had supplied gun barrels with becoming reluctance to Bismarck, Kaiser Wilhelm, and Hitler should be dismembered and robbed of its power to become the tool of warlike leaders. Krupps' was ordered to dispose of its coal and steel interests. In future it should make typewriters, bridges and other peaceful things.

Now Krupps' has purchased a steel plant. The European Coal and Steel Community has given its sanction and the Allies have shown no angry reaction. Indeed, Herr Alfried Krupp has declared quite openly that the original dismemberment of the industrial empire was forced upon him under duress.

Herr Krupp has proved the value of patience. Resentments do not endure forever among nations. A new generation grows up. Leaders change. Old foes become valuable friends as new enemies appear on the horizon.

Russian Trade War Problem

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Lawrence Fernsworth, entitled "Russian Trade War Problem," which appeared in the April 8 issue of the Concord Daily Monitor, Concord, N.H.

This article will be of interest to those who are concerned about the Communist threat to our economy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RUSSIAN TRADE WAR PROBLEM—ECONOMIC NATO PROPOSED TO COUNTER SOVIET MOVES

(By Lawrence Fernsworth)

WASHINGTON, April 8.—Plans for an Economic NATO to counter the Russian economic offensive are hatching in the minds of Members of Congress and of recently appointed Secretary of Commerce Lewis L. Strauss.

This idea has floated as a kind of trial balloon out of the rather rough-and-tumble hearing on the Strauss nomination which the Senate Commerce Committee started before the Easter holidays and which is being resumed this week.

Strauss told the committee that he accepted the President's recess appointment because "I believed I could counter the gravity of the Russian economic offensive." He made it plain that he considered this the big job cut out for him as the new Commerce Secretary to succeed Sinclair Weeks.

Senator COTTON, a member of the committee, has been an attentive participant in the hearings and was particularly concerned about those aspects of the Russian offensive that had bearing on New England industry—the Russian threat to the cotton and wool markets.

BRIDGES CONCERNED

Senator BRIDGES has also expressed his concern with the Russian trade war. As the hearings began, he said in a speech:

"If we want to substitute the Communist system of slave labor for the American system of free labor, then we might as well substitute the "Volga Boat Song" for "The Star Spangled Banner."

BRIDGES' ire was particularly aroused by the revelation that the Russian trade war is now threatening to invade the American school system by the sale of Russian-made laboratory equipment to American high schools and colleges.

"Just for a starter," he said, "the Russians are sending to this country 6,000 pieces of school laboratory equipment to help us educate our youngsters. Things like microscopes and projectors and electronic devices we are told are being sold, or are scheduled to be sold, to our schools by the Russians at prices as low as one-fifth for comparable American-made items."

BRIDGES said it would be well to consider an amendment to the National Defense Education Act to forbid the use of funds provided by the act to buy the Russian-made equipment. This act, passed last year, provides for $280 million in grants to State educational agencies for, as BRIDGES put it, "just this very thing—laboratory equipment, on a dollar-for-dollar matching basis."

LOW AS ONE-FIFTH

He informed the Senate that the first sample lot of 26 items has already arrived, and that Russia proposes to sell it proffered educational wares "at prices as low as one-fifth of the prevailing prices for comparable American items."

"And what is more distressing," he said, "those who viewed these samples say there is no question as to their quality."

When a Johnny Smith is told that the American schools can't afford anything better than the Russian equipment, "what does Johnny Smith think next?" BRIDGES asked. "Will he go home and think about it, and then come up with the conclusion that maybe the Russians are better than us? If he does God help us."

BRIDGES warned the Senate that the plan for American schools "is just another step in the overall Communist plan to unbalance first one then another segment of the United States business community. It is another instance of the economic war which the Soviets have declared.

"Only 3 weeks ago the Communist textile mills priced their goods to get the business—cost or profit being no object. It's the same thing here—only instead of American textile industry it's the American educational system."

HURT ALUMINUM

Another aspect of the Russian trade offensive brought out at the Strauss hearings was the disruption of the American aluminum industry by Russian dumping of aluminum in American markets abroad, and especially in England. Although Russia itself is short of aluminum, it resorts to dumping as a means of striking at American trade.

Indiana's new Democratic Senator VANCE HARTKE said that as a result of this dumping "the jobs of 18,500 American miners for a year have gone out of the window."

The trade offensive is also due to receive the attention of the subcommittee of the Commerce Committee.

The Soviet Deputy Prime Minister Anastas Mikoyan has acquired an American nickname as one of the hearing's byproducts. When the question of various ways of pronouncing his name came up, Chairman WARREN G. MAGNUSON, a Washington State Senator, remarked:

"Let's call him Mickey."

"I wish I had thought of that," countered Strauss.

Addresses at Annual Washington, D.C., Dinner of the Iowa Farm Bureau Women

---

EXTENSION OF REMARKS

OF

HON. BOURKE B. HICKENLOOPER

OF IOWA

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. HICKENLOOPER. Mr. President, on Wednesday, April 8, about 90 farm wives from Iowa, members of the Iowa Farm Bureau Federation, took part in their annual dinner in Washington, D.C., which is a feature of the trip they make each year. In connection with the dinner, three of these outstanding farm women leaders delivered addresses.

First, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Mrs. H. L. Witmer, the chairman of the delegation. Mrs. Witmer is a farm wife from Iowa.

Next, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Mrs. Herbert Johnson, of Charles City, Iowa. The address was made at the same meeting.

Third, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Mrs. Lyman Greiner, of Blairsburg, Iowa, who is also a member of the delegation, and who spoke at that same meeting.

I may say the addresses delivered by these outstanding ladies contain a great deal of food for calm consideration and thought, especially as they express some considered and experienced views of farmers in the State of Iowa with regard to economic and social conditions which now exist.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF MRS. H. L. WITMER, CHAIRMAN OF THE DELEGATION AT THE ANNUAL WASHINGTON, D.C., DINNER OF THE IOWA FARM BUREAU WOMEN, APRIL 8, 1959

Mrs. Johnson has ably expressed the views of this group on the Federal budget and inflation. Mrs. Greiner has left little to be said about our concern for the future.

One of the great needs of agriculture as well as other groups in our concern for the future is that of perception or a real understanding in advance of the eventual consequences of policies and recommendations.

With the clear vision of hindsight we can now look back to the 1930's when farmers requested and not government programs, Government agencies, and all that experience has shown goes with these things.

We were in a hurry to do something, but it is clear now that there was too little concern for tomorrow and too little perception of the long-run implications to agriculture of efforts to seek political solutions to questions essentially economic in nature.

There is no market system in the world to compare with that of the United States and it has been dramatically successful over the years. Are the right answers to the farm problems to be found in this very system?

Another of the qualities we covet is the ability to maintain sustained indignation. All through history, the righteous indignation of upright citizens has swept the Nation periodically but subsided all too quickly without anything actually being brought about that would eliminate the cause of the public's indignation. One of the old-time politicians was quoted as saying, "Reformers are like morning glories, they bloom in the morning and fade away before dark."

We farm bureau women are not reformers, but we are concerned and indignant about some of the things we hear and observe. With your permission, I would like to list a few causes to which it is our intention to maintain sustained indignation until something is done. I will not attempt to put these in order:

1. Racketeering in any field. We are more indignant with the local government officials who aid or condone racketeers for profit and political reasons than the racketeers themselves. Government officials have accepted a public trust. There is nothing worse than violating that trust and confidence.

2. Dishonesty in government. In repetition of what I have just said, a government official who betrays the confidence of his constituents is, in our opinion, much worse than the common thief who enjoyed no such confidence.

3. We are indignant at violence and racketeering in labor unions. This indignation, of course, is directed toward labor union officials who have been selected by their fellow union leaders and used their hard-gained funds for personal gain and riotous living. Again our indignation extends to politicians who for political reasons refuse to enact legislation tough enough to clean up the situation which exists.

4. We are indignant at the continuation of monopoly, whether it is in labor, agriculture, business, or government.

5. We are indignant at the waste of our personal and natural resources through excessive and unwise Government taxes, expenditures, and programs.

6. At attempts to compel us to accept services we do not request or to join organizations by other than our own free will and choice. We believe in voluntary membership only for our own organization and for all others.

7. We are indignant with those who attempt to buy our votes with public money—with our own money. At those who would jeopardize the private enterprise system in order to perpetuate themselves in office.

8. We are most indignant with those dictators who threaten the peace and freedom of the world.

The specific purpose of our organization is to improve farming as a business and the farm as a place to live.

Our country offers unlimited opportunity for a high standard of living, for spiritual achievement and for world leadership to benefit all mankind. To be leaders we must honestly demonstrate the qualities of leadership.

In summary, we will sustain our indignation to combat public acceptance of the uncondonable. We are determined to direct this indignation at the selfish, the dishonest, the thugs, the racketeers, the demagogs, and the dictators who threaten those things we hold most dear and important.

Our organization carriers on an active citizenship program. We intend to be increasingly active in the future in encouraging individual farmers to participate in the political party of their choice and to have influence in governmental affairs. We want to help build public respect for legislators and Congressmen. However, if we are to do this, we must insist that these public servants not shut their eyes to or condone the causes of our indignation just to be reelected or to further any political party's program.

Our program is to advance and improve the economic, educational, social, and cultural interests of the farm family. Implied in this are our State, national, and international responsibilities and our determination that private enterprise, democracy, and freedom shall be the legacy which, at all costs, we will preserve and pass on to our children and grandchildren.

We are depending on you, our elected representatives to perform your duties steadfastly to bring this about.

It is a well-known fact that the number of farmers is decreasing but there is an ever-reincreasing interest in government and a desire to keep that government and our country a shining symbol of freedom in a world where to many people freedom is a dream of the past or a seemingly unattainable goal of the distant future.

BUDGET—TAXES AND INFLATION

(Address by Mrs. Herbert Johnson, of Charles City, Iowa, before the annual Washington, D.C., dinner of the representatives of the Iowa Farm Bureau Women, April 8, 1959)

Distinguished guests and Farm Bureau friends, we are concerned about the threat of inflation. This is obvious by the fact that we have it as one of the topics we would like to discuss with our Congressmen here

tonight. It is my understanding that the men also discussed this subject when they were here a month ago.

I would like to discuss this subject of inflation from a woman's viewpoint. While this is not materially different than a man's we are especially concerned about some areas. We know that the dollar is worth only about half of what it was 20 years ago and probably a little less with these undesirable results:

First, we women are very much interested in the insurance program for the family. Our concern is not so much for ourselves as for our children in case something happens to the breadwinner. Farm women probably tend to be closer to the family business than women in general. But too often even the farm wife does not feel capable in the field of investments and business activities, if the husband is taken away.

Consequently, an estate administrator will usually recommend that a widow put her savings in fixed investments such as mortgages, bonds, and similar types. Many a widow has seen the purchasing power of her savings cut in two in the last 20 years. In many cases where the husband thought he had provided adequately for the family, they are now perilously close to poverty. This is unfair. It is a cruel and inhuman tax. We cannot justify voting for huge Government expenditures to put money into the pockets of the strong at the expense of widows, orphans, and old people.

The second area we women are especially interested in is the education of our children. Usually it is necessary for farm families to start putting away money for a college education from the time a child is born to make certain that the money is there. Here, too, it is customary to put the money into fixed investments. If we continue the present trend of inflation, there are going to be some bitter disappointments 15 or 20 years from now when the children are ready for college.

Thirdly, there are no company pensions for farmers. They must do their own saving. We want it that way. But a part of this saving for our old age should prudently be made in fixed investments. Again, the same cause for concern about the value of the dollar in 1975.

And, ladies and gentlemen, if we ever reach the point where the people believe that to speculate is safe—but to save is to gamble—then we are indeed in trouble.

Inflation has been almost continuous for the last 20 years. Of course, it received its greatest impetus from the war effort. That inflation was probably largely unavoidable. It seems evident to me, however, that we have not faced up to the problem since the war. And that our governmental policies now and in the past 15 years have encouraged inflation rather than combating it.

Of course, there are many causes of inflation, but we believe the fundamental one is deficit financing by the Federal Government. Now, you and I know that deficits are not something new to our Government. We've had a lot of them particularly through the past 30 years. Yet, we seem to have learned to live with them.

During the 1930's some people who were conservative—perhaps ultraconservative in financial matters—proclaimed that, if the Government did not stop spending money like a drunken sailor, the public debt would hit $50 billion and the country would be broke. That didn't happen. The peak of the World War II debt was reached in February 1946—it stood at $279.8 billion. That didn't break us. We've had a number of deficits since then. They didn't break us. Maybe that is what has put us to sleep concerning the dangers of continuing inflation.

And some of you might ask, "Why, now, of all times this emphasis on balancing the budget?" Some of our productive capacity lies idle, we have an undesirably high level of unemployment. (I might say here that the trend of unemployment both absolutely and as a percentage of the labor force, has been slowly rising ever since 1945.) Also, consumer prices have leveled off. So your question might be, "What inflation would you have us fight?"

The answer is, "The psychological reaction to the inflations of all the yesterdays in which this has occurred, and the potential inflation that lies in prospect for tomorrow—particularly that which will ensue if Congress fails to repair the finances of this country promptly. Fear of future deficits can keep people from saving because of the possible shrinkage of the purchasing power of these savings through inflation. And, let me repeat, if we ever reach the point where people think it is safer to speculate than to save, then we are indeed in trouble.

In addition to what I have said about the unfairness of continuously reducing the purchasing power of the dollar is the even greater fear that inflation might become uncontrollable sometime in the future. I know of no government in history that has been able to stand firm after its currency became worthless. From a leading dealer in government bonds, Aubrey G. Lanston, I qoute, "The budget must be balanced." It is the only way to restore confidence in the dollar and in Government bonds, which is one of the most vital of the fixed assets I mentioned earlier. He says that anything less than a clear-cut determination by Congress to turn its back on Federal deficiteering as a way of life will lead to some pretty uncomfortable developments in the Government security market.

If the Government's needs to finance are large and repetitious—as has been and seems likely to continue to be the case—we eventually find that the Treasury is obliged to confine its financings largely to securities that will mature within a short time. There, we may see sharp, overnight increases in short-term interest rates.

Such prospects or events would raise some troublesome problems for the Federal Reserve System, for the capital and credit markets in general, for businessmen, and the economy as a whole.

A dictator could come to America—and probably would come to America if inflation got completely out of control. We see enough indications of a lack of faith in the value of the dollar to, in my opinion, give us cause for alarm.

So we think it is high time to balance the budget and we would like to see this done without increasing taxes. We urge, and will actively support economies in government, as long as it does not mean endangering national security, or affect vital services. It means limiting Government spending to services which are truly necessary, cutting out those that are unneeded and wasteful.

Any other course is fiscal and moral irresponsibility.

If we Americans, through you, our representatives in Congress, do not have the discipline to pay our way in good times, it is unlikely that we can do so in poorer times. This would make deficit spending permanent. I don't think we want that.

What We Want in the Future

(Address by Mrs. Lyman Greiner, Blairsburg, Iowa, before the annual Washington, D.C., dinner of the Iowa Farm Bureau Women, April 8, 1959)

What do we want in the future?

What did the early farmers want so badly that they endured loneliness; long, hard-working hours; physical hardships, and deprivations?

Many of us in this room are living on farms that our ancestors homesteaded. We are handing down to our young people stories of the adventurous trip westward in muslin-covered wagons. We tell them stories of wintering in overturned wagons or in hastily erected cabins and lean-tos. After our March storms we can visualize cabins and stables buried for weeks beneath heavy snow. We know why farmsteads on the sunny slopes of the hillsides were moved and built high on the hills and knolls.

My husband's 95-year-old grandmother loaned me a clipping from an April 1915 Iowa Homestead. Her father, age 82 then, had written from his home in Story County a "Reminiscence of Pioneer Life."

He speaks of the fertile prairie which was a land of promise to the wide-awake newcomer. He speaks of children and of training them to honesty and industry.

Further, he says, and I quote: "The people's right to choose and not the divine right of king's. We paid Uncle Sam $1.25 per acre. God ruled then, as now, in this fair land in material and spiritual blessings."

We glory in our rich heritage of men and women who believed the motto they adopted: "Our liberties we prize and our rights we will maintain."

What is the vision that has led us to travel to our beautiful Capital City at this rush season back home on the farm? What do we want?

Our values, our visions are essentially the same as those of our ancestors. The average of 44 rubber tires that each farmer owns on our high-powered machinery has not cushioned and softened our resolve.

We want America to remain free; we want to preserve our freedoms. We assume, expect, and insist upon freedom of religion, freedom to came and go as we please, freedom of speech, and freedom to save or to spend.

We have come because we are afraid that our freedom is tarnishing as people take America and our luxurious prosperity for granted. Perhaps a visit to Washington will rub off the tarnish from our awareness of our heritage. We hope that our visit will help our representatives gain a brighter vision of how our democracy must be protected, our privileges cherished, and our freedom defended.

Recently the morning news report contained the statement, "Russia is rattling her sabres." At the Workshop on Economic Growth and Social Development being sponsored by our extension service, we heard talk of the fear of total annihilation of the world. Russia's threat contained the statement that the economic world would lose its head.

We are farm women, unskilled in rattling sabres or uneducated in economics, but we know about the rise in prices. We know that it costs more when we go to the grocery store, or when we buy clothing for our families. We know that the cost to produce our farm products has increased. We know that our dollar's purchasing power has been cut in half in 18 years.

We cannot sit here tonight and not admit that current stocks of storable farm products are excessive. That puts a squeeze on us, but we are proud that our modern research programs, our machinery, our intelligent application of farm technology has given us the most efficient agriculture in the world.

We believe that our Government needs to keep its proper role. We feel spending should be limited to services which are truly necessary. We feel that any threat to private enterprise is a threat to freedom. Inflation is one such threat. Russia is expecting inflation to destroy America's free enterprise system. If we run to the Government for help on things which we or local governments should take care of, we are en-

couraging inflation. Truly, we can lose our head by too much bureaucracy.

It was Ralph Waldo Emerson who said, "The less government we have, the better—the fewer laws, and the less confided power."

We want security for our families. It is not queer to talk of security and freedom in the same breath. Real security is within one's self. Freedom opens up opportunity to develop one's self.

We want our children to have an equal opportunity—not equality, but equal opportunity. We think education is one way to give them this. Education helps develop ones' self-confidence, ability, and drive. We are interested in improving the quality of education. We think this should and can be handled by State and local governments, and are in the process of reorganizing school districts as a first step.

As mothers, we pray for peace. We believe that peace is possible if we preserve freedom. Freedom spreads if it works. It works if we do our part.

We want America to be strong. We want America to grow—economically and spiritually. We believe it will if we preserve our freedom.

Looking steadily at the past and present, and also ahead to the future, we have a vision of the loyalty, integrity, education, and moral fiber of American citizens.

With our hands on our hearts, we say, "I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one Nation under God, indivisible, with liberty and justice for all."

We believe that you as Congressmen will recognize in the past, present, and future, the importance of individual initiative and price. If we can keep our goal and vision under the will of God, America will move to an energetic role in free world development. We know that you will have the courage to consider the effects that any proposed legislation will have on our goals. We know your efforts and deliberations will shape a proud future for America.

Fortieth Anniversary of the American Legion

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Tom Hargis, past post commander of the L. A. Engle, Jr., Post No. 16 of the American Legion, at Bisbee, Ariz.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BEFORE L. A. ENGLE, JR., POST NO. 16, BISBEE, ARIZ., AT THE AMERICAN LEGION 40TH ANNIVERSARY BANQUET, MARCH 21, 1959, BY TOM HARGIS, PAST POST COMMANDER

Tonight we are gathered here to celebrate the 40th anniversary of the American Legion. I am not going to review the history of our great organization, but I would enjoy the opportunity to look to the future of our Legion.

It is said that "Life begins at 40" and as the Legion has attained that age, I truly believe that we should look to the future and through concentrated efforts exert our energies toward a better and more honored organization.

Ordinarily, I don't go in much for slang expressions, but I'm going to use one now—for, it's being tossed about these days as a description of a trend that seems to be sweeping this country. Behind it is an idea, perhaps a plan, that we Americans can take almost anything more easily than we can take ridicule.

The slang expression is this: "It's corny." It is being applied more to anything that is part of the American tradition. In short, It's corny to be an American. It's quite the fashion to find fault with everything that relates to our homespun ideas and beliefs, to haul our Government over the coals and make fun of our lawmakers, to crack jokes about Congress, and laugh at cartoons of our President.

It's smart to admire things that have a foreign flavor because it's corny these days to be an American. In fact, what most of us know as the American way has been twisted into all sorts of propaganda that goes by the name but hasn't the slightest resemblance to the original product.

Uncle Sam used to be a symbol of men who were willing to work and struggle and speak up good and loud for our democratic ideals. Nowdays, you're narrowminded and filled with outworn prejudices if you think of Uncle Sam as anything but a broken-down old man who lives in the past.

Nowadays you're a flag waver or sentimentalist or Redbaiter or some other kind of a baiter if you believe all it has stood for since 1776 means anything today. And if you stand up now and then and speak in defense of the old-fashioned American way as prescribed by our forefathers, you are emotional.

As for me, I don't mind being called corny. I don't mind being old fashioned and conservative. I am proud to be called a flag waver and all the sarcastic smarties of the propaganda line can't swerve me from my beliefs and ideals. I'm an American.

What does the word "corn" mean anyhow? It is a particular American grain—the grain that grows tall and green across our prairies in the summer—and incidentally that gain isn't too corny to help feed a hungry world.

In a democracy, society must recognize that the individual has rights which are guaranteed, and the individual must recognize that he has responsibilities which are not to be evaded.

Freedom is like a bag of sand. If there is a hole anywhere in the bag, all the sand will run out. If any group of our people are denied their rights, sooner or later all groups stand to lose their rights. All freedom will run out.

I deem this a fitting time to remind all that peace is not merely a vacuum left by the ending of wars. It is the creation of two eternal principles: justice and freedom.

The goal of a great democracy should be fulfillment, not ease. It should be adequacy, not serenity.

Are we to be like the people in the village of Sham? A triumphal feast was scheduled. And to insure adequate liquid refreshments, each villager agreed to pour one bottle of his best wine into a great cask. "If the bottle that I contribute is filled with water," reasons one, "the dilution will be so slight, who will notice?"

But when the feast commenced and the cask was tapped, nothing but water poured forth. Everyone in the village had figured alike: "My bit will not be missed."

The harvest we reap comes from the seeds we sow. You can't leave patriotism up to the other fellow. The individual must contribute his bit by evaluating his actions in the light of how they will affect not only himself but how they will affect the other fellow.

America did not get to be the great Nation she is today by just the fact she is a country. It is the people in the Nation that have made America great. And so the same is true in the American Legion. We should all contribute our bit, renew our faith and be bold in our decisions, take courage of things to come, and ever be watchful in order to insure that our way of life, our homespun ideals, and our American ways will forever endure.

The American Legion has not changed in its patriotic character. In its ideals, in its objectives, and in its integrity. Keeping America always American is still its continuing goal. It is still true to the original purposes set forth so vividly in 1919 in the preamble to its constitution.

The good impact on the American scene of the American Legion is immeasurable. It has been an important factor in the defense of our free institutions, in keeping love of country at a high premium, in raising the popular level of education, in the great increase of home ownership, in the enlightened streamlining of child welfare, in pioneering modern care of the disabled and physically handicapped, and in the Nation's preparedness against aggression.

We salute our local post and wish it many happy returns as this great organization starts on its fifth decade of service to God and country.

Lowell Mason's Grace

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. CARLSON. Mr. President, for a number of years Lowell Mason, former member of the Federal Trade Commission, has been host at a luncheon on the opening day of the ball season. At the luncheon yesterday were members of the executive, legislative, and judicial branches of the Government.

Mr. Mason, as usual, opened the luncheon with a grace which was an inspiration to all of those present.

I ask unanimous consent that the grace be made a part of these remarks and printed in the Appendix of the RECORD.

There being no objection, the grace was ordered to be printed in the RECORD, as follows:

LOWELL MASON'S GRACE

O God teach us to repay our debt to Thee by the quality of our lives not by the quality of our words.

Grant us such a measure of thy spirit, that the fellowship of man one with another (at this luncheon, the baseball game and all places where we gather together in comradeship) may be an echo of the fellowship of the spirit Thou hast taught us in the quiet of cathedrals, the solitude of woods, and the majesty of sea and mountain.

Here in the Capitol (the busy marketplace of ideas) where men seek the greatest good for the greatest number.

Teach us, O God, to respect the feelings of others more than our own rights and the rights of others more than our own feelings.

Teach us to differ without anger, to know the best not just the good; to know that it is better to earn liberty than to praise it. Amen.

Secretary Strauss and Mikoyan

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the April 7, 1959, issue of the Manchester (N.H.) Union Leader. The editorial pays tribute to Secretary of Commerce Lewis L. Strauss for his realistic attitude in dealing with Soviet Deputy Premier Anastas Mikoyan during the latter's recent visit to this country.

Secretary Strauss' past and present monumental services in behalf of this country are well known; but the service he performed through his principled and forthright talk with Deputy Premier Mikoyan should add even greater laurels to an already highly distinguished career.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SECRETARY STRAUSS AND MIKOYAN

Looking back at Mikoyan's recent visit to the United States the whole affair seems even more disgraceful than it did at the time. The picture of prominent American industrialists and financial people falling all over themselves to wine and dine and shake the hands of this Communist lying murderer is certainly one of the most nauseating in American history.

This newspaper would now like to add to the small roll of honor of American leaders who refused to be taken in by Mikoyan, the name of Commerce Secretary Lewis L. Strauss, former chairman of the Atomic Energy Commission.

It seems that Commerce Secretary Strauss, when he was forced to meet Mikoyan as part of his official duties, bluntly told the Communst leader that the Soviets had brought slavery back into the world. Admiral Strauss acted as all Americans should have acted. He proudly represented the American heritage.

For instance, when Mikoyan came to his office he brought Strauss a present of a box of caviar, a luxurious food for the belly. Admiral Strauss in return presented Mikoyan with food for the mind and spirit. His present to Mikoyan was a copy of Washington's Farewell Address.

Secretary Strauss had underlined the passage where Washington said: "Reason and experience both forbid us to expect that national morality can prevail in exclusion of religious principle."

Mikoyan is supposed to have said: "You know, you talk about religion, but we have a religion, too, and we think it is the highest type. We send our sons off to battle. Khrushchev sent off three and one didn't return."

Admiral Strauss properly pointed out that that wasn't an example of religion but a desire for self-preservation, a virtue of pagan nations that has nothing to do with religion.

Mikoyan was then supposed to have got mad and said: "You have preached the brotherhood of man for 2,000 years and you have achieved absolutely nothing."

Admiral Strauss then answered: "That is an indictment of man, but not of religion. You overlook the fact that the brotherhood of man was successful in that it eliminated slavery, until you reinstated it."

At that point Mikoyan got up and left.

Thus Strauss joins the small role of honor consisting of Richard Cardinal Cushing, AFL–CIO President Meany, Styles Bridges, Congressman Judd, and General Trudeau who spoke out boldly, stating what Mikoyan is and what the nation he represents stands for.

The fantastic thing about it was that there were so few—that the rest of the people fell all over themselves to fawn on Mikoyan.

Some of these people, of course, were dedicated pro-Communists but the big majority weren't. As you read the dinner list of the people who welcomed Mikoyan the situation becomes even more incomprehensible. These men are the leaders of American business and finance. They have been very successful in handling their own affairs.

The only way you can explain the whole affair, apparently, is that in this age of specialization, many of these business leaders are specialists. They do not understand our politics and apparently do not pay much attention to religion. So they have no immediate moral revulsion toward a man such as Mikoyan.

This must indicate a degeneration of the American spirit.

Thank God that Admiral Strauss has not forgotten what this country stands for and is not afraid to pass moral judgment on Mikoyan.

The Democratic Advisory Council: Spenders Without Portfolio

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. MUNDT. Mr. President, one of the interesting phases of American life is the presence of self-styled advisory committees who prance around the fringe of political parties, telling both the legislative and the executive branches of the Government what ought to be done to save the country.

One such committee is the Democratic Advisory Council, which issues a number of advisory statements on a great number of questions. Interestingly enough, this council does not have the present leaders of the Democratic Party in Congress among its membership. I think a reading of the advice that is passed out pretty well explains the reluctance of the legislative leaders to join the group.

The Washington Daily News of April 7 has an interesting comment on the most recent pronouncement of the Democratic Advisory Council. I believe that most Americans will be interested in knowing that this Democratic Advisory Council still holds to the "spend and spend" theory of government. The Daily News points out, quite correctly, that some of the members of the council, who have been failures in the art of balancing their governmental books, are now trying to steer the National Government into the disastrous groove of bankruptcy which they have carved for themselves.

I ask permission to have printed in the Appendix of the RECORD the editorial entitled "Spenders Without Portfolio," from the Washington Daily News of April 7, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SPENDERS WITHOUT PORTFOLIO

By its own count, the Democratic Advisory Council in the last couple of years has put out 26 statements telling the Eisenhower administration and Congress what to do. It is fair to report that the administration and the Democratic leadership in Congress have ignored this advise in 26 instances.

The advisory council was appointed by the party chairman and proclaims at will, having no other responsibility. Its latest pronunciamento is designed to make political capital out of the people who presently are out of jobs. After we wade through the usual cliches and misstatements of fact, we come to the remedies which add up to one theme: If the Government would just spend more.

The Eisenhower administration, says the ghost writer for these 27 politicians, is trying to "balance the budget without balancing the economy."

In other words, the way to balance the economy is to run up bigger and bigger Government deficits. This creates inflation, which makes it easier for more people to lose their jobs and raises the price of everything for those who manage to keep their jobs.

One of the 27 advisers is Gov. Foster Furculo of Massachusetts, a State whose debt has gone up nearly $1 billion in a dozen years and which is desparately hunting new taxes to keep up with the spending.

Another advisor is Gov. G. Mennen Williams of Michigan, a State which even Mr. Williams belatedly admits is facing financial disaster, a State going broke.

These are some of the reasons President Eisenhower and the Democratic leadership in Congress are not likely to pay much heed to the Democratic Advisory Committee. There is always something to be thankful for.

The Southern Way

EXTENSION OF REMARKS
OF
HON. RICHARD B. RUSSELL
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. RUSSELL. Mr. President, my attention was called to a letter appearing on the editorial page of the Washington Evening Star of today, entitled "The Southern Way." I do not know the author of the letter, Mr. Powers. I have not had the pleasure of meeting him. If I ever heard of him, I do not remember it.

This letter is a very powerful argument in favor of protecting the individual rights of our people and the individuality of our people against the present drive for conformity at any and all cost.

I regard the drive to compel every segment of this country to conform, in its social order and in its cultural arrangements, and the concurrent drive to compel the individual to conform to what is regarded as the norm by the majority, as being one of the greatest dangers to what we have long boasted of as the American way of life.

This letter appeals to me, and I ask unanimous consent that it may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SOUTHERN WAY

In the national controversy raging over segregated schooling, we often hear of the southern way of life. This phrase is used with too little understanding both by those who wield it for defense and those who hurl it in attack. It is true that the South has a way of life, but the point missed is that a way of life is a normal social phenomenon. Way of life is, in fact, our everyday translation of the old term "regime." And regime is a word rich in social meaning.

Of all regions, the South has maintained a regime in the clearest and most enduring form. It has a society more unified by imponderables, more conscious of self-definition, more homogeneous in outlook than any other region. It should be recognized that these are conserving forces. The effect of a regime is to conserve and stabilize.

The South has had the enormously difficult problem of accommodating a large minority distinct in race and culture.

The South is the natural prime target of those who hate the very idea of regime. Anyone who looks beneath appearance to reality must see that the attack upon the southern school system is but one front of a general attack upon the principle of an independent, self-directing social order, with a set of values proper to itself. It is the one pushed most vigorously now because for a variety of reasons it can draw the most publicity, and it is the kind of action for which the liberal's sentimentalism makes him most gullible.

No long memory is needed to recall other fronts on which the attack against the South has formerly been active. Not very long ago the issue was fundamentalism, and the South was being crucified for holding a religious belief not terribly different from that of respectable contemporary neo-orthodoxy. Later it was the sharecropping system, which certainly brings great wealth neither to owner nor cropper, but which is nothing to get excited over from a distance, unless one starts with a strong initial prejudice. Still later it was the poll tax, again nothing to get excited over unless you believe that adding to the number of votes automatically adds to the amount of wisdom. Thus the attackers have said by their actions, "Any stick to beat a dog." This is the reason we urgently need to look for the real impulse behind their militancy.

The modern liberal has confused liberty with power, but the only use he has for power is to destroy. If these fanatical destroyers are allowed to have their way, the next thing to be challenged will be the basis on which the more general American way of life is forming. The same charge of inequity leveled against the southern regime will be leveled against capitalism, private property, the family and even individuality. The liberal's rage is directed against all restraints which allow things to grow in their own native character. He has a verdict of guilty against everything that stands in the way of certain ideas which are themselves life-denying.

Most of us readily admit that this Nation owes both its independence and its happiness to the principle of self-determination. That principle is now in danger of being suppresesd by a blind zeal for standardization and enforced conformity. To oppose that trend, we do not have to become sectionalists. We need only to grant the right of distinct groups to exercise some liberty of choice in the ordering of their social and cultural arrangements. If that liberty is denied, there will be no ground left on which to assert any other liberty.

W. A. POWERS, Jr.

White House Ceremony Lists Antarctic Feats of Tucker Sno-Cat, Manufactured in Medford, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. NEUBERGER. Mr. President, on February 4 there took place at the White House a most impressive ceremony. The President of the United States presented the Hubbard Medal of the National Geographic Society to the U.S. Navy Antarctic Expeditions of 1955–59, and also to the British explorer, Sir Vivian Fuchs.

It is my understanding that the President asked many questions about the details of the great expeditions which were being honored. In reply to one of these questions, Sir Vivian Fuchs described the remarkable vehicles which carried himself and his comrades across the tractless waste of the Antarctic—barren icy steppes which long ago claimed the lives of the heroic British explorer, Capt. Robert F. Scott, Royal Navy, and his party. Let me quote a sentence from an article appearing in the National Geographic magazine for April 1959. The sentence is as follows:

In response to a question from Mr. Eisenhower, the British explorer briefly described the Sno-Cat, the tracked vehicle that provided his principal means of transportation across the icy pole.

Mr. President, we of the State of Oregon are inestimably proud that the Sno-Cat, heralded by Sir Vivian Fuchs in his conversation with the President, is manufactured by the Tucker Corp., of Medford, Oreg. We are pleased that the U.S. Navy and the British Government have made effective use of the Tucker Sno-Cat, and we commend a similar decision to other units of the Department of Defense, such as the Army and the Air Force.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From National Geographic, April 1959]

SOCIETY HONORS THE CONQUERORS OF ANTARCTICA

On February 4, before a distinguished audience gathered at the White House, President Dwight D. Eisenhower presented the National Geographic Society's Hubbard Medal to British explorer Sir Vivian Fuchs and to the U.S. Navy Antarctic Expedition of 1955–59.

The ceremonies took place in the green-draped Cabinet Room adjoining the President's private office. A proud, smiling Lady Fuchs looked on as the coveted gold medal was bestowed on her husband.

Secretary of the Navy Thomas S. Gates, Jr., accepted the Hubbard Medal for the accomplishments of his service in the exploration of the White Continent. For their roles in the conquest of Antarctica, gold duplicates went to Adm. Arleigh A. Burke, Chief of Naval Operations, and Read Adm. George Dufek.

MEDAL FOR TRANSANTARCTIC LEADER

Melville Bell Grosvenor, president and editor of the National Geographic Society, introduced the medal recipients to the President.

"I speak for the trustees," he said, "and nearly 2,500,000 National Geographic members when I thank you for your interest in our work—the increase and diffusion of geographic knowledge. We are proud, Sir, that you are a longtime member of our society.

"Mr. President, the Hubbard Medal is one of geography's highest honors. It commemorates Gardiner Greene Hubbard, a founder and first president of our society—and, incidentally, my great-grandfather. Adm. Robert E. Peary, discoverer of the North Pole, received this medal first in 1906.

"Today we honor the Commonwealth Transantarctic Expedition for its extraordinary achievement of the first crossing by land of the southernmost continent. In a period of 99 days, from November 24, 1957, to March 2, 1958, Sir Vivian Fuchs and 11 other hardy men traveled 2,158 miles over the South Pole from the Weddell Sea to McMurdo Sound. They accomplished what Shackleton called the last great polar journey that can be made.

"Conditions facing Sir Vivian and his men were cruel. White-outs blinded them. Crevasses threatened to swallow them. Strange illnesses slowed them. And finally, the cold was so bitter that—I am told on best authority—even the penguins turned blue.

"To have made the journey at all is a feat of unprecedented valor and leadership. But, Mr. President, at the same time they carried out some of the most valuable scientific work of the International Geophysical Year. Despite hardships, the explorers stopped every 30 miles to make seismographic shots, and they made gravity tests every 15 miles. Our cartographers will have to remake our maps of Antarctica as a result of these surveys.

"For his mastery of a continent, the National Geographic Society has awarded the Hubbard Medal, with this citation:

" 'To Sir Vivian Fuchs for brilliant leadership of the British Transantarctic Expedition 1955–58 and for his extraordinary contributions to geographic knowledge of Antarctica.'

"NAVY'S ACHIEVEMENTS RECOGNIZED

"Now, Mr. President, as a sailor and classmate at Annapolis of both Admirals Burke and Dufek. I am especially pleased—and I know you are—that the trustees of the National Geographic Society have also awarded the Hubbard Medal to the U.S. Navy for its outstanding contributions to science through its IGY Antarctic Expeditions.

"Under the leadership of Secretary Gates, Admiral Burke, and Rear Admiral Dufek, more than 10,000 men of our Navy have built the many outposts from which the unknown lands of Antarctica are being studied.

"The logistics would have been impossible for any organization but the U.S. Navy.

Everything had to be shipped or planed in, from delicate instruments to lumber for shelter. Through the world's most dangerous waters, our Navy brought hundreds of thousands of tons of supplies into Antarctica.

"To build and supply the famous station at the South Pole itself, where Sir Vivian and his men received rest and refreshment from American scientists and Naval officers, the Navy and Air Force flew in 1,450 tons of supplies.

"The 4-year effort—which is continuing—was in the highest tradition of the Navy, Mr. President. Lt. Charles Wilkes, who first sailed to Antarctic water in 1838, would have been proud. His successors, whom we honor today, have continued and enhanced the Navy's great tradition of discovery and exploration. The citation on the medal reads:

" 'Awarded to the U.S. Navy Antarctic Expeditions 1955–59 for outstanding service to science in exploring vast south polar regions and establishing scientific stations for the International Geophysical Year.'

"Gold duplicates have been struck for Admiral Burke, your great Chief of Naval Operations and father of the nuclear-powered Navy, and for Rear Admiral Dufek, who is still in command of Operation Deep Freeze."

News cameras whirred and clicked as the President received the gold medals from Dr. Grosvenor and presented them in turn to Sir Vivian Fuchs, Navy Secretary Gates, and Admiral Burke. Each received as well a firm Presidential handshake. In response to a question from Mr. Eisenhower, the British explorer briefly described the sno-cat, the tracked vehicle that provided his principal means of transportation across the icy pole.

The formal ceremonies concluded, the President turned to Lady Fuchs, who was chatting with Sir Harold Caccia, British Ambassador to the United States. Offering her his congratulations on her husband's historic achievement, the President flashed the famed Eisenhower grin. "I'll bet," he said, "you're mighty glad you stayed home."

The Benson Farm Policy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the February 21, 1959, issue of the Washington Report of Representative GEORGE MCGOVERN, of South Dakota. Representative MCGOVERN competently and briefly reviews the Benson farm policy record and points up the existing situation in farm legislation. It is worthy of our attention.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

WASHINGTON REPORT

(By Congressman GEORGE MCGOVERN)

WASHINGTON, D.C., February 21, 1959.—Dear friends, Secretary of Agriculture Benson came before the Agriculture Committees of both the House and Senate in mid-February to ask broader authority to flex farm prices downward.

BENSON FARM POLICY RECORD

What the Secretary said in effect was a playback of the theme he has been preaching ever since he took office in 1953. That is: lower farm prices will discourage farmers from producing surpluses and will, therefore, produce higher farm income.

Unhappily for many farm families—as well as small businessmen and workers who rely heavily on agriculture for their own livelihood—the results of the last 6 years have disproved the Benson theory.

Since the beginning of 1953, farm prices are down 16 percent. Farm income is down 25 percent. In the 1952–57 period, farmers absorbed an aggregate loss of nearly $18 billion in income. Four million farm folks have left the land, and 600,000 farms have disappeared. Meanwhile, Government stocks of farm commodities have quadrupled since 1952. Benson does not seem to realize that lower prices lead to greater production, as farmers seek to offset their loss of income.

NEW PRICE-FLEXING AUTHORITY ASKED

Yet, the Secretary told the Agriculture Committees he needed: (1) New authority permitting him to set price supports at zero if he deems necessary; or (2) discard the parity principle and support prices between 75 percent and 90 percent of the average market price in the immediately preceding 3 years.

In my opinion, Congress will not accept the administration's farm recommendations. I, for one, cannot accept any such proposal. But a showdown is in the offing. The first round will probably come as we consider wheat legislation in the next few weeks.

WHAT ADMINISTRATION FARM PROPOSALS MEAN

To give Secretary Benson authority to drop supports down to zero would be to invite return to the chaos of 30 years ago. If Congress were to approve the plan providing for supports somewhere between 75 percent and 90 percent of the average market price for the last 3 years, manufacturing milk supports could slump to as low as $2.45 a hundredweight, compared to the present $3.06. Butterfat supports could drop to 47.6 cents a pound, compared to 59 cents a pound. Corn supports could fall to 96 cents a bushel, instead of the prospective $1.12, and wheat supports could plummet to $1.43 a bushel, compared to the announced level of $1.81. This latter figure will probably drop to $1.77 a bushel for 1959 even if the program remains as it now is. This is because of the Agriculture Department's new method of calculating parity.

PRICES DROP BUT PARITY RATIO RISES

The new parity computation went into effect at the beginning of this year. When the parity ratio was figured for the month ending in mid-January, it showed it had risen 2 points. The parity ratio was reported at 82 percent. In mid-December, it stood at 80 percent.

In reality, however, farm prices had actually fallen 1 percent by the old standards, toppling to 79 percent of parity, the lowest since August 1940.

Even with farm prices hovering at their lowest level in 19 years, consumers have not benefited by lower food prices. In the final 3 months of 1958, the Department of Agriculture announced that retail food prices rose 3 percent. At the same time, the farm share of the food dollar has dropped from 47 cents in 1952 to 39 cents today. We need to remind ourselves that on a loaf of bread, for example, the farmer receives only about 2 cents for the wheat involved.

ONE-SIDED PICTURE OF FARM COSTS

Much has been made of the cost of the farm programs, and to be sure, they have skyrocketed tremendously under Secretary Benson. But so often, only one side of the picture is shown.

The administration, for instance, has made a great deal of the $1 million a day storage cost for farm commodities. This is no small figure, but it costs more than $23 million a day to finance the Federal debt. Yet, we have had no recommendation to reduce interest rates which have been pushed higher and higher as a direct result of administration policy.

How many people know that of the total $6,872 million estimated agricultural budget for 1959, $3,022 million will be expended for programs which have multiple benefits going far beyond agriculture?

FARM BUDGET NOT ALL AGRICULTURE

Some $1,383 million will go toward programs related to foreign aid—Public Law 480 and the International Wheat Agreement, for example. Every American benefits from these expenditures, whether he lives on the prairie lands of South Dakota or in a Fifth Avenue penthouse in New York City.

Here are a few other programs listed as agriculture expenditures which benefit other segments of the public: $145 million for school lunch program; $53 million for disease and pest control; $21 million for meat inspection; $74 million for school milk program; and $26 million for dairy products for the armed services and Veterans' Administration.

All of these are fine programs. But is it fair that the farm budget should be charged with all of the cost? Shouldn't some of it be shifted to the State Department, Defense Department, etc.?

In spite of the implications that farmers enjoy a favored subsidy position, records show that of all Government subsidies paid in the last 50 years, agriculture has received only $5 out of every $1,000.

HOPEFUL SIGNS FOR NEW LEGISLATION

Obviously, we need a change in farm policy. There is no reason why a Nation that has the brain power to put satellites into orbit around the earth and send atomic-powered submarines beneath the polar ice cap cannot solve the problems of agriculture to the benefit of the farmer and the general public.

I believe there are hopeful signs in this Congress. Senate Majority Leader JOHNSON has called for an improved farm program. Under serious consideration is a bill offered by Senator TALMADGE, which by the way is similar to a measure I offered 2 years ago. Senator HUMPHREY is working closely with him on this legislation. In the House, I believe chances have also improved. Many of my colleagues share my determination to work for passage of a more adequate farm bill.

On several previous occasions, Congress has passed strong farm legislation, only to have it vetoed by the President at Mr. Benson's insistence. Let us hope that this will not be the fate of farm legislation in the next 2 years.

Your friend and Representative in Congress,

GEORGE MCGOVERN.

Review of the Book "The Communist World and Ours"

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. BRIDGES. Mr. President, in the continuing struggle between capitalism and communism, it is interesting to note the different appraisals of Communist objectives as seen through the eyes of professed authorities on this subject.

The well known newspaper writer, Walter Lippmann, after a 2-week visit to Russia last fall, has written a book on this general subject entitled "The Communist World and Ours."

A penetrating and succinct review of this book appeared in the April 6, 1959, issue of the New Leader magazine. I commend the reading of the review to my colleagues, and ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

LIPPMANN'S COMMUNIST WORLD

("The Communist World and Ours," by Walter Lippmann; reviewed by Myron Rush, Soviet affairs analyst, Rand Corp.)

"The rulers of Russia * * * are drawn toward Asia and away from Europe." Moscow faces east with the air of being the capital of a new order of things among the Asian peoples. So reported Walter Lippmann in a series of newspaper articles following a 2-week visit to the U.S.S.R. last October, highlighted by a 2-hour interview with Soviet Premier Nikita Khrushchev. The most learned and experienced of American publicists found the "basic issue," and at the same time the "most pressing issue," between the Communist world and ours to be the Russian and Chinese challenge for the leadership of Asia and Africa.

It was not to be supposed that the leader of the Communist world would lay bare his innermost thoughts to the bourgeois journalist; but apparently he failed also to reveal those foremost in his mind. A few days after their interview Khrushchev pronounced his ultimatum to the Western Powers on Berlin, thus assuring that the most pressing issue, at least for the 6 months following Lippmann's visit, would be a Soviet challenge in Europe, not in Asia.

Nevertheless, Lippmann has made no effort to fit the Berlin crisis to his findings, which are reprinted with amplified conclusions in "The Communist World and Ours." Apparently the present Berlin crisis, in his view, does not illuminate the mainsprings and the controlling ideas of Soviet foreign policy, which are the objects of his study.

The main challenge to the West is in Asia because that is where communism's strength lies. "The main power of the Communist states lies * * * in the force of their example" to countries which are economically undeveloped. The Communist leaders in Moscow and Peiping are certain that they will win primacy in Asia if only they can avoid war, which would ruin their economic achievements. Since they need peace, our military measures appear to them as preparations for an attack designed to halt their revolutionary rise to world leadership.

This explains their unwillingness to negotiate any concession which might give us even a slight tactical advantage in case of war. Observing the bellicosity of our generals and the propensity of Secretary of State John Foster Dulles and the President to treat the conflict as a religious war, the Communists regard hostilities as inevitable unless they make themselves so powerful that war cannot take place.

The West, too, has grounds for suspicion. "Insofar as the Soviet Union and Red China gain in military power, they are certainly bound to use it as an instrument of policy in order to complete their domination of Asia and of Africa." Europe is not mentioned here as an object of domination, evidently because Lippmann believes the chief purpose of Soviet military power, after defense, is to reinforce the political attraction of the Communist system, and that system holds little attraction for the more advanced countries of Europe.

True, there are Communist regimes in east Europe, but they were imposed and have been maintained by Soviet military power brought on the scene by the war against Nazi Germany. Lippmann feels that the Soviet leaders know that in east Europe they are not followed and admired and imitated. Aware that their domination of the area is precarious and impermanent, they would withdraw if they knew how this could safely be done. We should help them find a way.

If Communist military power serves these limited objectives and lacks an aggressive spirit, does it pose a serious threat to the countries of the North Atlantic Treaty Organization alliance? Lippmann is confident that there is no military threat to the United States—nor, unless something very stupid or desperate or reckless is done, to our principal allies in Europe. This oracular pronouncement follows an equally ambiguous phrase: He is confident, provided we maintain the balance of deterrent power.

But Lippmann gives little hint as to what this may require. He at once deprecates the notion that we cannot afford to keep up the race, and cautions against scare campaigns and becoming obessed with weapons. He records that nothing Khrushchev told him implied the view that "the U.S.S.R. has long-range missiles which have broken, or are about to break, the existing military stalemate with the United States." Subsequently, however, after precipitating the Berlin crisis, Khrushchev began to boast of Soviet ICBM production and to imply a somewhat different estimate of the strategic balance than the one he conveyed to Lippmann in October.

The Communist leadership appeared stable and united. Khrushchev's professed unconcern about the future of Soviet-Chinese relations seemed genuine, a product of his conviction that "applied science can solve all human problems," and of his "basic revolutionary faith that a Communist man is a new kind of man."

This, in brief summary of Lippmann's short account, is the Communist world as he sees it. Many of the features which Western political observers conventionally stress are missing here. There are Communist states, but no Communist parties, and policy is made by the "powerful government." Although the interview with Khrushchev makes up half the book, nothing is said of his position in the leadership. Neither is there mention of a dictatorship, whether of Khrushchev, of the proletariat, or of the party.

Lenin's authority is noted, but not his precepts for waging the struggle to decide "who [will destroy] whom?" (Marshal Zhukov, whom early partisans of disengagement once looked upon as an advocate of withdrawal from East Europe, actually used the phrase in a published speech to justify the Soviet intervention in Hungary.) He appears only to warn his ideological descendants against trusting the capitalist world, whose masters would launch a "preventive war" rather than submit to the loss of world dominion.

While the Communist world fears and distrusts ours, within their world evidently trust abounds. Doubtless Lippmann is right in warning that we ought not to rely for our salvation on divisions in the Communist world. But is it really necessary to this end that we disregard the fissures that exist and describe the Soviet system as one that does not work perfectly and has private discontent? Is it really to be supposed that Khrushchev's revolutionary faith protects him from doubts about Red China's leaders, as though a Communist man could not in a moment become a despicable deviationist like Vyacheslav Molotov, or even a renegade like Marshal Tito? Is the Communist revolution as it has developed during 40 years in Russia and 10 years in China, best described as a "revolution of the submerged masses * * * demanding a better life for themselves?"

If communism in Russia and China has such popular strength and the masses of Asia seem likely to rally to communism, if the Soviet and Chinese social structures harbor merely private discontent and their rulers implicitly trust each other as a new kind of man, what then are the grounds of Lippmann's confidence that the Communist movement is not destined to expand until it has conquered the whole world?

There is, first, the fact that "the Soviet system does not work * * * in eastern Europe." In the face of Khrushchev's repeated warnings that the clock will never be turned back in East Europe, despite the stepped-up socialization of the satellite economies and the plans for their increased specialization and subordination to Moscow's planning and direction, Lippmann suggests that in the long run nationalist forces will induce the Soviet Union to end its hegemony. A second reason for confidence is his evident belief that the Soviet leaders do not have in view the subjugation of west Europe. Since popular support is in Lippmann's view essential to the Communist revolution, there is little danger of communism's spread to west Europe unless, contrary to its leaders' strategy, there is war.

Lippmann's prescriptions for western policy flow logically from his analysis of the Communist world. In Asia we should meet the Communist challenge by underwriting India's development, thereby demonstrating that there is a more humane way to overcome poverty. In Europe we should capitalize on Soviet political weakness by seeking to end the military occupation of the Continent. At one point, Lippmann poses the problem of how democracies like ours can be induced to support armaments without scare campaigns which alienate the many millions of neutralists and pacifists. He nowhere resolves the question, but his last word is to relax and to avoid hysterics.

Although these views were first set down for the daily newspaper, their distinguished author always looks to the distant prospect: The future may still prove him right. Yet, considering the small place occupied by struggle, violence, deceit and evil—in brief, the virtual absence of bolshevism—in the Communist world of Walter Lippman, and bearing in mind bolshevism's large role in Communist history, the future seems more likely to reveal deep flaws in his analysis and predictions, and in the policy he recommends.

The United States and Israel Have Common Roots of Freedom

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Chief Justice Earl Warren as it appeared in the April 1959 issue of the National Jewish Monthly:

THE UNITED STATES AND ISRAEL HAVE COMMON ROOTS OF FREEDOM

(By Hon. Earl Warren, Chief Justice of the United States)

In Philadelphia's old Independence Hall, our Declaration of Independence was pro-

claimed 182 years ago over the signatures of patriots who preferred death to bondage. The United States of America was then the ugly duckling in the family of nations. But it was built upon principle by men who placed their reliance on the wisdom of the ages. It has prospered because it has adhered to simple truths and to the teachings of the scriptures.

The Liberty Bell bears the inscription "Proclaim liberty throughout the land to all the inhabitants thereof." It is appropriate to recall that these words were taken from the Hebrew writings Leviticus xxv: 10). Our Founding Fathers were conscious of their debt to the Hebrew tradition as the source of their own ideals. It was characteristic of Benjamin Franklin to suggest that the seal of the new Union should portray the people of Israel fleeing across the parted waters of the Red Sea on their way to a new life of independence.

The exodus was more than a revolt against physical servitude. It was a manifestation by ancient Israel that she was the guardian of spiritual ideas which could not flourish in the idolatrous despotism of the Pharaohs. These ideas were the freedom of the individual conscience—"Refuse the evil, and choose the good" (Isaiah vvi: 15); social justice—"Thou shalt love thy neighbor as thyself" Leviticus xix: 18); and universal peace—"Nation shall not lift up sword against nation, neither thall they learn war any more" (Isaiah ii: 4). The Hebrew people developed these ideals through prophecy and law into a moral system universal and eternal. On the foundations of this Judaeo-Christian tradition, the Fathers of the American Republic built the legal system and the political direction of the Union.

It is natural, therefore, that Americans should think of the land of Israel as the source of our law and ethics. When the restoration of Israel as a nation became an active international policy in the sequel to the First World War, the United States inevitably became associated with it. Today Israel is firmly established in the life and law of nations.

In the first year of her second decade Israel still faces many obstacles and dangers. Many of these she faces in common with the rest of us. But amidst her political and economic anxieties she will doubtless recall the undying ideas which she has carried across history. These ideas are not obsolete or outworn. Science has brought mankind to a crossroads from which the paths fork outward to vast alternatives of salvation or disaster. Only the humanities can solve the problems which the physical sciences have created.

This challenge faces every free nation today, none more so than ours. But the people of Israel illuminated these issues many generations ago. For thousands of years this people has been restlessly seeking an answer to the question of purpose in the mystery of nature and the journey of man. Restored to the conditions of her former glory, surrounded by the scenes and memories which her literature has immortalized, modern Israel may be facing a great destiny.

She had to fight for nationhood every inch of the way. Her precarious sovereignty, her small territory, her industries, her commerce, her access to the maritime waters, her very survival as a nation—all have been beset with difficulties, which to others would appear insuperable.

There was a sense of drama and an atmosphere of improvisation in everything about her rebirth as a nation. Independence was proclaimed in a little museum, too small and too bare for so solemn an occasion. The very furniture for the ceremony, ironically, was obtained from a ship stuck in Jaffa, out of a cargo consigned to, of all people, no less than Emir Abdullah, of Transjordan. The proclamation was not written on parchment for lack of material, but on a synthetic scroll still hot from a duplicating machine. It reached Ben-Gurion's hand a few minutes before the proclamation and only after a car was commandeered—there being no cab available.

An Israeli writer recalled that Sharett, the man who commandeered the car and brought the text to the museum, told the driver upon arrival: "You have a rare honor, I am holding the declaration of independence of the State of Israel in my hand." "Oh," said the driver nonchalantly, "I only stopped because I was driving without a license. I thought you were a cop."

Out of such grim drama and high comedy the independence of Israel was proclaimed, hours after the Palestine High Commission and the British had departed and a few hours before the massed Arab legions converged in the fateful attack on Israel.

The Israel declaration of independence is a veritable epitome of the historic struggle of a people inspired by a Messianic vision for their return. It recounts the tragedy and travail of their dispersions. But far from bringing hate and rancor to their hearts, it offered peace and amity to all people, especially to their Arab neighbors.

No longer shall we associate the Jew with the forlorn and wandering character with which he has been identified in ages past. The wandering Jew is no more. He has found his historic home at last. In this new home the Israelis, as technicians and farmers, have shown new capabilities, not only in extracting the best that the good earth could provide, but more, the capability to turn desert sands into flowering gardens, to carve modern cities from stony hills, and to build democracy where men could walk in dignity and freedom.

Men like Allyon, Yadin, Dayan, Josephtal, Eban, Shimon Perez, and hundreds of young, brilliant and dedicated people like them, with their elders like Ben-Gurion and Sharett, provide the motive force and spirit behind Israel's will to statehood. With men of this caliber to guide its destiny, the new State of Israel may well rise to great achievement. The promise in the Old Book is slowly but most assuredly on its way to fulfillment.

The Honorable Sol Blatt, a Great American

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an address by the Honorable Solomon Blatt, the Speaker of the House of Representatives of South Carolina, made to the 175th anniversary dinner of the Hebrew Benevolent Society of Charleston, S.C.

Mr. Speaker, you have compiled an enviable record as Speaker of the House of Representatives of the United States. Like you, Mr. Speaker, Mr. Blatt has been the Speaker of the House of Representatives of South Carolina longer than anybody in the history of our illustrious State. Mr. Blatt is a Jew. He is the son of a Russian Jewish immigrant. Mr. Blatt is proud of the fact that he is a Jew. He proclaims his faith to the world. He spoke to one of the most outstanding organizations of South Carolina and he advised them well when he cautioned them to avoid the hypocrites who are leading the Negro on the treacherous path of deceit and deception. He cautions his people against these modern Pharisees who have no real interest in the welfare of the Negro; he reminded his entire audience, in which were many men of all faiths, that in South Carolina the Negro is one of the most highly respected citizens and one of the best prepared in mind, body and estate, and the most satisfied of our people.

Mr. Speaker, I commend this magnificent address to all Americans who are interested in the truth.

No occasion could give me greater pleasure than to participate in this, the 175th anniversary celebration of the Hebrew Benevolent Society.

The distinguished record of this organization, coupled with the whole history of the Jewish race in America's most historic city, makes me proud to be included among you.

Not the least of the pleasures I have experienced as a result of your kind invitation has been the delving back into history, the studies I have made of the records in Charleston, dating back to 1695 when the first Jews settled here.

Those were the days of the lord proprietors. Joseph Blake was Governor through one-half of 1695, being succeeded by John Archdale in August of that year. The culture of rice had just been started in the province, and the State was just beginning to be called South Carolina, instead of "the southwest portion of the Province of Carolina."

Many Indian tribes inhabited the State—some friendly, some hostile.

The last years of that century tested the courage of all inhabitants. There was an epidemic of smallpox, killing many settlers and Indians. The epidemic was followed by a great fire that destroyed about one-third of Charles Town, as the city was then called. There was an earthquake, a siege of yellow fever, and during the yellow fever plague a violent hurricane struck Charleston. The sea came in with a tidal wave which forced the people to take refuge in the second stories of their homes.

South Carolinians began to talk about leaving a country that seemed marked for ill-fortune, but few actually left and the development of the Province really took root about that time, with Jewish people as part of the pioneering inhabitants.

I have been impressed by reading Thomas J. Tobias's booklet on "Tombstones That Tell a Story," a history of the Coming Street Cemetery, the first burial place of Jews in Charleston.

I have read with great interest and enlightenment the book on the bicentennial celebration published by the Charleston Jewish Community in 1950, under the brilliant editorship of Mrs. Jeanette Pearlstine.

The preface in this book by Rabbi Allen Tarshish cited the fact that Francis Salvador of Charleston was the first Jew to hold an important elective office in the United States. He was a member of the First and Second Congresses of South Carolina in 1775 and 1776, and on August 1, 1776, he was the first Jew to die in the War for American Independence.

Having been somewhat of an officeholder myself, it was particularly interesting to recall that a Jew had served in the legislative halls in South Carolina nearly 200 years ago.

During the intervening years many more of our race have served with honor. At the present time, the Senator from Marlboro, the Honorable William C. Goldberg, is a highly respected man. One of the old timers in the House, Matthew Poliakoff of Spartanburg, is one of our most popular members.

I recall during my time in the legislature others of our faith including Julius B. Ness of Bamberg, and Isadore Bogoslow of Colleton, have served with us.

Mr. Ness is now a circuit Judge, and making an outstanding record as a South Carolina jurist.

We all know that many, many members of our faith have attained national acclaim for their talents in many fields of endeavor.

In the judiciary, we look with justifiable pride upon the records of Associate Justices Benjamin Nathan Cordozo and Louis Brandeis.

We are proud of such great figures in medicine as Jonas Edward Salk.

In business and finance, we in South Carolina revere the name of a native son, Bernard Baruch.

An outstanding figure in the development of atomic energy and now the Secretary of Commerce, we pay our respects to Adm. Lewis L. Strauss, who previously had distinguished himself in the Navy.

Another great naval man, Adm. Hyman Rickover, is recognized as the father of the atomic submarine, and is a national inspiration to those who see the imperative need for constructive changes in public education, especially on scientific subjects.

In music, no other man today stands above the distinguished conductor-composer Leonard Bernstein, whom many of us have enjoyed recently in national TV broadcasts.

In opera, Richard Tucker is one of the foremost contemporary singers.

In the lighter forms of entertainment, we point with pride to veteran performers Eddie Cantor, Jack Benny, George Jessel, and many others.

We have read of the contributions made by Solomon to President Washington in the American Revolution.

Down South we remember that Judah P. Benjamin was widely recognized as "the brains of the Confederacy," serving as both Attorney General and Secretary of State in the Confederate States.

We could go on and on calling the names of distinguished members of our faith, both in the past and in the present American scheme of things.

The Jewish citizens of Charleston have contributed much to the progress of this fine city and county. I could, if time permitted, call the names of many of our faith in Charleston who are good citizens and who have had a part in this progress. I want to pay public tribute tonight to one of South Carolina's most outstanding citizens. He is a gentleman of the highest character, a man of integrity and outstanding business ability. He is always thinking of how he can help his fellow man, whatever his faith. He is charitable and civic minded. I know of no finer citizen anywhere than Ed Kronsberg, and I am happy to call him my friend and publicly pay him this well-deserved tribute.

It is right and proper that we should take personal pride in the accomplishments of Jews throughout the history of this wonderful Nation. We should sing their praises at all times, but we must also be careful to remember that their greatness came, not because they were members of any particular faith, but from their merit as individuals. That is true of all outstanding men and women, no matter what their origin.

People become great because they are endowed by God, born with certain sparks, and because they take advantage of their talents, working against any and all odds to perfect and apply the good that is in them to the welfare of human beings everywhere.

Not all of us, of course, can be great and distinguished doctors, scientists, composers, or writers. Many of us simply do not have the mental and physical attributes; others simply fail, often due to unfortunate circumstances, to develop themselves to the fullest extent.

The important thing, however, is that all of us in this great free country have the fullest opportunity to become whatever we can make of ourselves, not because of any particular national or racial origin, but because of the dedicated contributions we are able to make to a freer, happier, healthier, and more prosperous Nation.

I dwell upon this particular theme for a definite reason. I have endeavored to show that from the early times in South Carolina and in the Nation the Jewish race has enjoyed the rights and privileges which comes from living in a free country.

I have singled out a few of the Jews who have become great national figures, and a few who have especially earned and received the honor and respect of the people of our own State. I did not pretend to call the whole roll, but simply wanted to illustrate, through the use of some names, the fact that, like members of all other races, we are recognized as individuals according to our worth and our performance.

There are dangerous inclinations among some of the Jewish people in America today, out of the goodness of their hearts, to establish themselves as a minority force in the tragically exaggerated storm of political propaganda which surrounds and confuses the Negro question in the South.

Let is be clearly understood that if there were indeed conditions anything similar to those which prevailed during the Hitler persecutions of Jews in Germany—if there were any such persecutions against any particular race in America, I think that all good Americans should and would rally to defend the oppressed, whomever they might be.

But let us examine the statutes of the Negro race in South Carolina. We all know about our own problems better than we do about the problems elsewhere in the Nation, and by the same token we know better about our own problems than do people who live elsewhere in the Nation.

The fact is that nowhere else on the face of the earth are Negroes happier, more prosperous, more contented, more a part of the general way of life than in South Carolina.

During the last 25 years especially, the Negroes have made tremendous strides in this State politically, economically, professionally, and otherwise.

Never before in any other part of the world has so much relative progress been made by the Negro race as has been enjoyed in the South during the present generation.

Where else in America are such a large proportion of Negroes actively participating as respected ministers, teachers, lawyers, doctors, businessmen, and citizens in general?

About 40 percent of the school teachers in South Carolina are Negroes, teaching school in the most modern buildings, receiving the same State aid salaries as white teachers in their classifications, and otherwise becoming more and more a large and constructive force in our way of life.

Where else in America, outside of the South, are Negroes able to afford to become such extensive and prosperous participants in all phases of life?

There are more Negro teachers in the schools of South Carolina today than there are in any five or six States combined, outside of the South—and in that respect this includes such States as New York, Michigan, California, and others where political propaganda is rampant, where the South is being used as a whipping boy for ambitious propagandists who have no genuine interest in the real progress of the Negro.

We know that in South Carolina the already excellent relations between the races have been so sound and friendly that all of the misrepresentations in national newspapers, magazines, and over television and radio have not so much as dented the good will existing down here.

That, to me, is the finest evidence available that our good relationships are based on proper understanding, proper treatment, a proper and rapid rate of progress, and a proper perspective for the future.

If our relationships were not based on strong and deep-rooted good will, we would be in a state of utter chaos because of the unwise, unfriendly, and generally deplorable and deliberate misrepresentations which have been heaped upon us.

Make no mistake about it—our racial relationships in the South have been put to the acid test, and we have not been found wanting.

Still another strong evidence is the fact that, as we have good reason to believe, the truly thoughtful and sincere people over the rest of the Nation are beginning to understand, despite the false and tragic curtain of propaganda, that the South does indeed live in a much more healthy and promising atmosphere of racial good will than any other section of the country.

We do not have in South Carolina the kind of gangs, and mobs, and misunderstanding, and social conflict, and teenage terrorism which prevails in States like New York, Pennsylvania, Michigan, and California—the very States from which have come the most abuse against the South.

So I say, that every race living in South Carolina has equal opportunity for happiness and progress, that the members of every race living in South Carolina have the wide open opportunity, as individuals, to prove themselves for what they are worth.

No group of people is entitled, as a group, to be given special treatment.

If I had to select the one outstanding element in this Nation's rise to becoming the greatest Nation in all the history of the world, I would say that the freedom of the individual to express himself and to gain recognition according to his worth ranks ahead of all other blessings and attributes.

No, my friends, the Negro race, nor any other race, is oppressed in the South Carolina way of life today, and I am a living example of the tolerance of the people of this great State.

People of all races in South Carolina can look forward with confidence to the future, knowing full well that if they have character, talents and abilities, and if they exert themselves intelligently and constructively, they will be recognized and appreciated.

The Jewish people who moved into the Carolina colony in 1695, moved wisely into an area where their descendants have become respected and responsible parts of the communities and States in which they live.

Members of the Jewish race have fought in all of the wars in which our people have been engaged.

Seven Charleston Jews who served in the American Revolution are buried in the Coming Street Cemetery.

Four veterans of the War of 1812 are to be found buried in this same cemetery.

More than 180 Charleston Jews served in the Confederate forces, of whom some 25 were killed.

Thousands of our faith served in World War I, World War II, and the Korean war.

Many of them died on the fields of battle, but their sacrifice was not in vain.

Quoting Mr. Tobias: "During the century prior to the fatal firing on Fort Sumter,

Charleston prospered from the thriving plantation economy it served, with a heritage of religious freedom from its founding. Charleston's Jews participated in their city's prosperity and shared in its culture, developing men who contributed to the community and left their mark in all walks of life.

"Such a man was Mordecai Cohen who died in 1848, but who had risen from a peddler to the second wealthiest man in South Carolina. He was noted for his civic leadership. His tombstone best summarizes the kind of man he was: 'He was a good citizen, an enterprising merchant, and one of the largest contributors to the improvement and revenue of this city. By his strict integrity, his just and charitable disposition, he won the confidence and esteem of the community.'"

Now, not all Jews have risen to become the second wealthiest men in South Carolina, but to me the story of Mordecai Cohen, on a lesser but equally as commendable basis, applies to literally thousands of Jews who have lived in Charleston and the rest of South Carolina since 1695.

My personal feelings toward Mr. Cohen are doubly sympathetic, because my own father came to South Carolina from Russia many years ago. Like Mr. Cohen, my father was a peddler, but because South Carolina is a wonderful State of opportunity, my father was able to overcome all handicaps and to become a substantial merchant in the town of Blackville in Barnwell County.

Many, many times, especially in recent years, I have thanked God that my parents did come to this country, and to South Carolina, escaping what was then a tragic plight in Russia, and what now—in a godless nation—would be far worse than any plight I can imagine.

Now let's talk about the subject I happen, through experience, to know best—the government of South Carolina.

Though, at times, public service seems to be a thankless job—especially when as at present we are faced with imposing new taxes for desirable public services, public service nonetheless is one of the most compensating experiences to which men and women can devote themselves.

Twenty-seven years ago, in 1932, I was elected to the House of Representatives from Barnwell County. Two years later I was elected Speaker pro tempore of the House without opposition, and then in January 1937, I was elected Speaker of the House over one opponent.

Except for 4 years, it has been my great honor to have served ever since as Speaker. It is my information that no other man has ever served so long in this capacity in this or any other State.

And so, as a Jew, and proud of it, I feel that I can speak from full experience when I emphasize again that there is no intolerance in public life in South Carolina.

In the beginning, I pointed out that no other generation has enjoyed more progress in South Carolina than has the generation of which most of here tonight are a part.

In 1933, South Carolina was in the throes of the great depression.

For a moment, let's pause to make several pertinent contrasts between then and now.

Listen to this: In 1932 the legislature had appropriated $9,500,000 for general purposes, and the highway department, whose funds were separately accounted, had received $9,900,000 in revenue, a grand total of $19,400,000 for all State purposes as compared with more than $200 million a year at this time.

We were concerned only with the $9,500,000 for general purposes, and the State had, mind you, a deficit of $9 million. We were running, therefore, almost exactly a year behind in finances. Our credit had been exhausted and we could not borrow a dime.

The Farmers' and Taxpayers' League met the new legislature with mass demonstrations on the statehouse steps, demanding that we cut 1933 appropriations in half. As a matter of fact, during the opening week the house, by a vote of 79 to 34 resolved to hold appropriations below the $5 million level. That was less for all purposes than the single item in our current appropriations of $6 million for the State hospital.

State aid to public schools had amounted to only $3,600,000 in 1932, but the budget commission, under pressure of the Farmers' and Taxpayers' League, was recommending just $2,042,000 for 1933. Think of that. Today for public schools alone the State appropriates more than $85 million a year.

Conditions were like that 27 years ago.

But we had weathered the depression, and in every year since, during war and peace, we have weathered problems, all of the time moving forward into eras of greater development.

The restoration of South Carolina most certainly has experienced its realization during the past quarter of a century.

We believe that South Carolina taxpayers get as much, if not more value received from tax dollars, than those of any other State of the Nation.

It has taken a tremendous amount of working together, and of putting first things first. The taxpayers demand services from the State Government and if these services are to be given the people, then they cannot and must not complain about the imposition of additional taxes to provide the demanded services.

What has been accomplished already, and what we have reason to believe will continue to be accomplished in the future, as a result of the solid foundations which have been laid, could not have been attained without the services of dedicated men and women in Government, without free and loyal citizenship in general, and without the contributions made through such essential services as improved public education, public health, and highways.

Probably in no other State has a better balance of Government and private enterprise been reached. Our progress has been rapid but sound and our accounts are being balanced without backbreaking taxes on anyone.

South Carolina, for a decade now, has been enormously conscious of the industrial development which has been enjoyed, bringing with it the blessings of payrolls, revenues for government, and money in circulation for all types of business and the professions. All over South Carolina, the additional money in circulation is reflected in new school buildings, highways, hospitals, and other desirable and necessary public institutions. These businesses and industries should and must be protected from those who would destroy them.

From an agricultural viewpoint, within a relatively short time, a considerable transition has occurred, complicating the general ecenomy of the State.

Agriculture will always be a major factor in our economy, but mechanization, irrigation, pest control, and artificial fertility have brought about extensive changes in the methods of farming. The result has been much larger yields, much better produce and wider diversification.

But, while these good things were taking place in agriculture, the other side was not nearly as bright—because the modern trends have resulted in declining employment. We get heavier production with fewer human hands.

In many counties of the State, no employment was available for thousands of people who could no longer find jobs on the farms. New industries have helped in many areas to fill this void, but still there are many counties, especially in the low-country, the midlands and the Pee Dee sections which do not have either new industry or enough existing industry to employ the people.

The future prosperity of South Carolina, especially in those areas without industry, unquestionably will depend upon the continued development of new industry and the expansion of existing industry.

Decisively important in the attraction of new industry is the constant improvement of governmental atmosphere, both statewide and in the counties and municipalities. We feel that excellent progress has been made already, but much remains to be done. We not only have conditions which need legislative adjustment and correction, but we must continually be alert to constructive new ideas.

Not only is more industry developing, but more and more of the larger industries are dispersing their operations, locating additional plants in various parts of the country. This is a healthy trend, both from the standpoint of bringing further balance to the whole economy of the Nation, and in the area of national defense. Where industry is too concentrated, an attack on this country might easily disrupt production unless plants are widely scattered throughout the Nation.

As industry shows a growing tendency to spread, the competition among States, particularly in the Southeast, has become more aggressive.

Your native son, the new Governor of South Carolina, our mutual friend Fritz Hollings, has clearly recognized the need of the State and the pulse of our citizens on the subject. Throughout his campaign and during the early months of his administration, he has placed major emphasis upon the subject.

First, however, it was necessary to solve the temporary financial deficits, and the Governor took hold and courageous action from the outset to assure a balanced budget. In all of my service in the State government, I have never seen a Governor act as forthrightly on financial problems. It would have been much easier for him to have passed the buck to the legislature, but he realized that if we were to get on with constructive economical development, we first had to put our financial house in in order.

Every citizen of South Carolina should applaud his willingness to place first things first so that the way would be cleared for greater progress.

Please remember this, that the current session of the legislature is not imposing new taxes for extravagance in Government. It simply is balancing the budget for the kind of government the people have demanded, and our financial crisis resulted from a slowing down of industrial development during the recent national recession, plus a 5-year drought in profits for our largest industrial resident, the textile industry.

If the textile industry had been enjoying just normal profits during the last 5 years, it would have been paying enough in income taxes and additional employment, with the benefit of extra payrolls, to have kept us on a balanced basis.

Our textile leaders tell us now that they have strong hopes for a return to reasonable profits within the near future. It this develops, then we will have considerably more revenue from existing taxes, and we will be able to do more for education, public health, and other humanitarian causes without additional and increased taxes facing us at every session.

Now, in my opinion, one of the prime reasons why South Carolina has boomed in recent years has been the whole-hearted spirit of good government. I do not believe that business, professional and other substantial citizens are yet exerting themselves enough,

but I do believe that the active interest they have shown in recent years in proper government has had a remarkably healthy influence upon those who try to perform public service.

I cannot urge you enough to extend even further your good citizenship. For too many years substantial citizens seemed to think that their responsibility as citizens was to complain about everything that happened in Government.

In the legislature, we have noticed in the last 5 or 10 years that business people especially are showing a more constructive interest in what goes on and a greater appreciation for the proper services of government. If you continue to do that, and if you acknowledge the good things about government, and if your criticism is sincere and intelligent, then we in government welcome your criticism.

All over South Carolina there has been a much better statewide acceptance of both blessings and responsibilities. No longer do we hear petty arguments of sectionalism. Charleston, perhaps more than any other community, should recognize this change in attitudes because there were times in our lifetime when other sections of the State looked upon Charleston with suspicion and jealousy.

What finer illustration could I use here tonight than to point the fact that both houses of the legislature voted for the $21 million ports' development program for Charleston, Georgetown, and Port Royal. I was proud and I know you were proud that one of the foremost leaders in this great development has been Milton Pearlstine. Enactments of the port's program demonstrates that insofar as economic development is concerned, fulfilling the advantages of one area is important to the whole State.

Let me thank you again from the bottom of my heart for this opportunity to be with you tonight. It is truly one of the highlights of my lifetime. I will never forget your kindness in inviting me and I assure you that everything I do, I will do as a South Carolinian, as one of your faith interested in the welfare of all of our people and I believe I will be a better man because of this experience. May God bless and keep you, each and every one.

Let's Get Tough About Foreign Aid

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following article by John B. Hollister, former ICA Director, which appeared in a recent issue of the Saturday Evening Post. This article clearly indicates to me the very real need for a thorough reappraisal of our foreign aid program, especially with reference to the giveaway aspect of this program:

LET'S GET TOUGH ABOUT FOREIGN AID

(By John B. Hollister)

Once, during my early days as Director of the International Cooperation Administration—I served from July 1, 1955, to September 13, 1957—I was asked to assign about $1 million from our foreign-aid funds for the construction of a Buddhist temple in a certain Far Eastern country.

The request came from the head of my ICA mission in the beneficiary country and bore the enthusiastic endorsement of the U.S. Ambassador there. They pointed out that an important anniversary of the birth of Buddha was to be celebrated the following year and our gift of a shrine would win numerous friends for the United States among the deeply religious members of that sect in the Far East. I was, I confess, startled by this curious recommendation, but not too startled to disapprove the project promptly.

I recount this minor incident only because it illustrates, somewhat flamboyantly, a vital, fundamental difference of approach to our foreign-aid program which exists in the Congress and in the administration itself, including the staff of the State Department. This strong divergence doesn't involve the size of our effort, but rather the all-important question of how the money should be spent.

There is, of course, another basic dispute going on currently between extremists on the subject of foreign aid. One group protests violently that the nearly $4 billion requested for the mutual security program by the President in his budget message to Congress in January is completely inadequate and should be increased several times. The other group, which would abolish foreign aid entirely, objects just as violently to including the item in the budget at all.

Neither extremist position is likely to be effective in the present Congress. I don't believe the Congress will appropriate more money than our economy can safely afford, and there is no possibility of abandoning this work. The important problem, as I see it, is not the exact size of the program, but rather what should be the objective in our foreign-aid spending.

Let me make my own viewpoint clear: When, at President Eisenhower's request, I resigned as executive director of the Hoover Commission to become head of ICA, there was considerable criticism of my appointment in the liberal press and from some Members of Congress. The assumption was that I had taken over the work in order to do a hatchet job on the agency.

Later, when I defended the President's budget request before congresisonal committees, many of my old friends declared that I, a lifelong conservative Republican, three-term Congressman, and law partner of the late Senator Taft, had become a New Dealer.

Perhaps there was a certain justification for each of those opposing beliefs. Certainly I did my best to effect economies in ICA and to hold the program within strict limits. But I also realized that if we are to play the part in world politics into which, somewhat against our will, we have been thrust by the inexorable march of events, this expensive foreign-aid program must continue into the foreseeable future.

I had one guiding principle in my conduct of ICA affairs. Each proposed project had to be tested by a single standard: Will the spending of money for this purpose increase the security of the United States? In the use of taxpayers' money, my sole concern was, and is, the self-interest of this Nation.

In my meetings with leaders of countries which were receiving ICA funds, whether in Washington or on my extended travels, I was always perfectly frank in expressing the objectives of the United States in giving the aid. I made it clear that I was negotiating mutually advantageous security arrangements, not purveying gifts. I never noticed any shocked surprise from the generally realistic people with whom I dealt, although there was frequently disappointment because I insisted on this tough approach.

Our situation in Libya is an example of a mutually beneficial agreement. Libya, thought twice as large as Texas, has about 1 million people living along the fringe of the Mediterranean. Most of the country is desert. However, Wheelus Field, one of our largest air bases, is located near Tripoli; and the country, furthermore, acts as a buffer zone between Egypt and French north Africa. Libya is a desperately poor country, and her economy would collapse almost immediately without our financial shoring. Thus our money, which Libya badly needs, provides us with a dependable air base in north Africa, which we badly need.

There is, of course, powerful opposition in both Congress and the administration to this quid pro quo concept of ICA's purpose. One group, for example, is constantly attempting to divert an increasingly larger percentage of our foreign aid funds to the improvement of undeveloped parts of the world, regardless of our national interest. Because we are rich and powerful, the proponents of such a policy say, we should continue this program even if the cold war should come to an end. This is an entirely praiseworthy attitude of the majority of Americans in their private lives, but our administration, in my opinion, was not elected to act as agent for our philanthropies.

Among the allies of this philanthropic school of thought are many important public figures who would radically alter the present ratio of military and economic spending. Today, more than half of ICA's funds go for weapons and training for the armies of our NATO allies and friendly nations in the Middle East and Far East. Some Members of Congress and the administration would drastically cut this item of the budget.

A few days after the last ICA appropriation bill had been passed by Congress late last summer, eight leading and influential liberal Senators advocated this course in a long letter to the President. The essence of their argument is contained in part of one paragraph:

"It is in the political and economic realm that the concepts of freedom are now undergoing a universal trial * * * study has led us to the conclusion that the principal and most costly shortcoming of the mutual security program remains as it has been for some time—the failure to emphasize military aid less and to stress economic aid and technical assistance more."

Given a total appropriation of about $4 billion, which is about the maximum we should spend at present, this proposed shift of emphasis would seriously undercut the military strength of our allies and, by projection, of ourselves. Many countries have, at our behest, built up their armed forces far beyond the point where they can be supported without our help. To reduce sharply the various amounts they receive not only would shake their confidence in us but also would encourage the Communists to attempt further military adventures.

Admittedly, when the Soviet Union began using economic means to infiltrate the uncommitted nations of the Middle East and Far East, the problem of maintaining a clear-cut relationship between our security requirements and our spending became infinitely more complex. It is clearly self-interest to equip a willing but impoverished fellow soldier on the barricades. The amount and kind of help to give a neutral to keep him from being forced into the enemy's camp is a far knottier question.

An especially tough kind of realism is needed in this area of ICA's activities. The United States does have a real stake in keeping as many uncommitted nations as possible from being drawn into the Communist orbit through too much dependence upon Soviet aid. We cannot permit ourselves, however, to be lured into the fool's game of trying to outbid the Russians everywhere. That way lies bankruptcy.

The basic weakness in the position of both those who would make the ICA a global

philanthropic organization and those who would sacrifice military for economic aid is a lack of understanding of the real problems of economic development.

When the Marshall plan, or Economic Cooperation Administration, was started soon after World War II, we were faced with a partly devastated and completely exhausted Western Europe. Some of the European counties, in their weakened condition, were in danger of falling into the waiting arms of the Communists. Had this happened, our position in the world would have been seriously threatened. Therefore, the spending of our money to reestablish industrial Europe had a direct and obvious relationship to our own security. These were our allies, and they would be of considerably more value to us when they regained economic health.

This is not the place to discuss the unnecessary waste in the administration of the Marshall plan. We must admit that ECA played a large part in the quick recovery of Europe. Becauses of this, some Members of Congress and the administration believe that the same kind of precipitate and lavish spending would achieve comparable results in the Far East and Middle East. Understandably, political leaders in those parts of the world, who are anxious to industrialize their countries, endorse this reasoning.

In addition to the fact that the United States cannot again afford such a vast outpouring of its wealth, there is a major flaw in this concept. In Europe we were dealing with nations with excellent transportation and communications systems, skilled technicians, a huge reservoir of trained workers, sound tax laws, and stable governments. The rehabilitation of plants and adequate credit were all that was needed to revitalize industry.

The situation in the Middle East and Far East is vastly different. To begin with, there are hundreds of millions of people living in those parts of the world, and even our vast resources are inadequate to affect quickly the economic lot of such masses. But even more important, almost no nation in those parts of the world is, as yet, capable of absorbing massive doses of industrial development. There is no point in increasing production capacity faster than demand can be generated and technological skills can be learned. The road to economic health and success is uphill and arduous.

In a conversation in Vietnam not long ago, for example, I was discussing the many problems of that nation with the Minister of Finance. At one point in our talk he said earnestly, "What I really wish you could send us are a few clerks. Right now we need people who can do simple office work more than anything else."

He then went on to explain that the French colonial government had done almost nothing about educating the native population of Indochina and that, as a result, with the withdrawal of the French, there was only a handful of people in the entire country with even the equivalent of a high school education. "We have so few who can do even the routine tasks of running a government," he said.

Lack of education and technological experience is endemic in most of the Middle Eastern and Far Eastern nations which are receiving ICA assistance. Therefore, it becomes doubly important for us to scrutinize every proposal we receive in terms of its feasibility and economic advantage to the petitioning nation. A good banker will not make a plant expansion loan to a company merely because it wants to double production. He will insist on knowing something about the market for the company's products, the ability of the officers and the probabilities of profit from the new facilities. ICA should be no less thorough and analytical in handling taxpayers' money.

The present situation in India is a case in point. India is in the middle of a second 5-year plan, a highly ambitious effort with goals which seem unrealistic. About $1,500 million of foreign exchange will be needed to buy materials during the 5-year period.

Although we were not consulted about the plan in advance, a number of leading "liberals" in this country are demanding that the United States provide the necessary financing to make it a success. They don't ask whether or not the undertaking is sound. I concur in their desire to keep India a part of the free world, but I regard their advocacy of a massive plan of dubious worth as an advanced case of fiscal irresponsibility. Nor do they ask whether or not private capital could do a large part of the work if only the Indian Government would encourage such activity adequately.

In addition to selecting with care the projects it will support abroad, ICA also has a responsibility, both to this country and to the nation receiving the aid, to make certain that our aid money will not be lost through the incompetence or lack of experience of those who plan, build and operate the projects we finance.

Yugoslavia, for instance, tried for some time to secure financing from ICA for a fertilizer plant. This request precipitated a battle royal in our Administration. One group would give the money to Yugsolavia subject only to the provision that adequate engineering drawings were made. The other side, with which I was in hearty agreement, argued that a single, capable contractor should be employed to do the work under the supervision of a competent engineer and that arrangements be made for the training of operating personnel before we even embark on the project.

Naturally, the Yugoslav Minister concerned wanted complete authority over the project, and his supporters in this country said that he should not offend Yugoslav pride by imposing conditions. International amenities, however, must be sacrificed if they interfere with proper use and proper accounting of all our mutual security funds. By following this course, we may not be liked, but we will be respected for our money will not be wasted.

This is no isolated instance. Again and again we must deal with technologically undeveloped nations which, understandably enough, are fiercely nationalistic and keenly resentful of any reflection upon their abilities. Yet, if the United States is to use foreign aid properly—that is, to increase our own security—we can't permit this hypersensitivity to be a dominant factor in our decisions.

Occasionally we will lose a battle in the cold war because we will not yield to pressure. Colonel Nasser has taken Egypt at least to the periphery of the Soviet empire because we would not accede to his demands for arms and for Aswan Dam financing. Aside from the fact that giving substantial arms to Nasser would have been politically inadvisable, the two undertakings could not be supported simultaneously by the Egyptian economy. Had we acted upon the theories of the giveaway group in this country, we would not only have failed in our duty to our national self-interest but also have damaged the recipient as well.

The prmanent loss of Egypt to the free world would be serious, but Nasser's present disenchantment with his Russian partner indicates that the defection may prove to be only temporary. The Aswan High Dam is no closer to being built than it ever was. Perhaps Nasser's experience will show some of the other neutrals the truth of the adage, "He who sups with the devil must have a long spoon."

However, those who would convert ICA into an altruistic organization are not the only group which endangers the original purpose of our foreign aid program. Another influential body of opinion holds that more and more of our foreign aid money should be given to various United Nations agencies for distribution. We are already allotting about $75 million per year from our ICA funds to various international groups.

Again I must ask the basic question, "Would increasing our appropriation to these international organizations enhance the security of the United States?" My answer is "No." These agencies are controlled by secretariats appointed by the General Assembly of the U.N., where we have but one vote. This means that the expenditure of our money is controlled by nations which contribute negligible amounts and which, in many instances, are themselves beneficiaries of the spending.

In the United Nations technical program, for example, we contribute more than a third of the funds, and yet we have no more to say than any other nation. Not only is our contribution by far the largest but also our dollars can be spent anywhere in the world, whereas some of the other countries, including Russia, give only their own currencies, which usually can be spent only in the issuing nation. Thus, Soviet money hires only Soviet technicians to do U.N. work, whereas our money can be used to pay men from any part of the world.

In addition to following a hard line of self-interest in the use of foreign aid funds and strictly limiting the amount we give to international organizations, we should take definitive action to lighten the heavy burden on the U.S. taxpayer and, eventually, to obviate the need for the assistance program entirely.

One of the first steps we can take in this direction is to insist that we, as a Government, will do nothing which private enterprise can do as well or better. Next, ICA and the Development Loan Fund should sharply increase the amount of money now being spent to subsidize plant construction by American private enterprise in undeveloped countries. Third, we must convince these nations that it is to their advantage to welcome these investors and to adopt tax laws and operating regulations which will make it possible for both domestic and foreign capital to work efficiently and at a profit.

All of these objectives are more easily stated than realized. Many Government officials have come to expect the Federal Treasury to supply the solution for all of our problems. Private enterprise in the international field is viewed by many of the rank and file of the State Department with suspicion and often outright hostility as a complicating factor. Also, all too often the average U.S. ambassador, eager for the good will of the country to which he is accredited, is unwilling to fight for the cause of private capital. It is so much easier and more popular to offer a grant or loan from some U.S. agency.

The task of creating a favorable climate for our brand of free enterprise abroad does indeed present formidable difficulties, especially in the Far East. Few of the political leaders have a genuine understanding of our economic system, and the trend toward varying forms of state socialism is strong.

During a recent trip that I made to India, for example, the Finance Minister told me about some steel mills which his Government was building. The nation's future needs for steel, he said, had been determined in the current economic plan, but the private steel companies had refused to embark on an expansion program sufficient to produce the required tonnage. State-owned plants, he explained, were therefore necessary to supplement private production.

I asked him what would happen if the estimates in the plan proved to be too high. Would the Government mills close, so that private companies could continue to operate profitably, or would private organizations be forced out of business?

Neither, he said. A price would be fixed for steel, and production would be controlled, and state-owned and privately owned mills would both be able to make a profit. Such a statement is, of course, nonsense. As we know from our own experience in this country, the Government's invasion of any field of business forces out private industry. Government officials, good or bad, seldom recognize the actual cost of operating a state-owned business. Free enterprise can't compete.

Despite the major obstacles to be overcome both at home and abroad, the utilization of domestic and foreign private capital to relieve the U.S. taxpayer is far from a hopeless cause. Congress, in general, has been urging greater use of this powerful force in our aid program. An aroused and insistent public in this country can bring about the necessary change of bureaucratic attitude in Washington. Persuasion, practical demonstrations of the benefits to be derived from private capital and economic leverage exercised by our Government can effect a similar change abroad.

This is a comparatively long-range plan for lightening the burden on our Treasury. However, we could greatly increase our efficiency and effect enormous savings throughout the whole field immediately if we coordinated the present efforts of the numerous U.S. and international agencies which, along with ICA, affect the economies of foreign nations.

It is axiomatic that government is wasteful and inefficient. This condition is inevitable because there is no competition to require efficiency for survival. However, the manner in which we conduct our foreign economic activities seriously aggravates the situation.

Admittedly the size and complexity of the job of operating in some 60 countries should not be underestimated. Lines of communication are often inadequate. Limiting legislation, frequently unreasonable, complicates the problem. In many instances we are working with officials of newly developed countries who are hopelessly unequipped for their position and are often politically motivated or venal, or both.

Working under these handicaps, we obviously have a great need for unity of purpose and action. We should speak with one voice around the world. Unfortunately the tendency in Washington, both in the administration and Congress, is to fragmentize the aid program.

Let's take a cursory look at the financial jungle which has grown up in the last decade or so. Among the many agencies under international auspices, there is the International Bank for Reconstruction and Development—also known as the World Bank—which, with funds largely supplied by American investors, makes hard-money loans to other governments. Then there is the International Monetary Fund, to which the United States is by far the largest contributor, which makes short-term loans.

In this country we have the Export-Import Bank, which was started back in the depression to finance American foreign trade. The Bank has departed far from this field and is now engaged in budget support and balance-of-payment loans to foreign governments. The Development Loan Fund also makes loans, mostly in "soft" currencies—that is, not freely exchangeable—for long-term development projects, usually in neutral countries. The Fund was originally set up as an integral part of ICA, but now operates almost completely independently.

The Agriculture Department is also part of this tangled scene. Under the surplus commodity sales legislation, we sell to foreign countries, for soft currencies, those products which our agricultural price-support program requires us to buy from our farmers. Then we lend the proceeds of the sales abroad to those same countries for development purposes.

Our Defense Department also has a role. It plans military aid programs for various nations without adequate consideration of the continuing cost to the countries involved in supporting the arms efforts. The Defense Department also makes deals for bases in other countries which involve large expenditures by us and greatly affect the economies of these nations.

Remember that all of these organizations are in addition to ICA, which makes grants and loans, usually in soft currencies, for various types of assistance, chiefly the support of economies of countries with which we have military alliances.

Certainly we don't need any new agencies. We already have too many. Yet the President recently gave his support to the establishment of two new international lending organizations—the International Development Association and the Inter-American Development Bank. Also, there is constant pressure from "giveaway" groups to found various international development funds such as SPUR (Special Projects for Underdeveloped Regions) and SUNFED (Special United Nations Fund for Economic Development) plus additional regional lending institutions, all of them to be financed largely by the United States.

If we are to eradicate overlapping, duplication, waste, and inefficiency, a contraction—not an expansion—of our present structure of agencies must take place. First, the Development Loan Fund should either be abolished or be placed completely under the direction of ICA. In its present independent status, the Fund seriously weakens our overall control of lending.

Next, the Export-Import Bank should be restricted to its original purpose—financing American foreign trade. Our surplus-commodities-disposal program should be better controlled and more closely coordinated with our other activities abroad.

The most important step to be taken however, is the establishment of close-knit cooperation between all U.S. groups which affect our foreign aid program.

It is essential, of course, that the Secretary of State, acting for the President, should set the foreign policy of the United States. The Secretary, therefore, must have final authority over our foreign aid program. However, he is already doing the work of several men, and he has no time to oversee the day-to-day activities in order that we will speak with one voice.

This authority should be delegated to his Under Secretary of State for Economic Affairs, who should be a czar in this field with full power to act within the limits of existing legislation. Equally important, he should be a tough "no" man. Few U.S. Ambassadors ever think that the countries to which they are accredited receive enough money. No Regional Assistant Secretary of State is ever convinced that his area is getting its share of assistance. And, of course, there is the constant cry of "more," never "less," from each country on our foreign aid list.

If appropriations for the mutual security program are not to increase steadily and if we are to have an adequate reserve for new and pressing needs for aid which will inevitably arise, we must cut down on some of our existing programs and teach our friends abroad that our assistance is an emergency measure, not a continuing subsidy.

Foreign aid has been a tremendously expensive, but indispensable, weapon in maintaining the security of the United States. There are a few principles which will increase this security greatly. We must spend the money available for foreign aid for the safety of the United States without any giveaway aspects. The money should be spent by those with our interests at heart—and not by some international group. Funds should be allocated only where private capital, either local or foreign, cannot do the job under reasonable encouragement. Finally, the program should be closely coordinated with all other economic activities of the U.S. Government. Only by following these principles can the enormous drain on the American taxpayer be justified.

Unemployment

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two items from the April 8 issue of the Charleston (W. Va.) Gazette. The articles appear on the same page, side by side. One of them bears the headline "U.S. Jobless Drops Sharply," and the other item is entitled "Jobless Claims Up 10 Percent In West Virginia."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

U.S. JOBLESS DROPS SHARPLY

WASHINGTON.—Employment rose over one million in March while unemployment declined almost 400,000 in a substantial improvement in the Nation's job picture.

The changes were about double the normally expected springtime improvements. They reflected a sizable dent in the idle-worker problem that has been the only major bad spot in the Nation's recession recovery.

These are the exact new Government job figures, announced Tuesday:

Employment—63,828,000, up 1,106,000 from February. This is a 1,517,000 increase over March last year.

Unemployment—4,362,000, down 387,000 from February. This is 772,000 less than in March 1958.

The figures, also showing a rise in the available work force, followed rosy predictions by President Eisenhower and his Cabinet members that the new data would be gratifying to all Americans.

The March unemployment improvement was the best since 1950, the employment improvement the best since 1951.

Union leaders minimized the changes, saying they were chiefly seasonal and failed to provide any cause for celebration.

George Meany, AFL–CIO president, said that despite what he termed Eisenhower administration "ballyhoo" the idle total still is the highest for any month of March since World War II, except in last year's recession.

"There is no appreciable improvement in the overall picture," Meany said. "Certainly, well-staged propaganda announcements will not solve the problem or bring relief to the 4,362,000 unemployed workers and their families."

Meany said the AFL–CIO intends to make it clear at a rally here today, of more than 5,000 union leaders and idle workers, that unemployment is a problem of people.

rather than a mere statistic. The conference is intended to draw attention to the plight of the jobless.

Besides giving the new data a careful advance buildup, the administration unveiled them at an unusual news conference, held by Seymour Wolfbein, head of the Labor Department's Employment Statistics Division. In the past newsmen were simply handed printed releases containing the statistics.

Wolfbein displayed colored charts and used a pointer to maintain that the March figures represent a solid extra seasonal job recovery gain. But he frankly said there are serious job trouble spots in many major areas.

A hard core of 1½ million, or a third of the idle total, Wolfbein said, have been jobless 15 weeks or more. This group of long-term unemployed has not experienced much improvement, he said, underscoring "that we are by no means out of the woods."

Among nonwhite persons, mainly Negroes, there is 13 percent unemployment as contrasted to 5½ percent among whites.

The overall ratio of unemployment to the total work force declined from 6.1 percent in February to 5.8 percent in March.

A significant feature was that practically all of the nearly 400,000 drop in unemployment was concentrated among males 25 years or older, the group with heaviest family responsibility.

Factory-worker earnings rose during March to a record $88.62 a week, reflecting both more pay and longer hours. The workweek rose to 40.1 hours. Wolfbein said one third of all factory workers are earning more than $100 a week.

JOBLESS CLAIMS UP 10 PERCENT IN WEST VIRGINIA

Regular unemployment compensation claims increased 10.2 percent in West Virginia last week.

A report Tuesday from the Department of Employment Security showed regular claims totaled 23,689, an increase of 2,197 from the previous week. The total included 4,426 initial claims, up 1,582, and 19,263 continued claims, up 615.

By contrast, total claims were down slightly under the program of temporary unemployment compensation for jobless workers who have exhausted their eligibility under the regular program.

TUC claims totaled 4,431, down 157 from the previous week. The total included 524 new claims, down 176, and 3,957 continued claims, an increase of 19.

Poison in Your Water—No. 53

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting in the Appendix of the CONGRESSIONAL RECORD an article appearing in the Bisbee (Ariz.) Review on January 14, 1959, entitled "Flagstaff Has Sewage Trouble; Fear Epidemic."

FLAGSTAFF HAS SEWAGE TROUBLE; FEAR EPIDEMIC

FLAGSTAFF.—The Coconino County Health Department Tuesday said inadequate sewage disposal facilities in Flagstaff could touch off a serious epidemic.

In its annual report, the department said the sewage problem was a serious menace to Flagstaff and the unincorporated area of East Flagstaff.

The report—prepared by Dr. Lucy Sikorsky, department director, and W. E. Stanfill, chief sanitation officer—said that in one section of East Flagstaff more than 70 percent of the sewage systems were defective and many were overflowing.

Dr. Sikorsky and Stanfill also criticized garbage collections controls and the lack of building and zoning restrictions in East Flagstaff.

Meanwhile the city council approved a proposal for water and sewage expansion plans which will cost about $925,000.

The proposal calls for bond issues of $450,000 to improve the sewage system and $475,000 for water line improvements.

Final approval of the bond issues will be up to Flagstaff voters. The election date has not been set.

The county health department also recommended that East Flagstaff be annexed to the city as a step in the solution of the health problem. The unincorporated area, the department said, does not have the financial means to eliminate the sewage problem.

Annexation petitions now are in circulation in East Flagstaff.

A Bill To Amend Title II of the Social Security Act

EXTENSION OF REMARKS
OF
HON. DOMINICK V. DANIELS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. DANIELS. Mr. Speaker, I have introduced today, a bill to amend title II of the Social Security Act to increase the amount of outside earnings permitted from $1,200 to $1,800 yearly without deductions from benefits thereunder.

The purpose of this bill is to liberalize the allowance of earnings of old age beneficiaries without the loss of benefits. Under the present law, persons who are 72 years of age and older may earn any amount without having social security benefits reduced. Those persons under 72 years of age, however, may only earn a maximum of $1,200 per annum, without penalty. For each $80. or fraction thereof over $1,200 in yearly earned income, one month's benefit is lost.

I believe that our people after working and toiling through life should live out their final years in comfort and human dignity. In the past several years, the cost of living has risen higher and higher, thus reducing the purchasing power of the dollar. One group of our people most seriously affected by this inflationary spiral, has been our older citizens. The present limitation of $1,200 on earned income per annum is unjust and unfair. I am certain that all Americans are desirous that our senior citizens shall maintain and enjoy a decent and respectacle standard of living.

By increasing the income limitation from $1,200 to $1,800, as my bill proposes, a social injustice of the present law shall be corrected.

Improved Relations Among the American States

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a resolution adopted by the Foreign Trade Council of the Worcester Chamber of Commerce relative to actions which it believes should be taken to improve our relations with Latin American countries. Events in recent years make clear that there is room for much more resolute attention to be given by the United States to our relationships in Latin America. The suggestions for action in the resolution merit careful consideration.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION TO ENCOURAGE ACTION TO BE TAKEN BY WASHINGTON TO IMPROVE RELATIONS AMONG THE AMERICAN STATES

Whereas the Foreign Trade Council of the Worcester Chamber of Commerce believes that the economic stability of the other American States is essential to the economy of the Western Hemisphere; and

Whereas the council believes that expansion of their trade and the development of their human and material resources will enable these countries to strengthen their agriculture, industry, health, and education, and thereby gain to each one a fuller share of the products of man; and

Whereas the council believes that fulfillment of these endeavors and the free communication and trade with all of the American States will result in greater hemispheric strength, solidarity, and mutuality; and

Whereas Dr. Milton S. Eisenhower has prepared and submitted to the President of the United States a report on January 4, 1959, containing findings and recommendations designed to achieve these purposes: Therefore, be it

Aesolved, That the board of directors of the Worcester Chamber of Commerce, finding the Eisenhower report to be in its opinion a sound and progressive step in the achievement of these objectives, authorizes the foreign trade council to communicate its hearty endorsement of the report to the President of the United States, and the Massachusetts Representatives in Congress, with its recommendation that the steps proposed by this report be implemented without delay. Particular emphasis should be placed on the following proposals:

1. To develop a commission under the auspices of the Organization of American States to promote better mutual understanding by their respective peoples.

2. To take steps to improve public and private credit of the American States by helping each nation to encourage private investment and tourism, plan projects through the U.S. International Cooperation Administration, the Inter-American Regional Development Institute, and to work out loan arrangements to be repaid in dollars and local currencies.

3. To take steps to render technical and financial assistance in order to improve sanitation facilities and to confer with each na-

tion on the monetary and fiscal measures to be taken to provide these necessary funds.

4. To encourage the proposal to create a regional common market in the five Central American nations and the extension of the proposal to all the American States including the United States.

5. To join groups from the other American States on an equal basis to study ways and means of stabilizing hemispheric prices of basic commodities.

6. To increase the technical assistance programs and to put such programs under the direct supervision of the U.S. Ambassadors, with the Assistant Secretary of State for Inter-American Affairs being given authority to coordinate these technical cooperation programs with the diplomatic, social, cultural, and related activities within his jurisdiction.

7. To set up a council on inter-American affairs to advise the Secretary of State on all matters of hemispheric importance. This council is to be made up of representatives from the executive department, the Congress, business and cultural life within the United States.

8. To set up within the Organization of American States, an information agency to be directly responsible for keeping the peoples of the country members fully advised on the implementation of this program and its immediate effects. The functions of this agency shall be totally unrestricted to facilitate the dissemination of its reports through the free press of the Western Hemisphere; it shall be further

Resolved, That the steps here set forth shall be considered in conjunction with other agencies national or international, so that a unanimity of effort of all the American States can be realized.

The Supreme Court and Women

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Friday, April 10, 1959

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial entitled "The Supreme Court and Women," by the noted columnist, David Lawrence. This editorial was published in the Washington Evening Star of Wednesday, April 8, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE SUPREME COURT AND WOMEN—RULING FOR SEGREGATION OF MEN OR WOMEN IS COMPARED TO INTEGRATION DECISION

(By David Lawrence)

Segregation of men or women in schools controlled by State authority has just been upheld, in effect, by the Supreme Court of the United States. Two white women were denied enrollment in an all-male State college in Texas.

This ruling would not have occasioned any surprise 5 years ago, because the States previously were allowed to use their own discretion in deciding what pupils should be admitted to public educational institutions.

But in view of the fact that the Supreme Court, in 1954, said that discrimination on account of race or color could produce a feeling of inferiority and that mixed classes are beneficial from an educational standpoint, the query now is whether women haven't just as much right to use that argument with respect to discrimination against them because of sex. In fact, in appealing the current case to the Supreme Court, the two women cited the 1954 decision and argued that a woman is a person just as much as is a Negro. They pointed out that the 14th amendment says "All persons born or naturalized in the United States" are citizens.

"Are Women People?" was the heading of a weekly column by the late Alice Duer Miller, famous novelist, more than 40 years ago in what was then the New York Tribune. The question was finally answered by the adoption in 1920 of the 19th amendment to the Constitution of the United States, which declares:

"The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex."

Many of us true liberals—or progressives, as we were known in those days—had not thought an amendment was necessary because the 14th amendment had already forbidden the States to deny the equal protection of the laws and had said the privileges or immunities of citizens of the United States cannot be abridged by any State. Certainly women were entitled to be classified as citizens.

But, since neither voting nor sex nor color nor education was mentioned in the 14th amendment, the Supreme Court of the United States by its decisions indicated that these subjects would have to be treated separately in other amendments. In fact, the 15th amendment—which declares that voting rights shall not be denied or abridged on account of race or color—was adopted a year later than the 14th because it was desired by Congress to make clear that voting rights, usually prescribed by the States, should not be abridged because of race or color.

So, inasmuch as there was no tendency in those days to rely on the Supreme Court to amend the Constitution to give women the equal protection of the laws in respect to voting rights, even though they are citizens, many of us enthusiastically supported the adoption of the 19th amendment that would at last—as we thought—put women on a basis of equality with men.

But the Supreme Court this week has dashed our hopes once more. Evidently, because discrimination in educational institutitutions of a public character by reason of sex was not mentioned in the 14th amendment, it will be necessary to seek a new amendment that will forbid the exclusion of any female citizens from such schools.

It is, to be sure, the principle of the thing which is bothersome. Many women prefer to go to separate schools—in fact, some believe their opportunities for an education are much better when what they consider the lower intelligence quotient of the male sex is not present in the classroom. But even those women who may feel that way about their superiority will not relish any court ruling which says, in effect, that they can be barred by law from associating in the schoolroom with members of the opposite sex. They have never believed that any physical characteristic should diminish their rights as citizens.

There may be some men, too, who will object to the discrimination and who would prefer desegregation of the sexes. But the Supreme Court has spoken, and its decisions and rulings must be obeyed, for they are the law of the land. These are days, moreover, when the Supreme Court as an institution must not be undermined. Indeed, there have recently been outcries that the rulings of the highest Court must not even be subjected to severe criticism.

So the alternative is to abide by the ruling and try for a constitutional amendment which will give women the equality they had long thought they already possessed as citizens. But they must be careful not to agitate too vigorously, lest they be charged with massive resistance.

How Will You Meet Sickness After 65?

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Washington Evening Star on April 9, 1959, "Golden Years" subtitled "How Will You Meet Sickness After 65?" by Thomas Collins. A similar article appeared in the Detroit (Mich.) Free Press on April 5, 1959.

That article sets forth one of the grave problems of our older citizens, the cost of adequate health protection, hospitalization, doctor, and surgical care, and medicine.

These are the people who have the lowest income, the highest incidence of medical care, of any age group in our country except for the very young.

This problem of poor, hungry old folks eking out their lives in poverty, hunger, and misfortune without adequate medical care and even bare necessities must be approached vigorously.

This article sets forth some incontrovertible reasons why Congress must enact legislation providing adequate health insurance for our old people along the lines of the bill authored by our distinguished friend and colleague, the Honorable Aime Forand, H.R. 4700.

THE GOLDEN YEARS—HOW WILL YOU MEET SICKNESS AFTER 65?

(By Thomas Collins)

"My wife and I retired in 1952," he said, "and our income was something over $1,750 a year.

"We got along fairly well. I was still able to do some work that brought income. We owned our home and were able to keep it in repair. We owned a car.

"Then, after a few years, I developed a chronic illness. This required doctoring, hospital and surgical bills and no small amount of medicine.

"The situation has continued, and I am now 72 years old. We are spending $75 a month for medicines and doctor bills. Many of the medicines are outrageously high priced. I make four or five trips to the doctor each month, at around $5 to $10 a trip.

"So far we are making out, by the hardest effort. Have you anything to offer in the way of bettering such a hopeless outlook as ours?"

ONE AFTER ANOTHER

Thus, they come, one after another, seeking escape from the medical quicksand that has trapped them after retirement. And

with them come those who are well padded and not yet trapped:

"I will retire later this year, I have about $37,000 in good investments and from them get nearly $1,600 a year. In addition, I will have a total retirement income of $2,700 a year. This aggregate of $4,300 would be fine.

"If both my wife and I can escape the grave illnesses we can do all right. Arthritis, funny stomach, even a little heart trouble wouldn't be disastrous. But if either of us gets cancer or has a stroke that produces mental or physical disability, we could be ruined. Our $37,000 could be wiped out by doctor and hospital bills. Our remaining $2,700 a year could be so mortgaged to pay medical expenses that we would go to our grave as paupers.

"And there is no defense against this. Absolutely no way to know you won't wake up in the morning with cancer.

"This is not begging trouble . . . just look around at the people past 60 who get the bankruptcy diseases."

Some Members of Congress are trying to enact various forms of Federal health insurance for older people. Others in Congress and some labor unions are urging some form of socialized medicine for them. The American Medical Association is taking steps to provide medical care for the aged. Some insurance companies are seeking to meet the problem with health insurance that retired people can afford.

POOR GO HUNGRY

Still, the poor go hungry to pay $75 a month for medical help. And people with $37,000 grow old scared.

It's difficult to understand.

We will pay a farmer money to take care of his corn and wheat. We will pay huge sums to foreign people to maintain them as allies in case we go to war. We will enact laws to provide a minimum wage a worker must be paid, and maximum hours he can be made to work.

Yet once a person retires at age 65 we do not make the effort or pay the money to see that he or she stays alive to enjoy this American bounty. Before 65 there is workman's compensation, company health insurance, a salary and, with youth, a fighting chance to whip disease. After 65 there is little but praying.

You can get angry about this. You can also break out in a cold sweat if you think about it too much. What to do? Get the name of your Congressman and write him what you think. If enough of you write, something will be done by somebody.

Past, Present, and Future Convene for the Oregon Centennial

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. PORTER. Mr. Speaker, Oregon's 100th birthday celebration means a great deal to its residents and to the companies which serve Oregonians. Under the leave to extend my remarks in the RECORD, I include the following article from the April 1959 issue of Mainliner, a magazine for United Air Lines guests.

The article was brought to my attention earlier this month by Mr. Robert M. Ruddick, vice president and assistant to the president of the company. Mr. Ruddick tells me that over 500,000 people read the Mainline magazine each month. Oregonians hope each of them hurry out to Oregon to take part in centennial festivities.

I should add that this month's magazine carries a full color cover picture of Oregon's Mount Hood taken by Ray Atkeson.

PAST, PRESENT, AND FUTURE CONVENE FOR THE OREGON CENTENNIAL

In 1843, some 900 men, women, and children loaded their hopes and worldly possessions in cloth-covered wagons and headed west from Independence, Mo. With them they brought a volatile mixture of religious zeal, desperation, vision and greed.

For nearly 5 months the wagon train creaked its dusty way westward, up the Missouri Valley, along the Platte River, through the Rockies at South Pass to the Columbia River, down which they floated to the fertile Willamette Valley of Oregon.

Their arrival increased the American population of the Oregon Territory to nearly 1,100 and established the Oregon Trail as the route to a new land of springy green turf and gentle winds, of soaring mountains—and opportunity.

The land beyond the mountains lived up to its billing, and soon the Oregon Trail echoed to the cry of a hundred wagon drivers and the rumble of wooden wheels. By 1859, there were some 50,000 Americans in Oregon, and on February 14 of that year Oregon became the 33d American State.

Time replaced the deep wheel ruts of the Oregon trail with steel rails, then with concrete highways. Ultimately smooth airways followed the historic westward course, reducing the grueling 5-month trip to a smooth flight of a few hours. This summer, over this historic pathway and a hundred more recent routes, thousands will trek to Oregon for the celebration of its 100th birthday.

Not since the San Francisco World's Fair of 1939 has the West known such an event as the Oregon Centennial Exposition, which will offer its varied wonders for 100 summer days beginning June 10.

Eight miles from Portland, where U.S. 99 crosses the Columbia River, a 65-acre fairgrounds is abuilding, dominated by a sweeping 11-acre central exposition building—the largest one-level exposition structure in the Nation. Exhibits will encompass every phase of trade and industry—domestic and foreign. Special areas will dramatize products and arts for which the State is justly famous—lumber products, paper, farm produce, electronics, power, food processing and fishing, to name but a few.

History, which Oregon has in romantic profusion, will be served with reproductions of Lewis and Clark's Village, a frontier town, a pioneer logging camp, covered wagon camps, stagecoach rides and pony express riders. Entertainment will include water sports, fairyland amusement park and dozens of special events throughout the summer. Scenery, that significant commodity which cannot be exported, will lie as usual all about the State, augmented by special landscaping and floral displays for the centennial season.

The first 2 weeks of the exposition, June 10 through 24, will include an international trade fair, displaying the wares of 35 foreign nations. It will be the largest event of its kind ever held west of the Rockies and the largest in the Nation since 1950. Only buyers will be admitted to merchandise exhibits during the morning, but the public is invited to inspect the displays during the afternoon.

From the blooming of the rhododendrons in June to the pear harvest in September, the centennial fair will present appealing spectacle for visitors young and old. It will epitomize the State at its centennial milestone, juxtaposing the lore of a vibrant past, the achievements of the present, the industrial promise of the future and the eternal grandeur of one of America's most beautiful States.

Possible Solution to Our Farm Problem

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of the following letter I recently received from a farmer of my State of Michigan in which he presents an interesting plan and possible solution to our present farm problem.

MARCH 22, 1959.

Congressman BENTLEY,
Washington, D.C.

MY DEAR CONGRESSMAN: This letter to you is confidential as far as my name and address is concerned.

I am not looking for publicity but I would like to give my views on what I believe would be the quickest, best, and cheapest way to get out of the mess we are in regarding our farm program. For 3 years I have been trying to get the bushel allotment plan before the taxpayers of America but on account of fear of antagonizing the interests who are making financial gain out of the acreage program, I have seen slow progress even though Secretary Benson stated to a reporter for a national farm magazine last year that we may be forced to the B.A. plan, but he hasn't got the intestinal fortitude to take the problem to the American taxpayer. The pressure apparently from other interests is greater than the farmer pressure because very few farmers have heard what the real bushel allotment plan is.

I am writing to you because Chas. Figy of the USDA sent me a copy of H.R. 3275 which you introduced. I would like to see you introduce a bill including the provisions I will set down here.

Instead of acreage allotments I would use bushel allotments as you have indicated in H.R. 3275.

The Secretary of Agriculture would determine the number of bushels of wheat needed in 1960 for consumption. He would use the number of bushels of wheat sold by each grower in 1958 or an average of 1958, 1957, 1956 sales to determine a base quota for each grower. The total of all sales would be compared with the estimated total of needs for 1961. If the total of sales for 1958 was greater than the need for 1960 (no doubt they were) then if the sales were 20 percent greater than the need for 1960 each grower base allotment would be scaled down 20 percent.

This method should be very equitable. If the Secretary wished to leave room for new growers or wished to reduce the surplus faster he could cut more than 20 percent.

The B.A. plan would be easily enforced by giving each grower a marketing card showing how many bushels he could sell or put under loan and space would be provided so each sale would show date sold, number of bushels sold and signed by purchaser.

There might of necessity have to be some changes made but the above is my idea of how the B.A. plan would be set up. I do not believe the B.A. plan would be needed over 2 years. By that time I believe all the surplus would be disposed of and changes could be made to suit the circumstances at that time.

Here is what it would do for the farmer.

It would allow him to plant as many acres as he wished. It would allow him to use the wheat in any way he wished except sell or otherwise dispose of it.

It would allow him to grow enough wheat in a year to fill his marketing quota for 2 years.

The reason for the latter is because almost every farmer has some fields that are better suited for wheat than other fields and some seasons conditions are such that he cannot plant these better fields to wheat, and perhaps the next year the opposite is true.

Most farmers will always try to produce enough wheat to meet their marketing quota so he might have more produced than what his quota is and if so it would constitute a reserve supply. This reserve supply would be a wonderful thing in case of famine or war but would not be great enough to depress the market, the same as the surplus has done since 1958 harvest and would not cost the Government one cent for storage.

A support price and a loan could be retained from the present acreage allotment plan.

The soil bank plan could be eliminated or not. Personally I would eliminate it because it is costing a lot of money, is no good to the better class of farmers because few of them put good land in the soil bank and is allowing weeds and quack grass, etc. to take over much of our land.

The person that puts the land in the soil bank mostly is someone that owns some land and has an outside job and does little or no farming. With his land in the soil bank he draws enough to pay his taxes and his neighbors all get free weed seed. Most of this land will be so thoroughly overrun with quack grass in 5 years that it will cost as much to get rid of the quack grass as the owner received in soil bank payments so the owner has not benefited, although his taxes helped to make all the soil bank payments.

Millions of dollars could be saved through curtailment of the expenses in county A.S.C. offices.

Under the present plan fields have to be ground measured, farm maps made by township reporters, acreage determined by aerial photographs, etc. If you wish to determine this cost you have only to contact the A.S.C. office in your county, and also contact some of the fieldmen in each township. I guarantee you will be surprised, if you contact 2 or 3 of these township fieldmen and find out what their work is and what the costs are. I believe you will find the manager of the county A.S.C. office draws $5,400 per year. (The one in our county does.) The supervisors, the office staff, and the township fieldmen about $15.00 per 8 hour day. Please let me hear from you.

Why Minnesota Opposes a Sales Tax

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the very fine editorial appearing in the weekly newspaper, Circulating Pines, published in Circle Pines, Minn., a town in my congressional district, and which services northwest Ramsey County and southeast Anoka County.

This editorial gives constructive arguments against a sales tax for the fair State of Minnesota and is well worth the attention of my colleagues.

The editorial follows:

WHY WE OPPOSE A SALES TAX

All of the high powered propaganda for the sales tax is being released upon the citizens of Minnesota through the big cities daily and conservative weekly newspapers of Minnesota. It reminds us so much of the "slick" campaign in Illinois waged for this same tax. Then, we were in the midst of the great depression of the 1930's. Then, the tax was to be used only to provide funds for the relief of the needy. Then, it provided for the exemption of food, clothing and basic necessities and the rate was only 1 percent. But once the principle of a sales tax was accepted, the exemptions vanished, the rate rose to 3 percent, and the purpose for which the tax was collected was changed.

The same thing will happen in Minnesota. The credits that are being proposed, the exemptions that are suggested, be they food, clothing, feed, seed and fertilizer or whatever you choose, the lure of eliminating personal property taxes are all offered as sugar coating for a bad pill—the sales tax.

The sales tax is bad because it is a tax proposed by the greedy at the expense of the needy. Let's take a couple of examples to show what we mean. Studies have shown that a family of four having an income of $3,000 spends 82 percent of their income on sales taxable items. Their tax bill would be $73.80 or almost 2½ percent of their income in a state with 3 percent sales tax. The same study showed that a family of four with an income of $15,000 would pay only $171 in sales tax or a little more than 1 percent of their income. This family spends only 38 percent of its income on sales taxable items. But the percentage paid in taxes is just the opposite of the established principle under income tax—from each according to his ability to pay.

The sales tax is sneaky. It deprives you of a penny at a time without ever giving an accounting of the total amount paid. With real estate, personal property or income taxes you see in black and white what your total tax bill amounts to. And if you don't like it as a free American you can start to do something about it. And that's what makes for a healthy democracy.

The sales tax is bad because it is shifting to the individual the burden of taxes now being carried by businesses and corporations. Why should businesses want exemption from personal property taxes since we all include the tax as a cost of doing business.

But reduction or elimination of the personal property tax is only bait being used by the proponents of the sales tax. Two years ago Governor Freeman proposed elimination of the personal property tax for Minnesota firms doing business out of State in competition with corporations from other States who paid no personal property tax. This proposal was not passed by the conservative senate.

The argument is offered against withholding the income tax that it makes every businessman a tax collector. The sales tax makes every businessman a tax collector on every business transaction.

No matter how we analyze the sales tax we always come up with the same answer—the sales tax is unfair, expensive to the family of small or moderate income, a windfall for the big corporation, and a nuisance to the small businessman and Mr. Average Citizen of Minnesota. We are against the sales tax.

Reds Now Travel on Their Subversive Errands—by Supreme Court Decree

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the April 4 issue of the Saturday Evening Post:

REDS NOW TRAVEL ON THEIR SUBVERSIVE ERRANDS—BY SUPREME COURT DECREE

During the convention of the Communist Party of the Soviet Union in February, Dictator Khrushchev flung insults and threats at the United States. Marshal Malinovsky, the War Minister, also threatened the United States, bragging that the Kremlin's missiles can strike precisely any point in this country.

At that same convention in Moscow, was an American citizen who himself made a lying, anti-American speech. He was James E. Jackson, representing the Communist Party of the United States.

How did Jackson get there? He got there openly and legally. And so did other U.S. Communist leaders who went to Moscow at the same time. These characters were present because the Supreme Court ruled last June that the Secretary of State had no right to withhold passports from members of the Communist Party.

Jackson had been convicted by a jury in a Federal court as a conspirator against the United States. But last August the court of appeals reversed the conviction, on the ground that the Supreme Court in a similar case had freed several convicted California Red leaders. Thus Jackson was saved from prison.

Meanwhile, the Supreme Court had issued its decision that Communists must not be denied passports. President Eisenhower quickly sent a special message to Congress, urging legislation authorizing the Secretary of State to withhold passports from supporters of communism. The bill was passed in the House, but when it came to the Senate it got tied up in the jam of legislation just before adjournment. So the Communist Party was free to send Jackson to represent it at the convention of the Soviet Communist Party.

Also present in Moscow was the best-known member of the Communist Party U.S.A., Paul Robeson. He, too, had received a passport after the Supreme Court decision. And who should show up in Moscow, almost immediately after Jackson, but Harry Bridges, president of the Communist-controlled International Longshoremen's and Warehousemen's Union? Years ago a split decision of the Supreme Court saved this Australian-born citizen from deportation.

A few days earlier, Khrushchev received Dr. W. E. B. Du Bois, 91-year-old scholar, former professor and intellectual leader of the pro-Kremlin forces among Negroes in the United States. Both Du Bois and his wife were identified long ago as members of the Communist Party. Although not a member now, he makes no secret of his devotion to the Soviet regime. For years his efforts to get a passport failed. Then came the Supreme Court decision—and Du Bois was free to go to Moscow. From Moscow, Du Bois and his wife flew to Peking, defying the State Department regulation that U.S. passports are not valid for travel to Red China.

Another U.S. citizen in Moscow was George Morris, labor editor of the Communist Party's misnamed paper. The Worker, and member of the Communist Party's Labor Commission. After months of delay, the State Department had unwillingly given him a passport.

Meanwhile, Dr. Alpheus Hunton, another identified Communist Party member, had gone to Africa. Hunton used to be director of the Council on African Affairs, which Attorney General Brownell called a Communist front.

The State Department has been forced to grant passports to scores of important Communists and fellow-travelers. The Department even felt obliged to give passports to a precious pair one of whom on a previous trip abroad made speeches charging the United States with germ warfare. Who can check on what harm such people do to the United States abroad? Congress should adopt the bill which President Eisenhower urged last summer, unmistakably authorizing the State Department to deny passports to Communists and their willing instruments, and to cancel every passport now in such hands.

Resolution Passed by New Jersey General Assembly

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. RODINO. Mr. Speaker, I am pleased to include herein the following resolution which was sponsored by my good friends from the New Jersey General Assembly, William V. Musto and Frederick H. Hauser. The resolution which was adopted March 23, 1959, points up the need for consideration of the problem of immigration in order to bring about the reunification of families. My bill, H.R. 4404, is aimed in that direction. I hope that the Congress will soon take action in this area.

AN ASSEMBLY RESOLUTION MEMORIALIZING THE MEMBERS OF CONGRESS ELECTED FROM NEW JERSEY TO SEEK LEGISLATION TO ALLEVIATE AN IMMIGRATION PROBLEM

Whereas there are many Americans who have filed petitions with the immigration authorities of the United States for the entry of their sons, daughters, brothers, and sisters, which petitions are classified in the fourth preference quota of the Immigration and Nationality Act; and

Whereas of the four preference quotas established by the Federal Immigration and Nationality Act, the first, second, and third quotas are allotted 100 percent and thereby exhaust total annual entry quotas; and

Whereas as a result, those persons who fall within the fourth preference section must depend for entry into this country upon deficiencies in the first three quotas; and

Whereas there is frustration and despair resulting from the law that gives hope to Americans by permitting them to file petitions, getting them approved, and then compelling them to wait for their kin who may never be permitted to come; and

Whereas thousands of discontented people abroad, whose hopes are first raised and then dashed, certainly cannot believe in the good will we try to engender through our foreign policy, and thus become easy prey to the propaganda of unfriendly nations; and

Whereas in the past Congress has recognized and alleviated a similar problem through Public Law 85-316, which includes a provision for reuniting spouses and minor children of aliens legally residing in this country whose petitions were approved prior to July 1, 1957: Now, therefore, be it

Resolved by the General Assembly of the State of New Jersey, That:

1. The members of the General Assembly of the State of New Jersey respectfully request the Senate and House of Representatives of the United States to amend the provisions of Public Law 85-316 to include cases which fall within the fourth preference quota, in order to provide for entry into the United States of the many thousands, petitions for whom have piled up in a backlog in prior years.

2. In order not to create another problem of separated families, those approved applicants who are married and have families be permitted to bring them with them.

3. An authenticated copy of this resolution be forwarded by the clerk of the General Assembly to each Congressman and U.S. Senator elected from the State of New Jersey.

Statement by Msgr. Bela Varga, Chairman of the Hungarian Committee, in Connection With the Forthcoming International Negotiations on Berlin and the Related Problems

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Msgr. Bela Varga, chairman of the Hungarian Committee and former President of the Hungarian Parliament—1946-47—in connection with the forthcoming international negotiations on Berlin and the related problems.

This statement was submitted to me by Mr. Ferenc Nagy, former Prime Minister of Hungary in 1946 and 1947:

STATEMENT BY MSGR. BELA VARGA, CHAIRMAN OF THE HUNGARIAN COMMITTEE, IN CONNECTION WITH THE FORTHCOMING INTERNATIONAL NEGOTIATIONS ON BERLIN AND THE RELATED PROBLEMS

As the chairman of the Hungarian Committee, a national representation for a free Hungary, which includes postwar democratic politicians and the representatives of the 1956 revolution and freedom fight, I am deeply concerned about the proposal of the Soviet Prime Minister, N. Khrushchev, as conveyed by Prime Minister Harold Macmillan, that he will agree to a new arrangement for Berlin if he can extract some concession bolstering the position of the East European satellites.

Furthermore, I am deeply disturbed by the recent offer of Khrushchev to sign a nonaggression pact between the NATO and Warsaw Pact powers.

What would this mean?

A new arrangement for Berlin at the cost of the freedom of the East European peoples? Certainly, it would be the dirtiest deal in history abandoning a hundred million people, among them the brave Hungarians who fought so gallantly for their freedom and independence.

The Hungarian Revolution proved that the Soviets could not consolidate their hold and the Communist rule over our country without the deployment of Soviet troops. Since their brutal crushing of the freedom fight all the combined Soviet and Communist puppet efforts have failed to win over the Hungarian people to their side. Hungary still remains an unsolved problem for Moscow.

Mixing generosity and terror, the Soviets offered financial and technical aid after the revolution. Soviet political and cultural delegations continuously visit Hungary to indoctrinate the people. Prime Minister Khrushchev himself agitated among the Hungarians in 1958; but parallel to this wooing, special courts were established for the punishment of those who dared to revolt, meting out death sentences by the hundreds to be carried out immediately, sentencing thousands of brave freedom fighters who raised their voices and arms in defense of their country's freedom and independence.

We are reliably informed that terror is still the order of the day in Hungary. There is presently a centrally organized and directed campaign to undermine religion and to promote atheism. All Roman Catholic bishops and the theological seminaries of all denominations are under police surveillance and many priests are being imprisoned in order to break the spiritual resistance of the nation. The Communists are working very hard to eliminate the resistance of one of the most important segments of Hungarian society—the peasants. A shrewd collectivization campaign, applying the old Stalinist tricks and pressures, is in progress to force into kolkhozes the independently farming peasantry who until recently owned 80 percent of all arable land. The third organized Communist campaign is against the intellectuals whose resistance is still very strong and who were influential in igniting the 1956 Revolution.

Against this background it would be tragic and immoral to abandon Hungary in return for a new arrangement in Berlin offered by Mr. Khrushchev. Considering all the aspects of European security and their implementation, the Hungarian Committee believes that any non-aggression pact between the NATO and Warsaw Pact Powers would result in accepting the continuation of Communist oppression in East Europe.

The Hungarian Committee, therefore, solemnly protests against such proposals and plans and is of the opinion that there must be a clear declaration of support of political and human rights guaranteed to Hungary in the Yalta and Potsdam agreements, in the peace treaty with Hungary and in the obligations imposed upon the Soviet Union by the United Nations General Assembly in 18 resolutions accepted by the overwhelming majority of the member nations.

During the present session of NATO foreign ministers the Hungarian Committee suggested in a memorandum addressed to the participating governments the consideration of a proposal for the international negotiations calling upon the Soviet Union to honor her obligations, namely: withdraw the Soviet forces from Hungary, allow the Hungarian people to choose freely their government and to decide the internal and external political course they wish to follow.

Want Economy

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the text of the following letter written by Harold D. Draper, a prominent businessman in Saginaw, Mich., which appeared in "The People's Forum" of the Saginaw News. I have received many letters in support of the views as expressed in Mr. Draper's letter which clearly indicates to me the people's demand for economy in Government. I, therefore, felt this letter should be made available to all members of the House.

THE PEOPLE'S FORUM—WANT ECONOMY
(By Harold D. Draper)

Our country is spending itself bankrupt. Inflation is pauperizing millions of people with fixed incomes and pensions.

The rest of the world is looking questioningly at the soundness of the dollar and our international credit. Our national fiscal policies are unsound and bid fair to get worse.

Great segments of our business, agricultural and cooperative enterprises are being supported by subsidies or tax exemptions. The necessary taxes to support this program are paid by the rest of us.

The outstanding and most flagrant example of this socialistic program is the agricultural subsidy, which costs over $7 billion per year.

Every employed person in the country pays over $120 per year in taxes to pay for it, plus higher prices for the agricultural products bought for food.

The most vicious part of this subsidy is that most of it goes to great corporate type farm enterprises in the wheat raising group and not to the supposedly helpless small farmer.

Getting an automatic profit through price protection and a guaranteed market is a very big and secure business.

This subsidy, the largest by far of all the special favors granted by the Government to powerful minority groups is greater than the interest on our debt or veterans benefits.

Eliminate it and at once our budget is balanced and our national economy and credit are secure.

The reverse of this situation exists in the motor industry. This gigantic business employs one in seven people in the United States, pays fantastic amounts in income and excise taxes and all of the welfare taxes, yet, this industry is penalized by a 10 percent excise tax on all of its cars and trucks and 8 percent on all the replacement parts.

The industry that contributes more than the farm economy and supports more people than the farm economy is penalized for its ability to take care of itself.

Five hundreds dealers went out of business every month in 1958. That's very bad, but they couldn't make a living, so very likely 20,000 employees were thrown out of work each month. A total of 6,000 dealers and 240,000 employees are looking for work. That too, is bad, but it is part of the chance you take in this business. In addition, 500,000 employees in automotive production are out of work.

We do not want subsidies and we do want to pay our share of taxes for every necessary governmental expense, including defense, no matter how costly, but we do not want to pay for subsidizing farmers, oil people and tax-free co-ops and many others, and especially we do object to do-gooding projects all over the world and at home run by wastrel bureaucrats.

We want our Government to economize; stop spending money like it was going out of style and live within our national income, just like we as individuals must do. If necessary, for a year, in order to get solvent, we should be willing to pay higher taxes.

I, for one, am tired of all these pigs at the public trough, getting something for nothing. It's about time the welfare of our Nation came first.

If you believe with me, write to your Congressman and Senators—right now—today—and express your views. If you don't know who they are, call your postmaster, he will know.

Get everybody to write—Democrat or Republican—it doesn't matter—this is a problem that must be handled by thinking Americans before Congress spends us into bankruptcy.

If you do or do not agree with me—write me too.

The Hope for Housing

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. MOORHEAD. Mr. Speaker, soon on the floor we will be debating the omnibus housing bill, a piece of legislation with great impact upon those expanding urban areas in which 70 percent of our national population now lives.

It was a most fortunate coincidence, therefore, that the April issue of the Progressive magazine published an article by Senator JOSEPH S. CLARK, of Pennsylvania, entitled "The Hope for Housing."

If we were to search both of these great legislative bodies, it would be difficult to find a Member with greater interest in and knowledge of the problems of our urban areas, particularly in the field of housing, than Senator CLARK. He began this interest as mayor of Philadelphia and continues it as the senior Senator from Pennsylvania.

In his article, Senator CLARK tells precisely why we have not carried out the adequate housing goals enunciated as a matter of national policy in 1949, and lists the steps which must be taken if housing and urban renewal are to proceed in a manner befitting the future of our great cities.

Therefore, Mr. Speaker, pursuant to permission granted, I insert in the Appendix of the RECORD this well-conceived and effectively executed article:

THE HOPE FOR HOUSING
(By Senator JOSEPH S. CLARK)

A decade ago, in the Housing Act of 1949, the Congress wrote a declaration of national housing policy which said, in part: "The general welfare and security of the Nation * * * require * * * the realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family." Ten years later this statement could hardly be improved. The only trouble is that, as an expression of our national policy today, it is a dead letter.

What the 1949 language suggests is a simple and logical procedure. First count our families. Then project population growth. Then count the number of decent homes in good environments. Then subtract. The remainder is the number of homes needed. With that as a goal, adopt a program for reaching it. Simple and logical, yes; but perhaps too much so—because that is not the way our national housing policy is made today.

If we were to follow through on this arithmetic, this is what we would find:

The number of substandard housing units, according to the Census Bureau's 1956 inventory of housing, is 13 million—24 percent of a total inventory of 55 million. Of the remaining 76 percent, not all are "in a suitable living environment"; but for purposes of our calculation that factor can perhaps be disregarded. We know, then, our backlog of need.

Meanwhile, our population is increasing. We need close to 1 million additional homes a year just to take care of new families. Approximately 300,000 more are required annually to make up for houses which are burned or bulldozed to make way for new highways or cleared for urban renewal or otherwise lost to the housing inventory.

The net of all this is that we need 1,300,000 homes a year just to hold our own. To make any substantial dent in our backlog of 13 million substandard homes would require a building rate in the neighborhood of 2 million new homes a year.

Figures such as these have never been reached in the history of American homebuilding. Only twice has the rockbottom replacement level of 1,300,000 new units been achieved—in 1950 and 1955. Last year, with the stimulus of the antirecession Emergency Housing Act, 1,200,000 units were built. The rest of the time it has been a struggle to stay above 1 million.

No wonder that mayor after mayor who has appeared before the Senate Housing Subcommittee has testified that we are not gaining ground in our fight against slums; we are losing ground.

Are those responsible for executing our national housing policies looking hard at these figures? Are they mulling them over and devising programs which will raise the production of housing in America from 1,200,000 units up toward 2,000,000?

Not at all. They do not even think in such terms. To put it bluntly, whereas the 1949 law talked of homes for families, what is talked of these days is the budget, the preservation of the status quo (which is usually referred to as free enterprise despite the massive governmental intervention through the Federal Housing Administration and the Federal National Mortgage Association), and the limits of what is acceptable to the housing industry—especially that part of the industry which lends on housing. The people who live in housing are incidental.

If we ask, what are the needs, who are the families who are ill-housed, the answer comes: the low and lower-middle income groups, and most of all our minority group families. If we start from there, then we must devise government programs which, using the channels of private enterprise wherever possible, would bring decent housing within the reach of the families who need it.

Because need has not been our guiding consideration, our governmental housing programs have become badly skewed in favor of the upper-income groups. On the one hand, the FHA-FNMA complex, which insures mortgages on suburban homes for those who can afford them, is flourishing. At the other end of the scale, the public housing program, which serves the lowest income groups, has slowed to a trickle. And there is no effective program for the families in between.

I belong to an old-fashioned school of thought which holds that the Government should concern itself first of all with those least able to help themselves. I have no objection to helping the well off through FHA and FNMA, so long as we do not ignore the housing needs of those who are less well off. But in the past 6 years, this conception of Government has been inverted. In the case of housing, the administration's bill this year would have completed the inversion: it proposed to remove the ceiling on the volume of loans which FHA might guarantee, and to push the services of FHA even higher into the upper-bracket income groups by raising the individual mortgage limit to $25,000. At the same time, it proposed to administer the final blow to the one program which builds houses for low-income families—the public housing program.

The Senate, happily, paid little attention to the administration bill. We wrote our own bill, which gives public housing another 1-year lease on life. This is a degree of progress. But without Presidential leadership, it is at least unlikely—and probably impossible—for the Congress to go much further in bringing balance to our present housing programs so that they serve all income groups equally.

If we could achieve such balance, and thus broaden the housing market, we could approach the 2 million-a-year rate of building that is called for by the measurement of need. Otherwise, we will live with our slums as far ahead as population data can be projected.

Suppose we approach the problem from another viewpoint: the future of the central city.

The slum problem of the cities is broader than just the problem of slum housing. In many cities, the most blighted areas are those with dilapidated commercial and industrial structures which stand on valuable land and drag down the economy of the entire area. As blight—both residential and commercial—spreads, the tax base of the central city declines in relation to the need for services. Then the services themselves decline. Wealth and leadership flee to the suburbs. A vicious circle is set in motion, and the very life of the central city is threatened.

Obviously, in the national interest, our central cities cannot be abandoned to decay. Even if we want to, it is physically impossible for us all to escape to the suburbs and take our offices and businesses with us. The balance wheel of the urban economy and its social and cultural life will always be the central city. A rational pattern of metropolitan growth is simply impossible without assigning the highest priority to the development of the core city, commercially, industrially, and culturally as well as residentially.

Fortunately, the ingenuity of legislators has devised the means to make that possible. That means is urban renewal, and almost 400 cities in 44 States and Territories now have projects underway. These cities are of all sizes; one-third have a population under 25,000.

Urban renewal is tedious and complex in execution, but its principle is simple. Blighted areas are replanned to provide for better uses and a higher tax base. The city buys the land, clears it of structures which cannot be restored, and sells it to developers. The difference between the cost to the city and the usually lower sale price is financed by Federal and local subsidies, the Federal Government paying two-thirds. If no Federal subsidy is needed, as in the case of Pittsburgh's Golden Triangle, there is no need for Federal participation. But there are few Golden Triangles.

An important aspect of the program is the rehabilitation of existing structures—in so-called gray areas—that are on their way to becoming unsafe or unsanitary and which can be saved as decent housing by the expenditure of a little private money. Here, the Federal assistance is mainly to help defray the costs of public improvements that serve the renewal area.

Urban renewal works. Blight has been cleared. New buildings have risen. Private investment has taken place which could have been stimulated in no other way. Urban tax bases have been improved. For the first time cities can take hope that blight can be conquered, slums can be cleared. The light at the end of the tunnel is faintly visible at last.

But, to reverse a metaphor, the silver lining seems to have its cloud. That cloud is housing. In itself, clearing of slums does not build houses for the slum dwellers. In itself, urban renewal cannot solve the housing problem. In some respects, indeed, it intensifies the problem. The urban renewal law contains, quite properly, a provision that a project may not proceed unless decent, safe, and sanitary housing is available for the persons displaced.

What happens in the case of a typical city is this:

The urban renewal planners, initially, carve out a relatively modest project as a community experiment. The existing vacancy rate in private housing, and the turnover in public housing, are sufficient to take care of the families displaced. The project proceeds. Presently, cleared land replaces slum, and, shortly afterward, bright new buildings rise.

The impact on the community is immense. The pilot project has served its purpose. It has fired the imagination of the civic leaders. It has united conservatives and liberals, Republicans and Democrats, management and labor, behind the inspiring goals of rebuilding their community. These leaders, in turn, spur the planners to lay out a truly ambitious program. Together, they map boundaries for new projects, they count the families to be displaced, and then run abruptly into a cold stone wall: where do they put the families?

Sometimes a city will not encounter the wall on its second project, or even its third, but the logic of the statistics is inexorable. Sooner or later, before they have bitten very deeply into the slum problem, most cities will find that urban renewal itself will be blocked unless low-income housing is provided.

The figures show that half of the families displaced by urban renewal are of the lowest income level—the lowest sixth, who are within the income limits of public housing. Of the remaining half, a large proportion are just above the public housing level. Some will disappear during the relocation process and leave no trace. Some can be absorbed by the other slums in the community. A few will get trickle-down housing from persons moving to the suburbs. But beyond that, the only feasible way to bring into balance the need and the availability of low-rent housing is to achieve a major acceleration of the public housing program.

And yet the Eisenhower administration has chosen this particular moment to recommend that what remains of the present de-vitalized public housing program be laid to rest.

Perhaps there is more consistency to the administration's program, however, than meets the eye. The President also has proposed that the urban renewal program itself be held back. He asked $250 million a year in Federal funds to cover applications beginning at the rate of $500 million and going up. He also recommended that the Federal share be reduced gradually from two-thirds to one-half.

If we have less urban renewal, of course, we will need less public housing. We will, instead, retain our slums and congratulate ourselves upon the "soundness" of our fiscal policies.

It is ironic to recall, once more, that the authors of the Housing Act of 1949 were Senators Wagner, Ellender, and Taft—and that the last of these is none other than the man who lost the Republican nomination in 1952 because he was considered too conservative.

Where do we go from here?

I suppose we must start from the assumption that we can't go anywhere much until 1961. Even the modest bill the Senate has passed is being greeted with rumblings about a veto. Clearly, any measure truly geared to eradicating slums and rehousing slum families would never get across the White House threshold. But what should be the elements of a housing program for 1961? I believe it should have four:

1. Upper-income housing. For families above the median in income, the present FHA–VA–FNMA programs are relatively adequate. FHA has done far better, however, in promoting suburban sales housing than urban rental housing. Some of the improvements needed can be accomplished, I am sure, through administrative regulations; beyond that, legislation may be useful. A constructive proposal has been presented to establish a central mortgage facility to stabilize the flow of mortgage funds. Other recommended measures would extend the insurance principle to some loans now made on conventional terms and facilitate the trading of old houses for new. All these should be considered.

The various branches of the housing industry will present, as they have each year, proposals to bring the Government further into the job of assisting building for the upper and upper-middle income groups. These should be sympathetically considered, on the principle that whatever accelerates the building of homes for any income group increases the total housing inventory. But this is the easier part of the job of legislators; the hard part is devising measures that will work for the lower-income groups for whom the housing industry as now organized does not speak.

2. Middle-income housing: For housing purposes, middle-income (or moderate-income) families are defined as those whose incomes are too high to permit them to be admitted to public housing projects, and too low to be able to afford new privately built housing—the exact income limits varying from one market to another, as both incomes and housing costs vary. This gap between the top of public housing and the bottom of the private market was not an unknown factor at the time of the passage of the Housing Act of 1949. But the problem was held in abeyance until 1950, when a solution in the form of long-term loans, with interest rates set at the cost of money to the Government, came within five votes of adoption by the Senate. The bill has been introduced in subsequent years, with modifications, by former Senator Herbert Lehman and by myself, but has not been brought to a vote on the Senate floor. The problem, however, is still with us—increasingly so as urban renewal proceeds and the Federal highway program bulldozes its way into the core cities, displacing families by the thousands.

3. Low-income housing: In 1949, Senator Taft and his colleagues estimated that one-tenth of the need for new housing should be met each year through public housing. Accordingly, they authorized 135,000 units a year. Given the current need projection

this rate would be raised to 200,000. Not even the 135,000 has been approached, but there is no reason to believe the need is any less than estimated a decade ago.

The difficulty with public housing appears to be twofold: apathy or antipathy in the cities and gradual strangulation by hostile Federal administration. Both can be cured, to a large extent, by certain changes in the program: decentralization of management decisions, the use of existing housing and scattered units in lieu of large institutionalized projects, and the raising of income limits so that public housing is not confined exclusively to problem families. Important steps in this direction are written into the housing bill approved this year by the Senate.

4. Urban renewal. The urban renewal program also needs both improvement and expansion. To keep up with the current rate of applications would require an annual Federal authorization of $500 million. Personally, I would prefer $600 million, to allow room for the participation of additional cities and the acceleration of the program, and to authorize this rate for a long-term period, so that cities can plan ahead—say, 10 years. The Senate bill represents a good compromise, however, for this year. It allows an authorization of up to $500 million a year for slightly more than 4 years, if applications are filed at that rate.

Many improvements are needed to provide flexibility, to cut the long period between the conception of a project and its execution, and to adapt the program to industrial and commercial as well as residential areas—changes too technical to be enumerated here. Again, the Senate bill points the way forward, with further changes in order from year to year as experience accumulates.

The case for urban America is briefly summarized: nearly 70 percent of our people live in metropolitan areas, and the proportion continues to grow. As an urban nation, our national ability to govern ourselves and solve our problems is being tested in the cities. Many basic tools are at hand. Others can readily be fashioned. National purpose and will are also present. The need remains only for enlightened and courageous leadership.

Ruling From Olympus

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, March 13, 1959

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent I include the following editorial from the Memphis Commercial Appeal. The refusal of the Supreme Court to make available its public pay records will be another indication in the minds of the American public that the Court considers itself to have very little accountability to the American people.

RULING FROM OLYMPUS

It came as hardly a surprise that Chief Justice Earl Warren would refuse to permit examination of the Supreme Court's payrolls. The fact that taxpayers' money is involved and the documents should be properly considered public records seems not to impress the imperious Chief Justice.

In view of the casual disregard for the rights of State governments or the inarticulate majority, as frequently demonstrated by the Court, it was foolhardy to hope it might let us know where the money was going. What cheek. To think citizens and taxpayers would have the temerity to ask.

Considering the lavish hand with which other branches of Government are greeted by the Congress, the money involved is not great—$1,703,335 for the fiscal year ending June 30. But for the Court, haven of equity and defender of the right of people to know, to assume this lofty attitude must certainly strengthen the determination of the legislative branch to bring the judicial demigods down to earth.

The Story of Danville, Ill.

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. ARENDS. Mr. Speaker, the Congress and the country should know the inspiring story of the city of Danville, Vermilion County, Ill., which I am privileged to represent. It is a story of how a resourceful people who, in spite of all economic adversities, built and maintained a thriving community. I speak of this with pride beyond measure.

In truth, the story of the city of Danville, Ill., is the story of America and what has made our country great and strong. It is a factual account of what individual community initiative and ingenuity, self-reliance, and determination can accomplish.

In the course of its history, Danville at one time was a depressed area. It suffered, as all communities do from time to time, to national economic changes, resulting from the development of new products, new manufacturing techniques, labor cost differentials, transportation facilities and costs, and a number of such economic factors.

There were occasions in the history of Danville that doubtless many thought at the time it would become a ghost town. But it did not. Its people decided to make it a thriving city with a prospect for continuing growth. They pooled their ideas. They pooled their resources. They devised plans and put those plans into effect.

Mr. Speaker, it is well that the Congress and the country know the history of the city of Danville, particularly at this time when so many communities are looking to the Federal Government to aid them in their present difficulties. The history of the city of Danville says in words much better than I can employ the true meaning of local responsibility, self-reliance, initiative and ingenuity. It emphasizes what can be accomplished by following the true American traditions. They did not look to the Federal Government to solve their problems. They did it themselves.

I am inserting in the RECORD, as a part of my remarks, a memorandum, based on fact and not fiction, based on truth and not theory, of what one city itself accomplished on its own, without relying upon Federal aid and dictation.

This memorandum presents the story of a city that must be told over and over again—and there are doubtless other such communities who have and continue to do likewise but, unfortunately, they are becoming fewer and fewer. As we consider proposed legislation to establish a Federal agency to aid depressed areas bear in mind what Danville did for itself. If you take the proposed course of extensive Federal aid, you say to communities like Danville: Who exercise your own ingenuity, why risk your financial resources, why spend your time and effort—the Federal Government will do it for you? When that day comes, when the Federal Government attempts to do everything for us, then our American system of government is no more.

The following story of Danville was prepared by the local chamber of commerce, a truly progressive and aggressive organization:

THE STORY OF DANVILLE, ILL.

"Cities do not grow and prosper by chance. They are the result of the vision, the sacrifices, and efforts, of its citizens."

Many cities have progressed through an economic crisis, and have been left prostrate for all time.

Danville has experienced such a crisis, but fortunately for us survived.

Too few of our citizens realize that had our city been left to take its natural course, their homes, their fortunes, and all they treasure in Danville could have been wiped out of existence.

This is not a story of the Babylonian ages, nor of Colonial times, but one as modern as the last 20-odd years.

Mr. Walter Bluecher, executive director of the American Society of Planning Officials, in reviewing our transition, said, "This in Danville is not economic growth, this is industrial revolution."

This dramatic period in Danville's life is the story of our community's passage from one that grew and prospered by the exploitation of a nonreplaceable natural resource—coal.

It is the story of how coal came to dominate our economy, and then how, in just 20 years, it declined to such an extent as to become a minor factor in our community.

If our citizens would pause now, and look about them, and try to visualize our present coal mining operations, as our major employer of labor they would then have some idea of our possible economic paralysis and how our city, today, could be suffering economic chaos.

This history of what is known in coal parlance as the Danville district covers an area embracing our own Vermilion County alone.

It is the story of our major nonreplaceable natural resource, coal, dominating our community for a number of years, and then, its decline into a minor economic factor.

Those hardy backwoodsmen of America's pioneer era, who made the hazardous trek to and from the banks of the Vermilion River, for their small, but precious supply of salt, did not realize that the troublesome earth fires that resulted from the wood fires, kindled beneath the iron kettles of boiling salt water, would some day become the force that would foster the growth of a busy metropolis on the river's banks.

The rise of coal mining, as our major industrial employer, began in the 1850's. Then it was that coal was first mined locally, for local home use.

The entry of the railroads into the community gave added impetus to the then simple mining activity.

In 1866 several slope mines were opened in the Grape Creek area, followed in 1870 with the sinking of the first shaft mine in Illinois in what is now known as the Vermilion Heights area.

This new force in our community life grew rapidly.

It became not only the prime factor for our own growth and prosperity, but a factor also for the State of Illinois; in 1897 and again 1899, Vermilion County was the leading coal producing county in Illinois.

At the turn of the century, with a county population of just over 65,000 persons, there were approximately 3,000 persons engaged in the mining industry, or one in every 21 persons.

In succeeding years, even with the introduction of new mining techniques and mechanization, our dependence upon mining for employment increased, and the impact of the increase, and the decrease, of mining employment, is reflected in our population figures.

From 65,000 in 1900, our county population increased to 78,000 in 1910 and to 86,000 in 1920 but only increased about 900 persons from 1920 to 1950.

Danville, itself, grew from 16,354 in 1900 to 27,871 in 1910, and to 33,766 in 1920; and to 36,765 in 1930, but it increased by only 154 from 1930 to 1940, and only by 945 from 1940 to 1950, or only 55 persons per year increase for 20 years.

The causes of our small increases in population growth from 1930 to 1940 and again from 1940 to 1950 which so concerned and disappointed our citizens, is to be found in the period we are to review. People do not long remain in a community of rapidly decreasing employment.

In the 1920's the peak of mine employment was reached.

In 1926, out of a county population of 86,000 persons, 4,297 were employed in mining. Approximately 1 family in every 6 was dependent upon coal for existence.

Commencing in 1927, certain economic factors entered into the economy of producing coal in the Danville district that initiated the decline in mining.

The number of shipping mines decreased from a high of 9 mines in the 1920's to 1 mine in 1951, and a peak of employment of 4,297 eventually dwindled in 1951 to a mere 451 miners.

	Miners employed	Shipping mines in operation
1926	4,297	9
1929	3,286	8
1934	3,097	6
1939	2,558	6
1944	1,735	5
1951	451	1

In addition to the reduction in the number of mines and miners, the average days that the mines operated each year further decreased mine payrolls.

	Days
1920–1925	183
1925–1930	170
1930–1935	136
1935–1940	150
1945	115

With the final closing of the Bunsenville mine in 1947, our county ceased to be a major producer of coal.

In 1918, almost 4 million tons were mined in the county—largely hand mined.

In 1947, we mined less than 500,000 tons even with the most advanced mechanization.

Is it any wonder our community's population remained static?

Had matters been left to take their course, Danville would today be just another ghost of its former self, as are a number of other cities in southern Illinois.

Here was a community of some 40,000 people, its basic industry all but disappearing in 20 short years.

The black gold that was the foundation of Danville's growth and prosperity declined into a minor role.

Danville, known far and wide as "the heart of a large coal mining area" lost the major product that was the source of its national fame, and the fortunes of its people.

As if this, the loss of our major community support, were not enough, an additional blow was to simultaneously be struck at our economic foundation.

Due to the abuandance of coal, and the additional asset of local shale adaptable to brick manufacturing, it was only natural that brick making should become the second major factor in our community.

The coming of the automobile brought the new use of bricks for pavements, and along with the demand for bricks in the building of the rapid growth of Chicago, Danville became one of the largest brick producing centers of the country.

Five brickyards were in production in 1926 and 1,007 persons were employed; but even this substantial source of employment was to face its crisis.

Concrete became the standard material for highway construction, and steel, concrete blocks, and reinforced concrete, supplanted many uses of brick.

In addition, the introduction of mechanical processes in brick production further lessened the needed manpower.

From a high employment of 1,007 persons in this field, brick production in two remaining plants in 1951 employed 220 persons; thus another set of uncontrollable economic factors wiped out another 800 opportunities for employment.

What tragic consequences could have resulted:

	1926	1951
Mine employment	4,297	451
Brick employment	1,007	220
Total employment in these two major fields	5,304	671

For our purposes, manufacturing industries are establishments that produce a product for distribution beyond our wholesale or retail area; and Danville in 1926 had 18 such industries, employing 1,938 persons.

Yes, Danville today could have been only a ghost of its former self, but, fortunately for us, it is not.

Though its major source of employment disappeared, it had one asset that was to sustain it. Had this been lacking, as it had in so many other cities, we would not today live in a city more flourishing than its former self.

Danville had a primary asset; and that was community leaders and a citizenry that would not admit economic defeat, who would not, as had citizens in so many other cities, give up in despair.

It was in 1928 that the first of a series of meetings was held to discuss the growing problem. Visits were made to study other cities. Consultations were held with experts in the field of industrial development. No government was asked for aid or succor. This was our own task to solve.

At the height of our crisis, Danville's leaders were pioneering in a new method of community development.

After much discussion and days, yes, weeks and months, of effort devoted by loyal citizens to solving our critical situation, the solution was presented.

At a meeting of the Board of Directors of the Danville Chamber of Commerce, held in October of 1929, a plan directed toward saving our community from economic chaos was adopted.

At that chamber of commerce board meeting, the formation of the Danville Plan, a new and unique method of securing new industries, was drafted.

The action of that chamber board of directors meeting was to proceed with formation of the Danville Industrial Foundation, succeeded later by New Industries, Inc., and they set up the machinery to raise the necessary funds.

Taking a lesson from our past history, the decision was made to secure a diversification of manufacturing establishments in order that a more healthy base for our community's future would be provided.

In addition, it has as its premise that success, and particularly rapid success, could best be accomplished by a concentrated effort to induce small industrial establishments to locate in Danville, and our people would provide the funds to construct the buildings.

Danville's citizens responded most heartily. Over $70,000 was subscribed to launch the new enterprise.

The soundness of this action is given adequate testimony, not only with the revolutionary success we have had in rebuilding our tottering economy, but in the numerous visits by committees from other cities to our chamber of commerce office for advice, and in the hundreds of requests received from other communities for details of our plan, also the scores of articles written about our success that have appeared in magazines, newspapers, and national periodicals.

What a remarkable story of transition has taken place before our very eyes.

Our steady, consistent progress has been so constant that many of our citizens are unaware of what has transpired about them.

From a community, largely sustained by the employment of over 5,000 persons in two basic industries that had been reduced to the employment of only 671 persons in 1951, we have risen into a modern industrial city with 48 manufacturing establishments employing close to 8,000 persons.

And diversification we have. Jelly candy and drag line buckets, bobby pins and lift trucks, photographs and automobile castings, dresses, jackets and fertilizers, electrical supplies, and buttermilk products, hoists and dog foods, a host of products flow to the four corners of the world.

In 1929, at the start of our plan, Danville had 14 plants employing 1,444 persons.

In the next 2 years, five new plants were added.

By 1935, we had 23 plants employing 2,384 persons.

As the years rolled on, its leaders and its citizens were to keep doggedly at their task of reconstruction, and the results exceeded their fondest expectations.

Manufacturing industries and employment in Danville

By 1940, 26 plants, 2,890 employees; 1945, 26 plants, 3,284 employees; 1950, 46 plants, 6,745 employees; 1951, 46 plants, 7,825 employees; 1953 (employment should find us close to the 9,000 employment figure in 48 plants).

The source of the employment of the more than 12,000 employees of our stores, shops, and offices, and the livelihood and prosperity of the doctor, the lawyer, the wholesaler, and the retailer, in a larger measure than ever before stems from the payrolls of these plants.

The basis of all human existence stems from farm income and manufacturing payrolls, and our growth in manufacturing payrolls is most startling.

Payrolls, manufacturing industries

1940	$3,222,000
1945	5,837,000
1950	20,730,000
1951	25,788,000

But it is difficult to perceive the tremendous strides we have made in industrial payrolls, due to our present inflated dollars.

We have always taken pride in the richness of our surrounding agricultural area, and it is in comparing the increase in our total county farm income, with our industrial payrolls, that a more vivid picture is to be seen.

	Total farm income of Vermilion County	Manufacturing industry payrolls of Danville
1940	$7,849,000	$3,222,000
1945	17,983,000	5,837,000
1950	25,340,000	25,788,000

An amazing picture. Our industrial payrolls have grown from less than 40 percent of our total county farm income until they now exceed that income.

Success. Victory.

Yes; a city has been saved.

But what a debt of gratitude is due the men and women responsible for this unprecedented drama.

And they gave not only of their time, but of their personal resources as well; for to them these funds of their fellow citizens became as a public trust.

The moneys of the foundation stockholders were to be expended solely for the purpose to which they were dedicated, the construction of the buildings that would bring about our new economic era, and that alone.

And other costs must and did come from their personal resources.

Fools, some men might call them. But the results?

Not one penny invested in buildings has been lost.

Not one stockholder's investment has been squandered.

By watchful guardianship of the trust, a dividend of 22 percent profit was paid to the original stockholders.

A triumph most unusual in any joint community enterprise.

What a glowing monument is ours to see and from which we prosper today. As a testimonial of the time, the effort, and the personal sacrifices of those men and women, we do not have the dust and rubble of a ghost city, but a virile, prosperous city, and this prosperity is our inheritance.

Let us then pay tribute to them, in the present, and in the years to come.

Let us not be laggard in our present, and in our future years, with our inherited prosperity, our fortunes, and our livelihoods.

Let us, like them, by our continued community efforts and sacrifices, strive to make Danville a better city in which to work, a better city in which to play, and a better city in which to live.

For then, we can take continued pride in our community, and contribute our share in assisting Danville on its march forward.

Statement of Jack T. Jennings

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD the statement of the Cooperative League of the United States of America in opposition to H.R. 1253 "and any other legislation which would permit retail price maintenance on consumer goods." The statement was presented by Mr. Jack T. Jennings, assistant director, before the House Interstate and Foreign Commerce Committee on Monday, March 23, 1959.

Mr. Jennings' statement is a very cogent presentation of a number of valid reasons why enactment of the fair trade legislation is not in the public interest and, on the contrary, indeed, is inimical both to the interests of consumers and to the interests of those who unwisely pushed this sort of legislation.

With the rarest exceptions all of the Nation's reputable and outstanding economists oppose this legislation. The Federal Trade Commission and the United States Attorney General have opposed this sort of measure time after time as being not in the public interest and as establishing an almost complete repeal of the several antitrust laws. I am in thorough accord with the remarks of The Cooperative League and other consumer groups who oppose this kind of pernicious legislation.

The statement follows:

STATEMENT OF JACK T. JENNINGS, ASSISTANT DIRECTOR, WASHINGTON OFFICE, COOPERATIVE LEAGUE OF THE UNITED STATES OF AMERICA, BEFORE THE HOUSE INTERSTATE AND FOREIGN COMMERCE COMMITTEE, MARCH 23, 1959

Mr. Chairman, the organization which I represent is by its nature interested in the legislation now before you. The Cooperative League of the United States of America is a national federation of consumer, service, and purchasing cooperatives. We include in our membership 13 million families who own and operate their own cooperative business enterprises: farm supplies, insurance, credit, medical care, electric power, consumer goods, housing and other services. The Cooperative League is the second largest economic organization in America measured in terms of family membership. We are pleased to have this opportunity to present our suggestions on this legislation to your committee.

We appear today in opposition to H.R. 1253 and any other legislation which would permit retail price maintenance on consumer goods. Our policy has always been for more strict enforcement of the antitrust laws and in opposition to any attempt to weaken them. We feel the so-called "Fair Trade" bill would permit unfair and unwarranted pricing practices and would seriously weaken the provisions of the Sherman Act and the Clayton Act.

Fair trade policy as embodied in this legislation is diametrically opposed by the antitrust laws developed over many years by Congress. These laws attempt to stimulate fair competitive conditions in our economy.

Fair trade laws stifle such competition—and worst of all, force the Government to police such detrimental pricing practices against the public good. We agree wholeheartedly with an eminent economist, Dr. Clare E. Griffin, professor of business economics of the University of Michigan, who testified last year against a similar measure.

He pointed out very well:

"The principle of free competition is expressed in our Sherman Act, Clayton Act, and in other antitrust laws. While it is true that individual businessmen may chafe at the limitations on their ability to avoid competition which these acts impose, I think it is greatly to their credt that they still recognize the fundamental wisdom of these laws. I have personally made it a point over many years to ask businessmen, who at times are quite critical of the administration of these laws, if they would favor their repeal. I have yet to find one responsible businessman in this country who has answered that question in the affirmative. Surely such a unanimous endorsement of the basic principle of competition would not be found in any other country in the world.

"The principle of resale price maintenance as expressed in this bill and in earlier ones is clearly in violation of this principle. If it did not restrain trade there would be no necessity of such laws. They are designed as very special execptions to section 1 of the Sherman Act which prohibits agreements in restraint of trade. It is well known that the history of judicial interpretation of the Sherman Act has been long and involved. There are many points of disagreement even yet, but there is one proposition which is firmly established, namely, that agreements on price constitute a clear violation of the act, both as to letter and to spirit. Such agreements are known as per se violations and as such are not subject to exceptions under the so-called rule of reason or on other grounds. The effect of the proposed bill is to eliminate competition on price between wholesalers and retailers. It does this even more effectively * * * than would outright agreement among competitors.

"This bill, therefore, constitutes a serious emasculation of the Sherman Act—an act which is peculiarly an American law in the sense that it expresses the accepted customs and mores of the American people, and in the sense that no other country in the world has been willing to go quite so far in asserting unequivocally the principle of competition."

Those who favor so-called fair trade, it must be assumed, believe there is something wrong with our competive economic system. Believers in price fixing would prefer to place all sellers on a perfect competitive basis. They would place all manufacturers in a position where they could block out and maintain a certain share of the market without worrying about competitors.

A recent report published by the European Productivity Agency of the Organization for European Economic Cooperation [1] points out that the history of resale price maintenance in other countries started with dealers or their associations who took the initiative in setting standard pricing in order to obtain higher or more secure margins. Then, according to the report:

"Gradually, as the branding of goods became more general, it became easier to have this wish fulfilled because branded goods create both the technical and the economic conditions which enable individual manufacturers to introduce maintained resale prices. At the same time, a greater desire for protection arose among dealers, because competition between them can be keener on branded goods than on most of the unbranded ones.

"The growth of new types of shops such as consumer cooperatives, department stores, chain stores, etc., accentuated the dealers' pressure to have resale price maintenance introduced. Such shops are generally not members of the ordinary dealers' associations, with the result that these associations have no means of curbing their competition drives other than persuading manufacturers to introduce resale price maintainance. In some cases, dealers have had to use boycott, or the threat of boycott, in order to convince the manufacturers, but in others their mere wish for protection has been enough.

"Independent action by the manufacturers is taken mainly with goods where it is impossible, or difficult, for consumers to make a reasonable comparison of the prices and qualities of different brands. This applies chiefly to durable goods, such as watches, radio and television sets, electrical house-

[1] "Resale Price Maintenance," project No. 238, Soren Gammelgaard, published by the European Productivity Agency of the Organization for European Economic Cooperation, Paris.

hold equipment and motor cars, and to cosmetics, toilet articles, pharmaceutical goods, and other similar goods of a chemical or biological nature. In this case, the manufacturer may be interested in purchasing the dealers' favor by guaranteeing them a particularly high and secure margin, so that they are particularly induced to recommend his brands to consumers.

"In other cases, the manufacturer's motive may be that he finds it advantageous to advertise the article at a fixed retail price; and again, resale price maintenance may be a means of reducing competition among the manufacturers themselves, or may serve as a link in more complicated systems by which manufacturers and dealers mutually protect each other against competition.

"In public discussion of resale price maintenance, its supporters have chiefly used two arguments which suggest that manufacturers not only find it consistent with their own interests to maintain the resale prices of their goods, but plainly consider it a condition of economic survival. These are: (1) the need to maintain a certain standard of necessary service; and (2) the need to hinder the development of market-spoiling "loss-leader" competition among dealers. * * * It seems, however, that very specific conditions must be fulfilled before ordinary price competition between dealers can develop into "loss-leader" competition with harmful effects on the total sales of the branded goods in question, and indisputable examples of this have not been found in practice. The service argument seems to be justified only in respect of presales service, and even then its purpose may be more safely achieved by other means than resale price maintenance. * * *

"In trade the practice generally tends to raise the level of costs because price competition is abolished or restricted and replaced by competition in sales efforts and services. The development of all types of low-service, cheap-selling shops is thereby hindered or retarded, and the consumer's choice between different combinations of price and service is narrowed. The rate of progress of productivity is generally retarded and in some respects may be totally arrested by resale price maintenance. In cases where the system leads to an overcrowding of wholesale or retail trades, productivity can be directly decreased."

Mr. Chairman, we were greatly interested in the results of the A. C. Nielsen study reported last week by the Bureau of Education on fair trade. If we take the results of this study at face value as reported by the Bureau, we find absolutely no need for fair-trade legislation. Among eight points the Nielsen study found: "The differences in weighted average price in the price comparisons (in fair-trade versus non-fair-trade areas) shown are so small as to be statistically insignificant. Most price differences are of the order of one-third of 1 percent to 1 percent."

The Bureau claims that consumers in fair-trade areas paid 1.4 cents less on the average for certain fair-traded brands than did consumers in non-fair-trade areas. Mr. Chairman, if this is true, and we doubt that all of the facts are presented fairly, then manufacturers would be better off without fair trade.

A 1954 study cited by the U.S. Department of Justice shows that consumers in areas covered by resale price maintenance laws paid 28 percent more for drugs and appliances than did consumers in areas where there was no such law. Congressman EMANUEL CELLER, who made the minority report on the McGuire bill a few years ago, said, in discussing the effect of these laws, that resale prices have been fixed so high * * * as to insure a remarkably profitable rate of return.

Promoters of fair trade have no interest in consumer welfare as evidenced by the fact that some arbitrarily peg prices as high as 350 percent above dealers' costs. This practice is nothing more than robbery and many dealers find it difficult to abide by such practices with clear consciences.

We wish also to submit that fair trade forces the public to pay for things it doesn't want. If manufacturers can legally collaborate in setting fair trade prices, they do not have to compete on the same basis as would be necessary without fair trade. Under fair trade, consumers would shop not necessarily for quality products (since quality differences between one product and another might be slight) but for fancy packages or other eye-catching inducements. The manufacturer who didn't spend a little of his exorbitant markup on packaging would find that he had no demand at the customer level. So the chances are that one manufacturer would try to outdo the other in fancy packaging, thus forcing the consumer to pay for frills which add nothing to the product. He might much prefer to get more goods and better quality in less expensive wrappings.

Manufacturers may say they are indeed in favor of fair trade. They may contribute many dollars to the cause of fair trade. But behind the backs of their organization heads they keep their assembly lines producing for the non-fair trade market as though they never head of fair trade. They may change products slightly for the fair trade labels but they continue to make their own branded items and even private-label goods for all markets. Consumers are beginning to learn of these practices and are buying accordingly. They learn from such publications as Consumer Reports that quality and price don't necessarily go hand in hand—that some products at reasonable prices are the same as their fair traded companions at much higher prices.

We have prided ourselves in this country on our free enterprise system which has been able to produce an abundance of goods of highest quality at the lowest price. The so-called fair trade concept violates this time-honored and proven heritage. Fair trade operates in the interest only of those able to take advantage of it. It protects the inefficient only temporarily. It hampers the efficient operator in adjusting to conditions which benefit the consumer. Except in the case of cooperatives which rebate to consumer members these high margins in the form of patronage refunds, the consumer is the loser.

Small business does not necessarily benefit from fair trade. Large firms, making the same margin on a product as a small firm, can advertise widely, attract greater numbers of customers, and make life difficult for the small businessman. There is a question whether fair trade offers small business any protection at all. In fact, the Justice Department survey indicates there was little difference in small business failures in fair-trade versus non-fair-trade areas.

In its extreme form, if every product were fair traded, merchants would be as free as those in Soviet Russia. The only difference would rest in who dictates the price. In the long run, fair trade performs a disservice to even those who think it is the answer to all problems.

In past years we thought the Miller-Tydings and McGuire Acts were bad enough. They merely permitted the States to pass fair trade acts of their own. But H.R. 1253 goes much further. It would impose a Federal price-fixing law on all the States, whether or not they want it.

Our position against resale price maintenance is adequately supported by the Federal Trade Commission and the Departments of Justice, Agriculture, and Commerce. Farm, labor, consumer, and other public interest groups have also voiced their opposition.

This country was built upon progress. Progress causes adjustments—sometimes in a form that damages at least momentarily the welfare or security of a few people. We are sure that we have not seen the end of progress—and we hope we shall never see it. One can't pass a law against it. One can't stop it as long as the ingenuity and spirit that we know as America is alive and sensitive to the wants and needs of all the people.

Resale price maintenance is a step backward. It is an admission that some manufacturers and dealers don't want to face up to the challenges ahead. It's an admission on their part that our free enterprise system is defective. It's an effort on the part of a few to exploit consumers in the name of protecting their products or their trademarks. But what it really boils down to is they want to protect only one thing—their profits.

Thank you very much.

Economic Possibilities and Limitations of Farm Price Policies

EXTENSION OF REMARKS

OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. ALBERT. Mr. Speaker, Dr. Walter W. Wilcox, senior specialist for agriculture on the staff of the Legislative Reference Service of the Library of Congress, is one of the Nation's outstanding farm economists. On April 3, 1959, he delivered an address before the Midwest Milk Marketing Conference, at Madison, Wis., on the "Economic Possibilities and Limitations of Farm Price Policies." It summarizes the very difficult situation that faces American agriculture, and is of such a character as to provoke helpful discussion of one of the most important problems of our times. Under leave to extend my remarks I include a copy of this speech, as follows:

ECONOMIC POSSIBILITIES AND LIMITATIONS OF FARM PRICE POLICIES

(Summary of talks at Midwest Milk Marketing Conference at Madison, Wis., April 3, 1959, by Walter W. Wilcox)

Each year for the past 6 years $1.5 billion to $2.5 billion of farm products have been removed from commercial markets by the Government loan, storage and surplus removal operations. There is an upward trend in these overabundant supplies, for in the last 2 years the amounts removed would have been even greater except for the soil bank program which by its acreage reserve features idled approximately 20 million acres of land formerly devoted to the allotment crops, corn, cotton, wheat, rice and tobacco, and by its conservation reserve features in 1958, idled another 10 million acres of land formerly devoted to general crops.

Any attempt to explore the economic possibilities and limitations of farm-price support policies which might reduce Government costs, reverse recent upward trends in surplus stocks and yet stabilize or increase farm income must start with this recent economic history.

It is a matter of simple arithmetic that if market supplies were brought into balance with commercial market outlets at recent

price levels, farm income would be reduced by the amount of these recent annual surpluses—$1.5 billion to $2.5 billion a year (Government payments, largely for the soil bank program also totaled $1.1 billion in 1958).

It also is a matter of equally direct economic inference from the many statistical analyses of farm price and supply relationships, that if these $1.5 billion to $2.5 billion of surpluses, plus the potential supplies held in check by the soil bank and acreage allotments, were channeled through commercial markets, farm income would drop by two to three times as much or by $4 billion to $6 billion.

Farm leaders and farmers have been greatly confused on this latter point. Continued loan, storage and surplus disposal operations, together with the acreage allotments and the soil bank in recent years have prevented increased supplies equivalent to 6 to 10 percent of annual farm output from glutting commercial markets. Farm leaders and many of the farmers answering opinion polls may have been lulled into a false sense of security by these operations.

For those who doubt that farm prices and income would fall precipitously if production and marketing limitations were removed and surplus removal operations were discontinued, two items of recent history are informative: meat animal marketings on a weight basis were reduced 4 percent in 1958 as compared with 1957. Most of this reduction was in beef cattle marketings. Beef has a less inelastic demand than most livestock products. However, these 4 percent smaller meat animal marketings (mostly beef cattle) sold for some 16 percent higher prices and producers received almost 15 percent higher gross receipts in 1958 than from the larger supplies in 1957. Another item of interest in this connection: consumer disposable income was approximately the same in both 1957 and 1958, the usual annual growth in demand for meat resulting from the upward trend in consumer incomes was absent in 1958 because of increased unemployment.

The frost damage to the citrus crop in Florida in the winter of 1957–58 provides another bit of evidence with respect to the relation between supplies and prices for foods. Citrus fruit and frozen orange juice are usually considered to be products with an elastic demand, where moderate changes in supplies are accompanied by moderate changes in prices. Yet, Florida citrus producers who marketed 13 percent less fruit than a year earlier because of the frost damages in 1957–58, received prices 47 percent higher and gross receipts 27 percent higher than a year earlier.

These two items of recent economic history are not conclusive. But they strongly support the conclusions of economic analysts who estimate that if 6 to 10 percent more products had been channeled into consumption through commercial markets in recent years, prices would have been 15 to 25 percent or more lower than they were. Farmers and farm leaders have been inadequately informed regarding these relationships in recent years. Widespread lack of information of this character among farmers raises questions about the interpretations that should be placed on their answers on opinion polls.

TO MAINTAIN CURRENT FARM INCOME WITHOUT SUBSIDY

Farm leaders often make the point that food is cheap in the United States in terms of workers' earnings. Workers in the United States can buy more and better food in the United States with an average day's pay than in any other country in the world. They also can buy more food with a day's pay at the present time than in any previous period in history. In view of the relatively low cost of food, especially when it leaves the farm, they urge that farm programs be developed which eliminate Government subsidies and result in consumers paying the full price in the marketplace for their food.

If a goal of maintaining recent farm income levels without resorting to Government subsidies were set for some future program the economic requirements become evident. Farm production and marketings would have to be restricted by somewhat more than the 6 to 8 percent of surpluses that have been removed each year for the last 6 years by Government programs.

In order to maintain total farm income without resorting to Government payments some way would have to be found to restrict aggregate farm production and marketings some 10 to 12 percent as compared with potential market supplies in recent years. This appears to many farm leaders to be impossible of attainment, yet even if it could be achieved such a program would fail to grapple with the dynamics of the farm income stabilization problem in the years immediately ahead.

IMPLICATIONS OF FARM TECHNOLOGICAL ADVANCE

The crux of the farm price policy problem, as it has emerged in the last 6 years, is that output-increasing technological advances are being adopted at a rate which causes total farm output to increase faster than the demand for food and fiber is expanding. Utilizing both a smaller crop acreage base and a shrinking labor supply, farm output increased 23 percent between 1950 and 1958 (and would have been even higher except for the Soil Bank program and other acreage restrictions), while population increased only 15 percent.

The implications of this rapid rate of farm technological advance and its relations to farm price levels have been presented to the public in a most confusing manner. Farm technological advances are cost reducing and irreversible in the aggregate. Producers often make large capital investments to adopt new output-increasing, cost-reducing technologies. Once the capital investment is made the new production methods are continued even though prices fall. Other technological advances typically result from new additives in fertilizers or mixed feeds, new chemical compounds in pesticides and weed killers or the perfection of improved strains of seeds or breeding animals. Again since these technological advances are cost reducing, once adopted they will continue to be used even though prices decline.

A better understanding of this aspect of aggregate technological advance would correct many mistaken views with respect to expected shrinkage in total farm output under the influence of lower price levels. Most expansion in total farm output in recent years has been the result of technological advance, hence lower farm prices will not reduce farm output in the near future.

To affirm that lower farm prices will not result in a reversal of past technological advances in no way denies that the rate of technological advance is affected by price levels. Relatively favorable farm prices and incomes, the healthy financial position of most agricultural producers and their higher level of education in recent years, all have speeded the adoption of technological advances.

An agricultural industry lacking capital accumulations, without credit facilities, experiencing low prices and managed by entrepreneurs with a low level of competence would find it difficult to make the investment necessary for much of the technological advance in recent years.

WILL LOWER PRICES BALANCE OUTPUT WITH AVAILABLE MARKETS?

The failure to fully take into account the technical and economic relationships involved in technological advance has resulted in a tragic misconception of the nature of agriculture's price policy problems.

Given the present backlog of new technologies now available or in the testing stage which to a large extent are a result of Government planned and financed research and educational programs, and given the present educational level and financial position of agricultural producers, in spite of the 6 to 10 percent excessive productive capacity now existing, even though farm prices fall as much as 20 to 30 percent from recent levels, farm output probably will continue to expand faster than available markets.

Is it not probable that the adoption of output-increasing multiple farrowing equipment by hog producers at the present time is as much the result of expected lower hog prices in the future as it is the result of favorable hog prices in the recent past? Is it likely that the prospects of lower milk prices will reverse the upward trend in artificial insemination of dairy cows? Is it likely that the prospect of lower milk prices will reverse the trend toward output-increasing, year round feeding of dairy cows in dry lots?

Is it likely that lower corn prices will slow down the trend toward growing corn continuously on the most productive soils? Or will improvements in seed strains of hybrid grain sorghums be stopped by low grain sorghum prices?

New short strawed strains of wheat, yielding twice as many bushels per acre as those now in commercial production are reported in the quality improvement stage. Even though wheat prices drop to feed grain levels will not farmers adopt these new higher yielding strains as soon as they become available?

Those who expect moderately lower farm prices to bring supplies into balance with market outlets may be expecting fertilizer use to decline. Yet, technical studies in the Department of Agriculture indicate that at the levels of use of fertilizer in 1954 farmers were receiving marginal (additional) returns of $3 per dollar spent on fertilizer. With a slightly higher rate of fertilizer use in 1959 and somewhat lower farm product prices, marginal returns from fertilizer use may have dropped to $2.50.

With returns from fertilizer use at this level there is little reason to expect a decline in aggregate fertilizer use even though farm prices declined sharply. It is likely, e.g., that farmers will use less nitrogen on their corn unless or until corn prices drop to about 80 cents per bushel since the marginal cost of the corn produced by the nitrogen is probably 60 to 80 cents a bushel?

Few developments can be predicted with certainty in the economic world. Such evidence as can be assessed, however, suggests that because of this rapid rate of technological advance via atomistic competition in agriculture in the absence of Government programs, recent supply, price and income trends will continue to worsen until producers become financially unable to make further output-increasing investments.

COMPETITIVE POSITION OF LARGE FARMS

Reasoning from simple but unrealistic assumptions some farm leaders believe that the larger, more efficient farms would be able to continue profitable business operations under the price levels which would prevail, even though all current restrictions on production and marketing of farm products were eliminated.

Under such conditions they assume there would be fewer farm families and a lower total farm income but that average farm family incomes might be higher than in recent years. This might occur if the rate of technological advance could be slowed down by moderately lower price levels. However, production costs on the larger farms do

not appear to be substantially lower than those on the more efficient family farms. Furthermore, the backlog and oncoming stream of new technologies, including the possibilities for further substitution of capital for labor, are so great that their competitive adoption will continue to expand output faster than markets expand. This too rapid rate of output expansion, made possible by available new technologies and fueled by competitive efforts to survive under falling prices and rising costs, may well continue even though the number of farm operator families in agriculture drops by one-half or three-fourths.

With atomistic competition prevailing in agriculture it is profitable for individual farms to adopt new technologies even though farm prices are falling. Competitive forces lead to the more general adoption of these technological advances even though the increased aggregate output results in a sharp decrease in aggregate income. Fully as important, most of the resources previously committed to agriculture—tractors, improvements in land, harvesting machinery, and much of the previously committed labor—cannot shift to alternative employment—hence these resources continue to be used in agricultural production throughout their productive life in spite of low returns from their use.

Given the large backlog of output-increasing, cost-reducing technology not yet adopted on most farms, aggregate output under atomistic competition may be expected to expand at such a rate that prices will fall faster than costs can be reduced on the large, more efficient farms as well as on the smaller farms for an indefinite period. In view of these prospects in the absence of a farm program it is doubtful that even the larger farms would be able to maintain financial solvency."

POLITICAL LIMITATIONS

Turning now to the political problems involved in reaching an agreement on new price policies to be adopted, one can introduce realism into the discussion by quoting a recent statement of a Senator from one of the leading wheat producing States. In commenting on the program proposed by the National Association of Wheat Growers, he said:

"There is no organization in my State sponsoring any form of a two-price system. We only have two organizations, the Farmers Union and the Farm Bureau and they have different programs. But I find a sizable majority of the farmers still favor that approach to the wheat problem. I don't think they will be satisfied until it is tried out sometime."

For several years now there has been wide disagreement among farm organizations and between the leaders in the two major political parties regarding desirable changes in existing farm legislation. No important improvement in this situation is apparent as yet. Leadership in agriculture has been so divided by the developments of recent years that even within commodity groups paralyzing differences continue.

The historical record is quite clear on this topic. Major changes in farm price policy legislation only have occurred (1) when the executive branch of the Government exercised strong leadership, e.g., as in the establishment of the Federal Farm Board on recommendations of President Hoover in 1929 or (2) when the leading farm organizations and political groups agreed on general lines of action needed because of the severe adverse financial position of agriculture, e.g., the passage of the Agricultural Adjustment Act in 1933 and its major revisions in 1936 and 1938.

The provisions of the Agricultural Act of 1948 were largely drafted in the Department of Agriculture along lines suggested by the professional people in the Department. The executive branch of the Government actually took the leadership in formulating this early postwar legislation.

As long as farm people are confused and misinformed with respect to the economic implications of alternative lines of action, so long as the drop in farm prices and income is postponed by continued loan, storage, and surplus disposal operations, so long as the public does not rebel at the high cost of existing programs, and so long as the farm organizations continue to disagree as to desirable alternatives to existing price policies, no decisive new action is probable.

Farm leaders and agricultural economists have been caught offguard by the technological explosion now occurring in American agriculture.

Can we get our mistaken diagnosis of the price problems in agriculture corrected and make sufficient progress on an educational program based on the relevant issues, to permit the adoption of new policies in advance of the complete breakdown of existing programs? If this necessary educational work is to be done, it will be done by groups such as you folks gathered here today.

Why the Preservation of States Rights Is Important

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 26, 1959

Mr. BENNETT of Florida. Mr. Speaker, the Woman's Club of Jacksonville has recently conducted an essay contest among the schools of Duval County. The title of the essay chosen for first place in the contest was "Why the Preservation of States Rights is Important." Mrs. Don Graze ably handled details of the contest. The judges were: Miss Annie Beaman, Miss Florence Hughes, Mrs. Iva Sprinkle, and Mrs. Selwyn Chalker. They have informed me that the first place winner was Miss Marian B. Wolking, a student at Englewood High School. Miss Wolking has achieved substantial leadership qualities in her high school career and I am very pleased to include here her thoughtful and inspiring essay, as follows:

WHY THE PRESERVATION OF STATES RIGHTS IS IMPORTANT

Our Nation is at the edge of a yawning precipice. At every side are those who want to shove her into the gulf of a world federation. Every day she loses a right that should be inherent to every sovereign nation. Now is the time for us to insure her sovereignty by preserving the sovereignty of the States, that is, by preserving States rights.

Perpetuation of States rights is important, not only to the statesman, but also to every citizen of this Nation. It is as old as the country itself.

We rarely remember that the United States began as separate Colonies, and even though they were under the same English flag, they were connected only through their proximity and their allegiance to the mother country. As this relationship to England became strained, there was discontent and unrest in the Colonies; men began to talk or using force. They knew that the only way that each could win independence was for several of them to band together and present a united front. Therefore, they formed a voluntary alliance for the common good.

When the dust of battle drifted away, it left the 13 tiny Colonies as victors over a world power. Instead of disbanding and assuming their independence as 13 small countries, they drew up a constitution by which their Union would be made stronger and able to act for the common good during peacetime. The Federal Government was given enough power to insure economic and military stability, to govern in areas not under the jurisdiction of any one State, and to represent the several States at the international level. The jurisdiction over all other things was given to the States so that they could best serve the interests of their respective citizens.

Thus it was that our Nation was formed, not as a country subdivided into States for political expediency, but as sovereign States united for the mutual well-being. This was the intention of our Founding Fathers and the basis for the doctrine of States rights.

Commonsense can tell us that as individuals we can benefit more from a State government. Because the people of any one State are more likely to have unified interests, the State government can deal more effectively with the problem of the people than can the Federal Government.

Economy is another advantage that appeals to the citizens of today. The shorter the trip of the tax dollar, the smaller the amount of it that must be spent for handling. Taxes collected by the State bring direct benefits to the same people who paid them. We invariably lose money when it is sent all the way to Washington only to have a fraction of it come back in the form of aid.

In addition to economy and practicality, the proximity of the State government makes it truly a government of, by, and for the people. They are able to scrutinize its workings and to examine its usefulness. Need for reform can be seen sooner and the reform itself can be accomplished quicker in the comparatively small area of a State. There is a greater change for each person to take part in and feel the results of this government.

The advantage that an emphasis on State government has for the individual can be and has been easily shown. They do not point out a need to abolish the Federal Government, but rather, they lead us to the positive conclusion that the strengthening of these United States is dependent upon the strengthening of these inherent States rights. Our Nation will not have achieved its full potential of greatness until this is recognized, for the ingredient now lacking is domestic harmony.

At present, our land is torn with jealousy and resentment. As the U.S. Government steps more and more into the jurisdiction of the States, one is turned against the other as they either compete for benevolences or cry out against infractions.

This indeed has become a problem in our present political situation, but it is of very little importance in comparison to a newer and greater one. This new enigma is the desire to sacrifice our national rights on the altar of world federation. If more people could be informed on States rights and its importance, they would become aware of these losses at the State and national level.

It is now time for us to see that these losses are restored by using our influence and abilities to see that States rights are preserved. By doing so we will insure internal harmony and national sovereignty through an economical and practical government, one that is true to its original meaning.

Public Opinion in the Greater Boston Area About Foreign Policy

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, April 10, 1959

Mr. SALTONSTALL. Mr. President, during the past winter the World Affairs Council of Boston has held its third annual discussion series on American foreign policy, during which more than 5,000 citizens in eastern Massachusetts met each week for 8 weeks to consider key issues.

The Council is to commended for its energetic efforts to increase public understanding of the problems of foreign policy which face our Nation.

I ask unanimous consent to have printed in the appendix of the RECORD a tabulation of opinion ballots on the eight topics of "Decisions 1959" which has been prepared by the World Affairs Council of Boston. This tabulation furnishes an interesting insight into the public opinion in the Greater Boston area about foreign policy.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

DECISIONS 1959—RESULTS OF TABULATION OF OPINION BALLOTS

TOPIC NO. 1. WILL ALLIANCES KEEP THE PEACE?

Tabulation of the opinion ballots on this topic revealed that many citizens of the greater Boston area (97 percent) think that the cold war, in one form or another, will probably continue for some time to come. Only 15 percent think that Communist influence in the world can be contained by a system of alliances, however, 81 percent believe that a strong and well-coordinated Western alliance is essential to U.S. security.

Of the decisions participants, 57 percent feel that the United States should have closer coordination of cold-war political and military policies with its Western allies while 75 percent think that there should also be closer coordination of economic policies. Few (6 percent) think that the United States should depend less on allies and concentrate on building U.S. economic and military power.

In relation to the non-Communist and underdeveloped world 81 percent feel that the United States should place less emphasis on building the military capacities of underdeveloped allies and more on their economic and social development, and also, that the United States should invest in greatly expanded trade and economic growth throughout the non-Communist world.

TOPIC NO. 2. ARE WE REALISTIC ABOUT COMMUNIST POWERS?

The Decisions ballots indicate that many Boston citizens (73 percent) believe that allout war with the Communist powers is always a possibility for which the West must be prepared. However, 64 percent do not think that the West can best prevent the further spread of communism through adequate military preparedness. The following policies were most often suggested as ones which deal most realistically with Communist powers:

1. That the West should put an embargo on trade in strategic materials with the Communist bloc (44 percent);

2. That the United States should maintain its commitments to reduce trade barriers and expand trade in the non-Communist world (83 percent);

3. That the United States should give military and economic assistance to Yugoslavia (59 percent); and

4. That the United States should give economic assistance to Poland (65 percent).

TOPIC NO. 3. PEACE IN THE MIDDLE EAST: WHOSE JOB?

A large number of ballots (88 percent) stated that the United States has a moral and ethical responsibility to help the people of the Middle East realize their aspirations for better health, working and living conditions. About the same number of people (86 percent) feel that United States help in social and economic development of this area should depend on the willingness of local leaders to cooperate and commit their own resources. Although this number think that, in principal, the United States should be involved in the social and economic development of the Middle East, a relatively high percentage (30 percent) think that the United States should not be as deeply involved as it is in Arab politics and rivalries.

In regard to communism in the Middle East, 68 percent of the participants think that the United States should supply military and/or economic assistance to any Middle Eastern government which is threatened by aggression from international communism and which requests such assistance (Eisenhower doctrine—13 percent do not agree with this policy). In dealing with communism in this area it is significant to note that 93 percent think that big power conflicts in the Middle East should be neutralized by bringing the U.N. more into Middle Eastern affairs.

The following policy proposals were the ones which received the most support from Decisions participants:

1. Participate financially in any Arab-sponsored development bank or institution that is set up on a sound basis (68 percent).

2. Continue U.S. aid and technical assistance programs country-by-country (66 percent).

3. Counteract anti-Western, anti-U.S. radio propaganda in the Middle East by expanding U.S. information activities (76 percent).

4. Press in the U.N. for an expanded permanent U.N. police force in the area to help keep peace on the borders and to monitor radio propaganda and other forms of indirect aggression against the independence of Arab states (80 percent).

TOPIC NO. 4. A BETTER NEIGHBOR POLICY FOR LATIN AMERICA

Seventy seven percent of the Decisions participants think that Latin America should receive higher priority than it has in the past in U.S. global foreign policy. Fifty four percent feel that the United States should approach Latin American development problems (economic, social, and political) on a regional basis and not on a country-by-country basis. Few (16 percent) think the United States should feel free to intervene on the side of democratic forces trying to overthrow totalitarian governments.

The following are some of the internal problems of Latin America which Boston citizens feel are important enough for U.S. assistance:

1. Improving educational systems (87 percent).

2. Controlling disease and providing better health and sanitation facilities (79 percent).

3. Diversifying internal economic development (76 percent).

4. Encouraging development of democratic governments (68 percent).

5. Promoting greater U.S. private investment in internal economies (66 percent).

6. Speeding up internal economic development (60 percent).

Specific policy proposals regarding Latin America which received the most support are:

1. Expand cultural and student exchange programs and encourage the study of Latin American languages and cultures in U.S. schools (76 percent).

2. Try to find long-range answers to the commodity price problem by joining with other surplus-producing nations in joint studies (70 percent). Few (6 percent) think that there should be a restriction of U.S. imports of Latin American commodities which might damage U.S. producers (such as lead, zinc, oil, etc.).

3. Reduce or discontinue U.S. military assistance to dictators (64 percent).

4. Expand present U.S. economic and technical assistance programs in Latin America (62 percent).

5. Explore the possibilities of a regional (hemispheric) tariff and trade agreement to reduce trade barriers, stimulate regional trade, and stabilize prices (62 percent).

Put Your House in Order

EXTENSION OF REMARKS

OF

HON. SAMUEL L. DEVINE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. DEVINE. Mr. Speaker, the other day the editor of the Columbus Citizen, Don E. Weaver, wrote a Sunday editorial entitled "Are You Eating High on the Hog?" A number of the comments contained in Mr. Weaver's article should be thoroughly reviewed by Members of this Congress.

Accordingly, I am submitting a copy of the text of this editorial in the CONGRESSIONAL RECORD, for the information of Members of Congress.

ARE YOU EATING HIGH ON THE HOG?

(By Don E. Weaver)

Reading the papers you might think everyone is doing very well these days.

Congressmen, for instance, get $22,500 a year, another tax-free $2,500 for expenses, and a $37,000 allowance for office help. Just to keep it in the family, some Congressmen hire wives, sons, or daughters.

Two Iowa Democrats hit the headlines. One paid his wife $13,334 a year. Another paid his son, a 19-year-old university student, $11,873.

This revelation probably will defeat them at the next election, and it should. Congressmen who greedily gobble up tax money that way are morally dishonest. And Congressmen who don't do it themselves, but who condone it in their colleagues, are phonies.

Ironically, just as this crass nepotism was exposed, Congress was getting ready to declare itself another boost in expense money.

The Citizen series on high costs of hospitals, doctors, and medicine brought mixed reaction. Some were shocked that the charges are so high. Others say we didn't tell the half of it. They mention doctors who seem to generate fees and then keep raising them.

Meanwhile, over in the rackets committee, a procession of characters who have gotten rich from labor-union rackets cynically take the fifth amendment and defy the investigators to get the truth out of them.

Also, meanwhile, the Federal deficit runs higher, and Mike DiSalle has asked for $325 million more in his Ohio budget. Ohio is already over the $2 billion mark—more than the entire Federal budget was some years ago.

Congressmen, doctors, and union members who are highly paid are eating high on the hog. The unionists are demanding constantly more, which will just drive inflation up a few more notches.

But not everyone is doing so well. A little old lady calls us now and then to chat and air her troubles. She's a shut-in. She retired from schoolteaching so long ago she gets no pension. Her husband died too early for social security. She owns her home so she can't get old-age benefits.

She lives on a little insurance set up years ago before inflation cut the buying power of annuities in half. How will she live?

"Please do something to stop this inflation and spending," she pleads. Her wagon is not hitched to the star of inflation.

We have a letter from an Ohio State University professor. He's been reading about the incomes in the medical profession.

"The typical general practitioner gets $15,000 a year," he quotes. "The typical professor at Ohio State with lengthier training gets $7,500. Just half."

He gives his case history: "I came to Ohio State in the thirties as a full professor. During the depression, of course, I took cuts. Slowly we have climbed back up. But today in purchasing power my salary is slightly less than it was when I came here nearly 30 years ago. My case is fairly typical. Try to match our case with any other profession."

How do you suppose the reports of congressional greed, and of doctors' high incomes sound to old ladies living on insurance and professors whose pay hasn't kept up with the Joneses?

How do you suppose they like the stories of union featherbedding and strikes for more increases on pay that is already higher than a professor's?

Loose spending has become the American way of life. It reaches from the highest Federal level down through local governments and into our personal and family habits.

Let your wants, not your purse, be your guide. If you run short, squawk for more pay or a bigger expense account. If you can't afford it, charge it.

If you get in trouble holler for help. Look at all the welfare agencies, public, and private, that are supposed to look after you.

But if a nation as prosperous as the United States can't break even in times like these, when can it ever break even? And when can it ever start reducing the huge public debt?

The Congress that is building itself luxurious new office buildings, increasing its own pay, and tossing big chunks of expense money to its kinfolks, is the Congress that taxes us and spends our money.

There would be no Federal debt if Congress didn't vote it. It makes the laws. It represents the people. It levies taxes. It makes all appropriations. If it's doing wrong, you people just sent the wrong men.

We the people must take some of the blame. Partly for yelling for Federal handouts for our pet projects. Partly for not seeming to give a hoot what Congress does.

While we weren't paying attention, a vast bureaucracy has grown up at Washington. It's a system so vast, so entrenched, that no ordinary effort can shake it.

It's riding for a fall, and great may be the fall of this crazy, careless, blind spiral we call inflation.

Let Congress Know

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including two editorials which recently appeared in the Nashville Banner, Nashville, Tenn., in support of the Talmadge amendment to the Constitution of the United States.

It is my belief, as it is the belief of this fine newspaper, that the control of public schools should be in State and local hands.

I hope you will read these editorials. They follow:

TALMADGE BILL OPPORTUNITY FOR CONGRESS TO DISARM HANDS OF MISCHIEF

When irresponsible hands, whether individuals or agencies, persist in mischief, it's a good idea not only to put valued property out of their reach, but to disarm them of the instruments recklessly employed.

That is what Senator HERMAN TALMADGE, of Georgia, proposes to do in the bill he has introduced, which would provide that no Federal judge could hear, determine, or review any case growing out of the administration of public schools by States or their political subdivisions.

The measure in its specific purpose would rest on a point of law already written—a dozen times—into Federal statute; namely, that control of the public school system shall be exclusively vested in State hands forever.

In 12 acts admitting new States—every case of admission since the public school system came into existence—that stipulation has been included. It is spelled out beyond argument. Not once has it been formally challenged as such, much less repealed.

Judicial lawmaking has simply tried to bypass it.

Senator TALMADGE addresses himself to the realities of the case when he points out to colleagues that a usurpation has occurred divesting the States of authority reserved to them—transcending any question of State preference for either segregation or desegregation. For those mindful of the principle involved, the reminder should not be necessary that, no matter how much some citizens may applaud the school desegregation decision, "they will accept the manner in which it was handed down only at the peril of exposing themselves to some future application of the same theory of legislation by judicial decree."

Many today are realizing that who did not immediately in the wake of May 17, 1954. And most surely can understand the valid point of decision by State preference in an area of responsibility properly and historically left to State and local determination.

Pressure elements will rant against this measure all over again—quoting Myrdal, the NAACP, the ADA, but never the Constitution.

They are intolerant of the restraints placed on caprice by the basic concept of a government of law.

But a wider audience, a majority of the people who are aware of where this drift is leading will—with their eyes opened—demand of Congress the safeguards inherent in a governmental structure of checks and balances.

The public school system as such is crumbling under the assault of mischievous hands. It is time to disarm those hands, and Congress can do that if it will.

LET CONGRESS KNOW

The Constitution of the United States belongs to the people. They are the Government, as they are the governed.

It is theirs to amend, if that is deemed necessary. It is theirs to defend against emasculation or abridgment. It is theirs to spell out at points, if at points—under severity of test—that is needed.

Senator HERMAN TALMADGE's proposed amendment would clarify beyond all legalistic argument, pressure, or judicial distortion, the fact historically recognized—until the Supreme Court ruling of May 17, 1954—that public school controls belong exclusively in State and local hands.

That is not a segregation view or an integration view; it leaves the decision on that matter with the States and communities themselves; is uniformly fair, and an essential safeguard against the calamity of strife that has befallen America.

The enabling act now is before Congress, to submit that question to the people of the 49 States to decide. Yet because of the opposition pressure on an organized and inflammatory scale, many Members of Congress are on the fence.

If they hear from home—if they hear from constituents in the 49 States, unquestionably fair enough, and concerned enough, to demand submission of this amendment—they will approve it.

After all, it would be odd if Congressmen refused to let the people decide a question for themselves.

Senator TALMADGE has urged the people of the United States to write their lawmakers.

It is from that point that instruction must come.

Write your Congressman. Write your whole delegation.

Outstanding Musical Achievement

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. CONTE. Mr. Speaker, I wish to invite the attention of the House to the remarkable achievements of Mr. John Bearzi, a young man who was born and raised in my district and has now gone to Colorado Springs, Colo., where his achievements as the conductor of the concerto ensemble have drawn praise from numerous quarters. Mr. Bearzi's parents, Mr. and Mrs. Louis Bearzi, of Lenox, Mass., and all of us in western Massachusetts, are tremendously proud of this young man's impressive achievements in the musical world.

We were pleased to note that he recently conducted the concerto ensemble in performances on television, drawing the praise of Gov. Steve McNichols, of Colorado, who said:

There is a distinct need for the type of musicianship and musical presentation

(this) group offered to the privileged viewers and listeners of Colorado.

Performances by the ensemble have been universally hailed in the press. At this point I wish to include in the RECORD excerpts from an article in the Colorado Springs Free Press:

On Monday night a group of nine instrumentalists under the direction of John Bearzi met to play two concertos for string instruments, by Vivaldi and Corelli. * * *

John Bearzi, himself a descendant of a famous Italian family with strong musical connections, directed this small group in a masterly way. We hear much about inherited qualities and characteristics. Could it be that he has inherited from his Italian forebears something of the rhythm of that country's culture? Certainly the ideas and ideals of feeling for interpretation of music of this caliber cannot be acquired from books, from study, or from toil. It is inherited in the individual, from its people.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, may I call the attention of my colleagues in the Congress to the following letter received by me from two junior high school teachers in Santa Barbara, Calif.:

SANTA BARBARA, CALIF.,
February 4, 1959.

Hon. CHARLES M. TEAGUE,
Old House Office Building,
Washington, D.C.

DEAR SIR: The undersigned are writing you to express our opinions regarding the principle of Federal aid to education and specifically concerning the Murray-Metcalf bill. We are categorically opposed to the latter for the following reasons:

1. Economy: It is much more economical to collect money on the local and State level and spend it on those same levels. Money passing through a dozen bureaucratic hands from the local level up to Washington and back is bound to return to the local school districts (taxpayers) in a very anemic, not to say dangerously weakened, condition. In fact, we would be lucky if California recovered 50 percent of the money contributed.

2. Logic: Since California is one of the wealthier States, obviously it would contribute much more than it would receive back. We sympathize with the plight of the poor tenant farmers of Mississippi, but in these days of high taxes we don't feel obligated to help relieve their condition, which stems in large part from the faulty socioeconomic systems of the past and not from a lack of resources. Many States with poor educational systems have as ample natural resources as does California.

3. Control: A federally supported educational system, even though only partially supported in the beginning, will inevitably, with time, come under partial or complete Federal control. This must not happen. This is probably the most dangerous aspect of all in the long run. A monolithic Federal system of education would be a ready apparatus for a demogog to brainwash whole generations into becoming a subservient, unthinking mass. With control retained on no higher than the State level this would be impossible.

4. Aid to education: Proponents of Federal aid claim that teachers' salaries would increase by an average of $1,500 (or some similar figure) if Murray-Metcalf were passed, that a golden era of plenty would ensue for the whole educational apparatus if only the "Washington money tree" could be forced to bear fruit. Our contention is that no matter how stringent an attempt would be made to insure that recipients of such aid keep spending their own money at the same level, in time State and local support would dwindle percentagewise compared to the amount provided by Washington. After all, local and State politicians have a duty to their constituents to keep down taxes if possible.

5. Support by educational organization: Judging by the professional journals we see—the California Teacher Association Journal and the National Education Association Journal—all teachers are 100 percent for Federal aid. Such is not the case. In our local organization here in Santa Barbara there has never, to our knowledge, been a floor discussion of the principle of Federal aid, or of any specific bill. The members have never voted pro or con on any aspect of same. No delegate from our local group has ever been instructed either way on how to vote when attending State or National meetings. The above-mentioned journals have never invited professional opinion or comment or conducted any sort of poll or vote. To us this situation seems only too grimly reminiscent of certain union practices so justly condemned by much of the American public.

In closing, we should like to say that this is not a political question at all, as far as we can see. Apparently party convictions have little bearing in the case, although we both voted for you in the recent election. One of us is a Democrat and the other a Republican. We heartily congratulate you on your stand concerning this matter in the past and hope you will continue to hold your same views on this and other matters.

Sincerely,

GEORGE E. HOPPING,
E. GRANT RUNYAN,
Teachers, LaCumbre Junior High School.

James Michael Curley

SPEECH
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 25, 1959

Mr. PHILBIN. Mr. Speaker, Gov. James Michael Curley was a great invincible fighter for the ordinary man whose lot he worked so hard for years to improve.

He was a man of superb and extraordinary gifts, one of the most famous orators of our day, a highly gifted administrator, and an unsurpassed tenacious public advocate.

He had the courage of a lion and a warmth of human kindness and loyalty that endeared him to his friends and all those who knew him.

A beloved and valued colleague in the Congress, I had occasion to know and observe the warm personal qualities of Governor Curley and his great zeal for human betterment. The future will bring greater luster to his colorful personality and outstanding public career.

May he find rest and peace in his eternal home.

United States-Canada Relations: After Awareness What?

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mrs. KELLY. Mr. Speaker, one of our colleagues, the Honorable FRANK COFFIN of Maine, was one of the first Members of Congress to become alert to the growing tensions between the people of Canada and the United States. Determined that this increasing unfriendliness must not be permitted to continue, he, along with our former colleague, the Honorable Brooks Hays, conducted a study of the problems and issues involved, and they submitted a most noteworthy report on the subject. I beg all the Members of Congress to read it.

The report highlights the traditional friendship between the people of the United States and of Canada as well as the geographical significance of two nations sharing an unguarded border of 4,800 miles, sharing common objectives, loving peace, and most important, believing in the dignity of man. The Hays-Coffin report thrashed out the issues and origins of the deterioration of relations between the two countries. As a result of the report and as a result of the study of the same problem conducted by the Senate Foreign Relations Committee and by Senator AIKEN, of Vermont, a study group composed of Members of the House and the Senate, respectively, was appointed by the Speaker of the House and the chairman of the Senate Foreign Relations Committee, pursuant to a Senate resolution, to meet with the Members of the Parliament of Canada. The first Hays-Coffin report, which contained a recommendation for the establishment of closer legislative liaison between the United States and Canada was the first suggestion for the establishment of bilateral relationships between the legislatures of the two countries. The suggestion was picked up by the Prime Minister of Canada and encouraged by the Parliament of Canada, and endorsed by the executive branch of the U.S. Government.

A meeting of representatives of the two legislatures was held in January of this year here in Washington and at that time it was agreed that the establishment of a continuing inter-parliamentary group to be composed of representatives of the United States and Canada would have a salutary effect on the relations between the two countries. Furthermore, the Canadian group has now issued an invitation to 12 Members of the House and to 12 Members of the Senate to attend a meeting in Canada

to be held in conjunction with the formal dedication of the St. Lawrence Seaway. We are endeavoring to make plans to participate in that meeting. There is a steering group on the U.S. side composed of Mr. COFFIN, of Maine; Mr. MERROW, of New Hampshire; Mr. JUDD, of Minnesota; and myself for the House, and of Senator AIKEN, Senator MANSFIELD, Senator MORSE, and Senator CAPEHART for the Senate.

In order to facilitate this meeting and in order to provide for the continuation of these meetings I have introduced House Joint Resolution 254, authorizing U.S. participation in parliamentary conferences with Canada. The resolution provides for the appointment of not to exceed 12 Members from the House and 12 Members from the Senate to participate in each meeting. It is not contemplated that 24 Members will participate in each meeting and it is quite probable that some of the meetings will be composed of a smaller group. The resolution also authorizes the appropriation of not to exceed $30,000 each year to meet the expenses of these meetings. Fifteen thousand dollars of this amount is to be available for expenses of the House group and $15,000 is to be available for the expenses of the Senate group.

It is my belief that the group that this resolution establishes will go far toward creating new understanding on both sides of the border and that it will result in the development of new ideas and new approaches to our economic and political problems.

The Honorable FRANK M. COFFIN recently delivered a speech at the Canadian-American Relations Seminar, at Michigan State University, in which he discussed the value of a Canadian-United States parliamentary group. I would like to insert this address in the RECORD:

AFTER AWARENESS WHAT?

(Address by Representative FRANK M. COFFIN, of Maine, at Canadian-American relations seminar, Michigan State University, East Lansing, Mich., March 9, 1959)

There are many new dimensions in the relations between the United States and Canada. They range from defense, trade, transportation, power, travel, education, culture, investment, management, labor, and resource arrangements to diplomacy in most areas and in most groupings of the world.

There is certainly a new awareness on both sides of the border. That on the Canadian side has come earlier, sunk in deeper, and spread wider. It is a popular theme, originating spontaneously from many sources, lending itself to political uses by all parties, and tending to be (so far as United States-Canadian relations are concerned) more divisive than cohesive in its impact. In short, the new awareness on the Canadian side is a natural instrument of nationalism.

On the U.S. side of the border, there is also a new and unmistakable awareness. But mark the differences. It is less than 2 years old. It began, quite self consciously, with a few of us in Congress, caught on in some executive departments, attracted the attention of some observant commentators, and has reached the stage of quite formal cabinet and congressional arrangements. It is spreading both in Congress and in the public mind, slowly, deliberately, almost painstakingly. There is no political lodestone in this movement. To some extend there may be political liability. The tenor of U.S. awareness is a constructive one, placing more emphasis on hearing the other side than on stating its own case. These factors justify one in saying that the new awareness on the U.S. side is a hard wrought instrument of international accommodation.

These two sides of the new awareness are natural, in view of the disparity of size, of population, wealth, and influence of the two nations. The comparison implies no moral judgments. I predict that as the new awareness loses its novelty, there will emerge international overtones in Canada and national themes in the United States. What we can hope for is a balance on both sides, an adjustment of problems with no injustices to the national aspirations of either country.

This, however, will not automatically happen. The new dimensions which make both sensible and necessary the new awareness could lead to the new psychosis.

Awareness is in itself neither good nor bad—or, perhaps more accurately, it can be both. It is good when it leads to effective action to deal with a situation. It is bad when it is static, leading nowhere, except to frustration.

It is still too early to say which of these roads the new awareness will travel. But the time will soon come when we can tell.

There are two dangers that threaten. One is that we who are actively enrolled in the awareness forces shall try too little. The other is that we shall try too much. In either case we shall be harshly judged by impossible standards of excessive expectations. What I mean by trying too little is that we may feel that all that is needed are occasional fellowship meetings, strong on the amenities and weak on the specifics. Should meetings at Cabinet, sub-Cabinet, or congressional levels be too infrequent, too short, too poorly prepared, too press-release conscious, there will set in a disillusionment that will undo much of the good work that has been done.

The opposite trap lies in trying to do too much. This would happen if the various executive groups or our Canada-United States Interparliamentary Group failed to recognize their limitations. There are some problems that are unsolvable; there are others that only time will solve; still others can be solved but by other groups or in other contexts. For example, it would not in my opinion be productive if our interparliamentary group were to set itself the task of trying to arrive at a consensus on tariff matters or of trying to persuade the other side of the soundness of our position. Here we may well find that a consensus is impossible and that national positions are fixed and at least temporarily immutable. It would be a waste of time, talent, and opportunity if this group should take upon itself the role of a perpetually hung jury.

It is right and proper for both executive and parliamentary joint bodies to begin their work by developing an agenda for discussion. Much good can come by way of understanding and tolerance simply from the presentation of different views of the many problems existing between the two nations. But eventually there will come a time when awareness for awareness' sake will not be enough.

When this time comes, what function will our interparliamentary group serve? I have been deeply concerned over the proper and fruitful function of this group in the long run. After all, we have taken an unprecedented step in the technique of international relationships. There are other interparliamentary organizations. These, however, involve many nations, large memberships, and obvious limitations in marking out fields of common interest. Their purposes are and must be of the broadest scope and general in nature.

What is different about the Canada-United States Inter-Parliamentary Group? What is its justification? There are some who fear that this may be a precedent for forming bilateral parliamentary liaisons with other nations. The answer to this fear lies not in political theory but in the opportunities for meaningful collaboration.

These opportunities arise from the length of the 4,000-mile common border; the infinite daily crossings of people, goods, services, and ideas; the interdependence of the two nations in defense, in economic development, in diplomacy; the multiplicity of friction points and problems. The essential point is that the very intimacy of relationships creates problems which overpower the ordinary channels of collecting, analyzing, discussing, and acting on information. Even with such a close and important ally as the United Kingdom, distance from the United States and proximity to other nations blunts the edge of the American problem. There may even be a kind of diplomatic law of thermodynamics: the farther apart countries are, the more adequate are the ordinary channels of relationships; the closer together they are, the more need exists for extraordinary arrangements.

It is my conviction that a flexible but continuous relationship between the lawmaking groups of complex and advanced neighboring nations is eminently sensible, if those concerned see and remain faithful to their proper function.

That function is, in my opinion, not so much the attempt to solve problems as it is the continuing and systematic effort to improve the procedures for recognizing, discussing, and solving problems. This distinction could be the means of avoiding stand-off stalemated sessions between people who lack the power to solve the problems they are discussing. It could be the key to a limited but highly useful service.

For example, I can easily imagine Canadian and U.S. parliamentarians making little progress in persuading their opposite numbers to change their positions relating to lead and zinc. But I can imagine them coming to agreement as to the manner in which metals policies should be changed, as to the usefulness of full discussions before changes are made, as to the need for exploring noncontroversial fields as research, marketing, and the gathering of worldwide data as to supply and demand.

This function would require an orientation toward procedure. The objective would be what former Congressman Brooks Hays and I have called "mechanisms which will guarantee—if not a solution—an orderly, regular, and routine method of discussion, exchange of views, and, if possible, agreement on action."

Here is how I would visualize the Canadian-United States Inter-Parliamentary Group working: It would begin with a full exchange of views on the major problems besetting the two nations. This process of mutual education could be expedited by the preparation of position papers on the various subjects by the members of each side. These papers would be exchanged by the two sides before the first series of meetings. Oral exchanges would then be encouraged.

A Canadian and a U.S. parliamentarian could be assigned the task of preparing a summary for each subject. This would include a description of the problem, the Canadian position(s), the U.S. position(s), a report of any consensus that could be arrived at, a statement of the remaining issues, and a description of possible approaches to solution.

At this point, possibly at a subsequent meeting, the subject matter is taken up again, but from a different point of view. The focus shifts to possible procedures. Such questions would be explored as these: Is there need for more research on the problem? Is there need for better communication of facts or positions to interested parties, government, or the people on the

other side of the border? Is there enough opportunity for discussion of the problem on both sides? Is the communication between governments frequent enough, easily achieved, and responsibly achieved? Is there need for advice to governments? Are additional structures needed? How can citizens or citizen groups help? Does experience in other countries offer a lead? Should the problem be considered in the broader context of the free world?

In trying to answer these questions, the group would be well advised to invite those intimately concerned to talk, not primarily on the merits, but on the procedures and mechanisms which might lead to sclutions.

A vital part of the group's function would be that of a friendly watchdog on the effectiveness of the relationships between the executive branches of the two Governments. To change the figure, the group would serve as an anticoagulant to the Canadian-United States bloodstream. There are certain natural tendencies of bureaucracies. Some of them are as follows: To resist change; to do things as they have been done before; to reduce the level of decision to that of the lowest common denominator; to avoid seeking new problem areas; to delay moving into an area that looks like added work; to put off meetings that might be difficult or inconvenient; to avoid bringing issues to a head where one's department might not appear to advantage; to limit meetings and discussions to platitudes; and, above all, to cultivate an abiding distrust of and contempt for the legislator.

The overnight function of Congress is well established. I am not sure to what extent the Canadian Parliament exercises a similar function, in view of the fact that the government leaders also serve as leaders in Parliament. Nevertheless, there is no reason why the Canadian-U.S. Inter-Parliamentary Group could not keep track of the relationships between the executive branches, and make observations as to their improvement. The U.S. members of the group, could, for example, study the extent to which joint cabinet committee meetings had been prepared, agenda set forth, background briefings given to participants; the extent to which each government consults with the other in advance of a policy shift; the adequacy of opposite number communication and discussion at career staff levels; the need for additional executive relationships; the need on each side for coordination and centralization of data in all the areas of concern. The Canadian members could, I am confident, find areas where their government's procedures could be improved.

The mere fact that an informed and interested group is serving as a procedural watchdog will do much to stimulate a higher level of performance by executive personnel both in their planning for meetings and in their day-to-day performance. What I have been suggesting is not an antagonistic role for the Inter-Parliamentary Group. Its observation should be made to the respective governments in a friendly, even private manner. No good purpose would ordinarily be served by blowing up criticism of either government by the lawmakers of either nation.

The results of the lawmakers' group operating in the procedural area might not be dramatic. We hope, of course, that over a period of time there will be enough members of Parliament and Members of Congress educated to see the point of view of the other nation to make possible the passing of salutary laws or the removal of some irritants. But in the meantime a worthy purpose will have been achieved if new channels of communication are opened, if interchange of views reaches a new level of attention, if roadblocks to consideration of problems are removed.

The function I have described is a legitimate role for the parliamentarians of both countries. Both countries have the representative form of government. The members of Parliament and the Member of Congress represents his constitutents. He is close to them, knows their problems, and is the instrument through which his people speak. The representative can bring to the overwhelming task of Canadian-United States relationships the insights and irritations of the farmer, businessmen, laborer, shopkeeper, and tourist. The parliamentary member can supply the leaven of the generalist to the loaf of the specialist.

We are entering a period of great and continued strains and stresses on both our nations. This new experiment in parliamentary relationships can well serve to minimize these pressures. It will do this if it helps direct "the new awareness" into areas of fruitful activity. We shall have succeeded in our task when it is no longer newsworthy to hold seminars about awareness. Our objective is to make awareness commonplace, routine, undramatic, and highly productive.

The Townsend Plan for National Insurance

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. MARSHALL. Mr. Speaker, I take this opportunity to pay tribute to the dedicated people all over America who are joined with the Townsend plan for national insurance in working for a decent standard of living for our older citizens. Their headquarters is just a few blocks from this Capitol and most of us here are familiar with the fine services this office performs.

In the decade I have been privileged to serve my disrtict in the Congress, I have come to respect the faithful and tireless service this organization performs solely in behalf of the elderly citizens of our country. It has undertaken this worthy effort on a national level and deserves our commendation for the leadership it has provided. It has always been in the forefront of efforts to attain a realistic program of security for retired workers and continues to assert this leadership at a time when the problem is of growing consequence.

As a farmer and as a representative of a great agricultural area, it is natural that I should think of this legislation in terms of farm families. The serious decline in farm income and the natural hazards of agriculture make it difficult for farm families to provide for retirement. Yet, farmers were among the last to be covered under the Social Security Act and many today can qualify for only the minimum benefits. As self-employed persons, a distressing number of farmers operate at marginal levels and will therefore continue to qualify for the minimum or near-minimum benefits.

We certainly can agree that farmers contributing to any such program should be treated as equals of other workers and self-employed. They deserve the same opportunity to maintain a decent standard of living upon retirement from active farm operation.

Farmers have another stake in a realistic program of security for old age inasmuch as food is the basic requirement of every human being and retired workers remain the customers of agriculture. As the number of retired persons grows, it is important that their purchasing power be maintained at the level of decent comfort and adequate diet. Our interest in the retired worker, however, is not primarily economic, but humanitarian. In the midst of our abundance, we cannot permit a whole segment of our society to exist at subsistence levels after they have contributed their most productive years to our growth.

Because they are genuinely concerned with this problem and are dedicated to its solution, I welcome representatives of the Townsend organization to my office. In fact, in the 10 years I have been privileged to serve in this legislative body, the Townsend group have been the only organization to come to my office to express concern over the problems of the aged, those senior citizens of ours who have contributed so much to building our great country.

We respectfully suggest that all who share this concern devote some time to considering the purposes of H.R. 4000 and the goal it envisions. We are all too familiar with the inadequacies and the inequities of the present social security program and know that we must move forward with realistic programs if we are to meet the challenge now upon us.

Special Citation Awarded to Two Steamship Companies

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. GARMATZ. Mr. Speaker, because of their significance and satisfactory performance in the interest of the general public, it is gratifying to have recognition given to the Marven Steamship Co.—formerly the Ore Navigation Corp.—and the Calmar Steamship Co. for attaining highest rating in vessel sanitation after the closest inspection by our Government authorities. These companies have just been awarded the special citations of the Public Health Service, after approval of the recommendations of inspectors by Joseph B. O'Connor, Regional Director of the Department of Health, Education, and Welfare for New York, Pennsylvania, New Jersey, and Delaware.

Harry W. Warley, who has over a lengthy period distinguished himself in maritime affairs of our Nation, is the president of both companies, and received the awards.

The special citations were given because each of the 9 ships of the Marven

Steamship Co., and each of the 12 ships of the Calmar Steamship Co. achieved a rating of 95 or better on official Public Health Service inspections in which 166 separate items of sanitary construction and maintenance were involved. Our citizens in large numbers, who have had contact with President Warley and with representatives of the two companies in question, will approve of these awards, which have been justified by lengthy satisfactory service

The Marven Co. has earned the award for the third consecutive year, while the Calmar Corp. is now being cited for the second successive year. Both concerns transport valuable products to Bethlehem Steel Co., and their ships transport lumber from west coast ports in connection with their return voyages.

Americans have reason to be proud of the performance of these companies, which have given encouragement to steamship operators in different parts of country.

A Positive Image

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. CUNNINGHAM. Mr. Speaker, under leave to extend my remarks in the Appendix, I submit the following editorial from the Omaha World-Herald. The editorial appeared in the March 22 issue, and I believe it will be interesting to the readers of the CONGRESSIONAL RECORD:

A POSITIVE IMAGE

There's a story in the newspaper business about a country editor who was asked which side his paper would take in a local dispute.

"We haven't made up our mind yet," said the editor, "but I can promise you one thing—when we do we're going to be bitter."

Chairman Meade Alcorn of the Republican National Committee is in the position of the undecided editor.

Mr. Alcorn has been searching for a "soul" for the Republican Party. Or, in the words of the Madison Avenue ad men, an "image." The idea is to figure out what the Republican Party should stand for and then sell that image to the voters in 1960.

Meanwhile Mr. Alcorn has been out trying to stir up enthusiasm for his party.

"I am hopeful, of course, that all of you will choose the Republican Party," he has been telling college groups. "In any case, be political, be partisan."

Mr. Alcorn's plea for fervor when he isn't sure what the voters should be fervent about is one of the signs of these confused political times. The confusion affects both parties but seems to be more apparent among Republicans.

One thing the Madison Avenue people are telling Republicans is that they've got to "accentuate the positive." It isn't enough to be "agin'" something, they say. You've got to be "for." About this the witch doctors of modern politics are right. The Republicans (and Democrats, too) should present "a positive image." They should be "for" something. But what?

C. P. Ives said in the Baltimore Sun the other day that Republican idea men were overlooking an image that already exists, one much talked about by President Eisenhower. He wants his party to stand for sound money.

"As even his critics concede," Mr. Ives went on, "sound money shoots off implications in all policy directions."

It does indeed. If you're for sound money you cannot be for measures and practices that promote inflation.

Inflationists are for inflation because they expect to gain by it and to be protected from its bad effects. Inflationists know, for example, that pressure for higher wages inflates prices and so makes goods less available to other people. Unions try to get around this by out-pressuring employers and raising wages that much more.

But there is no defense against inflation for the great body of Americans who don't belong to pressure groups. This includes millions of wage earners and salaried workers, the self-employed, professional people and managers. It also includes millions who are nominally members of pressure groups but who realize that stable money is the only way that everybody can be protected against inflation.

If the Republicans are to be a consistent sound-money party, Mr. Ives points out, they will have to abandon inflationary high protective tariffs. But high tariffs are increasingly part of the Democratic grabbag of handouts for everybody. Jettisoning by the Republicans of the tariff issue along with high, fixed farm support prices and other catch-all subsidies would help make the difference between the major parties clear cut. A sound-money party would necessarily take a disapproving view of prodigal foreign aid, waste in government and all other policies and practices that erode the dollar.

If the Republicans really want an "image" around which millions of worried, dissatisfied Americans can rally, sound money is that image. And if Republican leaders will so declare, firmly and consistently, fervent support will be forthcoming.

The Al Sarena Case: A Log-Rolling Mine Gathers No Gold

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. PORTER. Mr. Speaker, the other day in reading through the interesting hearings on the Department of the Interior and related agencies appropriations for 1960 I came across an enlightening exchange between my able and distinguished friend, the gentleman from Ohio [Mr. KIRWAN] who is, of course, chairman of the appropriations subcommittee, and the director of the Bureau of Land Management of the Department of the Interior, Mr. Edward Woozley. You will no doubt remember that the famous Al Serena case developed in the Fourth Congressional District of Oregon and was one of the important issues in the campaign which resulted in my election to the 85th Congress. Under leave to extend my remarks I am inserting the following brief, but delightful, exchange between the chairman and the witness:

AL SARENA CASE

Mr. KIRWAN. Maybe one of you could enlighten me on this point. Did they ever discover those minerals that we gave Al Serena with all of that timber?

Mr. WOOZLEY. I think the minerals were discovered, but whether or not they are operating is a question. Gold prices are not too conducive to mining, and they have not been since 1934, as you know.

Mr. KIRWAN. They are not mining. This reminds me of a story Bob Burns, the comedian, once told about his uncle.

It took him 3 years to chisel a huge boulder out of the mountain overlooking Van Buren. He finally chiseled it away and the boulder rolled down the mountainside and destroyed every building in its path. They followed the boulder and when they got up to it to examine it carefully, his uncle said, "Just as I thought, no moss."

The same seems to be true of that mineral lease given to Al Sarena. After he removed thousands of dollars worth of timber, he found no minerals.

Mr. WOOZLEY. The timber is on a national forest.

Mr. KIRWAN. I am glad you mentioned that. It was, but, of course, it is now private land, thanks to the approval of the mineral claim given by the Interior Department.

The Sale of Steel to the Soviet Government

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. HESS. Mr. Speaker, under leave to extend my remarks I include a letter received by me from Mr. James J. McCullough, of 6971 Sandal Court, Cincinnati 11, Ohio, in which he includes letters Mr. McCullough has received from L. S. Hamaker, general manager of sales for Republic Steel Corp., and from Avery C. Adams, chairman and president of Jones & Laughlin Steel Corp.

Those of us who served in the House during World War II can well remember the sale of scrap iron to the Japanese Government at a time when Japan was an unfriendly nation, and which was hurled at our men in the fighting lines during the war.

Mr. McCullough gives us food for thought when he calls attention to the sale of cold rolled steel sheet to the Soviet Government, at a time when the Soviet Communists are fighting a cold war with the free nations of the world:

CINCINNATI, OHIO, *March 9, 1959.*

Hon. WILLIAM HESS,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN HESS: Recently Republic Steel Corp. sold $3 million worth of cold rolled steel sheet to the Soviet Government. I wrote to Republic protesting the sale on the grounds that the steel would in some way aid the Russian war potential and/or economy. This certainly would not be in the best interests of our country.

Mr. L. S. Hamaker, general manager of sales, replied (see his letter of February 2, 1959 enclosed) and rationalized the sale with a series of defenses which are as follows:

1. Our Government approved the sale because we were bartering for chrome ore.

2. The steel had no military value or significance whatever.

3. It provided jobs for the unemployed.

4. It helped maintain regular dividends for the stockholders.

5. Any American steel company would have done the same thing.

These defenses are in the most part inadequate and can be answered as follows:

1. If we are dependent upon Russia for chrome ore, we had letter locate an alternate source soon. However, C. H. Samans in "Engineering Metals and Their Alloys," MacMillan 1949, lists the principal sources as Turkey, Rhodesia, and New Calendonia. Why then must we obtain it from the Soviets?

2. I quote from the February 28, 1959 issue of National Review on this matter. "One would indeed presume that someone in the State Department could figure out that the Soviet investment, equipment, and work releases from the need of making steel sheets by virtue of such imports can be—and is—redirected to the making of, for sufficient example, missiles and submarines."

3. This is indeed true. Making guns for Hitler during the 1930's would have increased employment also. Citizenship in a free country requires sacrifice, i.e. military service, jury duty, etc. Perhaps some unemployment is the price of freedom, although I hope not.

4. Not selling steel to Russia is good for the United States. If I may paraphrase J. P. Morgan and Charles Wilson, "What is good for the United States is good for the stockholders of Republic Steel Corp."

5. Unfortunately on the basis of the limited evidence I am able to obtain (see enclosed letter from Avery C. Adams of Jones & Laughlin Steel Corp. dated March 3, 1959) Mr. Hamaker's fifth defense is all too true. Evidently, there are those American businessmen who would sell anything to anyone in order to make a profit regardless of the ultimate consequences of their act.

Is there anything that can be done, Congressman HESS, by you or me to (1) prevent the completion of this sale, and (2) to forestall future transactions of this kind with Russia?

Your comments on the matter will be appreciated.

Very truly yours,

JAMES J. MCCULLOUGH.

REPUBLIC STEEL CORP.,
Cleveland, Ohio, February 2, 1959.

Mr. JAMES J. MCCULLOUGH,
Cincinnati, Ohio.

DEAR MR. MCCULLOUGH: Your letter of January 28 has been referred to this department since we handle the details of Republic's sale of a substantial tonnage of cold-rolled sheets to Russia. First let me say that this whole deal was worked out by our Government and appeared to involve the barter of a substantial tonnage of chrome ore, which we do not have in this hemisphere, for a tonnage of American sheets.

Republic was not a party to these negotiations, which had the complete approval and cooperation of our State Department. Our order came from an export-import house with which we regularly do business. Since cold-rolled sheets have no military value or significance whatever (your automobile body and your refrigerator are made from them) we did not feel that Republic should "second guess" our own Government, which could be presumed to know what it was doing.

This proposition arose last summer when Republic and the rest of the steel industry were operating at a very low rate. We welcomed the opportunity to improve our operations, provide jobs for a lot of men who had had little or no work for some time and to bolster our earnings so that regular dividends could be maintained.

Any American steel company capable of handling this order would have been glad to accept it. Republic was fortunate in landing it.

As you may know a certain amount of trade goes on constantly, not only between this country and Russia but between free European countries and Russia. The only reason the trade is not larger is because Russia has little to export beyond furs, minerals, and gold.

Our opinion of Russian policies and politicians is no higher than your own, yet we do not feel we would be serving our stockholders properly by turning our backs on profitable business for steel products which add nothing to Russia's warmaking potential.

Very truly yours,

L. S. HAMAKER,
General Manager of Sales.

JONES & LAUGHLIN STEEL CORP.,
Pittsburgh, Pa., March 3, 1959.

Mr. JAMES J. MCCULLOUGH,
Cincinnati, Ohio.

DEAR MR. MCCULLOUGH: Your letter of February 17 addressed to Adm. Ben Moreell has been referred to me.

Admiral Moreell retired as chairman of the board of this corporation on September 30, 1958, and he has been away until recently.

You asked, in effect, whether this corporation would solicit or accept an order for cold rolled sheets from the Soviet government.

The answer to this question is not as simple as it might be were this a proprietary business or a corporation owned by the directors or a small group of stockholders who could be readily consulted as to their wishes. It is, in fact, a corporation owned by more than 55,000 shareholders.

The foreign policy of the United States is established by the President of the United States under the Constitution, subject, particularly in the matter of trade and commerce with foreign governments and foreign nationals, to laws duly enacted by the Congress.

Assuming that a sale of cold rolled sheets to the Soviet Government is consistent with our foreign policy as established by the President, such an order constitutes legal and legitimate business for any American manufacturer.

I would have very grave doubts, to say the least, that we would be justified in refusing to accept such business if it were, in our judgment, in the best commercial interest of this corporation to do so.

In other words, I question whether the management of this corporation should undertake to deem undesirable, in the best interests of our country, that which our duly constituted authorities deem desirable, or at least not objectionable, when the commercial interests of our shareholders dictates otherwise.

The question is a difficult one, but I can reach no other conclusion than the one I have indicated, and I feel certain our directors would concur in this position.

Very truly yours,

AVERY C. ADAMS.

Tribute to Rabbi Samuel Price

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. BOLAND. Mr. Speaker, this month Rabbi Samuel Price of Congregation Beth El in my home city of Springfield, Mass., will complete 35 years of service as chaplain to veterans of the Jewish faith at the Veterans' Administration Hospital in Northampton, Mass.

I JOIN IN TRIBUTE TO RABBI PRICE

I want to join in the tribute paid to Rabbi Price by the National Jewish Welfare Board of New York, which supervises and certifies all Jewish chaplains in the Armed Forces and Veterans' Administration hospitals.

Mr. Speaker, under leave to extend my remarks, I ask that the National Jewish Welfare Board tribute, published in the Springfield Union on April 8, be printed in the RECORD:

JEWISH BOARD LAUDS SERVICE OF RABBI PRICE—TRIBUTE PAID CLERGYMAN FOR MANY YEARS AS CHAPLAIN

The National Jewish Welfare Board of New York paid tribute to Rabbi Samuel Price of Congregation Beth El in a March newsletter.

CERTIFIES CHAPLAINS

The board supervises and certifies all Jewish chaplains in the Armed Forces and veterans' hospitals.

Its article, entitled "A Milestone in the Chaplaincy," states:

"It is a distinct pleasure to pay tribute, on the occasion of his 35th anniversary as a chaplain, to Rabbi Samuel Price.

"In April, Rabbi Price of Springfield, Mass., will complete 35 years of official service as a representative of the Jewish Welfare Board and at the VA Hospital in Northampton, Mass.

"SERVES BETH EL

"During all of these years and, indeed, starting a decade earlier, he has served Temple Beth El in Springfield.

"The Rabbi received his training at the University of Berlin and at a number of European Yeshivot. His influence has been felt in almost every field of communal activity in Springfield—Council of Churches, Ministers' Association, National Conference of Christians and Jews, B'nai B'rith, etc.

"He is the author of 'Outlines of Judaism' and has lectured extensively throughout the State.

"His devotion to his chaplaincy responsibilities over the year has been exemplary.

"May God grant him many more years of life and health to continue his fruitful labors."

They'll Be Working

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. WALLHAUSER. Mr. Speaker, I refer to an editorial in the Newark, N.J., Evening News, under date of March 24, 1959, in which it anticipated what the Members of this House would find when they returned home for the recess.

I believe, from personal experience, that the prophesy was even more accurate than the editorial writer could imagine it would be when he wrote it.

I found during the recent period of supposed rest and relaxation that a Congressman is, in many cases, a cross between a complaint bureau, an employment agency, and a sounding board.

With it all, however, there are many compensations. This makes it easier to take the many problems in stride, and eventually to return to the job with the sincere conviction that most people mean to be friendly and helpful:

THEY'LL BE WORKING

There will be little rest or relaxation for Congress during its approaching 10-day Easter recess.

Back home to places like Mesa, Ariz.; Ojai, Calif.; Nampa, Idaho; Exira, Iowa; Mankato, Kans.; Ontonagon, Mich.; Pascagoula, Miss.; Haw River, N.C.; Piqua, Ohio; Pampa, Tex.; and Lusk, Wyo., will troop Senators and Representatives for attentive consultation with the neighbors.

Much more than the public realizes does the Congressman heed sentiment back home. What the people who elected him think means more to him than what his party leaders in Washington want.

Even if the leader is the President of the United States, the Congressman will brave his displeasure on issues about which his constituents feel strongly. The mail and the hometown newspapers help him keep in touch with those feelings, but they are inadequate substitutes for the face-to-face contacts, on the streets, in the clubs and banks, the post offices, courthouses, and townhalls of the district.

When he calls himself a servant of his people, he is displaying no mock humility. He knows how he got where he is and who put him there.

So this week he returns to his bosses, eager to find out whether he is giving them what they voted for. What he has been giving them is a course of moderation that seems to fit the temper of the times. Before he gets back to Washington he will know for sure.

Sam the Loan Man

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. CUNNINGHAM. Mr. Speaker, I believe the editorial printed below about "Sam the Loan Man" carries an interesting message for the people of the country and for those here in Washington responsible for the future policies of this Nation. The editorial appeared recently in the Omaha World-Herald:

SAM THE LOAN MAN

Once upon a time there was a man named Sam. He wanted to be everybody's friend. He wanted to make everybody happy.

Among other things, he was in the loan business.

Unlike others who borrowed cheaply and lent at high interest rates, Sam borrowed high and lent low. He never asked for security.

He said he did this because he wanted to show the world he had no tricks up his sleeve and was really and truly the kindly, smiling old fellow he pretended to be.

When his relatives who financed him asked him why he simply didn't give the money away he had an answer.

Sam said he did give money away. Lots of it. But he said this was not the best way because it hurt people's pride. The important thing in the loan business, he said, was people's feelings.

When he gave the money away, Sam said, that made folks feel they were beholden to him. He tried to tell them this was a silly thought and that the money came only from the goodness of his heart and he wanted no return except their happy smiles, but the people grew angry and sullen and, perversely, demanded more money.

It was then that Sam thought of lending it to them on his low-interest, no-security, pay-me-if-you-feel-like-it terms. He borrowed the money from his nieces and nephews at 4 percent and he lent it at 2 percent, or sometimes 3 percent, but never 4. And he set the due date 30 years off so nobody would feel pressed or embarrassed.

By and by Sam had a flourishing business at which he was losing billions of dollars a year, and he had bright prospects of losing lots more. He gave employment to jillions of loan arrangers, inspectors, and file clerks, not to mention publicity men.

Sure enough, Sam got recognition. Everywhere he went people would shake their heads in wonder, and when he wasn't looking some would make a cabalistic sign in the form of a square and others would make a small circle in the air with their forefinger and point at their heads.

If Sam was not everybody's friend he was sure enough everybody's acquaintance and almost everybody's creditor.

Everything would have been fine, maybe, except that Sam's relatives finally realized they were going broke. Whereupon they had the old man committed and closed the loan window and everybody lived happily and more wisely ever after.

Moral: Keep a closer watch on your Uncle's allowance, especially if his name is Sam.

Oil Import Quotas Will Not Aid American Security

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. CONTE. Mr. Speaker, the assertion has been made that imports of crude and residual fuel oil into the United States must be limited in the interests of our national security. Yet no proof of this assertion, which is the justification for the President's recent ruling placing quotas on oil imports, has been produced.

Under leave to extend my remarks, I include three excellent articles showing that the President's order will actually work to the detriment of our national security. The articles are from the Journal of Commerce for March 24, the Boston Herald of March 12, and excerpts from Harvard Prof. Sumner G. Slitchter's newsletter:

[From the Journal of Commerce, Mar. 24, 1959]

OIL IMPORT CURBS SEEN NO HELP TO U.S. SECURITY

The U.S. Council of the International Chamber of Commerce has charged the administration's quotas on oil imports are "misguided" and "will contribute neither to the security nor to the economic strength of our Nation."

Philip Cortney, chairman of the council and president of Coty, Inc., rejected the contention oil imports are threatening national security by curtailing the search for oil here.

"A domestic source of crude oil in wartime," he said, "is obviously desirable, but import restriction is a clumsy and probably self-defeating means to obtain it."

Restrictions, he added, would cause the United States to use its own oil faster, which "only hastens the day when our dependence on foreign sources becomes critical."

Mr. Cortney said the United States uses nearly half of the world's oil products each year, although it has only one-sixth of the world's proved reserves.

The council claims the curbs injure the security of the United States by creating discord with friendly nations.

"The first step toward controls produces a chain reaction bringing more and more intervention in the private economy," the council holds. The action was said to be "directly in conflict with efforts the administration is making to check inflation."

The statement said import curbs will hurt (1) oil refiners "who have sought to augment national resources by developing foreign supplies," (2) industries relying on fuels refiners of U.S. crude cannot economically produce, and (3) the "whole large segment of the economy involved in our foreign trade."

The last group, the statement added, will suffer because of a weakening of the Government's ability to oppose reciprocal restrictions on U.S. imports.

[From the Boston Herald, Mar. 12, 1959]

WE ARE DUPED WITH SECURITY

In the deceptive name of national security, the administration in Washington has moved to put New England into a fuel hotspot. Again flagrant protection has been cunningly disguised as defense.

Here's how it goes:

New England uses large quantities of residual fuel oil in industry, in nonresidential heating and in the production of electricity. More than 55 percent is imported, mostly from Venezuela, which produces a crude suitable for topping out other products and leaving this heavy oil.

Domestic crudes are not so well suited, and the prices of other products are so much higher that refineries here operate more and more without any residual. In 1950 residual oil was 27 percent of domestic refinery production; today it is 12 to 14 percent and dropping.

Clearly New England is sharply dependent on imported residual fuel oil. Yet the Government has just announced that it will impose import quotas on residual as well as on crude oil, gasoline, and other products.

In deference to protests from this region, the administrator of the program said, disarmingly, that New England would be affected to only a small degree; that the quota on residual for the country east of the Rockies would be not a great deal less than present imports.

This is a trap. In any competitive field, it takes only a little less than enough to supply the demand to set the price soaring. In the winter of 1947–48 a shortage of only 1 percent sent fuel prices up in New England at the rate of at least $100 million annually.

In other words, the domestic oil producers, whose interest in exploration and development of new petroleum fields is supposed to be indispensable, are to get only a slight lift in demand for domestic residual, but to pay for that, New England is to be stuck with much higher prices.

Does that make sense? Or have the coal interests bilked the Government into contriving a better competitive position for coal in New England?

In this colder than normal winter, substantial additional amounts of heating oils came in to New England from Halifax, Puerto Rico, Venezuela, and California by boat, simply because our usual domestic sources could not meet the demand. But maybe New England is expendable and can be al-

lowed to freeze for the good of security. Or made to pay plenty.

The security angle is the thinnest subterfuge in all this business. Canada is part of our continental defense, yet we slap quotas on her oil. Venezuela would be an ideal source for oil in case of war, yet she is quotaed, too.

The fleets of tankers and the docks and handling equipment were invaluable in the Suez crisis. Do we give them up in the name of a dubious security? Or is security only for Texans?

There should be no restrictions on residual imports. New England, too, has a right to security.

[Excerpted from "The American Economy: Current Trends, Problems and Prospects," by Prof. Sumner H. Slichter, of Harvard University]

XIV. MANDATORY QUOTAS ON OIL

The President has fixed a national import quota on crude and semirefined petroleum at somewhat below the amounts specified in the recent voluntary controls. The President acted under the authority of the 1954 amendment to the Reciprocal Trades Agreement Act that permits mandatory curbs on imports of petroleum in the event that imports are found to threaten national security. The curbs are defended on the ground that imports of oil discourage the exploration for new petroleum sources that the country would need in event of war.

The real purpose of the curbs is to stall off legislation sponsored by oil-State Senators and Representatives that would have restricted petroleum imports by specific quotas. The mandatory quotas imposed by the President do not promote national security and are not needed for that purpose. In the first place, petroleum imports improve the reserve situation of the United States by making it less necessary to draw on our existing reserves. In the second place, the enormous civilian consumption of gasoline creates in effect an enormous reserve for war purposes, since the civilian use of gasoline can be easily curbed by rationing. It is not necessary that in time of war every American worker drives to his job in his own car. In the third place, the phony nature of the defense argument is revealed by application of the quotas to imports of oil from Canada. Since Canadian oil does not move overseas, imports of Canadian oil and the resulting stimulus to the Canadian oil industry would promote the security of the United States.

The oil quotas are an unwarranted act of economic aggression on behalf of a few oil States against the Nation as a whole and against the free world. By no stretch of the imagination can these curbs be regarded as promoting the national interest.

Honoring Siouxland's Meat Producers

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. HOEVEN. Mr. Speaker, the Sioux City stockyards was established 72 years ago. The Sioux City livestock market is one of the largest in the country. Recently, the 200 millionth animal was delivered to the yards by my constituents, Mr. and Mrs. Wilfred Wurth of Remsen, Iowa. The following editorial, which appeared in the Sioux City Journal of April 8, 1959, is a fitting tribute to the livestock industry in northwest Iowa:

HONORING SIOUXLAND'S MEAT PRODUCERS

Siouxland's leading industry has honored its key man, the producer, this week with the presentation of a free, all expense paid trip to Washington, D.C. for Mr. and Mrs. Wilfred Wurth, whose black steer turned out to be the 200 millionth animal to be handled by the Sioux City Stock Yards since the establishment's founding 72 years ago.

The Remsen, Iowa, farmer, for many years a regular shipper to the Sioux City public market, is the symbol of this region's basic industry, the one which is the foundation of Siouxland's agricultural wealth on which livelihood of most citizens in this area ultimately depends.

Mr. Wurth will be living proof and a reminder to the nation, during the tour of the National Capital City, of Siouxland's preeminence as a meat producing region and of Sioux City's growth as a central market for meat animals.

Each year more producers and more buyers come farther and in larger numbers to this corner of the Nation.

Meat, however, has a way of losing its identity after slaughter, at least so far as the over-the-counter purchaser is concerned. It takes resourceful promotion to make sure that the producing area gets its fair share of credit in the distant consumer's mind. Such resourcefulness is demonstrated by the Sioux City Stock Yards company's recognition of the part played by the producers on the occasion of arrival of the 200 millionth animal since the beginning of the Sioux City market.

Mr. Wurth in a real sense represents the thousands of livestock producers in this four state area who consign their animals to the Sioux City market for distribution as processed meat to the nation's dinner tables.

The pride and confidence of a whole region in its chief industry, which is of such vital importance to national strength, rides with Mr. and Mrs. Wurth in their acceptance of the role of tourists and goodwill ambassadors from this great meat producing region.

Rt. Rev. Msgr. Stanislaus Musiel

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. KOWALSKI. Mr. Speaker, on Sunday last in the city of Hartford, Conn., the Polish Government in exile paid a deserved tribute to a great religious and civic leader, the Right Reverend Monsignor Stanislaus Musiel.

A commission representing the Polish government headquarters in London invested Monsignor Musiel as a commander of the Polonia Restituta, the highest honor of Poland. He was decorated with the Commander's Cross, an award with centuries of glorious tradition behind it.

The award is a recognition of the illustrious services performed by Monsignor Musiel in the cause of freedom. It pleases us in Connecticut, who have known so well his great work in many fields, that recognition of his achievements should be given also by the government devoted to the cause of Polish freedom.

In our State, Monsignor Musiel has won wide respect and admiration for his accomplishments. Born in Poland, he has brought to his adopted country the same love of freedom and justice which has marked the history of the Polish people.

In order that there may be an official record of this award to Monsignor Musiel, I am requesting, Mr. Speaker, that there be inserted in the CONGRESSIONAL RECORD the following news account from the Hartford Courant:

MONSIGNER MUSIEL IS AWARDED HIGHEST POLISH HONOR

The highest honor of the Polish Government in exile was awarded to the Right Reverend Monsignor Stanislaus Musiel, pastor of SS. Cyril and Methodius Church in ceremonies at the Polish National Home Sunday.

Monsignor Musiel was invested as a commander of the Polonia Restituta. The decoration, a gold maltese cross bearing the arms of Poland and suspended from a red and white ribbon, was awarded in recognition of the monsignor's assitance to Polish-Americans in Hartford and for his aid to the exile Government.

The award was presented by a commission appointed by the exile Government, situated in London. Members of the commission were Adam B. Lyczak, of Brooklyn, N. Y., president of the Polish National Fund; Msgr. A. P. Francis P. Kowalczyk, of Passaic, N. J.; and the Very Reverend Anthony Mazurkiewcz, of New Haven.

Presentation of the award was preceded by an Easter supper at which traditional Polish food, blessed by Msgr. John P. Wodarski, was served. Walter Maznicki, president of the Polish National Club, was toastmaster at the dinner.

Monsignor Musiel was born in Jankowie Przygodskien, Poland, November 11, 1872, and was ordained a priest at the University of Louvain, Belgium, June 29, 1897. Shortly after his ordination he came to Hartford as assistant pastor of St. Peter's Church, where he remained a few months before being assigned to organize Polish parishes in New Haven and other Connecticut cities. He returned to Hartford as pastor of SS. Cyril and Methodius Church in 1917, and became a monsignor in 1939.

Richard Cardinal Cushing, of Boston, is among recent recipients of the Polonia Restituta.

Federal Interference

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. WESTLAND. Mr. Speaker, each day it becomes more apparent that the Federal Government is interfering to a greater extent than ever in the lives of the people. An example of this interference in my own area, the Second Congressional District of Washington State, is the Federal Government's apparent decision to include the city of Everett and Snohomish County in the Seattle standard metropolitan area.

This, Mr. Speaker, is a case in which the Federal Government is interfering with the lives of individuals against their wishes. The residents of Everett and Snohomish County want to retain their

identity. They do not want to be identified with Seattle.

Snohomish County is a growing area. Its population is on the increase. Its industry and economy are expanding, and new oil refineries are scheduled to locate here. This growth justifies the faith of the people and their desire to identify themselves proudly with Everett and Snohomish County.

My father came to Everett in 1891 when there wasn't much of a city. He helped to build Everett and establish its identity. I was born there 54 years ago and I like to think that I, too, helped to make Everett a better place to live.

Seattle is Seattle and Everett is Everett. Most everyone knows this except some agencies of the Federal Government which think they know different. By what right do these people here in Washington, D.C., decide that Everett shall be a part of Seattle—are we to be regimented so that next they will be telling where we will live?

I hope that census and budget will come to their senses and let us run our affairs while they run theirs.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the editorial, "Not Everyone Works at Boeing," from the Tacoma, Wash., News Tribune of March 21, 1959. This editorial agrees with the principle that each area has a right to local identity.

The editorial follows:

NOT EVERYONE WORKS AT BOEING

The Seattle-Renton plants of the Boeing Airplane Co. represents the biggest industrial operation in the Pacific Northwest. They so far overshadow everything else in Seattle that one hears Seattleites say they have a one-industry town—"all their eggs in one basket." Boeing Seattle-Renton-Moses Lake also is a colossus in the Washington State heavy industry picture.

So, back in our National Capital it is understandable, even if not true, that bureau people hold the idea that everyone out here works at Boeing.

Lately the Bureau of the Budget and the Bureau of the Census are about to include Everett and Snohomish County in the Seattle metropolitan district for census purposes. This is based on the premise that more than 15 percent of the Snohomish County labor force commutes to Seattle to work. Where? At Boeing. The Bureaus maintain that 23 percent work in Seattle and therefore Snohomish County is socially and economically integrated with Seattle-King County.

The Everett Chamber of Commerce is upset and alarmed at the prospect of Everett losing its own identity as a metropolitan area in being gobbled up by Seattle. Very properly, it has informed the Federal bureaus that the picture is changing rapidly. Three major oil refineries are going into Snohomish County and there is considerable expansion there of existing industry. Everett hears from Senator JACKSON that Boeing will experience nearly a 50-percent payroll reduction in the next 2 years. These developments would shoot the commuter number to well below the 15 percent the bureaus use for their criterion.

Tacoma supports Everett's contention. Tacoma has its own metropolitan area. Bremerton has its own. Everett has its own, and should keep it. Much as we should like to see Boeing hold its payroll high, the prospect of industrial development around the Puget Sound area in the next few years favors expansion in Tacoma and in Snohomish County.

Federal Aid to Protestant Institutions

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. ABERNETHY. Mr. Speaker, Judge Luther A. Smith of Hattiesburg, Miss., who has served with distinction as a judge in the 10th Chancery District of Mississippi, is now the Sovereign Grand Commander of Scottish Rite Masons, Southern Jurisdiction. There are a half million Scottish Rite Masons in this jurisdiction and an additional 3½ million Masons affiliated with the Blue Lodge. Recently there came to my attention, Mr. Speaker, a statement by this beloved southern leader regarding dangers which inhere in the matter of Federal grants to the support of religious programs. I appreciate and applaud this statement which points up a serious problem in our country today. That the institutions mentioned by Judge Smith are Methodist, Mr. Speaker, is quite incidental to the point he raises.

A Methodist himself, this distinguished jurist objects to Federal grants to Methodist institutions. But he would, by the same principle, object quite as strenuously to such grants for the benefit of any church. He believes that the strength and independence of our churches are most surely safeguarded when they subsist on the voluntary gifts of adherents.

There is a disposition I have detected too often, Mr. Speaker, to include church institutions in grants which come under the health and welfare banner. The intent is worthy, but the result may not be what is sought. For it is evident to me, Mr. Chairman, that institutions seeking and accepting aid from the government will inevitably come under some measure of Government surveillance and control. Such a development can scarcely be avoided since it is the solemn duty of the Congress to follow the flow of Federal funds in order to ensure their proper use.

I am one who believes, Mr. Speaker, that any such encroachment of the Government upon our churches—even though it may appear to be necessary and proper in the circumstances—would be a tragedy of vast proportions. I believe that the churches will fill a truly prophetic role in our Nation, and effectively serve the State itself, only as they remain truly independent bodies, free of the State's control.

The statement of Judge Smith which exhibits such a clear grasp of this basic principle, is as follows:

FEDERAL AID TO PROTESTANT INSTITUTIONS

(By Luther A. Smith)

One of the cardinal principles of the Supreme Council 33d Degree of the Ancient and Accepted Scottish Rite of Freemasonry, Southern Jurisdiction, United States of America, which it traditionally and stanchly supports is stated as follows:

"The entire separation of church and state, and opposition to every attempt to appropriate public moneys—Federal, State, or local—directly or indirectly, for the support of sectarian or private institutions."

We feel compelled to call the attention of our members and all citizens to recent violations of this principle by the Methodist Church. One is the application for and acceptance of national fellowships for graduate studies in religion by Emory University, Atlanta, Ga., a Methodist institution. The money involved is small, but the principle at stake is mammoth. If the program is executed, the Federal Government will pay for religion. It collects $22,500 in taxes from American citizens, then pays three men who are engaged in religious studies. We believe that Emory University is wrong to apply for and accept these funds for such a purpose. We believe it is unthinkingly disregarding a basic American principle.

It is quite possible that voluntary gifts to Emory may decrease since the university has chosen to accept funds for its school of theology from the Federal Government.

We are further saddened to note that this same denomination has recently taken over from the Federal Government at Oak Ridge, Tenn., a hospital which, with its site, is said to be valued at $4 million. We are not interested in the fact that the Methodists won a referendum vote over another agency which had been interested in the property. A majority creed could do this in any community. What impresses us is that the Government has given a valuable facility to a church and in addition has guaranteed to assume operating losses for 10 years.

A notion seems to obtain in certain quarters that the principle separation of church and state is a constitutional weapon to strike at a particular church. This notion is grotesque. The principle applies to and is good for all churches, is basic to their health and virility. The principle of voluntarism which denies public support to sectarian enterprise has consistently redounded to the churches' advantage. It has rightly become one of the cornerstones of our free culture. We can name country after country that has suffered from "religious inflation"—a condition created by subsidies from the state to the church. Such subsidies build up the church as a power structure until it arouses the enmity of the people.

Such a condition, often called anticlericalism, has never developed in the United States. There has been no occasion for it since our churches have all been free institutions without ties of governemnt. The surest protection against anticlericalism is the voluntary principle in church finance. This means that not just one church but all churches shall go for their money not to the government but to their own adherents. We believe this principle is good. The Founding Fathers believed in it and put it into the Constitution. We favor it. We favor it for all churches without denominational distinction.

If the Roman Catholic Church were seeking these fellowships for the graduate training of its priests, we would object to such an expenditure of public funds. But it is Emory University, a Methodist-supported institution, and the Holston Annual Conference of the Methodist Church, which now seek and receive financial favors from the Federal Government. We object quite as strenuously. Yes, the sums involved are small, but the precedent is deadly. If such subsidies to the Methodist Church are permitted to stand, there will be more and more as the practice burgeons. The legal implications of these grants should be fully investigated. The grants may turn out to be highly expensive to the institutions which have accepted them.

Bishop Roy H. Short of Nashville, Tenn., the episcopal leader of the Holston Conference, Bishop Arthur Moore of Atlanta, Ga., and the trustees of Emory University are

Methodist leaders with whom many Methodists and others will want to register their concern in this matter.

I am a Methodist and an alumnus of Emory. If it needs financial aid, I will join the other alumni in donating to its relief.

Real Money

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. DEVINE. Mr. Speaker, a retired banker from the Central Ohio area, Mr. J. Keller Kirn, of Lancaster, Ohio, recently submitted an article on real money which should be of interest to the Members of Congress.

The article is as follows:

REAL MONEY

(By J. Keller Kirn, Sr.)

Paper money is not really money. It is the promise of money. The language on the face of paper bills says so very plainly. One kind of money states: "This certifies that there is on deposit in the Treasury of the United States of America $1 in silver payable to the bearer on demand." Another kind of paper money declares: "The United States of America will pay to the bearer upon demand $5."

The 1932 Republican Party platform stated: "The Republican Party established and will continue to uphold the gold standard and will oppose any measure which will undermine the Government's credit or impair the integrity of its national currency. Relief by currency inflation is unsound in principle and dishonest in results. An ailing body cannot be cured with quack remedies."

Quack remedies are inseparable from currency not payable in gold coins. Using our gold only for other nations' citizens, and forcing us, including farmers, to pay taxes for quack remedies, such as subsidies, price supports, controls, and the Soil Bank law, then giving or selling surplus farm products at lower prices to other nations' citizens, forces us to be second-class citizens.

When our gold coins were in banks and our President or Congress alarmed us, we withdrew them from banks and hoarded them. It did not take Congress long to learn this and correct mistakes. When confidence was restored, we again deposited them in banks. Taking our gold coins from us made masters of our servants who no longer correct mistakes. The 100 cents we get for a dollar constantly buy less.

Reducing the gold content of our dollar from 25.3 to 15.238 grains per ounce reduced our buying power with a 59.06-cent dollar and increased the price of gold from $20.67 to $35 per ounce. This enabled other nations to pay their debts to us and buy our bonds, stocks, and products with less gold dollars. Contrariwise, it forced us to pay more gold dollars for foreign products and services, such as shipping and insurance. Raising the price of gold again would repeat this mistake.

Our gold coins were our private property, like our clothes. Forcing us to take currency not payable in gold coins violate the fifth amendment which prohibits taking private property for public use without just compensation. Panama refused to take currency not payable in gold coins for U.S. bonds and demanded that gold coins be 25.3 grains per ounce 0.900 fine.

We had more gold January 2, 1933 than on November 2, 1932, therefore there was no need to take us off the gold coin standard and there is no need to keep us off the gold coin standard. Neither our Nation nor any other nation ever was on a 100 percent gold convertible basis, just as banks can't keep all of depositors' money in banks. Gold Democrats helped to elect President McKinley.

When we were on the gold coin standard in 1920, our recession lasted only 1½ years and was followed by 7 years of real prosperity. We had a flexible wage scale that permitted immediate and adequate adjustments in accordance with changing conditions. Prices fell until buying resumed according to the law of supply and demand. We balanced the budget each year during that time. Franklin D. Roosevelt never balanced the budget.

Currency payable in gold coins stops abuse of credit. NAM's Robert de Fremery said: "But when our Federal Reserve banks are obliged to maintain domestic convertibility of currency into gold, we lay ourselves open to a drastic collapse of credit every time it becomes necessary to counteract an abuse of credit."

Importing $100 million gold from England in 1907 stopped the panic. Each nation went its own way and made its financial policies subject always to the limitation that if it overextend itself other nations would drain its gold and force it to reverse its policies, without war. This illustrates how currency payable in gold coins automatically stabilizes credit and halts inflation, therefore restore the gold coin standard now at $35 per ounce, 0.900 fine.

How Much Did American Prestige Suffer in Cyprus?

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. LOSER. Mr. Speaker, recently the editor of the Nashvill Teennessean, Mr. Coleman A. Harwell, in company with Prof. Kenneth E. Olson of the Northwestern University School of Journalism, and under the auspices of the State Department exchange program, left on a world tour to exchange programs with editors and officials in a number of countries.

Mr. Harwell is writing a series of several articles for his paper during this tour. It is my plan to place each of the articles in the CONGRESSIONAL RECORD in order that you may have the opportunity to read them. Mr. Harwell is an astute newspaperman and I am sure you will find his articles interesting.

Under leave to extend my remarks, I am including his first article on Greece. It follows:

HOW MUCH DID AMERICAN PRESTIGE SUFFER IN CYPRUS?

(By Coleman A. Harwell)

ATHENS.—"Ah-o-kah! Ah-o-kah! Ah-o-kah!"

The shouts rang out from the streets and rooftops of Athens.

One of the greatest heroes in modern Greek history had returned at last.

Mustachioed, coal-eyed Col. George Grivas never smiled once, but shed tears several times as he was embraced, praised, and cheered when he came back from 4 years as literal underground leader of Greek forces in Cyprus.

Slender and erect at 62, he wore his khaki combat sweater, and uniform, his pistol, binoculars, and shining boots—all topped by his jaunty beret—as he stood at erect salute in a grey Cadillac convertible being escorted along streets jam-packed with exultant throngs held in tow by thousands of police.

Beside him was his lovely-looking wife. Younger than he and blondish she was still radiantly and somberly Grecian.

For the truly legendary colonel and his lady this was a day of emotion-packed triumph. And it was equally that for every person who calls himself Greek and who cherishes a history of heroes and of legendary events and characters who have often been proved to be truer than truth itself.

For an American, standing on the rooftop of a hotel overlooking Constitution Square, it was less personal. And yet it had something of the effect perhaps of sitting in the topmost row of an ancient Greek theater, seeing and hearing the last act of a classic play. It also had very direct significance for Americans aware that feelings toward us were involved here, too.

GREEK CHORUS

The chorus (there is always a chorus in Greek drama) was there in the streets below, it was on the parapet of the parliament building, it was on the rooftop of the building opposite us. The score of young men across from us (they looked like teen-agers who might have been wearing leather jackets on an American street) were shouting together, "Ah-o-kah! Ah-o-kah!"

Perhaps they were veterans of this heralded EOKA. Whether veterans or not, they were wrapped up in its meaning to Greece.

EOKA (National Organization for Cypriot Struggle) was the group that sought to force union of Cyprus with Greece. When Britain, having military control of the island, played for time, and America took a hands-off attitude, underground terrorism erupted in 1954.

The story, at least this major chapter, is now finished. The Greek majority will share a government with the Turkish minority. Britain will retain a naval base.

The result? Grivas would be in position to give the answer.

When he made his first open appearance in Cyprus the morning of March 18, after more than 4 years of existence under the mysterious pseudonym of "Dighenis," his first comment was something of a twister. The man who had resisted the British so fiercely, said:

"I am fanatically pro-British but the British made us bitter. It is for them to rebuild this friendship now."

Grivas pro-British? Recall that it was the British (with French and Russian help) who helped Greece win independence in 1829, after 400 years of being dominated by Turkey. Recall, too, that Greece was a British ally in World Wars I and II, had been in Britain's sphere of influence until 1947. And, as further evidence of Greek-British affinity, consider that they are two of the few nations maintaining royalty. (Incidentally, both descend from the now defunct German royal line.)

NOT SO STRANGE

It is not so strange, then, that Grivas should proclaim himself as pro-British. Nor should it seem strange that the Greeks were not so surprised when the British fumbled for time in the face of the irksome question as to whether Cyprus should be Greek or Turkish or neither. That's the way the British are supposed to act, isn't it?

Of course. But not the Americans.

They are for the self-determination of peoples. They are for independence.

And so, in 1955, 1956, 1957, 1958 and on into 1959, we Americans, who had spent $3 billion of our hard-earned tax dollars saving fair Greece from a fate worse than you-know-what, found ourselves getting the cool treatment, and sometimes not so cool at that—as, for instance, when the U.S. Information Service Library was sacked here in Athens and burned.

The Greeks reminded us and themselves over and over (their newspapers banged away for 4 solid years) that they had been our ally in both World Wars, that they had stood with us in Korea; that Turkey had turned against the Allies in World War I, that she had not truly pitched into World War II, but had had greater U.S. aid thereafter than Greece. And that, furthermore, Cypriots wanted to unite with Greece.

Puzzling? Disturbing? Aggravating? Does the situation make you want your tax dollars back?

Before you go too far along that line—and thus, perhaps, lose sight of what the Marshall plan and Truman doctrine did in Greece, keeping a valiant and freedom-loving people on our side of the Iron Curtain, and thousands of miles of Mediterranean shoreline open to our ships and planes and missiles—let's get back to the subject at hand—Cyprus.

You can make a powerful argument that an election should have been held to determine the island's future. And you won't find many people who'll say the vote wouldn't have been overwhelmingly in favor of union with Greece.

So, should it surprise you that Greece was unhappy about Cyprus? Or that you don't get cheers on Athens' Roosevelt Avenue when you mention John Foster Dulles? Should it ever surprise you that the U.S.I.S. library was set upon by an angry crowd?

It would be wiser, we believe, to consider that this is the kind of thing we will be facing from now in many parts of the world. And in such future cases, what do we do?

Hold to principle? Let freedom wave o'er the lands that want to be free and say they are brave?

Or compromise? And in what circumstances and to what extent?

These are big questions. They are facing Americans everywhere today—in Tennessee, in Washington, and in a hundred foreign lands. We heard the subject discussed by a group in Athens the other day. I'll run into it all around the world in the next few weeks. And perhaps some of the findings will be worth reporting.

PLEASANT CHANGE

Meantime, the Greeks are glad to stop arguing about Cyprus. It was exciting while it lasted, and one who hit the subject hard and often was Tom Little's counterpart on the Athens newspapers Vima and Nea. One of his latest was being laughed at when I arrived March 9 and I am forwarding it herewith. It pokes fun at Governor Sir Hugh Foot, who suffered much of Britain's discomfort as the elusive Grivas rocked the island. The dog represents Foot's unhappy predecessor, General Harding, who always had such a critter in his company.

Now, Greeks are glad the Cyprus argument is past and they can get down to some other pressing matters. Such as economic development, about which more later.

Asked why she thought Athens newspapers had lost circulation in recent years, attractive Mme. Helen Vlachou, successful publisher of Kathermirini, said: "Four years is too much of anything. People want a change."

Concerning America, it may be reassuring to know that the U.S.I.S. art gallery on Venizelos Avenue has an excellent exhibition of Greek sculpture that is drawing big crowds. That an American in Athens is made to feel welcome everywhere, except in the center of the street where drivers don't get a fair shot at you. That a lady guide to the Acropolis says: "Oh, yes, I have heard of the Parthenon in Nashville, Tenn. They came here to study it in great detail. The only sad thing is that it isn't located on a hilltop."

Teenagers and Outer Space

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. CUNNINGHAM. Mr. Speaker, I want to share with my colleagues and with the thousands of other persons who read this RECORD some thoughts and recommendations in the field of parental guidance. This is perhaps not the direct concern of Congress; yet, the results of a lack of parental guidance have occupied special and regular committees of Congress many weeks and months in studying juvenile delinquency and crime.

The thoughts below are from a talk given by the Reverend John E. Vernon, a close personal friend of mine. Father Vernon is guidance director of the Archbishop Ryan Memorial High School in Omaha. He has a master's degree in education from the Catholic University here in Washington, where he specialized in guidance and psychology.

This talk was given to a home and school group meeting last month and has since come to my attention. It will give everyone who reads it some food for thought, and I recommend taking the few minutes necessary to read it.

The remarks are as follows:

Everyone is concerned about outer space these days, what with missiles and satellites zooming around. Parents and teachers, too, have their outer-space problems—their children and pupils. I say outer-space problems because anyone observing teenagers for any length of time, seeing their strange dress, mannerisms, and language, feels like throwing up his hands and exclaiming, "Take me to your leader."

The teenage is the time for radical changes. Jane begins to powder and Junior starts to puff. Junior stands before the mirror and throws out his chest like a football player. Jane quits making faces at the boys and starts making eyes at them instead. She also discovers that Alexander Graham Bell invented a handy device called the telephone.

It is true that youngsters haven't really changed very much over the years. Witness what the oldest writing known to man says, "Things aren't what they used to be, children no longer obey their parents." Socrates, who lived about 469 B.C., said: "Children now love luxury; they have bad manners; have contempt for authority; they show disrespect for their elders and love chatter; they no longer rise when their elders enter the room; gobble up dainties at the table and tyrannize their teachers." Yet, we must admit that while the music of the younger generation is real cool, and their hotrods are the most, it does seem that their respect for their parents and teachers is real gone.

What is the answer to the burning question, "Why are our young people today so restless, so undisciplined and so contemptuous toward authority?—More so than ever before?" The first and obvious fact is a psychological truth that these youngsters are at this time insecure and unstable by nature. Now add to this fact the failings of three important agencies—education, society, and the home. The result is almost chaos.

Modern education is responsible for a part of modern youth's problems and criticism by elders. With the advent of so-called progressive education, these youngsters were conscripted into serving before the mast of that leaky tub which sailed under the name of "Cafeteria-Style Curriculum"; their minds and tastes were debauched by pursuing pedantic imbecilities in place of "tried and true" essential subjects; the progressivists abandoned the "three r's" for the three "t's" of "tutti-frutti, triviality, and twaddle." Thank goodness, we are witnessing now an abandoning of this type of education and a return to what is essential in education. But the damage already has been done to far too many.

Society itself is the second culprit, because many modern teenagers are more sinned against than sinning. Did you ever ask yourself the question, "Who are these kids?" I'll tell you who they are. They are those who (a) were conceived in the chaos of a world war; (b) were raised without fathers for their first 5 or 6 years (psychologists tell us this is perhaps the most important time in father-child relationship); they are those who (c) are products of working mothers and two-jobbed fathers; (d) are victims of broken homes, separated parents; (e) are sons of country-clubbers and daughters of social butterflies; (f) have the streets for their playground; (g) have gangs for their companions; (h) have comic books and 25-cent pocketbooks for their bible; and (i) have TV and movie houses for their very impersonal babysitter.

The home, even the so-called Christian home, is also a culprit. The popes and Catholic educationists have insisted that parents are the primary educators of their children, not the priests, nun, and lay teachers. Parents are given this God-given right and the graces to carry it out. Home should be the place where the child's physical needs are met, his character formed and personality shaped.

Parental guidance ought to concern itself with at least these four areas—example, love, understanding, and morality.

Example: Youngsters look to the adults for example. Here is an important area where we are failing them. Last year, at this time, I was in New York and I attended a delinquency trial, presided over by that outstanding American, Judge Samuel Leibowitz. As these flotsam and jetsam dregs of young American manhood and womanhood were brought before the court, their lives spilled out before all, one answer came back strong and clear as the reason why they acted as they did. Four out of five said they did these things—stole, molested, robbed, beat, etc.—because they were only following the example of adult Americans. What a terrible indictment of adult American life. Judge Leibowitz has said that the problem of juvenile delinquency can be solved very simply, in nine words—"Put father back as the head of the family."

In a survey I conducted last year among some 1,300 teenagers for my M.A. degree, one of the questions asked was, "To whom do you go for help with most of your personal problems?" Their answers came in the following order: First of all, their friends; secondly, their mothers; and far down the list was dad. Some even admitted that the only thing they discuss with dad is their allowance.

Love and understanding: Children and teenagers need to be loved and understood. But that alone is not enough. They must know that they are loved. Heart-to-heart talks between parents and their offspring are most essential to a child's well-balanced sense of security. And by all means, take their problems seriously. To laugh or scoff

at what seems to the parent as a trivial, foolish thing might well be the weapon severing the child's trust in his parents, perhaps, forever. Each child must be treated as an individual, since no two people are alike. It is not so much for parents to solve the problems of the child, as it is to help him solve his problems. Pope Pius XII said, "Make them understand themselves."

Morality: The young people of today are confused by a dual standard of morality. The home has one standard; the school and church another. It is fruitless to teach the children the laws of morality in school and then have them witness a complete disregard for them at home.

The TV program "Father Knows Best" is a wonderful example of proper parental guidance. Take the problems of the children seriously and work with them so that eventually they can face the world and its problems without fear, knowing that they have the ability to cope with them.

The Advancement of Medical Research and Education

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. FULTON. Mr. Speaker, I wish to call to the attention of my colleagues in the Congress, as well as the American people, the views of Dr. Edmund R. McCluskey, vice chancellor of the University of Pittsburgh, Schools of the Health Professions, on the continuing need for medical research and education. Dr. McCluskey is an outstanding educator in the fields of medical research and medical education. In 1958 he was the Man of the Year awardee in medicine. This award is given by the Pittsburgh Junior Chamber of Commerce for distinguished service in western Pennsylvania.

I submit the letter of Dr. McCluskey of April 7, 1959, and include his reference on manpower and facilities, which outlines the need for physicians, dentists, professional research workers, scientific facilities and medical schools. This is an excerpt from an excellent pamphlet, published by the Department of Health, Education, and Welfare, entitled "The Advancement of Medical Research and Education":

UNIVERSITY OF PITTSBURGH,
Pittsburgh, Pa., April 7, 1959.

The Honorable JAMES G. FULTON,
House of Representatives,
Congress of the United States,
Washington, D.C.

DEAR MR. FULTON: You will recall our conversation at Dr. Barone's anniversary dinner at Pittsburgh. At that time we spoke of the continuing need for medical research and medical education, the continuation of Hill-Burton funds, and also the need for low-cost housing in relation to our health center hospitals.

RESEARCH AND EDUCATION

Enclosed please find a copy of "The Advancement of Medical Research and Education Report," published through the Department of Health, Education, and Welfare. This is commonly known as the Bayne-Jones Report. This document is the best available source of our needs for medical research and education.

Sources of research funds and the ultimate use of such money are found in part A, beginning on page 17.

The chapter on "Manpower and Facilities," page 31, tells of our present and future needs.

The chapter on "Research and Training Grants—Extramural Programs," on page 67, summarizes some of the needs and tells of the types of grants that are now being given.

These matters are well set forth and I need not comment further.

HILL-BURTON FUNDS

There is information to the effect that congressional thinking on the allocation of Hill-Burton funds is undergoing revision. Most of the funds from this source have, in the past, gone to the building of hospitals for rural areas. This need has now lessened and Congress may allot more of this money to teaching centers and community hospitals in urban areas, hopefully for both new buildings and also for the renovation of present buildings. This would be a great help to teaching centers like our health center hospitals, for we are meeting the medical needs of our own community, the medical needs of the adjacent areas from which we get the most severe and complicated cases and, also, the needs of our teaching programs as well. We are in dire need of additional capital funds from both Government and other sources to provide necessary facilities to meet our growing responsibilities.

LOW-COST HOUSING FOR NURSES, INTERNS, AND RESIDENTS

Funds for this above purpose are now included as specifically earmarked money in a bill designed for the college housing program.

Medical centers desperately need low-cost housing immediately adjacent to the centers where married students, married interns, and residents in training, as well as nursing and key technical staff, can be housed. Many centers already have developed such programs to meet their own needs. Congress has become increasingly aware of the need and value of such housing and a bill to provide some funds for this purpose died in the closing sessions of the 85th Congress. This matter is now before Congress and receiving consideration in committee and we would appreciate your interest and support.

We are still looking forward to the pleasure of having Members of Congress visit with us, and will be most happy to make any arrangements for any of you which your time will permit.

With warmest personal regards.

Sincerely yours,

E. R. MCCLUSKEY, M.B.

MANPOWER AND FACILITIES

Research is an intellectual pursuit, led by intelligent, highly trained people who must work under conditions fostering creativity. The establishment and maintenance of a strong national research effort, including fields related to medicine, depend heavily on intangibles, such as the strength of universities, general respect for learning, and a sound system of secondary education. While the consultants are aware of the fundamental importance of these intangibles, they have been directly concerned with two concrete kinds of resources for research—manpower and facilities.

If the growth projected in this report is to occur, specialized research manpower of high quality and specialized research facilities must be produced on an expanded scale.

A. PROSPECTIVE MANPOWER DEMAND

The current $330 million medical research enterprise of the Nation is staffed by about 20,000 professional research workers.

The consultants assume that the trend toward more complex instrumentation is a necessary consequence of the development of science, that more non-professional help per thousand professionals will be used, and that more expensive supplies will be needed. These trends are not an unmixed blessing because the work of some scientists may be impaired by gadgeteering. But for better or worse, the expenditures per investigator will rise steadily, by an estimated 40 percent by 1970.

With increased expenditures per professional, the projected increase in medical research effort could therefore be staffed by less than a proportionate expansion of the manpower supply. A total corps of 45,000 (full-time equivalent) professional research workers could staff a $900 million total annual program under the assumed increase in annual cost per professional.

The consultants find that attainment of a national medical research investment of $900 million to $1 billion by 1970 depends upon the ability of the Nation to more than double the number of professional medical research workers over a 12-year period.

Is this increase attainable? What are the policy implications—immediate and long range?

B. PH. D.'S IN MEDICALLY RELATED SCIENCES

Using the most recent Office of Education total projections for doctoral degrees between 1958 and 1970 and assuming that the proportion of degrees in the fields related to medical research will remain constant, 16,000 (full-time equivalent) new Ph. D.'s would become available for medical research during the next 12 years.[1]

The actual proportion of Ph. D.'s in each field who will enter medical research over the next 12 years depends heavily upon the availability and suitability of job opportunities in industrial, governmental, private, university, and medical school laboratories. The effectiveness of efforts to recruit well-qualified people for these fields will also be important.

Provision of additional adequately paid and otherwise satisfying careers in universities and medical schools for Ph. D.'s heavily engaged in research is the most urgent prerequisite to attraction of increasing numbers of scientists to academic research careers.

By wise and vigorous action, private and governmental, it should be possible to produce 20,000 scientists with Ph. D. degrees who will enter medical research between 1957 and 1970.

C. PHYSICIANS FOR RESEARCH

The proportion of medical school graduates in teaching and/or research has been rising steadily.[2] On the basis of recent trends, it can be assumed that 8 percent of the medical school graduates of the 1957–65 classes conduct research and teach. This will contribute an additional 6,300 physicians to the medical research manpower pool by 1970. Assuming continuation of the pre-

[1] These are conservative assumptions because it appears likely that the proportion of Ph. D. degrees in the sciences will rise rather than remain constant.

[2] H. G. Weiskotten and Marion E. Altenderfer. Trends in Medical Practice. The Journal of Medical Education, July 1956, vol. 31, No. 7, p. 70. The proportion of all physicians graduating in 1935, 1940, and 1945 engaged in salaried positions involving teaching and/or research rose from 2.3 percent in 1935, to 4.9 percent in 1940, to 6.0 percent in 1945. (The consultants assume that there was an increase to 8 percent by 1957.)

vailing ratio of 3 part-time to 1 full-time physician in medical research, this would approximate 3,200 (full-time equivalent) researchers added to the medical research manpower pool by 1970.

It is quite possible that, as a result of trends already evident, the proportion of physicians who elect essentially full-time careers in research will rise. Medical schools will probably assume a more positive and more extensive role as institutions training M.D.'s specifically for full-time research careers.

The projected addition of 3,200 full-time equivalent M.D.'s to the medical research manpower pool by 1970 may therefore be low, if more M.D.'s are trained for research and if rewarding, stable careers are available for them after they are trained.

The projected rising demand for physicians engaged full time in research will—as contrasted with the situation in the past—begin to absorb an appreciable proportion of the total output of M.D.'s and therefore make the total production of M.D.'s a factor that must be weighed in projecting the Nation's medical research effort.

D. TOTAL SUPPLY OF AND DEMAND FOR PHYSICIANS

A major obstacle to the attainment of a well-rounded program of medical research and medical education for the Nation as a whole is the fact that the career opportunities in academic teaching and research—with respect both to salary and to the absolute number of positions—are inadequate. Any general development which makes a research or teaching career for the M.D. less attractive professionally and financially than a career in private practice will hamper the development of medical research.

1. Number of physicians

What is a reasonable national goal for the output of physicians? What are the prospects that the goal will be met?

The demand for medical care is influenced by many factors, some of which increase and others of which decrease the number of people who can be cared for by a physician. Among these are demographic changes, changes in therapy, urbanization, and a suburbanization, use of ancillary personnel, the nature of facilities for medical care, shifts in the causes of morbidity and death, extension of prepaid medical care programs, and the effectiveness of preventive medicine.

The Consultants believe that it would not be in the public interest for the number of physicians per 100,000 population to fall below the 1955 ratio of 132 per 100,000. This ratio has remained constant (plus or minus two) over the past 30 years.

To maintain this ratio, the output of physicians would have to expand by 1970 to 8,700 a year from domestic schools, plus another 750 from foreign schools. This compares with the production of 6,800 physicians in 1956. The domestic output would have to rise by 1,900 per year by 1970.

More physicians can be produced without increasing the number of 4-year medical schools. Additional 2-year schools attached to universities and devoted to teaching preclinical subjects would provide students to fill the existing clinical facilities. Clinical facilities of medical schools are expensive, and the existing facilities are not fully used.

In addition, experiments are in progress involving a shift of teaching responsibilities between the university and the medical school in a way that reduces the time required to produce physicians. To the extent that these experiments are successful, one of their effects will be to increase the number of physicians who can be trained by existing medical schools. But these expedients could not be realistically expected to yield more than the output of 7 new 4-year schools—about 700 graduates per year.

Therefore, about 1,200 (1,900 minus 700) additional physicians per year must be produced by new schools. The average medical school produces about 90 graduates per year. Therefore, a minimum of 14 and as many as 20 new medical schools will have to be built if the existing number of physicians per 100,000 population is not to fall. To meet this need construction would have to begin in the immediate future and be completed within a few years.

2. Quality of medical education

Concern over numbers should not obscure the critical importance of sustaining and increasing the quality of medical education. Attainment of optimum standards of education, research, and community service by medical schools at this time, and without increasing enrollments, would require additional operating funds of $10 to $20 million per year. As new schools are added, operating costs for the system as a whole will rise. There is a serious question as to the degree to which the physical plant of the medical schools can usefully expand without simultaneous availability of increased operating funds. Unless such funds are made available for present medical schools it will not only be difficult to increase the number of graduates but it will be almost impossible to provide faculties for any new medical schools.

Outside (nonuniversity) support for the operating expenses of medical schools during recent years from private sources has amounted to millions of dollars per year and not the tens of millions of dollars per year required for optimum performance today and future expansion during the next decade. In 1957, for example, the National Fund for Medical Education raised $2 million.

3. Physician supply and research

In the light of the prospective supply-demand situation for physician services, strenuous efforts should be made to make research careers more attractive for M. D.'s if research careers are to attract an adequate number of highly trained and highly intelligent physicians.

E. TOTAL MANPOWER SUPPLY SITUATION BY 1970

The estimated net addition of 3,200 M.D.'s in research and 16,000 doctorates in the sciences related to medicine would fall about 6,000 short of the 25,000 new medical researchers required by 1970 for the projected medical research effort. There will also be shortages of technicians, nurses, and other ancillary personnel. A portion of the deficit could be avoided, perhaps, by more effective utilization of existing personnel and facilities. Nevertheless, it would appear that an additional 6,000 M.D.'s and/or Ph. D.'s beyond the supply now projected will be needed if the Nation's medical research program approximates the 1970 estimates.

F. CONSTRUCTION OF MEDICAL SCHOOLS

The oncoming wave of college students will generate construction needs of unprecedented dimensions. The special facilities requirements for medical education and research must be viewed in the perspective of the much larger total demand for construction of all kinds of facilities for higher education.

Unless a large construction program designed to expand markedly the facilities of the Nation's system of medical and related schools is undertaken in the immediate future, the total medical research effort of the Nation will be impeded and the number of doctors per 100,000 population will begin to decline in the near future.

The problem is in two parts—improvement of the facilities of existing schools, and construction of new schools.

The present Health Research Facilities Construction Act will, unless extended and broadened, expire with extensive research construction needs unmet. There is on hand $61 million in currently approvable projects which cannot be financed. This represents at least $122 million in total medical research construction needs since each Federal dollar must be matched by a local dollar. Because these figures relate only to projects on hand, the total national needs are substantially greater.

Much larger capital investment will be required to renovate and enlarge existing schools, and to finance the construction of 14 to 20 new medical schools. A new medical school requires a capital investment of $35 to $50 million. The total cost of new medical school construction required to sustain today's population-physician ratio would range between $500 million and $1 billion. About 10 years typically elapse between the planning of a school and production of the first graduates.

Indeed, even if funds in the order of $500 million to $1 billion were made available immediately for construction of new medical schools, it seems certain that the number of physicians per 100,000 population will decline between now and 1970.

The consultants find that unless construction funds become available on a much larger scale than has heretofore been contemplated, the output of physicians will not keep pace with population growth and the needs of the Nation for research workers will not be met. Unless there is a marked change in social philosophy leading to private gifts or State appropriations on an unprecedented scale, large Federal appropriations will be required.

G. TOTAL SUPPLY OF AND DEMAND FOR DENTISTS

Dental research has grown in scope and depth of the past few years. Over 90 percent of the dental schools have active research projects, and in the year ending June 30, 1958, they spent $2.6 million on research Of this, about two-thirds was supplied by research grants from the National Institutes of Health. The investigations are concerned to an increasing degree with dental problems in the context of the whole body, and hence promise to become even more productive.

To sustain this momentum, additional research manpower, soundly trained in fundamentals, will be required. Steps to produce the required manpower are being taken. Among the most significant of these are the training programs of the National Institute of Dental Research, which supplied more than $700,000 to dental schools in the year ending June 30, 1958.

Shortages of dentists now and in the future will hamper the development of dental research. Since 1940, the number of practicing dentists has increased by only 10,000 while the population of the country has increased by 40 million. Dental services have not declined proportionately because of more extensive use of auxiliary personnel in recent years. The dental schools have been and are vigorous. Over the decade 1949–58, they have undertaken $41 million in new construction, and 94 percent of the funds were raised by the schools from private sources.

The Nation could use 13,500 more dentists now, and unless more dentists per year are produced, the dentist-population ratio will continue to decline. While four new dental schools have been established during the past 2 years, more new schools are needed. Indeed, two new schools, each with a graduating class of 50, would be required each year between 1957 and 1970 to reestablish the 1955 ratio of 1 dentist for each 1,900 persons.

Civil Rights Commission

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. ROBERTS. Mr. Speaker, when the majority of the Members of the 85th Congress voted to enact the ill-conceived civil rights legislation, some of us very strongly opposed this action. We insisted that this bill which, among other things, would set up a special Civil Rights Commission under the Attorney General to investigate alleged civil rights complaints, would serve no good purpose. We maintained that such legislation would provide no new right, grant no new privilege to any citizen. It was, we contended, merely an attempt by self-righteous, self-styled liberal politicians to make the South their whipping boy in their frantic effort to gain the vote and support of certain groups.

Recent developments have, it seems to me, substantiated the arguments of those of us who opposed to the end the enactment of the 85th Congress' iniquitous civil rights legislation. Four members of the Civil Rights Commission created by that legislation say they will give up their positions on that body later this year. The chairman, who comes from Michigan, says in many of the questions referred to the Commission there is plainly no right answer. In short, the Commission is serving no good purpose, providing no new rights, granting no new privileges. This is as we said it would be, and it certainly is to be hoped that no new movements will get underway to perpetuate the life of this useless body.

An editorial on this subject appeared recently in the Sylacauga Advance, and under leave to extend my remarks, I ask unanimous consent to insert this editorial from this fine Alabama weekly newspaper.

THE CIVIL RIGHTS COMMISSION

The announcement that four members of the Civil Rights Commission, and possibly a fifth, would resign their posts when their terms expire this fall, is of great interest. It means that probably five of the six members will toss in the towel at the end of their 2-year terms.

The most enlightening thing about the recent development is the fact that the chairman of the Commission, the president of a prominent Michigan college, has declared that there are no right answers to many of the questions involved.

This is certainly an unbiased judgment, and it shows that a majority of the members on the Commission feel that the use of force in settling civil rights disputes is unwise. What many readers do not know is the fact that, some time ago, certain members of Congress were confidentially informed that the Civil Rights Commission would suggest that the life of that body not be continued by Congress.

All those politicians who were "crusading" on the issue, perhaps for the sake of votes, will not accept this verdict, even though it comes from members of the Civil Rights Commission itself.

We expect the leftwingers in Congress to continue to insist that the Civil Rights Commission be continued, even though five of the members think that it is not the answer. It is gratifying to know, however, that the action of the members of the Civil Rights Commission has had a profound effect on the White House.

Opinions From Columbus and Franklin County, Ohio

EXTENSION OF REMARKS
OF
HON. SAMUEL L. DEVINE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. DEVINE. Mr. Speaker, on March 9, 1959, I sent a newsletter and questionnaire to a cross-section of 1,000 persons in the 12th District of Ohio. The response was amazing. After 30 days 405 persons have answered. I feel this clearly demonstrates the keen interest the citizens of central Ohio have in the affairs of their Government.

Further, the overwhelming majority of responses contained studied comments, suggestions, and opinions relative to the matters we face here in Congress. I plan to retain these answers for some period of time, and any Member of Congress who wishes to examine them is most welcome.

In response to the question, "Do you favor a balanced Federal budget and reduced Federal assistance programs rather than additional public debt?" Ninety-one percent said yes, four percent said no, and five percent were undecided.

The results on the fair trade bill were not nearly as conclusive since 31 percent favored it, 46 percent were opposed and a large 23 percent undecided.

On the issue of Federal aid to education concerning Federal grants to schools for construction and teacher's salaries, 33 percent favored, 61 percent opposed, and 6 percent were undecided.

The omnibus housing bill relating to Federal grants and loans for urban redevelopment, public housing, college housing loans and other programs brought a favorable response from only 26 percent. Fifty-six percent opposed the legislation and 18 percent were undecided.

Thirty-five percent of the people answering were in favor of increasing the Federal gasoline tax from 3 to 4½ cents per gallon for the highway trust fund. Fifty-two percent opposed a gasoline tax increase and fifteen percent undecided.

On legislation aimed at elimination of corruption in labor unions, specifically such bills as Kennedy, Goldwater, and McClellan to require unions to submit reports on activities, hold secret ballot elections for officers, and other provisions, 94 percent favored such legislation, 3 percent were opposed, and 3 percent undecided.

The above figures express the views of a small segment of the population in Columbus and Franklin County, Ohio, and perhaps other areas in the great Midwest.

Due to the tremendous response and interest in central Ohio, I have mailed out another newsletter and questionnaire on March 30, with seven questions directed to the mutual security program that now faces Congress. The mailing list has been more than doubled due to the number of persons who have written asking that their names be added. I hope to give the Members of Congress the benefit of that poll on May 1. The results on incomplete returns to date are surprising.

The Anxiety of Castro Supporters

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. PORTER. Mr. Speaker, is Fidel Castro playing the political piano by ear because of his administrative inexperience? Or are there darker and hitherto unsuspected motives which explain his recent actions which have so disconcerted many of his most ardent supporters?

The Fidel Castro I know doesn't need claques. The Fidel Castro I thought I knew would never have insulted his guest Jose Figueres, former President of Costa Rica, nor would he have had the temerity to question the intelligence of this proven democratic leader.

Under a previous consent I am including the text of an article by Bertram B. Johansson, staff writer on Latin American affairs for the Christian Science Monitor, which appeared in that paper on March 31, 1959.

PRO-CASTRO'S ELEMENTS' ANXIETY MOUNTS

(By Bertram B. Johansson)

Concern is deepening among even pro-Castro sources in the United States and Cuba over the thrust and direction of events of recent weeks in Cuba.

The anxiety, which appears most pointedly and poignantly among loyal pro-Castro sources, not pro-Batista elements, involves three categories of political activity in Cuba:

1. Recent anti-U.S. utterances of Premier Fidel Castro, which have bothered introspective Cubans more than U.S. citizens. The statements, incidentally, have not openly disconcerted the State Department, which is holding to a patient, wait-and-see, noninterventionist stance.

CASTRO PUZZLE

2. An obvious increase in strength of leftist and Communists in Cuban labor unions. Labor sources here estimate that Communists by now may have wrested effective control in nearly 20 out of 30 Cuban labor unions.

3. And the suspicion that persons of strong leftist or Communist inclination surrounding Premier Castro may become or are becoming more influential in his inner councils, thinking, and decisions.

Although the Castro-Urrutia government acted swiftly to clean out Communists from labor's top council in the early weeks after the successful revolution against Fulgencio

Batista, a change in the modus operandi apparently has taken place.

Some of the most astute labor sources here state that the evidence now is that top Cuban leadership wants the July 26 independence movement to grab the labor movement and hold it, with the effective help of the Communists.

Experienced Cuban labor leaders on lower levels are being shunted aside, these sources say, and inexperienced personnel substituted or Communists allowed to maneuver into positions.

In all three of these areas of political activity, the unanswered questions are whether Dr. Castro is naively or ignorantly being swept along with circumstances—playing the political piano by ear because of his administrative inexperience—or whether a conscious, studied position is being taken on significant issues. There are adherents of both points of view.

The first break with Dr. Castro among some of his supporters came at the time, several weeks ago, when he publicly objected to the decision of a Santiago military court which acquitted 43 Batista airmen of charges of genocide and bombing civilian populations and villages.

As a result of Dr. Castro's criticism of the acquittal by a lower military court, the case was hurriedly transferred to a higher military court, the decision reversed, and the airmen were sentenced to long prison terms. None of them was executed.

Havana lawyers and bar associations disputed the court reversal instantly. Persons who criticized the reversal were dubbed by Dr. Castro as counterrevolutionaries, though they were objecting to the points of law involved, not the issue of whether the men should or should not be punished.

There is also a growing uneasiness in Cuba and the United States over the continued military executions. They have mounted to more than 450 thus far. Dr. Castro, some weeks ago, said he expected and hoped the executions could be stopped when the figure reached 400.

Even those persons who were willing to grant that a certain number of military executions of the worst atrocity offenders were necessary to prevent mob violence and revengeful, indiscriminate retribution are beginning now to raise the questions, "Isn't this enough, for now at least? Can't the executions be deferred, and the trials shifted to civilian courts?"

ARDENT SUPPORT

On the other hand, the Cuban Government appears to have the general, in fact, ferocious support of the greater part of the Cuban public which has been tragically touched by the incredible persecutions, tortures, rapes, atrocities permitted under the Batista dictatorship.

Evidence has come to light recently tending to prove that in one instance some 90 rebels were executed by the Batista officers and bulldozed into a mass grave.

Furthermore, there is uneasiness among some Cubans and pro-Castro North Americans at the inclination of Dr. Castro to defer general elections. In the first flush of victory after the January 1 flight of Dictator Batista, Dr. Castro said elections might be held in 18 months.

Later the figure was put up to 24 months, to allow for the more gradual development of political parties, on the theory that if an election were held now the 26th of July revolutionary forces would inevitably make a clean sweep.

Now, whenever elections are mentioned by Dr. Castro to huge audiences, it appears that claques of people in the crowds shout, "No elections, no elections."

The incident which has caused greatest anxiety among Cubans and Latin Americans generally occurred at a trade union rally March 22. Col. José Figueres, former President of Costa Rica, who was visiting Cuba as a guest of the Government, had made the statement to thousands of workers in front of the presidential palace that in the cold war between the Soviet Union and the United States the interests of Latin America naturally lay with the West.

ANTI-U.S. GIBES

Dr. Castro later rose to say he was hurt and surprised that his old friend José Figueres should also have fallen into the trap of the propaganda of lies which distort Cuba's policy in the United States and in other countries.

Dr. Castro indicated he felt Cuba's position should be neutralist in the cold war.

At this point his speech was interrupted by David Salvador, secretary-general of the Confederation of Cuban Workers, who asserted that "Cuba cannot be with the United States," which he contended was oppressing Cuba.

Some Cubans expected an open break in United States-Cuban relations as a result of these statements, but the State Department has remained calm, tight-lipped, and noncommittal on the issue.

Quite to the contrary, the State Department is preparing, as a matter of course, to take all measures necessary for the protection of Dr. Castro on his scheduled nonofficial visit to the United States on April 17.

Dr. Castro has been invited by the American Society of Newspaper Editors to answer questions at its annual meeting in Washington.

Poison in Your Water—No. 54

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Niles, Ohio, Times on February 13, 1959, entitled "Tired of Floodings: Water-Weary Wickliffe Cries for Good Sewers."

[From the Niles (Ohio) Times, Feb. 13, 1959]

TIRED OF FLOODINGS—WATER-WEARY WICKLIFFE CRIES FOR GOOD SEWERS

AUSTINTOWN.—Water-weary Wickliffe area residents are whipping up support for creation of a citizens' committee to fight for a better sewer system in the area.

Kenneth Davis, of 262 North Roanoke Road, one of the backers of the group, said today the committee probably will hold an organization meeting sometime next week.

He said the action is an outgrowth of 3 years of fruitless efforts by residents for a better sewer system.

He said that during recent rains water entered about 25 homes in triangle-shaped area bounded by Mahoning Avenue on the south, Raccoon Road on the west, and Four Mile Run Road on the east.

Davis said water from both sanitary and storm sewers backed into homes during heavy rains. Most of the homes in the area are one-story structures, he said.

He said the group is working on a petition outlining the area's flood problems. A committee will be formed soon to complete the petition, he said.

Davis said the petition will cite Mahoning county commissioners, the county sanitary engineer, the Austintown township trustees, and the developers of International Homes, for failure to make adequate arrangements for sewers.

The move, Davis said, already has the backing of several area church, business, and civic groups.

Oceans Will Have To Be Stirred To Feed the World

EXTENSION OF REMARKS
OF
HON. JAMES C. OLIVER
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 7, 1959

Mr. OLIVER. Mr. Speaker, as early as the 18th century, Thomas Malthus predicted that the increase of the world's population would ultimately result in a scarcity of food. The Malthusian theory assumes even greater interest today since the population of the earth is exploding at a tremendous pace while many countries are subsisting on a grossly inadequate food supply. Even though more and more of the land area capable of producing foodstuffs is being placed under cultivation, it is becoming more obvious that we must look for new areas for the development of additional food sources. Oceanographers visualize the oceans as a vast gold mine of untapped food potential, but a great deal of research must be undertaken before utilization of these resources can become a reality.

Mr. Everett S. Allen in the following article, originally published in the New Bedford, Mass., Standard-Times, outlines some of the possible oceanic food sources that might be developed. Unless our country's research programs are substantially expanded, we cannot hope to reap the harvest of what may eventually prove to be essential food products.

OCEANS WILL HAVE TO BE STIRRED TO FEED WORLD

(By Everett S. Allen)

The world's oceans will be artificially stirred eventually, for otherwise they will not provide enough food for the hungry millions who will turn to them for sustenance when there is no more land available for cultivation. They will have to be stirred to bring up nutrients from the bottom so sunlight can get at them and thus increase the sea water's productivity.

The ocean turns over by itself, but the rate—estimated by some scientists at once every 500 years—will not be fast enough to meet future food needs.

Prof. James Bonner, California Institute of Technology biologist, says the earth's present population of 2,700 million will triple in the next 100 years. By that time, nearly every inch of the earth's topsoil will be inhabited or cultivated, poultry and livestock will be virtually extinct, and man will be vegetarian, getting his necessary protein from plants.

NEW FOOD SOURCES

Marine scientists believe animal material nearer the bottom of the food chain—much simpler forms of sea life than the codfish, for example, may provide additional sources of food. They also suggest the ocean may

nourish plant life ashore on which man must depend for food.

Recently, ocean scientists from nine nations, convening at the Woods Hole Oceanographic Institution, concluded, "One of the most important long-range problems is concerned with the oceans as an important source of protein food for many of the world's peoples.

"With the quick growth of populations, man's need for food from the sea may be expected to increase rapidly. The living resources of the oceans are by no means infinite and, like the land, different parts differ widely in fertility. The fertile areas are those where nutrient substances, essential for plant life, are brought up from the deep waters. To obtain the maximum harvest, we must understand the processes by which this occurs."

SEA OUTPRODUCES LAND

Acre per acre, the sea already is producing about as much plant material as is the land; since there is more sea than land in the world, the oceans are, therefore, outproducing the total land output.

Plant food in the ocean is highly diluted, generally in the form of plankton—weakly swimming or passively floating plant and animal life of miscroscopic dimension—and getting it in quantity for man's food would involve filtering huge amounts of water.

At present, instead of eating this basic food form, men eat fish, which means that the original plant is concentrated through biological process—in other words, it has passed through the digestive systems of a half-dozen animals, each of which lives on the other.

Most significant is this: At each step of this process, there is a 90 percent loss in food value. As the world's need for food increases, oceanographers seek a way in which men can consume the basic food at first hand, without sustaining these interim losses. The plankton sandwich is a standard joke among earth scientists but it does indicate the direction of the thinking.

The sea actually can outproduce the land. The only reason it doesn't is because it is not sufficiently transparent to sunshine. At best, sea plants grow only in the area from the surface to a depth of 500 or 600 feet, in the midlatitudes, plant life is found only down to 50 or 60 feet.

Plants growing up in the surface areas, plus finely suspended clay materials from rivers flowing into the sea create an upperlevel umbrella which shades the lower ocean from the sunlight just as a forest does. Thus, there is a lot of ocean in which plant life does not grow.

But the sea has great advantages over the land as far as crop raising is concerned; there is no problem of drought, and the oceans contain vast sources of plant-nutrient material (phosphates and nitrates) washed off the continents since the beginning of time. Normal ocean turnover, dependent on temperature and density differences, brings these nutrients up to the surface layer but not always as fast as the plant life could use it.

For example, there are few phosphates in the surface waters of the Sargasso Sea; this is a marine desert. By contrast, tidal currents on New England's Georges Bank keep "plowing" the ocean, turning up plant food, exposing new water to the sunlight, and so Georges probably produces 200 times as much fish per cubic foot as does the Sargasso Sea.

Thus, if you could find some way to stir the sea better than nature now is stirring it, it could raise a lot more plant life, and a lot more fish, as well.

WHALE MAY HAVE ANSWER

Dr. Robert Menzies of Columbia University's Lamont observatory commented, "The world population is going to outgrow its food supply unless something changes a great deal; then it will have to turn to the nearest sea.

"We are harvesting the sea now at a great rate, but are not eating the primary producer, phytoplankton (the plant variety of plankton); instead, we eat a product five times removed. The whale is the only vertebrate close to eating the primary producer, and we must study the whale to see how he does it.

"The problem of food might some day require changing people's eating habits. Obviously, it would take a tremendous job of education to get them to eat plankton."

Dr. Menzies, director of Lamont's biology program, wrote to Columbia's Institute of Nutrition Sciences, "(We) might profitably investigate:

"1. The nutritional value of plankton. * * * Social and psychological problems involved in attempting to feed people plankton directly probably are too great to be overcome, but the possibility of using plankton as poultry food supplements may well be considered.

"2. Seaweeds. Oriental diets often contain considerable amounts of seaweeds, and experimentation is underway in Britain on the nutritive value of various seaweeds as cattle foods and dietary supplements.

ARE BARNACLES FOOD?

"3. Fouling organisms: These constitute a serious problem to shipowners, consisting of barnacles, hydroids, clams and mussels, and their removal costs several million dollars annually. These represent a wasted source of protein and probably also valuable minerals. No one has considered using these creatures as a secondary source of food, to my knowledge. One large vessel may accumulate in the course of a year as much as 1 million pounds of these animals."

In addition to providing food plants within its own depths, the sea also may supply a substantial part of the food of plants on land by means of bubbles coated with the organic matter of the ocean.

Dr. A. H. Woodcock at Woods Hole Oceanographic Institution commented, "Charles H. Keith, in our laboratory, discovered that droplets ejected from a water surface covered with organic matter come out coated with this material. Since the sea in many parts of the world have organic film coating on their surface, this finding suggests that the ocean may provide principal plant nutrients.

RED TIDE NOTED

"It has been known that airborne droplets sometimes contain small sea organisms and parts of plankton. The notorious red tide along our gulf coast, an occasional phenomenon produced by great swarms of reddish plankton, sends up airborne droplets containing a substance very irritating to mucous membranes, as shore dwellers and fishermen have discovered to their distress."

Again, it is reasonable to suppose that the seas would supply more plant nutrients if they were artificially stirred and agitated. The rain in Sweden is known to provide 30 percent of agricultural requirements for plant nutrition. Presumably, this plant nutrition got into the air through salt particles kicked up by whitecaps on the ocean.

Therefore, anything that man could do to add to the effervescent quality of the sea might very well put more nitrates and phosphates back into the atmosphere and produce more rainfall, as well, by providing salt nuclei for raindrops. Oceanographers believe this is the method by which forests get their nutrients, too.

JOINT ASSAULT SEEN

The International Special Committee on Oceanic Research, of which the United States is a member, considers as one of its principal objectives the coordination of a multination program of observation and measurements of the deep ocean waters. One point of this program would involve an intensive effort to understand the relationship between the plants and animals with that of the dynamics of the upper water layers.

Is is, therefore, possible, perhaps 3 or 4 years from now, for as many as 16 ships from several countries to make a combined assault on the largest unknown area on earth, the deep waters and seabed of the Indian Ocean. This is possible if there is sufficient money and ship time available. This area's unique qualities will provide valuable evidence for those investigating the general productivity of the oceans.

It is noteworthy that the Russian oceanographers already are working on an extensive program in the Indian Ocean.

Curtailment of Nuclear Tests

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. DOOLEY. Mr. Speaker, recently at a meeting of the Society of Friends at the home of Mrs. Stephen Angell on Popham Road, Scarsdale, N.Y., I discussed the desirability of curtailing nuclear tests, especially because one of the byproducts of such tests is an increase in radioactive fallout.

I favor curtailing such tests on a bilateral basis. In other words, only if Russia agrees to do the same thing at the same time.

It was generally agreed at the abovementioned meeting that the resolution which Senator HUBERT H. HUMPHREY introduced in the other body a short time ago was a move in the right direction. With congressional endorsement and international support, this resolution could go a long way toward helping to establish real world peace.

I am introducing a facsimile of the Humphrey resolution in the House of Representatives because I believe it is a constructive effort to eliminate one of the great dangers which beset us today, and I urge all unfamiliar with its provisions to acquaint themselves with them.

The resolution is as follows:

Whereas the goal of the people of the United States is a just and lasting peace; and

Whereas the peace of the world is threatened by an arms race of major proportions among the leading powers of which a key aspect is the continuing development of devastating nuclear weapons; and

Whereas for 13 years negotiations to control and limit these weapons have not led to agreement; and

Whereas representatives of the United States, the United Kingdom, and the Soviet Union are now meeting in Geneva for the purpose of drafting a treaty on the discontinuance of nuclear weapons tests; and

Whereas an effective international control system is a necessary component of any multilateral agreement on the cessation of nuclear weapons tests in which all states are to have confidence; and

Whereas an agreement regarding the discontinuance of nuclear weapons tests under an effective control system would prove an opportunity to ease world tensions and realize a small but significant first step to-

ward the control and reduction of armaments: Therefore, be it

Resolved by the Senate, That its Members support the efforts of the United States to continue to negotiate for an international agreement for the suspension of nuclear weapons tests, and that it emphatically endorses the principle that an adequate inspection and control system must be part of any such international agreement involving a suspension of nuclear weapons tests; and That the Senate requests the President of the United States to submit to the Soviet Government the contents of this resolution and that he ask the Soviet Government to transmit the resolution to the Soviet people so that leaders and people alike will know of the desire of the American people speaking through their representatives in the Senate for the successful outcome of the negotiations in Geneva for an effective and reliable agreement for the discontinuance of nuclear weapons test.

H.R. 2729

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following news column by C. Wilson Harder in which he refers to legislation I have introduced, namely H.R. 2729. I believe his comments are very worthwhile and feel they should be called to the attention of this body.

WASHINGTON AND SMALL BUSINESS
(By C. Wilson Harder)

It would appear, barring apathy on the part of the Nation's small businessmen, that before this session of Congress is finished, some concrete measures will be passed strengthening the laws that permit opportunity to independent enterprise.

Of course, it is too early to tell as yet what the impact will be of opposing forces, or what coalitions might be formed by the socialistic dreamers monopoly-minded interests to head off the drive.

But a lot of effort is being put forth to protect free enterprise.

Attorney General William Rogers has asked both Senate and House to pass legislation giving Justice Department authority to compel production of documents during investigative stages of civil and antitrust proceedings.

As it stands now, the only way necessary documents can be forced out into the open is to file criminal charges with the respective grand juries making the demand. However, this is not always feasible, nor proper.

At present, civil enforcement of the antitrust laws is handicapped by the inability of Justice Department to force production of documents which have a bearing on the situation.

And from another quarter, Representative ALVIN BENTLEY, of Michigan, has introduced a bill amending the Federal Trade Commission Act which would prohibit certain practices now being carried out by manufacturers who attempt to carry water on both shoulders.

Representative BENTLEY states that there are instances where the manufacturer is selling his products to the consumer through his own stores at a price level that the independent retailer must pay for the same products. In other cases, he said, the manufacturer is selling direct to the consumer at one price, to the manufacturer owned stores at another price, and to the independent retailer at still another price.

At the same time, the Michigan Congressman is quite critical of the Federal Trade Commission. In his opinion, the major reason that the Robinson-Patman Act has not brought the expected relief to independent business at the local level is directly due to FTC failure to enforce the laws.

This has long been a complaint of the nationwide membership of the National Federation of Independent Business.

Representative BENTLEY seems to feel that the major fault of the FTC has been a failure of the FTC to vigorously enforce and police the cease-and-desist orders issued when a major violation has been perpetrated.

In other words, there have been occasions where the FTC has moved in on violators and against unfair practices. The guilty parties have replied that they would cease and desist, and the FTC has gone along its merry way, on the assumption that there would be no reversion to the forbidden practices.

Thus, in this respect, the FTC apparently has failed to recognize what men of the cloth have always known to be true.

There are always backsliders. Representative BENTLEY wants the FTC to recognize this fact and act.

Centennial of Guttenberg, N.J.

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. OSMERS. Mr. Speaker, the century-old town of Guttenberg, N.J., sits high on the Palisades of the Hudson River, with a magnificent view of the river and the famed New York City skyline. It is likely that 350 years ago, New Jersey Indians took their first look at Henry Hudson's *Half Moon*, as it sailed up the Hudson in 1609, from this location.

Guttenberg is a substantial community in northern Hudson County that is justly proud of its traditions and history. It is known far and wide as an important center of the Schiffli embroidery industry. Its nearly 6,000 citizens have established a fine tradition of thrift and obedience to law that has come about as a natural result of the development of their religious and family life. The town's name honors Johannes Gutenberg, the pioneer printer of the Holy Bible, even though the town name contains one more "t" than does the printer's name.

During our Revolutionary War, a small battle was fought there when Colonial troops, led by "Mad" Anthony Wayne, attacked Tory workmen at a fortified blockhouse.

This town is now celebrating the 100th anniversary of its incorporation by the New Jersey Legislature and I would, therefore, like to include the official proclamation by the Honorable Herman G. Klein, mayor of the town of Guttenberg, N.J., in the Appendix of the RECORD.

PROCLAMATION BY MAYOR OF THE TOWN OF GUTTENBERG, N.J., REGARDING CENTENNIAL CELEBRATION OF GUTTENBERG, N.J.

Know all men by these presents that:

Whereas the town of Guttenberg in the county of Hudson and State of New Jersey was incorporated by official act of the New Jersey Legislature as an incorporated town in 1859; and

Whereas the said town of Guttenberg has been in continuous existence since 1859 so that appropriate centennial observances are fitting and proper in this year of 1959; and

Whereas it is the unanimous desire of the people of the town of Guttenberg to commemorate this 100th anniversary of the founding of the town by appropriate events and observances; and

Whereas the people of the town of Guttenberg have lived and prospered through this century under the blessings of our American liberties which inspired our centennial slogan "A Century of Progress and Freedom Through Democracy" and have earned the affection and respect of our neighbors and fellow citizens and desire to express their friendship and announce the centennial observance; and

Whereas appropriate plans are progressing under the leadership of the Guttenberg Centennial Committee to make the centennial celebration a memorable one and to invite thereto various friends and representatives from the Federal, State, and local governments:

Now, therefore, as mayor of the town of Guttenberg, N.J., I do hereby proclaim, by virtue of the authority vested in me, that the official Guttenberg centennial observance will be held on May 3–May 17, 1959, and all official departments and agencies of the town of Guttenberg are authorized to participate and cooperate in such observance, with the fervent hope that, under God, the people and the town of Guttenberg will continue to develop and prosper in the coming years and centuries.

HERMAN G. KLEIN, *Mayor*.

Spain and Russia: Closer to Each Other Than to Us

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. PORTER. Mr. Speaker, Eric Allen, managing editor of the Medford (Oreg.) Mail-Tribune questions whether Franco is, as he often alleges, a bulwark against communism. He writes of the threat to freedom of authoritarianism of both the right and the left and points out that they are in fact closer to each other than they are to the democratic forms to which we adhere in the West.

Under a previous consent, I am including the text of his editorial of March 27, 1959.

TWO-EDGED SWORD

We are not fond of dictators.

This goes for a Stalin or a Khrushchev or a Tito, and it also goes for a Trujillo, or a Hitler, or a Franco.

Despite the fact that free men's greatest war was fought against the forces of fascism,

as exemplified by Hitler and Mussolini, the current set of the times is against the Communist dictators.

Sometimes it seems that this very natural preoccupation with the threat of communism tends to blind us to the threat of the tyranny at the other end of the political spectrum.

Freedom lives in the middle.

It is threatened by the authoritarianism of both the right and the left—which are, in fact closer to each other than they are to the democratic forms to which we adhere in the West.

Both are insidious. But the danger of communism has been made so thoroughly understood that it is universally acknowledged. On the other hand, the danger from fascism was downgraded following the defeat of the Axis powers, and also as a result of the fact that its remaining protagonists, Franco, Trujillo, et al., present no immediate danger to the security of the United States.

They don't—no. But the authoritarian philosophy which they represent, does, always has, and probably always will.

One of the side effects of the Nation's preoccupation with communism has been a sort of de facto alliance with Fascist-type regimes.

Much of the American aid which has gone to Latin American dictatorships has been given under the pretext that it was to help them fight communism—which is a flimsy sophistry, at best.

The same is in part true of our uneasy alliance with Generalissimo Francisco Franco, the Spanish dictator, although because Spain furnishes bases for our planes, there is somewhat more justification for the practice.

But is Franco a bulwark against communism, as is always alleged?

Salvador de Madariaga, Spanish ambassador to the United States in 1931, now living in Oxford, England, an historian and diplomat, recently wrote to the New York Times to point out some of the facts about communism in Fascist Spain.

He declares it is thriving. And he cites these reasons:

"All parties being forbidden by Franco, the Communist is the only Spanish party which possessed a technique of clandestinity, and money.

"Spain receives a score of weekly radio talks and none from a free world point of view.

"Franco accuses all his enemies of being Communists, which automatically raises the prestige of communism, since opposition to Franco is popular and general in Spain.

"American friendship and aid to Franco generate a chain reaction of emotions on the basis of: Friends of my enemies are my enemies and enemies of my enemies are my friends; which, of course, works fatally in favor of communism.

"The people get used to apathetic obedience, which paves the way for communism.

"The regime has increased the scandalous gap between rich and poor; and the poor are denied any outlet in free working-class organizations of a syndicalist or social-democratic type; so they go Communist."

Senor Madariaga's arguments, while not conclusive, certainly tend to show how it is possible for a violent anticommunism, through ill-advised repression, to encourage the very thing it fears and detests.

Not only is this food for thought about our policy of cooperating with Franco and his ilk.

Perhaps even more important, it is one more reason why we should look with suspicion at those in our own midst who would curb the freedom of others under the pretense, or excuse, of fighting communism.

That is a sword which cuts both ways.

Threat of an Unwanted War Lies in Growing Tensions

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a very fine editorial from the Nashville Tennessean of April 7, 1959.

World tensions are almost to a breaking point. We cannot say that an unwanted war will not erupt. We can only work and pray for a peaceful solution to the present situation.

The following editorial concerning the growing tension is well worth the reading of every Member of the House.

THREAT OF AN UNWANTED WAR LIES IN GROWING TENSIONS

No nation really wants a war over the German and Berlin questions, it is generally believed, and if that is so some kind of satisfactory agreement must be reached by negotiations.

But that does not mean a clash of arms could not result from the building up of tensions which are so plainly evident. Even now, the United States and Russia are exchanging heated notes over plane incidents—one over West Germany and the others in the Baltic and Japan Seas areas.

Tempers have flared and harsh accusations have been made. The Soviets have been made. The Soviets charge that an effort is being made to prevent any agreement at the summit, and our State Department blames Russia for provocative actions.

Both sides are making a show of their determination, so that it might be said that unofficial negotiations are already under way—but not in an atmosphere calculated to make peace easier to attain.

Already having pledged that he will not give an inch where our rights and obligations are concerned, President Eisenhower is acting accordingly lest the Kremlin suspect that the spirit of appeasement is being resurrected. And the Soviet, having brought on this crisis with its original free city demand for West Berlin, seems intent on emphasizing its belief that it will negotiate from strength as opposed to the group of free nations who do not see as one on every issue.

President Eisenhower and the NATO leaders are right in saying that they are not going to desert the free people of West Berlin and in resisting Russian pressures. There comes a time when a backward step is equivalent to defeat, and it is now at hand.

The free and undecided world is looking to the White House for reassurance, and it is not being disappointed. Mr. Eisenhower has evidently been advised that, if we are to resist further Communist victories, we are better equipped to do so now than we will be in the years just ahead.

In such a course, however, it should be recognized that the risks of starting a war by mischance or misunderstanding is increased. If Soviet airmen, instead of buzzing an American transport flying at high level over West Germany, had fired on it, there would have been an immediate crisis. And in a like manner, a grave emergency was threatened when, according to a United States protest, Russian planes attacked ours over international waters of the sea of Japan and the Baltic Sea. Since there was no loss of life in any of these cases, the matter is being handled diplomatically. Had it been otherwise, the consequences might have been far-reaching.

The existing situation is as explosive as that of 10 years ago when NATO was organized to meet the massive threat of the Red army to sweep all of Europe into the Communist camp. Significantly enough, there was another Berlin crisis at that time, and it was only met and overcome by Western solidarity.

For Mr. Khrushchev, the urge to play with matches in a powder magazine seems to be strong, but before committing himself fully to such a course he might dwell upon the fate of others with the same weakness whose names are written large in the pages of criminal history.

A Weak Economy Drive

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. GROSS. Mr. Speaker, the Waterloo, Iowa, Daily Courier in a recent editorial clearly points out one of the real weaknesses in the campaign of President Eisenhower for economy and a balanced budget.

It is not enough to simply balance the budget. There must be substantial payments each year on the Federal debt, the interest and other carrying charges on which now total well above $8 billion each year.

To accomplish this necessary objective there must be an end to spending for those programs which are clearly a responsibility of local subdivisions of government. As the Daily Courier well points out, "the Federal Government will soon be paying 50 percent of the cost of the traffic lights on Main Street" unless someone demonstrates the courage to demand sane fiscal policies.

The editorial follows:

IKE SAYS "SOME"; CONGRESS SAYS "MORE"

The greatest weakness of President Eisenhower in his campaign for a balanced budget is that he has, throughout his administration, refused to meet the issue head-on. His solution to a spending problem is always to "spend a little less for this" rather than take the more dramatic position that "the Federal Government shouldn't be spending a dime for this."

A typical example is the administration's position on money to aid local communities in building sewage disposal plants. The President in his fiscal 1960 budget recommended that the Federal contribution for this purpose should be reduced from $50 million to $20 million.

But the subcommittee handling the issue in the House, naturally, proposed an increase from $50 million to $100 million. And the administration, having refused to take a stand on a proper division of Federal and State responsibility, is in a poor position to oppose the increase. For it is committed to "some" aid for building sewage disposal

plants. And once that commitment is made, the record shows that there is likely to be an increase in the need every year.

Actually, there isn't the slightest justification for Federal aid for sewage disposal plants under any rational division of Federal-State authority. If the Federal Government is justified in this intervention, then there simply isn't any clear division of responsibility. Under this process, the Federal Government will soon be paying 50 percent of the cost of the traffic lights on Main Street.

If President Eisenhower would take a stronger stand on the question of a proper division of Federal and State authority, he would be able to win more public support for a sane fiscal policy.

A Tribute to a Great American

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. KASTENMEIER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I wish to announce that it is with pride and sorrow that I rise, in the name of my Wisconsin constituency, to pay tribute to a great American, Frank Lloyd Wright, who passed away in a hospital in Phoenix, Ariz., early yesterday morning, April 9—just 2 months short of his 90th birthday.

And this great American, who lived just 10 miles west of my congressional district in Wisconsin, in a once obscure place he named Taliesin, even in the last days of the broad expanse of his life remained provocatively controversial and magnificently creative. He will best be remembered for having lifted American architecture from the status of a craft to a fine art, but to Mr. Wright architecture was even more fundamental and meaningful; it was a way of life, a philosophy.

Frank Lloyd Wright was a man of unrivaled achievements in the field of architecture. Magnificent at once as an engineer and as an artist, he has left his monuments in stone and steel, in wood and concrete, and glass and plastic, in globe-girdling profusion.

Characteristic of the man was his daring conception of the plan for the Imperial Hotel in Tokyo, in 1915. Required to design an earthquake-proof building for a region noted for its frequent and severe earthquakes, he discarded the ancient reliance upon rock for solidity, knowing that it is in the rock itself that the earthquake takes place, and built the hotel like a huge Noah's Ark, not supported on anything solid, but floating upon soft mud, and held together internally by cantilevered floors and concrete supports.

The building was completed and opened for use in 1922, and in 1923 triumphantly survived, undamaged, the extreme test of the great earthquake of that year, one of the worst earthquakes in Japanese history. It was the only major building to withstand that upheaval, and many a correspondent wrote in awed tones of seeing its mass looming above a waste of rubble.

But that is one of his ideas, one of his buildings. He spouted ideas like a fountain, and strewed buildings behind him in his career as a child strews toys. But varied as these buildings are, each suited to its surroundings, meeting its special engineering problems, fulfilling the needs and desires of its owner, and expressing the resolute independence of the architect—yet there is a core of unity informing all this sparkling variety.

Everywhere, and all the time, Frank Lloyd Wright was the exponent of a philosophy of architecture that combined functionalism with what may be called naturalism. His effort was always to make his building seem to grow out of the earth like a tree or a bush, to loom like a rocky cliff or to curve like a lily; but at the same time to suit his building to its function as strictly as a machine. A similar suiting of building to its surroundings and function appears in the apparent inconsistency with which Wright, the most spectacular free-spender in the history of architecture, devoted himself and his Taliesin Fellowship to the problem of constructing medium-sized homes at a moderate cost and with the least expenditure of material and labor, at the same time retaining artistic excellence. A lavish expenditure of wealth he found suitable to the display of spectacular beauty that a rich man might desire for his estate—but for the man of moderate means he was intent on securing an equal beauty at a pared-to-the-bone cost.

A "rebellious old gentleman," they called him. He was indeed rebellious. He rebelled against hidebound conservatism, and equally against doctrinaire modernism. He was wise and witty, fierce and furious, warm with human sympathy, delight, ambition, energy, and a passion for truth and justice. His name will be honored for centuries in the history of architecture.

He had won international eminence long before some of us in the House of Representatives were born, but his contributions, his genius and the spirit of his personality will live forever. Indeed, he leaves this earth uniquely—already memorialized by his own monuments. We and the generations to come will long remain in his debt.

Postscript on the CCD

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. ABBITT. Mr. Speaker, on March 3, 1959, I inserted in the RECORD an editorial which appeared in the Richmond News Leader, entitled "Pow-Wow on 40th Street," which dealt with a meeting of the consultative conference on desegregation. Along with the editorial was printed the minutes of the mass media committee of this organization.

The News Leader, on March 26, wrote again of this organization and related certain other facts concerning its membership which I think the American people would be interested in having made known to them. I believe that the second editorial, entitled "Postscript on the CCD" is worthy of the attention of all Americans. This points up, I think, the allout effort that is being made to spread false propaganda and hatred upon vast segments of the Nation.

I desire to include the editorial herein with my remarks and commend it to the reading of the Members of the House:

POSTSCRIPT ON THE CCD

A month ago this newspaper carried on its editorial page the minutes of a meeting held by an interesting, if unknown, body—the mass media committee of the Consultative Conference on Desegregation. These minutes, never intended for publication, described with revealing frankness the coordinated, professional efforts being made by integrationist groups to advance their point of view.

The Consultative Conference on Desegregation was a new outfit in our book. Inquiry to the Associated Press in New York at first drew a blank. The secretary was unwilling to disclose the names of the member agencies of this conference without their consent.

Now, however, a letter is at hand from the New York bureau of the Associated Press forwarding information obtained from Arnold Aronson, of the National Community Relations Advisory Council, who serves as secretary of the CCD.

The Consultative Conference on Desegregation was formed a little over 2 years ago, Mr. Aronson advises, "in order to further communication among organizations committed to facilitating orderly compliance with the constitutional requirements regarding desegregation." The CCD is a "mechanism for interconsultation and for an exchange of information, views, and experiences." It does not engage in legislative activity, "nor does it take public actions or issue public statements."

Member agencies include the following:

Department of racial and cultural relations, National Council of the Churches of Christ in the U.S.A.
Catholic Committee of the South.
Synagogue Council of America.
American Friends Service Committee.
American Civil Liberties Union.
Americans for Democratic Action.
American Jewish Committee.
American Jewish Congress.
Anti-Defamation League.
Board of National Missions, United Presbyterian Church in the U.S.A.
Catholic Interracial Council.
Council for Social Action, Congregational Christian Churches.
Department of Social Welfare, United Christian Missionary Society, Disciples of Christ.
Evangelical and Reformed Church, Commission on Christian Social Action.
Jewish Labor Committee.
National Association for the Advancement of Colored People.
National board, YWCA.
National Council of Jewish Women.
National Council, Protestant Episcopal Church, Division of Christian Citizenship.
National Sharecroppers Fund, Inc.
National Social Welfare Assembly.
Southern Regional Council.
Union of American Hebrew Congregations.
Unitarian Service Committee.
United Automobile Workers of America.
United Church Women.

United Steelworkers of America.

Women's Division of Christian Service of the Methodist Church.

That is the lineup: Twenty-nine organizations, including several of great wealth and political influence, working smoothly together on one coordinated drive to promote racial integration.

And the American South, whose society, culture, and institutions are the targets of this formidable assault, remains almost defenseless in a war of ideas. When will we marshal our scattered forces for an effective campaign of our own?

America's Educational System

EXTENSION OF REMARKS
OF
HON. FRED WAMPLER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. WAMPLER. Mr. Speaker, there appeared in the April 1959, issue of the American Federationist magazine an article dealing with the problem of America's educational system and Federal proposals designed to relieve, hopefully to an appreciable extent, the stresses currently besetting our public schools.

The article was written by Carl J. Megel, the president of the American Federation of Teachers. Against the background of Congress' legislative attempts in the school construction and educational fields, I find Mr. Megel's analysis penetratingly provocative:

Among the union teachers who view educational deficiencies and inequities from inside our public schools, there is new hope that our national lawmakers will have the vision and the courage to provide Federal aid for education.

This hope is spurred by the introduction and strong sponsorship of the Murray-Metcalf bill. This bill would supply money at an equal ratio per child to help all States and communities to erect much-needed buildings and increase now-scanty teachers' salaries.

Hope for such aid to our overloaded public schools has sprung up at each session of Congress for many years, only to be dashed by the reactionaries.

The school burden on the States and local communities was reflected in a recent Census Bureau report that education now takes up to one-third of State and local tax revenue. The unfairness of this to State and local taxpayers is not so much the portion of their taxes spent for schools but the vast numbers of people who escape helping to pay public education costs under the outdated, provincial and local school taxing formulae.

The Federal taxing system is the only system with the ability to spread school costs over all the people and thus contribute enough money to update the Nation's public schools without financial harm to anyone.

Nevertheless, we must expect to face the same reactionary group that has blocked Federal aid for education in the past. That education is the first and major prerequisite for national defense and democracy is small deterrent to the reactionaries and to the numerous school administrations controlled by reactionaries.

Again raised is the old bromide that "Federal aid means Federal control." This is nonsense, but many people are fooled by the cry.

Then there is the demand for "sanctity of local responsibility"—without regard to the extent of local ability.

Also the crop of school cure-alls and nostrums:

"Let us teach 1,000 children in a class through one television camera."

"Let us keep good teachers with merit rating by paying those who agree with the principal more money than to those who may not."

"Let us solve the teacher shortage with housewives acting as teachers' aides."

"Let us organize 'Teacher for Tomorrow Clubs' among high school students." (They join the clubs, only to find out how much less a teacher earns than many semi-skilled manual workers.)

The other day J. Lloyd Trump, a professor at the University of Illinois, spread confusion among newspaper readers nationally with a speech before the National Association of Secondary School Principals.

"We should meet the teacher shortage with classes of 100 or more," he said.

Dr. Trump teaches education. Would he consent to 100 student teachers in one of his own classes? We don't think so. Knowledge is not an assembly-line product.

Families striving for better education for their children will do well to anticipate the campaign to spread confusion. They should find out at first hand the needs of their children's schools by talking to teachers. The teachers—more than administrators in ivory towers—know the score.

In the next quarter of a century our people will experience entirely new modes of living. The change is inevitable. It is not reasonable to expect that America's children will be able to prepare themselves for the new era in the neglected public schools of today—understaffed, undersized, and underequipped as they are.

Education is the key to the progress for which men strive. Many school systems have improved very little since 1909—and the reason is not entirely public apathy. The United States has 50,453 separate school districts. They are run by people who differ in their sense of responsibility. In the various school districts differing values are placed on education in general as well as on just what and how the schools teach.

Four major shortages are found in America's public schools today. The Murray-Metcalf bill or a similar measure would help to correct these shortages, directly or indirectly.

What are these four shortages? Let's look at them:

1. There is a shortage of at least 300,000 teachers having a bachelor's degree. Federal aid for teachers' salaries would help attract more young people into teaching and bring back many who quit for better paying jobs elsewhere.

2. At least 400,000 new classrooms are needed to eliminate double-shift classes, to reduce classes to 25 pupils each and to replace obsolete buildings, many of them built in the 19th century.

3. More than half the Nation's classrooms lack modern teaching equipment ranging from textbooks to visual aids.

4. Far too many school administrations are still unconscious of the new and vital role of education. They put ill-advised economies ahead of curriculum and proper education of children. Federal aid would awaken such school administrations.

To the perennial cry that Federal aid means Federal control, the thinking parent may well reply:

"The Murray-Metcalf bill sets up safeguards against this. But if it would mean Federal influence—so what?"

Certainly it would do no harm for the Federal Government to equalize educational opportunity.

Our Federal Government is by, for, and of the people. It is time we met the Federal control bogey head on.

The argument that Federal aid for education would be an innovation is also full of holes. For a hundred years the Federal Government has given aid to education in various forms—land grants and funds for special educational purposes.

The Nation will also hear the old cry from foes of Federal aid that wealthy Northern States do not need it. These wealthy States supply their own answer. They have as many outdated school buildings as the poorer States. In addition, none of the cities of over 400,000 population has been able to secure the number of degree teachers it has needed.

Federal aid for education may rightly be considered an investment that will more than pay for itself.

Tomorrow's need will be for greater numbers of skilled workers and fewer unskilled workers. Education will be the key to the individual's earnings. Higher incomes will mean more money channeled back to the Government in income taxes as well as in other kinds of taxes.

The need for an educational system capable of coping with our times should be clear. Adequate numbers of modern schools and thoroughly qualified teachers are our major prerequisite for national security and for democratic living in this atomic and space-pioneering age.

Frank Lloyd Wright: A Nonconformist, but a Man of Vision

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. IRWIN. Mr. Speaker, the death of Frank Lloyd Wright has taken from the world one of those rare individuals who was not afraid to be a nonconformist, a man who did not fear being visionary.

His work was that of a man regarded by many as the greatest, if perhaps the most controversial, architect of this century.

On April 19, Mr. Wright had been scheduled to address a meeting of the Silvermine Guild in Norwalk, Conn., and I had hoped to hear this great individualist talk about his work.

I think that an editorial in the New York Times this morning sums up nicely the career and the life of Mr. Wright. I would like, therefore, Mr. Speaker, to introduce this editorial into the RECORD:

FRANK LLOYD WRIGHT

It is customary in many quarters these days to indict our society for its alleged stress on conformity and for its supposed trend toward the organization man as its representative citizen. Yet the passing of Frank Lloyd Wright was front page news yesterday, and no American of the present century has been less associated with conformity or anything smacking of the organization man than this pioneer in architecture who influenced so profoundly the surroundings in which many of us live, work and play.

Boldness and imaginative daring were the hallmarks of the long career of this artist,

who worked in three dimensions with the most varied of materials. Like every innovator who makes his mark upon his times, he was the object of both adulation and attack and it is still too early to give the final verdict on his place in the history of architecture and, more generally, of art. But even now it is clear that he brought a freshness of vision and a zest for life to his work which provided stimulus for new thinking and for new experimentation, a stimulus which worked its power on both his followers and his opponents. Original thinkers and artists of the stature of Frank Lloyd Wright are rare in any time and any society. We are richer for the fact that he found a hospitable atmosphere for his work and creativity.

Newsweek Reports on the Great Economic Debate

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. REUSS. Mr. Speaker, there appeared in Newsweek magazine of April 13, 1959, a most lucid and comprehensive analysis of the diversity in expert opinion today on the questions of economic growth and price stability. The authors of this timely and informative article are Editors Sandford Brown and Hobart Rowen, of the magazine. I believe it will be of great interest to Members on both sides of the aisle. Under leave to extend my remarks, I therefore offer the article for inclusion in the RECORD:

Unwatched by TV or tabloids, devoid of inflammatory words or fifth amendment thugs, a congressional committee this week began an investigation whose enormous scope transcends by far its lack of dramatics. The subject before the Joint Economic Committee was nothing less than the whole future of the U.S. economy and everything that leans on it. And that future could be boiled down to a single issue. As Senator PAUL DOUGLAS, Illinois Democrat and committee chairman, defined it: "The central problem of our times is how to combine price stability and growth." The answers to that problem—which undoubtedly will be based on political as well as economic beliefs—will determine how much the Government spends in the future for what, and how much it collects in taxes from whom. In short, the answers will affect every person in the country.

The dry-talking, chart-toting economists called by the committee to give advice on the problem were stepping into a red-hot debate that has been raging for months wherever a businessman, labor leader, politician (or, for that matter, an economist) pushed back his chair and rose to make an afterdinner speech. One one side are those whose main worry is economic lassitude—the fear that the economy may be growing too slowly to meet the demands upon it. On the other side are those whose principal anxiety is economic explosion—the combustible inflationary forces that might be ignited by too rapid growth.

The problem of growth vs. inflation is hardly a new one. In fact, it is as old as the economy itself. What's more, the state of the economy at the moment seems caculated to soothe anxieties on both sides of the great debate. The Nation's total output of goods and services was still rising fast (up 2.4 percent in the first quarter over the fourth quarter of last year); personal income, retail sales, industrial production were all hitting new peaks. At the same time, the Consumer Price Index stands at 123.7 percent of the 1947–49 average, exactly where it stood when the recovery surge started.

Why, then, a great debate at this time?

CAUSE FOR TALK

The immediate reason probably lay in another statistic: The jobless rolls still were well above the 4 million mark in March, showing all too clearly how far employment was lagging behind the general business recovery. Harvard's Sumner Slichter, one of four economists called by the Joint Committee in its preliminary hearings last month, recommended that the Government schedule a $3 billion deficit in its budget for fiscal 1960 for the sole purpose of stimulating the economy. Another witness, President Truman's former chief economic adviser Leon Keyserling, told Newsweek last week that he favors a boost in Government spending as "the quickest way to create jobs." Committee Chairman DOUGLAS himself has made it plain that he thinks the first objective of the moment, with priority over any and all steps to check potential inflation, should be to restore full employment.

Against such views, the administraton, the Federal Reserve, and probably a majority of U.S. economists are solidly arrayed. Gabriel Hauge, former economic assistant to President Eisenhower and now an officer of New York's manufacturers Trust Co., states the case this way: A boost in Government spending would not create jobs quickly since it would be hard to allocate the money to areas and industries where unemployment is concentrated. More important, Hauge thinks that "the economy is ticking along just right at the moment, provided we ease the burden of the unemployed with adequate unemployment compensation." Extra Government spending, he thinks could set off another unhealthy, 1955-style boom and lay the groundwork for another recession.

STRETCHOUT

On top of this, Hauge agrees with administration spokesmen who predict that the natural forces of the economy will cut unemployment to close to 3 million by the end of the year in any case. "Up to now, management has preferred to stretch out the working week rather than hire back additional workers, because of high wage rates," says Hauge. "But the average workweek has been stretched about as far as it will go (to 39.8 hours). From now on, business improvement should be reflected in more jobs" (and it apparently is).

But the problem of 1959 unemployment is only a starting point for the great debate. Some far more fundamental issues have been brought to the fore by the whole cycle of recession and recovery just experienced. Among them:

The possibility that a growing labor force and continued automation of production are making it harder and harder for the Nation to achieve "full employment" as time passes.

The simple fact that, rich as the Nation is, 20 percent of its families exists on incomes of less than $1,890 a year.

The mounting economic challenge of the Soviet Union, whose industrial output has expanded at an average rate of 7 percent in the last 5 years versus a 2.3 percent rate (in constant dollars) for the United States.

To all of these basic problems, there is a single answer: Faster growth for the United States. Just to absorb the 1 million new people added to the work force, each year, the economy must grow $10 billion; in a sense, it would be standing still. To improve living standards, the output of goods and services must increase even faster. And while U.S. living standards have undeniably improved since 1953 in terms of the real benefits produced by each hour of labor, nearly everyone agrees that the Nation has been growing too slowly to achieve its real potential. Most authorities believe that the economy should work for an optimum cruising speed that would boost output without eroding the gains through price inflation and painful readjustments.

There are a few mavericks. Slichter, for one, thinks that "some of the causes that raise output also produce inflation." So what? he says in effect. He is convinced the Nation should accept a modicum of inflation as inevitable and harmless, try to keep it at a modest level by such means as lowering tariffs. Another Harvard economist, author John K. (The Affluent Society) Galbraith, thinks that the main objective should not be simply to boost the Nation's gross output but to channel more of its energies and capital into vital areas that don't get as much as they should (e.g., education, slum clearance).

But the essential questions of the great debate are on matters of degree (How much should national output be boosted?) and matters of method (What is the best way to achieve the optimum cruising speed?).

Not surprisingly, the same people advocating a boost in Government outlays this year to help create jobs are the people plumping for the fastest rate of growth over the long term—5 percent a year is a target mentioned, with Government spending to be used as a fiscal whip to drive the economy to the desired heights. This group has its roots of political power in the liberal wing of the Democratic Party. Its chief spokesman is Democratic Advisory Council member Keyserling, who feels that too little growth is just as apt to cause inflation as too much.

Underutilization of equipment and manpower has been forcing prices up in recent inflation periods, claims Keyserling, who feels that many of the administered price increases of recent years were put through specifically to compensate for uneconomically low levels of production and sales. By stimulating industrial expansion with boosts in Government spending (on the theory that the rest of the economy tends to catch up with what the Government is doing), Keyserling argues that the Nation would be able to put its facilities to more economical use, produce enough tax revenues so that the Government can balance future budgets, and thus lick the problem of inflation.

POINT OF ISSUE

To men like Economist Hauge and Chief Economic Adviser Raymond Saulnier, this is putting the cart before the horse at the top of a steep hill. While they don't argue with the need for faster growth, they would aim for an average rate of around 4 percent[1] and would make no attempt to set yearly goals for the economy but work for a long-term average. Most important: Instead of trying to stimulate growth to defeat inflation, they would concentrate on checking inflation to stimulate growth. The methods: Cut taxes to boost business incentives and increase private investment; reduce monopoly power to stimulate competition; make monetary adjustments to check or stimulate demand as necessary.

The fact is that neither camp can make a clear-cut, detailed case for its methods, or eliminate the inevitable loopholes that any economist can find in any other economist's brief. Saulnier has no really good answer to the question of why the Government should

[1] A small difference in rate eventually adds up to a lot. In a projection by the National Planning Association, the difference between a growth rate of 3.7 percent and one of 4.5 percent—only eight-tenths of 1 percentage point—would make a difference of $35 billion in the gross national product by 1970.

be concentrating on boosting private investment now, when there is already a large amount of idle plant capacity. And Keyserling never quite spells out how higher Federal budgets would generate higher spending by industry.

PRECEDENT

Economic history can be cited to support either side's case. Past statistics on growth rates versus price inflation over the same periods, for example, would seem to support the Keyserling view that rapid expansion alone has not been a prime cause of inflation. Prices dropped 0.3 percent while output was jumping 8 percent in 1954–55 and have held steady through the current recovery. In contrast, prices rose 2.7 percent while output dropped 3 percent in 1957–58. Yet New York's First National City Bank points out that the Keyserling technique of trying to balance the budget with Federal spending was tried and found wanting more than 20 years ago. It failed in 1933–36, even with the aid of successive tax increases, notes the bank. Trying to do too much and control too much spells inflationary disruption of orderly work and progress.

There is just as much room for argument on the question of how fast the economy can or should grow. For one thing, how much growth is physically within reach? Economist Hauge thinks that a 5 percent rate would require annual capital outlays "one and one-half to two times the peak level of nearly $38 billion we hit in the third quarter of 1957, plus a much larger proportion of the population in the work force. I just don't think this is in the cards for the near future." And how much growth could be sustained without yearly "borrowing" from the future (thus generating severe recessions) and without wasting too many gains through inflation? Again, there is no sure answer. But General Electric economic analysts have projected a probable 4.7 percent annual increase in the gross national product over the next 10 years—3.2 percent in constant, 1958 dollars, plus 1.5 percent in plain, inflationary air.

GROWTH CONSCIOUS

But one thing does seem certain, even though the debate is still millions of words, and probably millions of ballots, away from any sort of resolution: The Nation's rate of growth is going to be speeded up. There has been a noticeable shift within the administration toward a more liberal view of Government's role in promoting economic expansion, with conservative men like Saulnier looking toward higher spending for housing and education and talking easily of a $600 billion economy not too far ahead.

Dr. Gerhard Colm, chief economist of the National Planning Association, sums up the trend this way: "Under the impact of the great depression of the thirties, the Second World War, and of cold war and competitive coexistence, we have become increasingly growth conscious. It is likely that the Government will be forced to adopt programs favoring economic growth and counteracting prolonged periods of stagnation or recession.

We can count on a rate of growth during the next decade which is substantially larger than that [3 percent] of the last 50 years."

The NPA itself has picked 4.2 percent as the most likely rate. As part of an exhaustive study (whose details will be sent to its subscribers this month), it has constructed a model of the economy that this rate of growth would produce by 1970. Here is how hypothetical 1970 stacks up against prerecession 1957:

Gross national product: $790 billion in 1970 versus $451 billion in 1957.

Industrial production: 254 versus 142 (1947–49 equals 100).

Average working hours: 37.5 per week versus 41.

Labor force: 83.6 million versus 67.9 million; employment of 80.7 million versus 65 million.

Still another study, released last week by the Committee for Economic Development, gives the cheering promise that this may be real growth, and not just a paper mirage conjured up in Washington. Surveying probable Government budgets over the next decade, Economist Otto Eckstein estimates that Federal outlays in 1968 will amount to about $97.1 billion, with a fat, anti-inflationary surplus of $7.5 billion.

But Eckstein's forecast has one strong hedge: All bets are off if there's an upset of the recent overall balance of forces in the great debate of 1959.

Twelve-Point Plan To Improve Social Security System

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 7, 1959

Mr. ANFUSO. Mr. Speaker, it is by now generally agreed that help and care of our aged population constitutes today a major national problem which requires a serious approach on a national scale. We have today over 12 million elderly and retired citizens who are dependent on their monthly social security payments for their subsistence, and before very long their number will reach 15 million people. There are others in this age group who would prefer to retire, but they cannot afford to do so because the benefits they would derive would be insufficient to cover their needs in these days of high cost of living.

Our social security system was initiated in 1935. We shall soon be approaching the quarter-century mark. It was originally established as one of the major steps in combating the greatest economic depression in our history, and it really proved to be an important factor in helping to pull the Nation out the economic mire of the 1930's. What is achieved then it can do now, too, in view of the 5 million unemployed in the country now and the very slow recovery that our economy is making from last's year's recession.

Over the past few years we have made some amendments to the Social Security Act, particularly in extending coverage to more people and increasing benefits to some extent. Last year I supported the 7-percent increase, though I tried to obtain a higher increase. However, these improvements have been relatively small compared to the needs of the average retired person. Many of them have no savings to supplement their social security income They have been victimized by the sharp rise in the cost of living since the end of the war. Many of them find themselves in dire straits and are actually undergoing physical and mental anguish in an effort to keep their heads above the water at a period in life when their health is deteriorating.

Our Nation cannot afford to let those who are forced to retire because of advanced age to pay a heavy toll by being relegated to a lower standard of living in their declining years. The higher costs of food, medical care and other essentials of life have shrunk the value of their meager dollars which they receive each month. In the past, some of our elderly citizens were able to supplement their limited income with outside earnings, but these opportunities have greatly diminished in recent years with the increase in unemployment.

I have become firmly convinced in the last few years that we have reached a point where an overhaul of the social security system is badly needed. We must bring it into step with the times and the needs of the people. We must make urgent improvements and introduce long-needed changes which will enable our elderly people to enjoy the fruits of their life's labor in their declining years, without undue worries and the feeling of being "the forgotten people."

Consequently, I have given considerable thought to this whole problem of our senior citizens, with the result that I am now renewing my efforts to obtain larger benefits. During the past few months I have been working on an omnibus social security measure and I am now introducing this bill. It contains 12 major changes which, if adopted, would be a great step forward in overhauling and improving the whole social security system.

The following are the 12 major provisions advocated in my omnibus social security bill:

Section 1 increases all social security benefits by 30 percent. Minimum monthly payments are to be increased to $50, instead of $33 at present. Maximum payments are to be established at $200 in the case of primary beneficiaries.

Section 2 reduces the retirement age to 62 for both men and women, and eliminates the present actuarial reduction in benefit amounts for women.

Section 3 increases from $4,800 to $6,000 the amount of annual wages which may be taken into account in computing benefits and taxes, thus increasing the earnings base.

Section 4 does the same thing for those in the self-employment category by increasing from $4,800 to $6,000 the amount of their income from self-employment which is to be taken into account in computing their benefits and taxes.

Section 5 extends from 18 to 21 the maximum age for eligibility of children to receive benefits, which would enable such children to continue their education and finish college or other schooling.

Section 6 increases the amount of a widow's social security benefit from the present level of 75 percent of her husband's allowance to 85 percent of that amount.

Section 7 increases from $1,200 to $1,500 a year the amount of outside earnings which a social-security pensioner may receive without suffering deductions from his benefits under the work clause.

Section 8 permits a blind person to receive disability insurance benefits with only four quarters of coverage, and to

continue to receive such benefits after attaining retirement age.

Section 9 establishes a new program of hospitalization and surgical insurance for individuals entitled to old-age and survivors insurance benefits. It would cover the costs of up to 60 days of hospitalization in each 12-month period; the cost of up to 120 days of nursing home services in each 12-month period, also payments covering reasonable costs of surgical services, as well as out-patient care and emergency surgery.

Section 10 provides that an individual's first $50 a month of earned income shall be disregarded in determining his eligibility, on the basis of need, for old-age assistance. In other words, recipients of such assistance would be permitted to earn up to $50 a month without having that amount deducted from their subsistence grants.

Section 11 seeks to aid dependent children over the age of 18, if they are regularly attending school. The purpose here is to encourage the care of dependent children and to enable such needy children to acquire an education.

Section 12 increases the rates of social security taxes for employees, employers, and the self-employed in order to obtain the necessary funds required to cover the additional costs of these increased benefits and to keep the social security fund solvent.

This is my 12-point program for overhauling the social security system. Each of these points fills a need. All of them together would bring the entire system up-to-date and make it one of the best in the whole world—a model for many other nations to seek to emulate.

It is my view that the increased benefits advocated in my bill will repay the extra cost in a number of ways:

First. It would provide greater purchasing power to our retired citizens and enable them to maintain an adequate standard of living in their retirement.

Second. It would encourage many of our older workers to retire and make available more jobs for younger people, thus decreasing the unemployment rolls and unemployment insurance payments.

Third. It would provide a much-needed health program of hospital and surgical services and nursing home care for the elderly, thus helping them to save on their costly medical care needed in old age and to utilize their meager income for other essentials.

Fourth. It would assist and encourage many youngsters to stay in school and continue their education up to the age of 21, from which both they and the Nation would gain, thus keeping them out of the labor force or preventing them from becoming public charges.

Fifth. It would provide a considerable boon to the economy of the country because of the increase purchasing power on the part of the retired, the reduction in unemployment, the medical care for the old, the educational to the young, and the other phases of this program.

Just as the launching of social security in the 1930's helped to overcome the effects of the depression of that era, so an overhaul along the lines as suggested in my bill could prove to be of more lasting value to the economy of the Nation and the continued economic growth of the country.

I recall that when social security was first introduced nearly a quarter of a century ago, it was considered by many people as a drastic step because of the payments involved. There were even some pessimists who foresaw economic ruin for the country. As we look back over the perspective of time, what do we find? Today a grateful Nation realizes the tremendous significance of the social security system and would not hear of discarding it or even reducing it. A political officeholder or a political party advocating such a step would be thrown out of office at the very next election.

The American people have long ago ceased to regard social security in the nature of a dole. Rather, they prefer to regard it as a democratic system established by a free people to provide economic security to its older citizens after they have completed a lifetime of useful service. It is our way of saying to these people: Now that you are retired from your life's labors, a grateful Nation will maintain you in dignity and security, free from want or worries. But are we really maintaining them in dignity and security? Unfortunately, our elderly citizens are not enjoying the measure of economic independence originally foreseen for them under the social security system.

The time has, therefore, come when we must take full cognizance of the problems of our aging population, not merely for their own benefit but for the Nation as a whole. We cannot ignore these problems any longer or they will get out of hand. We must approach them from a practical, yet humane, point of view.

I believe that the approach advocated in my bill is reasonable and realistic. It will help eliminate major deficiencies in our social security system, and at the same time provide our older citizens with greater economic security. It will make possible for them to live in dignity and to walk with their heads high—proud that an appreciative Nation has not forgotten them in their old age.

John Drupa, Boys' Clubs of America Boy of the Year

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. ROBISON. Mr. Speaker, in my short speech to the House at the opening of today's session I told of John Drupa, the Binghamton, N.Y., boy who has been chosen Boy of the Year by the Boys' Clubs of America, and who is in Washington today. The news release concerning his selection gives more details about his background, and I am sure my colleagues will agree that he is a remarkable young man.

BOYS' CLUBS OF AMERICA BOY OF YEAR FORMER LATVIAN REFUGEE

John Drupa, 15, a member of the Binghamton, N.Y., Boys' Club, has been named 1959's "Boy of the year" by the Boys' Clubs of America, the youth organization dedicated to the furtherance of juvenile decency. Drupa, who fled from the Russians with his mother after World War II, was chosen by a national committee of judges from candidates nominated by BCA's 522 local clubs. The young winner, an accomplished public speaker, will come to New York to receive the "Junior Citizenship Award" from former President Herbert Hoover, chairman of the Boys' Clubs of America, during National Boys' Club Week, April 6 to 12.

The Boys' Clubs' "Junior Citizen" represents more than half a million Boys' Club members from all over the country and Hawaii. He was selected in the 13th annual search for the boy who best fulfills the requisite "outstanding service to home, church, school, community and Boys' Club."

Young Drupa was a very small child when his mother escaped from Latvia with another brother and a sister. His older brother and father remained behind to defend their homeland against the reconquering Soviets. Both father and brother were taken prisoner by the Russians and sent to Siberia. Mrs. Drupa and her three small children moved from one European country to another until they were admitted to the United States in 1951. Recently John's father and brother were released from Siberian prison camp but are unable to join their family in the United States.

John couldn't speak English when he arrived here at the age of seven, and so could not be placed with his age group in school. The young refugee had difficulty making friends because of the language barrier until soon after his arrival, he became a member of the Binghamton Boy's Club. There he made friends easily, and today is one of the club's most popular members.

John has been able to catch up in school and for the past five years has been an honor student, is now treasurer of his homeroom and a member of the school traffic staff. His principal says proudly, "John helps his fellow students by devoting his own time to teaching them efficient methods of preparing for exams and to giving advice and assistance in homework."

Junior Citizen Drupa has been active in all forms of community service in which his Boys' Club engages, including making speeches for United Fund campaigns, and has won a variety of wards. In 1956, he was co-winner of a trip to Washington in connection with the American Heritage—Boys' Clubs of America national "Get Out the Vote" contest. He was one of two Boys' Club members who obtained the greatest number of pledges to vote. In speeches during the "Vote" campaign, he stressed that "the right to vote is the most important right in democracy. It is the right which will keep a free people always free. . . . By voting we who came as refugees are repaying to America a small amount of what this country has given us. Voting is the voice of the people. Take it away and men won't dare to speak about things such as liberty, justice and freedom."

John received the Binghamton Good Citizenship Award for directing the Mayor's Youth Council community projects, including the safety program "Hitch Horse Sense to Horse Power." The Mayor has publicly expressed his appreciation of this work: "John's handling of this project has resulted in a material decrease in speeding and reck-

less driving in our area." Drupa was mayor-for-a-day in 1958.

The Boy of the Year is a Junior Leader in his Boys' Club, a Boy Scout patrol leader, and chairman of the board of the Junior Sertoma Club. Under John's leadership, the group has raised $1,000 for Boys' Club Day Camp through the sale of Christmas trees which the boys plant every year.

John has also received honors in sports, including a special Boys' Club Athletic Achievement Award and first place in the Activities Day contest in which he succeeded in doing 604 sit-ups. His hobbies are skiing, skin diving, swimming, electronics, chess, and coin collecting.

Many Older Farmers Use Soil Bank Plan as Retirement Route

EXTENSION OF REMARKS
OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. HENDERSON. Mr. Speaker, this Congress should take a very long and searching look at the conservation reserve program to see that it does not become a gravy train which eclipses the original congressional intent of withdrawing land from production in order to discourage production. The following article from the Wall Street Journal depicts some extreme applications of the program which are bringing it into disrepute. Income received from the program has become a supplement to nonfarm income. It is being used as a source of retirement funds and is defeating the primary purpose by assisting farm operators to increase the productivity of their remaining farmland. These practices should be inspected with a congressional microscope.

MANY OLDER FARMERS USE SOIL BANK PLAN AS RETIREMENT ROUTE—OTHERS, AFTER IDLING FARMS, TAKE CITY JOBS; WILL PLAN CUT TOTAL FARM OUTPUT?

(By Arthur C. Nauman)

BEETOWN, WIS.—An auctioneer's chant recently floated through the brisk spring air out on Orlo Taylor's 160-acre farm near here, as tractors, a corn planter, bolts, hay and even the old dinner bell went on the block.

Four hours later, this lean, 66-year-old farmer was out of business. He's among the 183 farmers here in Grant County to take advantage of one of the latest Government programs for cutting the farm surplus. Mr. Taylor put his entire farm in the soil bank's conservation reserve and agreed to keep it out of production until 1969.

Both here and in other areas the new program is providing older farmers, such as Mr. Taylor, with enough guaranteed income—which they receive without working their farms—to permit them to retire.

TWO MAJOR REASONS

Of 27 farmers interviewed here, 22 said they planned to retire with the money received from idling their farms. This group averaged 58 years of age. Soil bank officials in Washington are checking nationally now to find out just what farmers' motives were for idling their land. They say, however, that early returns from the survey indicate the two major reasons were to retire and to work at jobs in town.

This grain- and livestock-producing county here in southwestern Wisconsin provides a good capsule picture of how the program is working. In this county, 4.8 percent of the farms and 4.4 percent of the tillable land has been deposited in the conservation reserve. Nationally, 3.1 percent of the farms and 7.2 percent of the cropland has been idled. The program, of course, affects not only farmers and rural businessmen but is of major importance to U.S. taxpayers. Uncle Sam will pay nearly $250,000 a year to farmers in Grant County to keep their farms out of production.

Farmers throughout the United States have deposited 23 million acres in the conservation reserve. The annual bill for keeping this land idle will total $365 million. But Agriculture Secretary Benson can spend up to $375 million a year, which he hopes will enable him to idle an additional 5 million acres. He's considering asking Congress to lift the annual outlay to $575 million so the land in the conservation reserve can be boosted to 40 million acres.

The retiring Mr. Taylor will receive $30,760 over the next 10 years for keeping his farm out of production.

CLIPPING THE WEEDS

"I won't know for sure until the end of the year whether or not we can make out," Mr. Taylor says. "But I think the income will keep us going. After all, my two daughters are grown and married. I won't have to buy any fertilizer. All I'll have to do to the farm is have the weeds clipped twice a year."

Drive down the road a few miles and talk with 65-year-old Joseph Matt. He agreed last fall to deposit his 103 acres in the conservation reserve and will get $2,183 a year from the Government.

"This soil bank is like an insurance policy to elderly folks like us," he says, puffing his long cigar. "The money will come in steady every year. It won't ever freeze, a drought won't hurt it, and you don't have to work to get it."

Here in Grant County, too, a number of farmers banked their farms so they could work in town. Loren J. Wood, 30, will receive $2,000 a year for keeping his 80-acre farm in the soil bank. He's working full time now at the Stella Cheese Factory in Lancaster, the county seat. Last year he held down the job in the cheese plant and farmed evenings and weekends. Some nights he'd be in the fields until 2:30 a.m., he recalls. "I'll get just about as much from the farm as before, maybe a few bucks less, but I won't have to do any work there now," he says.

Other farmers also are using the conservation reserve as a way to whack the number of hours they work. Harry Horsfall, a breeder and raiser of purebred Aberdeen Angus beef cattle on a farm 10 miles north of here, banked his 123 acres of cropland. "Cattle take a lot of time," he says. "This way, I can work a shorter day because I don't have to bother with raising any crops."

INCOME TO BUY FARMS

Some farmers are using the plan to get an assured income that will help them buy farms. William Pink bought a 390-acre farm near here last year for $45,000. Then he deposited the 250 acres of crop land in the conservation reserve. Mainly a dairy man, Mr. Pink owns 50 head of Holstein cows. He'll keep them on his 140 acres of pasture. He has rented 25 acres on which he plans to raise corn for the silage he'll need to feed the cows. But the $5,000 a year he'll get over the next 10 years for the land he has in the conservation reserve should pay off the mortgage, he says.

While it's still early to measure the effect on production of idling 13,000 of this county's 298,000 acres of tillable land, evidence here indicates other farmers will try harder than ever to get each acre to yield just a little more corn, oats, and soybeans, three of the major crops produced here.

"Our orders for fertilizer are running a good 15 percent ahead of last year at this time," says Herm Wolfgram, manager of the fertilizer plant operated at Prairie du Chien by Wisconsin Farmco Service Cooperative. It supplies the fertilizer the co-op sells in Grant County. "We've had to hire three more people to handle the spring rush," Mr. Wolfgram adds.

Despite the land taken out of production, the acreage planted to corn probably will climb, says Frederick Dahms, Grant County farm agent. There are no planting controls on corn this year and the price support level is somewhat higher than was paid to farmers who ignored acreage controls last year. The big sales of seed corn don't take place until April but E. S. Floyd, Farmco office manager in Lancaster, says sales so far this season are running about 10 percent ahead of a year ago.

Corn, of course, is one of the biggest farm surpluses. At last count on January 31, Uncle Sam had $2.4 billion tied up in surplus corn.

Farmers who are sticking to farming also are pushing mechanization in an effort to keep output rising. Talk with William Schneider, Lancaster's Deere & Co. farm machinery dealer.

"My sales were nearly $100,000 last year," he says, considerably above the year before. Since November, he was sold five tractors; he sold only four during the entire year ended last October 31.

North Pacific and Bristol Bay Salmon Fisheries

EXTENSION OF REMARKS
OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 8, 1959

Mr. RIVERS of Alaska. Mr. Speaker, I refer again to my bill H.R. 3063 and related bills designed to ban the importation of Japanese-caught salmon until the Government of Japan cooperates in measures necessary to restore the depleted Bristol Bay salmon runs on the coast of Alaska. Recent notice of closure of the Bristol Bay salmon fishery for the coming season highlights the intolerable situation which has developed in our dealings with Japan through miscarriage of the North Pacific Treaty entered into in 1953 between the United States, Canada, and Japan for the purpose of preserving and improving our once great salmon resource.

To supplement previous presentations on this subject which were submitted to acquaint the Congress with the facts and background pertaining to this serious national problem, I hereby insert into the Appendix of the RECORD the following major portions of the illuminating testimony of Mr. Clarence L. Anderson before a subcommittee of the Senate Committee on Interstate and Foreign Commerce, at hearings presided over by Senator BARTLETT on April 1 and 2, 1959, at Juneau, Alaska.

Mr. Anderson, who is the director of the Alaska Department of Fish and Game, spoke in support of the pending bills I have mentioned. His testimony follows:

In the general peace treaty that was signed by Japan and the United States after World War II, no mention was made of the valuable fisheries of the North Pacific Ocean. However, Japan did agree to negotiate a separate convention on these matters at a later date. Accordingly, representatives of Canada, Japan, and the United States met in Tokyo during 1951 to work out the details. Although this International Convention for the High Seas Fisheries of the North Pacific Ocean was signed by all three countries at Tokyo on May 9, 1952, it did not enter into force until June 12, 1953, when final ratification papers were exchanged at Tokyo.

A formal organizational meeting was held at Washington, D.C., on February 1–12, 1954. Since that time annual meetings have been held each fall, alternating between Canada, Japan, and the United States. Under terms of the treaty, a policy making commission was created with four representatives from each of the three countries. Each national section has only one vote, and all resolutions, recommendations and decisions must be by unanimous vote. Each nation may establish an advisory committee and employ such scientific and other experts as it may require.

The primary objective, as spelled out in the convention, is "to ensure the maximum sustained productivity of the fishery resources of the North Pacific Ocean, and that each of the parties should assume an obligation, on a free and equal footing, to encourage the conservation of such resources."

As a part of the treaty, the principle of abstention was established, which, briefly, is as follows:

"A nation should abstain from entering a fishery (1) which is already utilized as fully as is consistent with its sustainable yield; (2) which is under scientific study to determine the steps necessary for its conservation, and its maximum yield; and (3) which is being managed administratively in keeping with the findings of research and the objectives of sustained yield conservation."

In line with this principle, the annex to the convention provides that Japan agrees to abstain from fishing:

1. Halibut off the coasts of Canada and the United States in which commercial fishing for halibut is being, or can be, prosecuted.

2. Herring off the coasts of Canada and the United States east of the extremity of the Alaskan Peninsula, but not including Bering Sea.

3. Salmon off the coasts of Canada and the United States east of the provisional line of 175° west longitude, which line passes through the western extremity of Atka Island in the Aleutian chain.

The annex further provides that Canada agrees to abstain from fishing salmon in the Bering Sea east of the provisional line.

When the provisional line at 175 degrees west longitude was settled upon in 1951, there was every reason to believe it would be an equitable line. Little did the participants in the memorable meeting at Tokyo dream that in just a few short years the International North Pacific Fisheries Commission would be embroiled in heated arguments over relocation of the line. Neither did they dream that congressional hearings on this very subject would be held in Juneau today.

At the organizational meeting in 1954, the Commission agreed upon a broad program of research on the salmon of the North Pacific. Each national section supplied its own funds and personnel, but the various research projects were closely dovetailed and coordinated. Because of lack of funds it was impossible to get started in 1954. However, the program was initiated in 1955 and has been expanded and continued ever since.

At the outset, little was known about the distribution and migration of the salmon of the North Pacific. Much to the surprise of most of us, but perhaps not to the Japanese, it was soon learned that the various species of salmon were widely distributed across the entire Pacific from the North American coast to the Asian shore. The southern limit was roughly at the line of 45 degrees north latitude, which, at some places, is approximately 1,000 miles from the nearest land. Although limited feeding of immature salmon does occur in the Bering Sea, there are, nevertheless, extensive runs of migrating mature salmon north of the Aleutian chain destined for both Asia and North America.

The next problem was to try to segregate, on the high seas salmon of North American origin from those of Asian origin. It is not the purpose of this review to go into the intricate scientific details of how this is being done. It is sufficient to state here that it is being accomplished by:

1. The study of the anatomical structure and the body proportions of the salmon.
2. Analyses of the scales.
3. Presence or absence of certain parasites.
4. Serology, or the study of blood types.
5. High seas tagging.

In addition, one might add the presence of net-marked salmon in American streams. This in itself is a form of tagging done unwittingly by the Japanese fisherman on the high seas.

By means of this broad and highly specialized research, it is now known that there is a wide zone of intermingling of Asian and American salmon along the line of 175° west longitude. Red salmon of North American origin occur west of Attu Island or 170° east longitude. This is approximately 550 miles west of the provisional line. On the other hand, pink salmon of Asian origin have been located at 163° west longitude, south of False Pass at the tip of the Aleutian Peninsula. This is about 450 miles east of the provisional line. This zone of intermingling is, therefore, roughly 1,000 miles wide.

Turning more specifically to red salmon, it has been found that the feeding ground of the Bristol Bay fish is delineated generally by this zone of intermingling, except that they do occur somewhat further to the east.

* * * * *

During the 1957 season it has been estimated that the Japanese fishermen caught between 6 million and 10 million red salmon in about two weeks time in this area, most of which were headed for Bristol Bay. Is it any wonder, then, that the salmon fishermen of Bristol Bay are worried? Their fishing effort is being cut more and more each year. Very soon now, every red salmon that escapes the Japanese fishery will be required for seed stock in the streams and lakes of Bristol Bay in order to perpetuate this high seas fishery for Japan.

At Vancouver, British Columbia, in 1957, and again at Tokyo in 1958 the American members of the North Pacific Commission, backed up by their advisory committee, made a concerted effort to get an agreement from the Japanese delegation for movement of the provisional line from 175° west longitude to 170° east longitude. In this they were not successful. To this date there has been no indication from the Japanese that they will even decrease their fishing efforts in the red salmon zone of vulnerability.

As you know, the Japanese persist in their claim that they are fully complying with the terms of the treaty. While it may be true they have abstained from fishing salmon east of 175° West longitude, are they really following out the spirit of the convention? It would appear not. Earlier in this review the primary objective of the convention was stated as follows: "to insure the maximum sustained productivity of the fishery resources of the North Pacific Ocean." The salmon in the intermingling zone south of the Aleutians are largely immature fish, which at the time of capture by the Japanese have from 2 months to 4 years before they are ready to start on their spawning migration. They are constantly feeding, growing, and increasing in weight. Even the mature migrating salmon continue feeding and putting on weight until almost the time they reach the shores of Bristol Bay.

In order then, to get maximum productivity, the fishery should be confined to the coastal areas, so the salmon will be caught at their prime and when they have attained their greatest weight. The Canadian and American Governments have recognized this and passed laws to prevent the net fishing of salmon on the high seas. The Japanese steadfastly refuse to accept this principle.

The picture does look bleak for the fishermen of Bristol Bay. Certainly Congress should do everything within its power to assist the people of this area.

As the situation looks today, there appears to be one faint spark of hope. A recent dispatch from Tokyo, dated March 10, 1959, outlined the progress of the Japanese-Soviet fishery conference which has been carrying on since January 10. After spending a month and a half on preliminaries, discussing the biological and other related aspects of the salmon problem, Russia presented its proposal for the 1959 season to Japan. Except for a prohibited area off northern Kamchatka, the Japanese have, in the past, been free to fish throughout the Pacific, west of 175° West longitude between May 1 and August 10 and within certain tonnage limits. The new Soviet proposal would drastically curtail both areas and time. The areas open to Japanese salmon fishing would be reduced approximately 80 percent and the time by over one-half. The 1958 Japanese catch quota as set by Russia was 110,000 tons of salmon of all species. The actual catch exceeded this by 145 tons. The Soviets now propose a Japanese catch quota for 1959 of only 30,000 tons, with not more than 10,000 tons of this being red salmon.

The section of the Pacific Ocean covered by the Japanese-Soviet Treaty lies north of 45° north latitude and west of 175° west longitude. The proposed areas that would be open to Japanese fishing in 1959 are indicated on the map, with the seasons shown below. As can be seen this will give, for all practical purposes, protection against high seas fishing of Bristol Bay red salmon. From all available reports, it would appear the Russians are deeply worried about the decline of their salmon runs and are now making an effort to correct the situation. It could be they have in mind the eventual abolition of all high seas salmon fishing in their treaty areas, just as Canada and the United States have already accomplished.

However, one cannot rest on this assumption. Alaskans, through their elected Representatives in Congress, must carry on the fight. This can be done in two ways: (1) By exerting every possible influence on the U.S. State Department to secure withdrawal of Japanese fishermen in the critical area west of the provisional line; and (2) by endeavoring to enact suitable legislation that will make the Japanese voluntarily move out of the vulnerable zone, ocean home of the Bristol Bay red salmon.

Discrimination Against Reserves Charged in Retiring Officers With World War I Service

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. FULTON. Mr. Speaker, it has come to my attention that an inequality in regard to retirement pay exists between Regular and Reserve officers with World War I service. In order to correct this I have cosponsored legislation along with a number of my distinguished colleagues. To acquaint Members of the Congress and the American people with this situation I am inserting an article from the Army, Navy, Air Force Journal of March 7, 1959 in the RECORD.

DISCRIMINATION AGAINST RESERVES CHARGED IN RETIRING OFFICERS WITH WORLD WAR I SERVICE

(By Col. George H. Foster)

Many Members of Congress, as well as many other well-informed persons, have expressed the feeling that there should be no discrimination between officers of the Regular establishments and officers of the Reserve components. In the Armed Forces Reserve Act of 1952 this was specifically established as basic policy: "There shall be no discrimination between and among members of the Regular and Reserve components in the administration of laws applicable to both Regulars and Reserves."

In spite of the general feeling that culminated in this statement of policy, there appear to be a few who feel that a retired Reserve should not have the same right to an increase in retired pay, because of World War I service, that is now given to retired Regular officers.

Regular Army officers who served in the military or naval forces prior to November 12, 1918, whether or not in combat areas, retired under such circumstances that their retired pay would be less than 75 percent of their active-duty pay, are entitled to an increase in the retired pay up to the maximum of 75 percent because of such wartime service. Reserve officers, retired at considerably less than the maximum retired pay, do not get a similar increase for wartime service.

The provision for special recognition of service in the World War I period had its origin in the act of July 31, 1935 (49 Stat. 507). At that time, due to the large increase in Regular officer personnel following World War I, there was a stagnation in promotion. In order to alleviate this bad morale factor, provision was made for voluntary retirement of Regular officers after 15 years of service. The retirement pay was at a reduced percentage rather than the conventional 75 percent, being based on years of service. The retired pay was such percentage of active-duty pay as was derived from multiplying the number of years of service by 2½ percent. A special award, however, was given to those who had served as commissioned officers during the war period by raising to the grade of major for retired pay purposes any officer below that grade who voluntarily retired under the act.

In June 1940, in furtherance of the same plan, the 1935 act was amended to provide that any officer on the active list of the Regular Army who had served in any capacity in the military or naval service prior to November 12, 1918, could, upon his own application, be retired with 75 percent of his active-duty pay, with an added provision for increasing the pay and rank of majors and lieutenant colonels, to lieutenant colonel and colonel.

The 1940 amendment made the retired pay provision so broad and liberal, to use the words of the Senate Committee on Armed Services, in Senate Report No. 1543, June 8, 1948, "as to make it theoretically possible to retire certain officers after only 1 day's service under a Regular Army appointment," if they had served in the military or naval service prior to November 12, 1918.

Shortly thereafter during the preparedness program, on July 29, 1941, Congress passed a joint resolution to provide a speedy method of elimination of unsuitable officers from the active list of the Regular Army. This law provided that any officer so eliminated who had served in any capacity in the military or naval service prior to November 12, 1918, should be retired with 75 percent of his active-duty pay, with service of only 7 years. This law suspended for the emergency an earlier law passed in 1920 under which unsuitable officers were classed as class B officers and eliminated from the active list. Under that law, which was cumbersome to operate, officers eliminated from the active list who had had 10 years of service were retired with the reduced retired pay based on 2½ percent for each year of service, without a special award for World War I service.

When the Pay Readjustment Act of 1942 was under consideration by Congress, the fact was brought out that Army officers who served in World War I were granted retired pay of 75 percent, whereas officers in the Navy and Marine Corps who had served in World War I were not so entitled. In the House an amendment was adopted to provide a similar right for the Navy and Marine Corps officers. The bill was rewritten in committee and apparently to make this provision uniformly applicable it said that the retired pay of any officers in any of the services mentioned in the title of the act, i.e., Army, Navy, Marine Corps, Coast Guard, Coast and Geodetic Survey, or Public Health Service, who served in any capacity as a member of the military or naval forces of the United States prior to November 12, 1918, thereafter retired under any provision of law, shall be paid 75 percent of his active-duty pay.

However, before the bill was passed by Congress another paragraph was added, giving to the class B officers eliminated under the 1920 act, 75 percent retirement pay if they served in the World War I period. The War Department had opposed this latter paragraph, but after a fight in Congress the paragraph was adopted.

Having given this special right to officers eliminated from the active list as unsuitable, under the 1920 act and under the joint resolution of 1941, Congress, on October 18, 1943, amended the Pay Adjustment Act of 1942 by adding another paragraph granting the same right to those officers who had been eliminated in 1922 as the result of an economy wave then existing. These officers had been retired if they had had at least 10 years of service. The retired pay for the 10 years retired officers, under the act under which they were eliminated, amounted to only 25 percent of active-duty pay.

Thus, most, if not all, Regular Army officers retired on a reduced pay basis have had their retired pay raised to the maximum of 75 percent if they had World War I service. Even the officers eliminated as unsuitable whose retirement pay would otherwise be 17½ percent (the 7-year officers retired under the 1941 joint resolution), or 25 percent (the 10-year officers under the 1920 act), have now been raised to 75 percent merely because a part of their unsuitable service was during the period of World War I.

It is against this background that the equity of retired Reserves to a similar treatment is to be appraised.

Reserve officers in order to be retired must be 60-years old and must have had over 20 years of satisfactory service. When this age factor is considered, it will be seen that most of these officers not only were in service in the period of World War I but served as well in the period of World War II.

It certainly is equitable to consider that over 20 years of satisfactory service by a Reserve officer is equal to the 7 or 10 years of service by Regular Army officers, which service was so unsatisfactory that they were eliminated from the active list. The average retired pay for Reserve officers is not over 30 percent, with no increase at all for World War I service, yet the eliminated Regular officers have been granted 75 percent retired pay because a part of their service was during World War I.

There are bills pending in the 86th Congress to correct this manifest inequity, notably bills sponsored by Senators SPARKMAN and JACKSON, and by Representative HUDDLESTON. It is to be hoped that early remedial legislation will result, if only to assure justice to a dwindling but distinguished group of veteran officers whose service dates back to World War I.

Union Sends Officers to World Affairs Class

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. HOLTZMAN. Mr. Speaker, I am taking the liberty of inserting in the RECORD an article which appeared in the New York Times of April 3, written by A. H. Raskin.

The article is entitled "Union Sends Officers to World Affairs Class," and points out an unusual picture of union education, wherein officers of Local 3 of the International Brotherhood of Electrical Workers are now attending morning classes on major world problems.

The Times has performed an outstanding and much-needed service to labor during these trying days for the trade union movement in bringing to the attention of the public the efforts and aspirations of a forward-looking union headed by an intelliegnt and progressive leader.

Mr. Raskin's article follows:

UNION SENDS OFFICERS TO WORLD AFFAIRS CLASS—VASSAR PROFESSOR TO OFFER ELECTRICIANS BASIC STUDIES

(By A. H. Raskin)

A union once so parochial that its members would not even install electrical equipment made outside the metropolitan area started a mandatory course in world affairs yesterday for all its paid officials and business agents.

The unusual venture in union education was designed to give the staff of Local 3 of the International Brotherhood of Electrical Workers a "feel of the world" through the tutelage of Clyde G. Griffen, a young teacher on leave from the faculty of Vassar College.

Harry Van Arsdale, Jr., who heads both the local and the New York City Central Labor Council, said international problems

had become so much a part of daily living that no union official could do his job adequately without knowing more about them.

Mr. Van Arsdale and 43 of his aids gathered yesterday morning in a classroom in the union headquarters at 130 East 25th Street. The room, normally used to instruct union mechanics in television repair techniques, was rimmed with video and hi-fi sets in varying states of disorder.

The opening lecture was scheduled for 8 a.m., but everyone was in his seat so early that the local's educational adviser—Dr. Harry J. Carman, dean emeritus of Columbia College—began an introductory talk 5 minutes ahead of time.

He told the officers that he considered the new course one of the most important and exciting developments in a cultural program that already was probably the most unusual conducted by any local union.

One mainstay of the program is a course in thinking intended to spark the intellectual curiosity of the union's rank-and-file members. It is conducted on a 314-acre estate that was once a millionaire's summer playground at Southampton, Long Island. Unionists spend a week there reading books, discussing philosophy and otherwise developing their critical faculties.

Another main facet is employer financial support for a scholarship program under which 140 sons and daughters of local 3 members have had their tuition paid for 4 years of college. Those whose academic records are good enough can get additional grants to finance 2 years of postgraduate study.

The new course in major world problems is an outgrowth of a foreign travel project Mr. Van Arsdale initiated several years ago. Under the program, business agents are sent to Europe, Asia, or Africa for 2 or 3 months to get a first-hand understanding of how people live and unions operate in other lands.

Mr. Griffen is a tall, eager man of 29 years, who looks more like a freshman than the holder of a Phi Beta Kappa key and an imposing list of fellowships and college teaching posts here and abroad.

Born in Sioux City, Iowa, Mr. Griffen took his master's degree at Columbia after his graduation from Iowa State University. He went to Pakistan in 1954 under the auspices of the State Department and was coleader of a Foreign Policy Association seminar on India 2 years later. He has taught history at Columbia and Barnard, as well as at Vassar, and is currently completing his doctoral thesis on a social science research council fellowship.

He emphasized that the course was not going to be concerned with current events but with a basic understanding of such issues as imperialism, colonialism, population trends, tariffs and ideological conflicts. He assigned outside readings calculated to give pause even to the longhairs on the union staff.

The texts were Raymond Aron's "The Century of Total War," and Joseph Schumpeter's "Imperialism and Social Classes." Mr. Griffen made it clear that no one could sleep through the course. Periodic examinations will be given, and term papers required. The class will meet once a week on what is expected to become a permanent basis.

With no school bell to signal the end of the hour, the first period ran 15 minutes overtime.

In addition to the union staff, the student body will include a former official of local 3, Armand D'Angelo, now city commissioner of water supply, gas and electricity.

Two other students also plan to come every week. They are Morris Iushewitz, secretary of the merged labor council, and Martin Rarback, secretary-treasurer of District Council 9 of the Brotherhood of Painters and Decorators.

In the years before World War II, local 3 was not noted for its global outlook.

At the New York World's Fair in 1939, foreign nations complained that the union had forced them to dismantle elaborate electrical devices that had been wired abroad for display in national pavilions. The exhibits had to be rewired by union mechanics here. In the same period, the local also refused to handle equipment made by members of other electrical unions in other parts of the United States. All of these boycott practices have since been abandoned.

Stanley Posner: Citizen of the Americas

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. PORTER. Mr. Speaker, a nation is no stronger than her citizens and sometimes those citizens working outside of government, but in support of fundamental principles, can accomplish tasks which have proved too great for the resources of the government.

I refer now, Mr. Speaker, to Stanley Posner, a worthy citizen indeed, and to the problem of unification of the Central American States, an awesome task indeed.

Stanley Posner has been a good friend of mine since I first contemplated a visit to Latin America 2 years ago. A Washington correspondent of Time, himself an expert on Latin America, Jerry Hannifin, recommended I talk to Stanley before I went to Costa Rica. Stanley came to my office. We had a fine talk. He knew that area and its peoples. He gave me Carleton Beal's magnificent book on Latin America.

Since then we have together followed the fortunes of our mutal friends, such as José Figueres, former President of Costa Rica, and Romulo Betancourt, now President of Venezuela. We have often talked about Latin American affairs, hopefully and idealistically but realistically in terms of existing conditions. His friendly help has been invaluable in my own attempts to improve our relationships with Latin America.

Recently I came across a magazine article about him. It is worth sharing with my colleagues. Here is the story of how Stanley Posner, citizen, went about Central America creating good will for the United States and confronting the knotty problem of unification. Under a previous consent I am including the article entitled "The Don Quixote From Massachusetts," which appeared in This Day, March 1955:

THE DON QUIXOTE FROM MASSACHUSETTS

(By Harold Helfer)

You would never turn around for another look at Stanley Posner if you passed him on the street. He is an unprepossessing figure, a rather smallishly built middle-aged man with hornrimmed glasses and a very bald head. And his name—Stanley Posner—means nothing to the bulk of his fellow citizens in the United States. He could speak out on almost any topic in the world without creating a ripple in the press of this Nation.

Yet this same Stanley Posner would only have to pass casually through Guatemala, Nicaragua, Costa Rica, or any other Central American country, for his trip to be treated as an event of major importance. Headlines would tell about it. Gala receptions would be planned for him. Representatives of the newspapers would be on his trail. Very likely banners would be unfurled along the way, and schoolchildren would dress up and sing songs.

For this mild mannered native of Massachusetts (who doesn't have a drop of Latin American blood in him and who was never south of the border until 5 years ago), has come to be regarded by many in Central America as a modern Simon Bolivar. More than any man of recent times he is responsible for shaping the destiny of that narrow but strategically-placed stretch of land that links the two great continents of this hemisphere. Almost singlehandedly he brought about the newly created organization of Central American States, which is a matter of great moment for the Central American region and is apt to have important ramifications for all the Americas.

HE CHANGED THE FLOW OF HISTORY

How this Stanley Posner, who is all but unknown in this country and never had anything much to do with any local politics, let alone international relations, came to change the flow of Latin American history is really quite a fascinating story. The fact that it was his unprepossessing looks and manners that played a vital part in winning the Central American countries back to an age-old dream in no way detracts from the aura of incredibility about the whole thing.

But to begin at the beginning, the Inter-American Bar Association was holding its annual convention in Lima, Peru, in 1947. Stanley Posner was something which the Washington, D.C., woods are full of—a lawyer. He did well enough financially, providing adequately for his brood of three youngsters and his wife, Lillian, but it could not be said that he had a particularly spectacular legal practice. Diaper concerns were his principal clientele.

But Posner set his mind to thinking about this convention in Lima and how nice it would be if he and the "missus" could "have us a little vacation" in such an exotic place at Lima. Stanley and Lillian would get out maps and just mull over South America. To a couple who never got into south side Washington very much, it all seemed wonderously fabulous.

Well, Stanley and his wife, Lillian, went to Lima, and they had quite a high time taking in the sights, making new friends, and the like. And, of course, Stanley attended convention sessions, of the bar association, too, at which, naturally, there are a large sprinkling of Latin American lawyers.

And it was from them, at some of the committee get-togethers, that Stanley began to hear rumblings of how nice it would be if there were a Latin American federation of states similar to the United States of North America, instead of the many struggling, impoverished little countries with artificial trade and tariff barriers and border disputes and bloodshed.

When Posner got back to Washington, the thought of a United Latin America kept darting into his consciousness. He had seen some of the squalid, miserable conditions firsthand, and it seemed a shame that they should be allowed to continue when, in the main, they were unnecessary.

Still Stanley told himself that it was not his affair. He had no ties with Latin America.

A CONFEDERACY OF STATES

But, just the same, one day Stanley Posner called on the State Department. They lis-

tened to him tell about his trip to Lima and how he had become imbuted with the notion of a confederacy of states for that part of the world, "I'd like to see what I can do about bringing it about," the lawyer told them.

Since there was no denying the man's sincerity, State Department officials answered: A stabilized, unified Latin America would be a wonderful thing for both continents. In the past couple of years there had been no less than nine revolutions south of the border. With the menace of communism growing and feeding, as it does, on unrest, solidarity in Latin America was more important than ever. But a "United States of Latin America," because of age-old fueds between countries, chauvinistic influences, etc., was an altogether unattainable goal. The State Department, profoundly concerned as it was with Central America and its vital Canal Zone, told Posner that this Government could give him no help whatsoever in his efforts. The odds were overwhelmingly against his proposal—there were a hundred reasons why it could never be put into effect.

Posner felt compelled to go ahead with the project anyhow. So one day, after brushing up on his grammar-school-acquired knowledge of the Spanish language, he set out for Central America. Although undismayed by the note of faint amusement with which the State Department had received his proposed mission, he nevertheless faced some practical difficulties. No one in Central America knew him or had even heard of him.

THIS SILENCE WAS GOLDEN

So what did Stanley Posner do upon arriving in Panama? He simply got off a telegram to the President of the country, stating he would like to see him. He did not mention his mission or explain who he was. He reasoned that if he did not mention why he wanted to see the President, his silence might intrigue Panama's ruling head to find out who he was and what his purpose might be. And that's the way it worked out. He got his audience.

President Enrique Jimenez listened to the rather slightly built caller from North America politely but with considerable astonishment. It was really fantastic—a private citizen from another country, without a corpuscle of Latin blood in him, without any Latin family ties, and without any business interest in those countries, speaking with such passionate conviction about the affairs of Central America and what could be done to better the situation there.

But the sincerity and good will of the man was obvious, and President Jimenez told him that if it were possible to bring about a federation of Central American states, he would be for it. Then Stanley Posner contacted the press in Panama. He allowed himself to be questioned on anything and everything.

While expressing admiration for the "small fellow with the big ideals," as one paper put it, it was with reservation that they greeted his mission. More than one journal likened him to Don Quixote, the legendary figure of great chivalry but of equally great futility. They praised the North American's great chivalry in tilting at the Central American windmill, but they did not see much hope for any success.

MODERN DON QUIXOTE—PLUS

As the Yankee lawyer wended his way down that narrow tropical strip, he could have given the State Department in Washington more than even 100 reasons why his mission ought to fail. There was powerful opposition of entrenched officeholders and vested interests who did not want the monopolies created by tariff walls and their control of cheap native labor pools dissipated. Guatemala had served as the tax-collecting headquarters for that region under Spanish rule, and it was feared that with her dominant population she would again turn into the landlord of Central America. On the other hand, Nicaragua had the most powerful military establishment, and it was also feared that for that reason she would, in effect, under the guise of unification, actually run Central America. Guatemala was ultraliberal, Nicaragua a rather iron-fisted dictatorship. How could you have two opposing forces of this sort in one camp? Then there was El Salvador, the richest and technologically most progressive of the Central American countries, which did not want to see the taxes of her heavy but industrious population spread out into more indolent areas. Costa Rica, with a predominately white population, held herself somewhat aloof from the other countries. Honduras and Nicaragua had been having a bitter border dispute for decades. And so it went.

But Stanley Posner persisted, using the same tactics, sending his rather innocuous telegram to the president of a country and contacting the press. And there began to grow, despite all the opposition and all the reasons why there could never be any unification, a ground swell for it. It made sense. He told them how he was born in one State, Massachusetts, went to school in another, Illinois, first began to practice law in still another State, New York, and finally wound up in Washington, D.C. "Mi padre estaba un sastre," he would say, meaning, "My father was a tailor." Yet he had gone on to become a successful trade-association attorney, one of the pioneers in his field. Had he been born in Central America, relegated to one small area by passport restrictions and enmities and rivalries between countries, he probably would have had to become a tailor like his father.

In telling his story Stanley Posner did not disparage tailors or handicrafts of any kind but humbly pointed out the advantages of a passportless unified federation of States that encouraged the free flow of trade and exchange of ideas and that extended the horizons of a man so that he could better his status and follow some other trade than his father's if he so desired. After all, did not all the people of Central America speak a common language and have a common history? Why, for example, shouldn't El Salvador sell its dairy products, Panama it shoes, Guatemala its vegetables, to all the Central American region, instead of being stultified by restrictions and heavy tariffs and confined to its own small strip of territory?

VOICE FOR ALL

The diaper attorney talked, but he also did something to remedy matters. There were not only suspicions between countries but also deep rifts between factions in one country. One party would tell him: "Yes, we will support the unification of Central America for our country, but we do not want this other political group represented in this action." Posner would quickly reply that this was not the way to do it, that all factions must be represented in this common objective, that it must be an expression of the will of all the Latin American people. He explained that in the United States, no matter how bitter a campaign might be, the loser always congratulates the winner of an election and promises to cooperate in working for the good of the country. The Central Americans were flabbergasted and aghast. But they agreed to go along with this strange, energetic, selfless man of deep convictions.

So members of different parties, vicious rivals for years, sat down together. At one of these gatherings one man leaned over and whispered to Posner: "If I didn't see this with my own eyes, I wouldn't believe it. There are men here who have been hunting one another like rabbits."

A STEP CLOSER

Before Stanley Posner's trip to Central America was over, he was likened, not to Don Quixote, but to Simon Bolivar, the liberator of South America.

The smallish, bespectacled man who was born in faraway Leominster, Mass., was not content with merely feeding the idealistic fires of the Central American people. He had a concrete plan—a loosely federated organization of states that would work toward a gradually tightened union.

No longer is the name of Stanley Posner regarded with faint amusement at the State Department. Instead, it is apt to invoke awe mingled with gratification. For despite the 100 reasons why it couldn't have happened, it did. The Organization of Central American States has come into being. Moreover, it is much more than a paper proposition. A full-time paid secretary-general has been appointed—Ricardo Toledo of Costa Rica. And various committees have already been created to work out the elimination of passports, the cutting down of tariffs, the establishing of a great university for all Central America, instead of the several poor colleges now in existence.

Of course, this still isn't quite the United States of America. But something like it appears to be on the way at least. One thing is sure: Central America, which the Carnegie Endowment for Peace once studied as a hotbed of war, will never be quite the same again since this Stanley Posner fellow took that trip of his some 4 years ago. "Peace and Unity" is now the burning slogan down that way. Although some differences still exist, even infrequent feuding, the Central American States have made genuine progress toward union.

ALONG THE PATH WITH SIMON BOLIVAR

The program to bring about a unified, peaceful, and progressive Central America—and perhaps eventually a United States of Latin America—is sometimes referred to as the Posner plan by the press south of the border. But Stanley Posner, still as active as ever in behalf of the Latin American cause, takes little credit for anything original. He says all he did was to awaken a dream that more than a century ago Simon Bolivar had.

Poison in Your Water—No. 55

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting in the Appendix of the CONGRESSIONAL RECORD an article appearing in the Chicago Daily News on February 16, 1959, entitled "Blasts Pollution of Streams—Charges Illinois Is Lax":

BLASTS POLLUTION OF STREAMS—CHARGES ILLINOIS IS LAX

(By Bob Cary)

"I want to know who behind State Sanitary Engineer Clarence Klassen is falling down on the job," Walter Sherry of Joliet, Ill., Izaak Walton pollution chairman, stated Saturday.

Sherry, fiery pollution fighter, keynoted the first northeast Illinois Clean Streams Convention at the Cook County forest preserve headquarters, River Forest.

"The rivers in Illinois are so dirty I don't think I'll even buy a State fishing license this year," said Sherry.

"The fish aren't fit to eat from the filthy water."

In a stream-by-stream report, Izaak Walton delegates and members of the Cook County clean streams committee documented health law violations on the Chicago River, Calumet-Sag, Des Plaines River, Du Page River, Fox River, Hickory Creek, Illinois River, and the Fox Chain of Lakes.

"It's time to quit handling these law violations with kid gloves," said Sherry. "We want to know why the State and Federal pollution laws are not being enforced."

Instances were cited where pollution violations of 4 years' standing had been investigated by State sanitary engineers only to have their reports die in the Springfield health office.

Sherry praised the work of the sanitary engineers, at the same time laying the blame for the filthy streams at the door of the Springfield health office and the Illinois attorney general.

Among the panel of State and Federal officials who participated in the day-long meeting were: Senator Paul Douglas, H. W. Poston, U.S. Public Health Service; Col. John B. W. Corey, and L. A. Beaudin, U.S. Corps of Engineers; Lee Bradish, Metropolitan Sanitary District of Chicago, and Benn Leland, State Sanitary Water Board.

Credit Union Legislation, H.R. 3674 and H.R. 3675

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 8, 1959

Mr. MULTER. Mr. Speaker, on January 29, 1959, the distinguished gentleman from Montana [Mr. ANDERSON], joined me in introducing a bill to amend the Federal Credit Union Act. The bill numbers are H.R. 3674 and H.R. 3675.

On March 18, 1959, at pages 4061 and 4062 of the CONGRESSIONAL RECORD, I made a statement to the House explaining the reasons for the introduction of the bills and urging our colleagues to support the enactment of this legislation.

The response of our colleagues indicating their support of H.R. 3674 and H.R. 3675 is most gratifying.

In order that our colleagues may have a better understanding of exactly what those bills do, I am setting forth a section-by-section analysis of the bills, showing the changes from the present statute sought to be accomplished, together with an explanation and reasons for each change.

Changes in existing law made by these are shown as follows: Existing law proposed to be omitted is enclosed in black brackets; new matter is in italics; existing law in which no change is proposed is shown in regular type:

"SHORT TITLE (12 U.S.C., SEC. 1751; F.C.U. ACT, SEC. 1)

"SECTION 1. [Citation of chapter.] This [chapter] *Act* may be cited as the 'Federal Credit Union Act.'"

Statement of purpose: To eliminate citation and change reference from "chapter" to "Act."

Reason for proposal: To clarify and modernize the section.

"DEFINITIONS (12 U.S.C., SEC. 1752; F.C.U. ACT, SEC. 2)

"SEC. 2. [A Federal credit union is defined as a cooperative association organized in accordance with the provisions of this chapter for the purpose of promoting thrift among its members and creating a source of credit for provident or productive purposes. When used in this chapter the term 'Bureau' means Bureau of Federal Credit Unions, and the term 'Director' means the Director thereof.]

"As used in this Act—

"(a) The term 'Federal credit union' means a cooperative association organized in accordance with the provisions of this Act for the purpose of promoting thrift among its members and creating a source of credit for provident or productive purposes, and includes a cooperative association (hereinafter called a 'Federal central credit union') whose members are Federal credit unions and credit unions organized in accordance with the provisions of law of any State, the District of Columbia, the several Territories and the several possessions of the United States, the Panama Canal Zone, or the Commonwealth of Puerto Rico, and located within a well-defined geographical area, and whose members may also be directors and members of the supervisory and credit committees of such credit unions.

"(b) The term 'Bureau' means the Bureau of Federal Credit Unions.

"(c) The term 'Director' means the Director of the Bureau of Federal Credit Unions."

Statement of purpose: (a) To rearrange definitions of Federal credit union, Bureau of Federal Credit Unions, and the Director thereof;

(b) To further define a credit union to include Federal central credit unions with membership composed of Federal credit unions, State credit unions, and directors and committee members of credit unions.

Reasons for proposals: (a) To modernize and clarify the section;

(b) To allow for the purchase of shares and the obtaining of loans by Federal credit unions and State credit unions in and from Federal and State central credit unions, and to provide a source of credit for directors and committee members. Under the existing Federal law, directors and committee members may not borrow in excess of the amount of their holdings in a Federal credit union as represented by shares thereof. Through membership in a central credit union, the directors and committee members would be subject only to the normal borrowing restrictions applicable to the general membership of a credit union.

But there is another and more important reason for establishing central credit unions under the Federal law. Over the years, it has become apparent that there is a real need for a source and reservoir of additional funds to satisfy local and seasonal requirements of credit unions. The function of the central credit union in this case would be to provide a source of ready credit, and a reservoir to meet varying local credit needs. Central credit unions, thus, would provide an efficient mechanism for self-help which would enable credit unions to undertake to meet their own problems in a particular geographic area.

"CREATION OF BUREAU (12 U.S.C., SEC. 1751A; SEC. 2 OF ACT OF JUNE 29, 1948)

"SEC. 3. [Establishment of Bureau of Federal Credit Unions in Federal Security Agency; appointment of Director.] There [is hereby established in the Federal Security Agency] *shall be in the Department of Health, Education, and Welfare* a Bureau of Federal Credit Unions, which shall be under the supervision of a Director appointed by the [Federal Security Administrator] *Secretary of Health, Education, and Welfare.* The Bureau of Federal Credit Unions and the Director [thereof] shall be under the general direction and supervision of the [Federal Security Administrator] *Secretary.* [The functions, powers, and duties of the Farm Credit Administration under the Federal Credit Union Act, as amended, shall be exercised by the Bureau of Federal Credit Unions. The functions, powers, and duties of the Governor of the Farm Credit Administration under the Federal Credit Union Act, as amended, shall be exercised by the Director of the Bureau of Federal Credit Unions.]

Statement of purpose: (a) To change section number;

(b) To set forth the status of the Bureau of Federal Credit Unions in the Department of Health, Education, and Welfare.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To clarify and modernize section dealing with creation and operation of Bureau of Federal Credit Unions.

"FEDERAL CREDIT UNION ORGANIZATION (12 U.S.C., SEC. 1753 F.C.U. ACT, SEC. 3)

"SEC. 4. Any seven or more [natural] persons who desire to form a Federal credit union shall subscribe before some officer competent to administer oaths an organization certificate in duplicate which shall specifically state—

"(1) [The] *the* name of the association [;]

"(2) [The] *the* location of the proposed Federal credit union and the territory in which it will operate [;]

"(3) [The] *the* names and addresses of the subscribers to the certificate and the number of shares subscribed by each [;]

"(4) [The] *the* par value of the shares, which shall be $5 each [;]

"(5) [The] *the* proposed field of membership, specified in detail [;]

"(6) [The] *the* term of the existence of the corporation, which may be perpetual [; *and*]

"(7) [The] *the* fact that the certificate is made to enable such persons to avail themselves of the advantages of this [chapter] *Act.*"

Statement of purpose: (a) To change section number;

(b) To change reference from "chapter" to "act;"

(c) To eliminate the restriction upon subscribers to "natural" persons.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To modernize and clarify the section;

(c) To allow credit unions to act as subscribers in the formation of Federal central credit unions.

"APPROVAL OF ORGANIZATION CERTIFICATE (12 U.S.C., SEC. 1754; F.C.U. ACT, SEC 4)

"SEC. 5. [Any such] *The* organization certificate shall be presented to the Director for approval. [Upon such approval the Federal credit union shall be a body corporate and as such, subject to the limitations herein contained, shall be vested with all of the powers and charged with all the liabilities conferred and imposed by this chapter upon corporations organized hereunder.] Before any organization certificate is approved, an appropriate investigation shall be made for the purpose of determining (1) whether the organization certificate conforms to the provisions of this [chapter] *Act*; (2) the general character and fitness of the subscribers thereto; and (3) the economic advisability of establishing the proposed Federal credit union. Upon approval of such organization certificate by the Director, it shall be the charter of the corporation, and one of the originals thereof shall be delivered to the corporation after the payment of the fee required therefor. *Upon such approval the Federal credit union shall be a body corporate, and as such, subject to the limitations herein contained, shall be vested with all of the powers and charged with all the liabili-*

ties conferred and imposed by this Act upon corporations organized hereunder."

Statement of purpose: (a) To change section number;

(b) To change outdated wording and add sentence setting forth corporate limitations, powers and liabilities of a Federal credit union.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To modernize and clarify the section.

"FEES (12 U.S.C., SEC. 1755; F.C.U. ACT, SEC. 5)

"SEC. 6. For the purpose of paying the costs incident to the ascertainment of whether an organization certificate should be approved, the subscribers to any such certificate shall pay, at the time of filing their organization certificate, the amount prescribed by the Director, which shall not exceed $20 in any case; and on the approval of any organization certificate they shall also pay a fee of $5. Not later than January 31 of each calendar year, each Federal credit union shall pay to the Bureau [of Federal Credit Unions], for the preceding calendar year, a supervision fee in accordance with a graduated scale prescribed by regulation on the basis of assets as of December 31 of such preceding year, but such fee shall in no event be less than $10 nor [(subject to such minimum)] more than the amounts specified in the following table: *Provided, however,* That no such annual fee shall be payable by [such an organization] *a Federal credit union* with respect to the year in which its charter is issued or [the year] in which final distribution is made in *its* liquidation [of the credit union] or the charter is otherwise canceled. All such fees shall be deposited with the Treasurer of the United States for the account of the Bureau and may be expended by the Director for such administrative, *supervisory* and other expenses incurred in carrying out the provisions [thereof] *of this Act* as he may determine to be proper, the purpose of such fees being to defray [as far as practicable, the administrative and supervisory costs incident to the carrying out of this chapter] *such expenses as far as practicable."*

Statement of purpose: (a) To change section number;

(b) To shorten reference to Bureau of Federal Credit Unions and to change wording of other portions of section.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To clarify and modernize the section.

"REPORTS, [AND] EXAMINATIONS *and audits* (12 U.S.C., SEC. 1756; F.C.U. ACT, SEC. 6)

"SEC. 7. Federal credit unions shall be under the supervision of the Director, and shall make such financial reports to him [(at least annually) as he may require] *as and when he may require, but at least annually.* Each Federal credit union shall be subject to examination by, and for this purpose shall make its books and records accessible to, any person designated by the Director. The Director shall fix a scale of examination fees to be paid by the Federal credit unions, giving due consideration to the time and expense incident to such examinations, and to the ability of Federal credit unions to pay such fees, which fees shall be assessed against and paid by each Federal credit union promptly after the completion of such examination. Examination fees collected under the provisions of this section shall be deposited to the credit of the special fund created by section [1755 of this title] *6 hereof,* and shall be available for the [purposes] *purpose* specified in said section *6."*

Statement of purpose: (a) To change section number;

(b) To change wording and correct references to another section of the act.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To clarify and modernize the section.

"POWERS (12 U.S.C., SEC. 1757; F.C.U. ACT, SEC. 7)

"SEC. 8. A Federal credit union shall have succession in its corporate name during its existence and shall have power—

"(1) [To] *to* make contracts [;]

"(2) [To] *to* sue and be sued [;]

"(3) [To] *to* adopt and use a common seal and alter the same at pleasure [;]

"(4) [To] *to* purchase, hold, and dispose of property necessary or incidental to its operations [;]

"(5) [To] *to* make loans with maturities not exceeding [3] *five* years to its members for provident or productive purposes upon such terms and conditions as this [chapter] *Act* and [the] *its* bylaws provide and as the credit committee *or a loan officer* may approve, at rates of interest not exceeding 1 per centum per month in unpaid balances, inclusive of all charges incident to making the loan: *Provided,* That no loans to a director [officer] or member of [a] *the supervisory or credit committee* shall exceed the amount of his holdings in the Federal credit union as represented by shares thereof *plus the total unencumbered and unpledged shareholdings in the Federal credit union of any member pledged as security for the obligation of such director or member of committee.* No director [officer, or committee member] *or member of the supervisory or credit committee* shall endorse for borrowers. A borrower may repay his loan, prior to maturity, in whole or in part, on any business day. The taking, receiving, reserving, or charging of a rate of interest greater than is allowed by this [subsection] *paragraph,* when knowingly done, shall be deemed a forfeiture of the entire interest which the note, bill, or other evidence of debt carries with it, or which has been agreed to be paid thereon. [In case the greater rate of interest] *If such greater rate of interest* has been paid, the person by whom it has been paid, or his legal representatives, may recover back *from the credit union taking or receiving the same,* in an action in the nature of an action of debt, the entire amount of interest [thus] paid [from the credit union taking or receiving the same]: *Provided,* That such action is commenced within [2] *two* years from the time the usurious [transaction occurred] *collection was made;* [.]

"(6) [To] *to* receive from its members payments on shares [;]

"(7) [To] *to* invest its funds (a) in loans exclusively to members; (b) in obligations of the United States of America, or securities fully guaranteed as to principal and interest thereby; (c) in accordance with rules and regulations prescribed by the Director, in loans to other credit unions in the total amount not exceeding 25 per centum of its paid-in and unimpaired capital and surplus; (d) [or] in shares or accounts of [Federal] savings and loan associations, [and in shares or accounts of any other institution] the accounts of which are insured by the Federal Savings and Loan Insurance Corp.; *or (e) in shares of Federal central credit unions and in shares or accounts of other central credit unions, as defined in section 2, paragraph (a) of this act. Payments to, and withdrawals from, such central credit unions by a Federal credit union must be specifically authorized by the board of directors of such Federal credit union;* [.]

"(8) [To] *to* make deposits in national banks and in State banks, trust companies, and mutual savings banks operating in accordance with the laws of the State in which the Federal credit union does business [;]

"(9) [To] *to* borrow [(from any source)] *in accordance with such rules and regulations as may be prescribed by the Director, from any source,* in an aggregate amount not exceeding 50 per centum of its paid-in and unimpaired capital and surplus: *Provided,* That any Federal credit union may discount with or sell to any Federal intermediate credit bank any eligible obligations up to the amount of its paid-in and unimpaired capital; [subject to such rules and regulations as may be prescribed by the Director.]

"(10) [To] *to* [fine members] *levy late charges,* in accordance with the bylaws, for failure to meet promptly their obligations to the Federal credit union [;]

"(11) [To] *to* impress and enforce a lien upon the shares and dividends of any member, to the extent of any loan made to him and any dues or fines payable by him [;]

"(12) to charge members and individuals eligible to become members a reasonable fee for cashing or selling checks, not to exceed the direct and indirect costs incident to providing such service;

"[(12)] *(13)* [To] *to* exercise such incidental powers as shall be necessary or requisite to enable it to carry on effectively the business for which it is incorporated."

Statement of purpose: Section 8: To change section number.

Reason for propsal: To make section number consistent with other sections of the act.

Statement of purpose: Section 8(5): (a) to make certain changes in wording;

(b) To amend paragraph to provide for a loan maturity limit up to 5 years;

(c) To amend paragraph to provide that in addition to borrowing up to the extent of his shareholdings, a director, officer or committee member may borrow an additional sum equal to the total of the free and unpledged shareholdings in the Federal credit union of any member pledged as security for the obligation;

(d) To provide for the approval of loans by a loan officer.

Reasons for proposals: (a) To clarify and modernize the section;

(b) To extend the maturity limit to allow Federal credit unions to more adequately meet the demands of their members for various types of loans. For instance, a 5-year loan maturity on home repair and modernization loans would be more feasible for many credit union members. Also, there are many occasions when a credit union member has suffered a series of financial catastrophies and wishes to borrow additional funds or consolidate his debts but is realistically unable to pay off these debts over a 3-year period. Under these conditions, if the member is of sound character, the credit union often wishes to extend a longer term loan. Such loans can be a sound use of credit and are consistent with the fundamental purposes and goals of credit unions. The experience of many State chartered credit unions, which in some cases may grant loans for up to 20 years, has been extremely favorable on longer term loans;

(c) To liberalize borrowing restrictions on officials. It is often difficult and in some instances almost impossible to secure members to serve as directors, officers or committee members because of the present limitation in the law on the borrowing privileges of persons serving in such capacities. As a result, credit unions are not always getting the most capable leadership available from the qualified membership. This weakness would be remedied to a large degree by the proposed liberalization, and at the same time due regard for the safety of the funds of the credit union would be retained.

(d) Please see section 15.

Statement of purpose: Section 8(7): To allow Federal credit unions to purchase shares or invest in accounts of central credit

unions, subject to authorization by boards of directors of such Federal credit unions.

Reason for proposal: To create an additional source of investment for funds of Federal credit unions, which funds could be used for the purposes set forth under section 2.

Statement of purpose: Section 8(9): To relocate wording.

Reason for proposal: To clarify section.

Statement of purpose: Section 8(10): To change wording.

Reason for proposal: To clarify section.

Statement of purpose: Section 8(12): To authorize Federal credit unions to charge a reasonable fee for cashing or selling checks.

Reason for proposal: The Director of the Bureau has ruled that Federal credit unions may not charge a fee for cashing or selling checks. Credit unions throughout the country had been engaged in this activity and the ruling has created considerable hardship. The activity, which is desired and requested by the members, results in certain direct and indirect costs. It is only fair and equitable that these costs should be borne by those directly availing themselves of the service rather than by the general membership. This principle has been accepted by the credit unions directly involved and as the owners of the credit unions, they should have the right to provide this service for themselves.

Statement of purpose: Section 8(13): To change the number of the subsection.

Reason for proposal: To make the number of this subsection consistent with other portions of the section.

"BYLAWS (12 U.S.C., SEC. 1958; F.C.U. ACT, SEC. 8)

"SEC. 9. In order to simplify the organization of Federal credit unions the Director shall [on June 26, 1934] *from time to time* cause to be prepared a form of organization certificate and a form of bylaws, consistent with this [chapter] *Act*, which shall be used by Federal credit union incorporators, and shall be supplied to them on request. At the time of presenting the organization certificate the incorporators shall also submit proposed bylaws to the Director for his approval."

Statement of purpose: (a) To change section number;

(b) To remove obsolete date and make an addition authorizing the Director of the Bureau to "from time to time" modify the form of organization certificate and form of bylaws consistent with the act.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To clarify and modernize the section.

"MEMBERSHIP (12 U.S.C., SEC. 1759; F.C.U. ACT, SEC. 9)

"SEC. 10. Federal credit union membership shall consist of the incorporators and such other persons and incorporated and unincorporated organizations, to the extent permitted by rules and regulations prescribed by the Director, as may be elected to membership and as *such* shall, each, subscribe to at least one share of its stock and pay the initial installment thereon and the entrance fee; except that *other than as provided in section 2, paragraph (a) of this Act as to Federal central credit unions*, Federal credit union membership shall be limited to groups having a common bond of occupation, or association, or to groups within a well-defined neighborhood, community, or rural district. *A Federal credit union may, by authorization of its board of directors, become a subscriber to, or organizer or member of, a Federal central credit union or a central credit union as defined in section 2, paragraph (a) of this Act.* Shares may be issued in joint tenancy with right of survivorship with any [persons] *person* designated by the credit union member, but no joint tenant shall be permitted to vote, obtain loans, or hold office, unless he is within the field of membership and is a qualified member."

Statement of purpose: (a) To change section number;

(b) To except Federal credit unions from the general limitations upon fields of membership;

(c) To make Federal credit unions eligible to subscribe to the charter for a central credit union.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To allow for the field of membership of central credit unions to be as set forth in section 2.

(c) Under certain circumstances, it may be desirable that credit unions act as subscribers.

"MEMBERS' MEETING (12 U.S.C., SEC. 1760; F.C.U. ACT, SEC. 10)

"SEC. 11. The fiscal year of all Federal credit unions shall end December 31. The annual meeting of each Federal credit union shall be held at such time during the month of the following January, and at such place as its bylaws shall prescribe. Special meetings may be held in the manner indicated in the bylaws. No member shall be entitled to vote by proxy, but a member other than a natural person may vote through an agent designated for the purpose. Irrespective of the number of shares held by him, no member shall have more than one vote. *Federal credit unions having membership in a central credit union may be represented at annual or special meetings of the central credit union by one member duly authorized by the board of directors of the member Federal credit union. To the extent permitted by the articles or certificate of incorporation or bylaws of the central credit union, such representative shall have one vote and shall be eligible for office in the central credit union the same as though he were a member as an individual of such central credit union."*

Statement of purpose: (a) To change section number;

(b) To provide for representation by Federal credit unions in membership meetings of central credit unions in which they are members and to allow representatives of such Federal credit unions to be eligible for office in such central credit unions.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To give Federal credit unions the rights of membership consistent with basic credit union principles.

"MANAGEMENT (12 U.S.C., SEC. 1761; F.U.C. ACT, SEC. 11)

"SEC. 12. [(a) Generally] The business affairs of a Federal credit union shall be managed by a board of not less than five directors, a credit committee of not less than three members, [and a supervisory committee of three members (a majority of whom shall not be directors) all to be elected by the members (and from their number) at their annual meeting, and to hold office for such terms, respectively, as the bylaws may provide.] *all to be elected at the annual members' meeting by and from the members which, in the case of Federal central credit unions, shall be deemed to include the duly authorized representatives of the member credit unions, and by a supervisory committee of three members, one of whom may be a director other than the treasurer, to be appointed by the president from the membership promptly following the annual meeting, subject to ratification by the board at its next meeting. If the board fails to ratify the appointment of any member of the supervisory committee, the term of such member shall thereupon cease, and the president shall immediately appoint a replacement, subject to ratification by the board at its next succeeding meeting. Any vacancy occurring in the supervisory committee shall be filled in the same manner as original appointments to said committee. All members of the board and of such committees shall hold office for such terms, respectively, as the bylaws may provide.* A record of the names and addresses of the members of the board and *such* committees and officers shall be filed with the Bureau within 10 days after their election *or appointment*. No member of the board or of either *such* committee shall, as such, be compensated."

Statement of purpose: (a) To change section number;

(b) To amend section to provide that the supervisory committee shall be appointed by the President from the membership promptly following the annual meeting, subject to ratification by the board at its next meeting and that at least one director other than the treasurer may be a member of the committee.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) The board of directors have the responsibility for the general direction and control of the affairs of the credit union. The present law limits the ability of the board of directors to properly discharge this responsibility in instances where an elected supervisory committee is not functioning in an effective manner and in accordance with prescribed procedure. The recommended changes would allow for the appointment of qualified persons to the committee by the board and would charge the board with more direct responsibility for supervisory committee performance.

"OFFICERS (12 U.S.C., SEC. 1761; F.C.U. ACT, SEC. 11(B))

"SEC. 13. [(b)] At their first meeting after the annual meeting of the members, the directors shall elect from their number a president, [a vice president, a clerk,] *one or more vice presidents, a secretary,* and a treasurer, who shall be the executive officers of the corporation [and may be compensated for their services to such extent as the bylaws may provide]. *No executive officer, except the treasurer, shall be compensated as such.* The offices of [clerk] *secretary* and treasurer may be held by the same person. The duties of the officers shall be as determined by the bylaws, except that the treasurer shall be the general manager of the corporation. Before the treasurer shall enter upon his duties he shall give bond with good and sufficient surety, in an amount and character to be determined [from time to time] by the board of directors in [conformance] *compliance* with regulations prescribed from time to time by the Director, conditioned upon the faithful performance of his trust."

Statement of purpose: (a) To allow for more than one vice president;

(b) To change section number;

(c) To change name of "clerk" of board of directors to "secretary;"

(d) To prohibit compensation to any executive officer, except the treasurer, for services rendered as such.

Reasons for proposals: (a) To eliminate the necessity for an amendment to the bylaws in order to provide for more than one vice president;

(b) To make section number consistent with other sections of the act;

(c) To give the position a title which is more descriptive of its function and to add dignity and stature to the office;

(d) To provide that only the treasurer, as general manager of the credit union, may be compensated for his services. Service without pay by the directors, committee members and all other officers is consistent with credit union philosophy. Under the present law all of the officers of a credit

union may be compensated to such extent as the bylaws may provide.

"DIRECTORS (12 U.S.C., SEC. 1761; F.C.U. ACT, SEC. 11(C))

"SEC. 14. [c] The board of directors shall meet at least once a month and shall have the general direction and control of the affairs of the corporation. Minutes of all such meetings shall be kept. Among other things they shall act upon applications for membership *directly or shall appoint a membership chairman from the members, other than the treasurer or assistant treasurer, who shall be authorized to act upon such applications for membership as the board may prescribe and who shall submit to the board at each monthly meeting a list of applications for membership received since the previous monthly meeting, together with such other information as may be required by the bylaws of the board;* require any officer or employee having custody of or handling funds to give bond with good and sufficient surety in an amount and character to be determined [from time to time] by the board of directors in compliance with regulations prescribed from time to time by the Directors, and authorize the payment of the premium or premiums therefor from the funds of the Federal credit union; [recommend the declaration of dividends;] fill vacancies in the board and in the credit committee until successors elected at the next annual meeting have qualified; have charge of investments other than loans to members; determine from time to time the maximum number of shares that may be held by an individual; subject to the limitations of this [chapter] *Act*, determine the interest rates on loans and the maximum amount [that] *which* may be loaned with or without security to any member; and, subject to such regulations as may be issued by the Director, authorize an interest refund to members of record at the close of business on December 31 in proportion to the interest paid by them during [the] *that* year; *and provide for compensation of necessary clerical and auditing assistance requested by the supervisory committee, and of loan officers appointed by the credit committee.*"

Statement of purpose: (a) To change section number;

(b) To provide that in addition to the board of directors acting directly upon applications for membership, they may appoint from the members (other than the treasurer or assistant treasurer) a membership chairman who shall also be authorized to act upon such applications;

(c) To authorize the board of directors to provide compensation for necessary auditing assistance requested by the supervisory committee and for loan officers appointed by the credit committee;

(d) To make other changes in wording.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To enable credit unions to make their services and benefits available more quickly to applicants for membership. The board of directors usually meets but once per month, and under this arrangement action upon such applications may be delayed for from several days up to a month;

(c) To assist the supervisory committee in functioning more effectively by providing for assistance which may be compensated by authorization of the board of directors. This committee, which is charged with the responsibility for making regular internal audits of the credit union, often requires outside clerical and auditing assistance, due to the increasing volume of work. Compensation for loan officers who would take some of the burden off the credit committee is based upon the same principle.

(d) To clarify and modernize the section.

"CREDIT COMMITTEE (12 U.S.C., SEC. 1761; F.C.U. ACT, SEC. 11(D))

"SEC. 15. [d] The credit committee shall hold such meetings as the business of the Federal credit union may require and not less frequently than once a month [(of which meetings due notice shall be given to members of the committee)] to consider applications for loans. *Reasonable notice of such meetings shall be given to all members of the committee.* No loan shall be made unless approved by a majority of the entire committee and by all [the] members of the committee who are present at the meeting at which the application is considered: *Provided, however, That the credit committee may appoint one or more loan officers, who may be the treasurer or an assistant treasurer, and delegate to him or them powers to approve loans up to the unsecured limit or in excess of such limit if such excess is fully secured by unpledged shares. Each loan officer shall furnish to the credit committee a record of each loan approved or not approved by him within 7 days of the date of the filing of the application therefor. All loans not approved by a loan officer shall be acted upon by the credit committee. No loan officer, including the treasurer or assistant treasurer, shall have authority to disburse funds of the Federal credit union for any loan which has been approved by him. Not more than one member of the credit committee may be appointed as a loan officer.* Applications for loans shall be made on forms prepared by such committee, which shall set forth the purpose for which the loan is desired, the security, if any, and such other data as may be required. No loan shall be made to any member, *except in the case of a loan by a Federal central credit union to a member credit union,* which [shall cause] *causes* such member to become indebted to the Federal credit union in [the aggregate, upon loans made to such member, in excess of $200 or 10 per centum of the Federal credit union's paid-in unimpaired capital and surplus, whichever is greater, or in excess of $400 unless such excess over $400 is adequately secured.] *an aggregate amount, upon loans made to such member, which is in excess of $1,000 unless such excess over $1,000 is adequately secured, except that in no event may any such loan be made if such aggregate amount would be in excess of whichever of the following is greater:*

"(1) $200, or

"(2) 10 per centum of the credit union's paid-in and unimpaired capital and surplus.

"For the purposes of this subdivision an assignment of shares or the endorsement of a note shall be deemed security."

Statement of purpose: (a) To change section number;

(b) To increase the signature loan limit from $400 to $1,000;

(c) To provide authority for the credit committee to delegate to a loan officer, for whom compensation would be provided, power to approve loans up to the secured limit, or in excess of such limit, if fully secured by unpledged shares;

(d) To rephrase, add, and delete certain words and phrases.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To raise the unsecured loan limit to a realistic figure which will more adequately satisfy the consumer credit needs of the expanding credit union membership. Congress has progressively increased this limit from $50 initially in the original act to $100 in 1940, $300 in 1946, and $400 in 1949. The experience of Federal credit unions on loans of this type has been very good over the years, and the rising cost of commodities and services, coupled with the progressive growth in knowledge on the part of credit unions of the character and financial responsibility of their members, warrants an increase in the signature loan limit to $1,000;

(c) To provide for a realistic, practicable means of acting upon the large and ever-increasing volume of loan applications and activity in some Federal credit unions. Also, the credit committee (which is not compensated) is often scattered and finds it difficult to properly consider loan applications and render prompt loan service in emergencies. A loan officer will resolve this special problem. Adequate control over the loan officer's activity is provided for in that he is required to furnish to the credit committee a record of loans approved and loans not approved within 7 days of such action;

(d) To clarify and modernize the section.

"SUPERVISORY COMMITTEE [; DEFINITION] (12 U.S.C., SEC. 1761; F.C.U ACT, SEC. 11(E))

"SEC. 16. [e] The supervisory committee shall make, *or cause to be made,* at least quarterly, an examination of the affairs of the Federal credit union, including an audit of its books; *shall make, or cause to be made, a report of its quarterly examination to the board of directors;* shall make, *or cause to be made,* an annual audit, [and a report to be submitted] *a report of which shall be submitted to the members* at the *next* annual meeting of the corporation; and [by a unanimous vote, may suspend] *may suspend by a unanimous vote* any officer of the corporation or any member of the credit committee or of the board of directors, until the next members' meeting, which [said] *members'* meeting [however] shall be held within [7] *seven* days of said suspension and at which meeting said suspension shall be acted upon by the members; and, by a majority vote, may call a special meeting of the shareholders to consider any violation of this [chapter] *Act*, the charter, or of the bylaws, or any practice of the corporation deemed by the committee to be unsafe or unauthorized. [The said committee shall fill vacancies in its own membership until successors to be elected at the next annual meeting have qualified.] *Any and all members of the supervisory committee may be suspended by the president, subject to the approval of the board of directors, or by the board of directors, subject to the approval of the members. In the latter case, a members' meeting to act upon such suspension shall be held within seven days thereof. The board of directors or the members, as the case may be, shall decide whether the suspended committee member shall be removed from or restored to the supervisory committee.* The supervisory committee shall cause the passbooks and accounts of the members to be verified with the records of the treasurer from time to time, and not less frequently than once every [2] *two* years. As used in this [subsection] *section*, the term 'passbook' shall include any book, statement of account, or other record approved by the Director for use by Federal credit unions."

Statement of purpose: (a) To change section number;

(b) To change wording to provide for all or a portion of the work of the supervisory committee to be carried forward under its direction and control by outside auditing assistance;

(c) To provide for suspension of any and all members of the supervisory committee if warranted;

(d) To make other changes in wording.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) Please see section 14;

(c) To carry forward the basic principle that the board of directors has primary responsibility for the direction and control of the credit union;

(d) To clarify and modernize the section.

"RESERVES (12 U.S.C., SEC. 1762; F.C.U. ACT, SEC. 12)

"SEC. 17. All entrance fees and [fines] *charges* provided by the bylaws and 20 per centum of the net earnings of each year, before the declaration of any dividends, shall be set aside as a regular reserve against losses on bad loans and such other losses as may be specified in the bylaws in accordance with regulations prescribed under this Act: *Provided, however,* That when the regular reserve thus established shall equal 10 per centum of the total amount of members' shareholdings, no further transfer of net earnings to such regular reserve shall be required except that such amounts not in excess of 20 per centum of the net earnings as may be needed to maintain this 10 per centum ratio shall *continue to* be transferred. In addition to such regular reserve, special reserves to protect the interests of members shall be established when required (a) by regulation, or (b) in any special case, when found by the Director to be necessary for that purpose."

Statement of purpose: (a) To change section number;

(b) To change wording and add a phrase.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To clarify and modernize the section.

"DIVIDENDS (12 U.S.C., SEC. 1763; F.C.U. ACT, SEC 13)

"SEC. 18. [At the annual meeting a dividend may be declared from the remaining net earnings on recommendation of the board of directors, which dividend shall be paid on all paid-up shares outstanding at the end of the preceding fiscal year.] *Annually, or semiannually, as the bylaws may provide and after provision for the required reserves, the board of directors may declare a dividend to be paid from the remaining net earnings. Such dividend to be paid on all paid-up shares outstanding at the end of the period for which the dividend is declared.* Shares which become fully paid up during such [year] *dividend period and are outstanding at the close of the period* shall be entitled to a proportional part of [said] *such* dividend [calculated from the first day of the month following such payment in full]. *Dividend credit for a month may be accrued on shares which are or become fully paid up during the first five days of that month."*

Statement of purpose: (a) To change section number;

(b) To authorize board of directors to declare dividends rather than the membership;

(c) To provide for an annual or semiannual dividend, depending upon which is provided for in the bylaws;

(d) To provide that dividend credit for a month may be accrued on shares which are or become fully paid during the first 5 days of that month.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To transfer this function to the board of directors, which is primarily responsible for the management and sound operation of the credit union, and is the body which is in the best position to determine the size of the dividend which should be distributed, based upon its intimate knowledge of the organization's affairs and its current and future needs. This would also eliminate the condition presently existing whereby the members are in a position to declare a dividend in excess of that which the credit union can safely and prudently afford to pay.

(c) To allow an alternative to the current requirement that dividends be paid annually, which often penalizes members who are forced to withdraw shareholdings prior to the yearend, thereby losing the dividend. The semiannual dividend proposal would alleviate this inequity. Adoption of the alternate dividend plan would be optional with each currently operating credit union and would require an appropriate amendment to the bylaws. Newly chartered credit unions would have an initial choice;

(d) To provide dividend credit for the month on the accounts of members who do not receive their compensation until the last day of the previous month or the first day of the current month and find it impractical to make share payments immediately. Dividend credit under the current law would not commence until the following month. The proposed amendment eliminates this inequity and provides an additional incentive for saving.

"EXPULSION AND WITHDRAWAL (12 U.S.C., SEC. 1764; F.C.U. ACT, SEC. 14)

"SEC. 19. A member may be expelled by a two-thirds vote of the members of a Federal credit union present at a special meeting called for the purpose, but only after an opportunity has been given to him to be heard *and subject to review by the Director, if such review is requested by the member within thirty days.* Withdrawal or expulsion of a member shall not operate to relieve him from liability to the Federal credit union. The amount to be paid a withdrawing or expelled member by a Federal credit union shall be determined and paid in the manner specified in the bylaws."

Statement of purpose: (a) To change section number;

(b) To allow a member expelled from a credit union to obtain a review of such action by the Director of the Bureau.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To provide for a method of review, since such action may seriously affect the person's standing and reputation in the community and may be based upon factors which do not represent a valid reason for such expulsion.

"MINORS (12 U.S.C., SEC. 1765; F.C.U. ACT, SEC. 15)

"SEC. 20. Shares may be issued in the name of a minor or in trust, subject to such conditions as may be prescribed by the bylaws. *When shares are issued in trust,* [the] *the* name of the beneficiary shall be disclosed to the Federal credit union.

Statement of purpose: (a) To change section number;

(b) to add a phrase.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To clarify the section.

"CERTAIN POWERS OF DIRECTOR (12 U.S.C., SEC. 1766; F.C.U. ACT, SEC. 16)

"SEC. 21. (a) The Director may prescribe rules and regulations for the administration of this [chapter] *Act* [(] including, but not by way of limitation, the merger, consolidation, and/or dissolution of corporations organized under this [chapter] *Act.* [)]

"(b) (1) The Director may suspend or revoke the charter of any Federal credit union, or place the same in involuntary liquidation and appoint a liquidating agent therefor, upon his finding that the organization is bankrupt or insolvent or has violated any provisions of its charter, its bylaws, [or of this chapter] *this Act,* or [of] any regulations issued thereunder.

"(4) Subject to the control and supervision of the Director and under such rules and regulations as the Director may prescribe, the liquidating agent of a Federal credit union in involuntary liquidation shall (i) cause notice to be given to creditors and members to present their claims and make legal proof thereof, which notice shall be published once a week in each of three successive weeks in a newspaper of general circulation in each county in which the Federal credit union in liquidation maintained an office or branch for the transaction of business on the date it ceased unrestricted operations: *Provided,* That whenever the aggregate book value of the assets and property of a Federal credit union in involuntary liquidation is less than $1,000, unless the Director shall find that its books and records do not contain a true and accurate record of its liabilities, he shall declare such Federal credit union in liquidation to be a 'no publication' liquidation, and publication of notice to creditors and members shall not be required in such case; (ii) from time to time make a ratable divided on all such claims as may have been proved to his satisfaction or adjudicated in a court of competent jurisdiction and, after the assets of such organization have been liquidated, shall make further dividends on all claims previously proved or adjudicated; and the liquidating agent may accept in lieu of a formal proof of claim on behalf of any creditor or member the statement of any amount due to such creditor or member as shown on the books and records of the credit union: *Provided further,* That all claims not filed before payment of the final dividend shall be barred and claims rejected or disallowed by the liquidating agent shall be likewise barred unless suit be instituted thereon within three months after notice of rejection or disallowance; (iii) in a 'no publication' liquidation, determined from all sources available to him, and within the limits of available funds of the Federal credit union, the amounts due to creditors and members, and after sixty days shall have elapsed from the date of his appointment, shall distribute the funds of the Federal credit union to creditors and members ratably and as their interests may appear."

"[b] (*c*) After the expiration of [5] *five* years from the date of cancellation of the charter of a Federal credit union the Director may, in his discretion, destroy any or all books and records of such Federal credit union in his possession or under his control.

"[c] (*d*) The Director is authorized and empowered to execute any and all functions and perform any and all duties vested in him hereby, through such persons as he shall designate or employ; and he may delegate to any person or persons, including any institution operating under the general supervision of the Bureau, the performance and discharge of any authority, power, or function vested in him by this [chapter] *Act.*

"[d] (*e*) All books and records of Federal credit unions shall be kept and reports shall be made in accordance with forms approved by the Director.

"[e] (*f*) The Director is authorized to make investigations and to conduct researches and studies of the problems of persons of small means in obtaining credit at reasonable rates of interest, and of the methods and benefits of cooperative saving and lending among such persons. He is further authorized to make reports of such investigations and to publish and disseminate the same.

"[f] (*g*) Any officer or employee of the Bureau [of Federal Credit Unions] is authorized, when designated for the purpose by the Director [of the Bureau of Federal Credit Unions], to administer oaths and affirmations and to take affidavits and depositions touching upon any matter within the jurisdiction of the Bureau [of Federal Credit Unions].

"[g] (*h*) The Director [of the Bureau of Federal Credit Unions] is authorized, empowered, and directed to require that every person appointed or elected by any Federal credit union to any position requiring the receipt, payment, or custody of money or other personal property owned by a Federal credit union or in its custody or control as collateral or otherwise, to give bond in a corporate surety company holding a cer-

tificate of authority from the Secretary of the Treasury under the Act of Congress approved July 30, 1947 (6 U.S.C. [, secs.] 6–13), as an acceptable surety on Federal bonds. Any such bond or bonds shall be in a form approved by the Director with a view to providing surety coverage to the Federal credit union with reference to loss by reason of acts of fraud or dishonesty including forgery, theft, embezzlement, wrongful abstraction, or misapplication on the part of the person directly or through connivance with others, and such other surety coverages as the Director may determine to be reasonably appropriate or as elsewhere required by this [chapter] *Act*. Any such bond or bonds shall be in *such* an amount in relation to the money or other personal property involved or in relation to the assets of the Federal credit union as the Director may from time to time prescribe by regulation for the purpose of requiring reasonable coverage. In lieu of individual bonds the Director may approve the use of a form of schedule or blanket bond which covers all of the officers and employees of a Federal credit union whose duties include the receipt, payment, or custody of money or other personal property for or on behalf of the Federal credit union. The Director may also approve the use of a form of excess coverage bond whereby a Federal credit union may obtain an amount of coverage in excess of the basic surety coverage.

"(i) *In every case of an adjudication by the Director under this Act, determination shall be made on the record after giving the opportunity for a hearing to all persons and credit unions who may be directly affected by any order that may be issued as a result of such adjudication. The words 'adjudication' and 'order' as used herein shall have the meanings specified in the Administrative Procedure Act.*"

Statement of purpose: (a) To change section number and letters;

(b) To change certain words and phrases;

(c) To place the Bureau of Federal Credit Unions under all provisions of the Administrative Procedure Act. At present it is subject only to the rulemaking provisions of the act.

Reasons for proposals: (a) To make section number consistent with other sections of the act and to make letters consistent with other letters of the section;

(b) To modernize and clarify the section;

(c) To provide Federal credit unions and proposed new credit unions with the right to a hearing on adjudications made by the Bureau, and to create a formal record of such hearings.

"FISCAL AGENTS AND DEPOSITORIES (12 U.S.C., SEC. 1767; F.C.U. ACT, SEC. 17)

"SEC. 22. Each Federal credit union organized under this [chapter] *Act*, when requested by the Secretary of the Treasury, shall act as fiscal agent of the United States and shall perform such services as the Secretary of the Treasury may require in connection with the collection of taxes and other obligations due the United States and the lending, borrowing, and repayment of money by the United States, including the issue, sale, redemption, or repurchase of bonds, notes, Treasury certificates of indebtedness, or other obligations of the United States; and to facilitate such purposes the Director shall furnish to the Secretary of the Treasury from time to time the names and addresses of all Federal credit unions with such other available information concerning them as may be requested by the Secretary of the Treasury. Any Federal credit union organized under this [chapter] *Act*, when designated for that purpose by the Secretary of the Treasury shall be a depository of public money, except receipts from customs, under such regulations as may be prescribed by the Secretary of the Treasury."

Statement of purpose: (a) To change section number; (b) To change references from "chapter" to "act."

Reasons for proposals: (a) To make section number consistent with other sections of the act; (b) To clarify and modernize the section.

"TAXATION (12 U.S.C., SEC. 1768; F.C.U. ACT, SEC. 18)

"SEC. 23. The Federal credit unions organized hereunder, their property, their franchises, capital, reserves, surpluses, and other funds, and their income shall be exempt from all taxation now or hereafter imposed by the United States or by any State, Territorial, or local taxing authority; except that any real property and any tangible personal property of such Federal credit unions shall be subject to Federal, State, Territorial, and local taxation to the same extent as other similar property is taxed. Nothing herein contained shall prevent holdings in any Federal credit union organized hereunder from being included in the valuation of the personal property of the owners or holders thereof in assessing taxes imposed by authority of the State or political subdivision thereof in which the Federal credit union is located: *Provided, however,* That the duty or burden of collecting or enforcing the payment of such tax shall not be imposed upon any such Federal credit union and the tax shall not exceed the rate of taxes imposed upon holdings in domestic credit unions."

Statement of purpose: To change section number.

Reason for proposal: (b) To make section number consistent with other sections of the act.

"PARTIAL INVALIDITY; RIGHT TO AMEND (12 U.SC., SEC. 1770; F.C.U. ACT, SEC. 20)

"SEC. 24. [Separability of provisions; right to alter, amend, or repeal chapter] (a) If any provisions of this chapter *Act*, or the application thereof to any person or circumstance, is held invalid, the remainder of the [chapter] *Act*, and the application of such provisions to other persons or circumstances, shall not be affected thereby.

"(b) The right to alter, amend, or repeal this [chapter] *Act* or any part thereof, or any [chapter] *charter* issued pursuant to the provisions of this [chapter] *Act*, is expressly reserved."

Statement of purpose: (a) To change section number;

(b) To eliminate certain phrases and change references from "chapter" to "act."

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To clarify and modernize the section.

[ALLOTMENT OF] "SPACE IN FEDERAL BUILDINGS (12 U.S.C., SEC. 1771; F.C.U. ACT, SEC. 21)

"SEC. 25. [Allotment of space in Federal buildings.] Upon application by any credit union organized under State law or by any Federal credit union organized in accordance with the terms of this [chapter] *act, at least 95 per centum of* the membership of which is composed [exclusively] of *persons who either are presently* Federal employees *or are retired Federal employees* and members of their families, which application shall be addressed to the officer or agency of the United States charged with the allotment of space in the Federal buildings in the community or district in which said credit union or Federal credit union does business, such officer or agency may in his or its discretion allot space to such credit union if space is available without charge for rent or services."

Statement of purpose: (a) To change section number;

(b) To modify the conditions under which space in Federal buildings may be allotted to credit unions serving Federal employees.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To allow credit unions to continue membership of retired Federal employees without jeopardizing the credit union's eligibility for space in Federal buildings. This would be accomplished by adding the phrases "Persons who either are presently" and "or are retired Federal employees." Also, to allow such credit unions to continue their eligibility although membership is extended to a limited number of employees of private contractors working on Federal installations along with Federal employees, and to American Legion and Red Cross personnel working at Veterans' hospitals, etc. This would be accomplished by substituting the phrase "at least 95 percent" for the word "exclusively."

"CONVERSION FROM FEDERAL TO STATE CREDIT UNION AND FROM STATE TO FEDERAL CREDIT UNION (NEW SECTION)

"SEC. 26. (a) *Conversion from Federal to State credit union. A Federal credit union may be converted into a 'State credit union' under the laws of any State, the District of Columbia, the several Territories, and the several possessions of the United States, the Panama Canal Zone, or the Commonwealth of Puerto Rico, by complying with the following requirements:*

"(1) The proposition for such conversion shall first be approved by a majority of the directors of the Federal credit union. The proposition then shall be submitted to a meeting of its members, the notice of which shall be in writing and shall be delivered in person to each member, or shall be mailed to each member at the address for such member appearing on the records of the credit union, not more than thirty nor less than seven days prior to the time of the meeting. Approval of the proposition for conversion shall be by the affirmative vote of not less than two-thirds of the members present and voting at the meeting.

"(2) A copy of the minutes of such meeting, verified by the affidavits of the president or vice president and the secretary of the meeting, shall be filed with the Bureau within ten days after the meeting.

"(3) Promptly after the adjournment of such meeting of the members, and in no event later than ninety days after such meeting, the credit union shall take such action as may be necessary under the applicable State law to make it a State credit union, and within ten days after receipt of the State credit union charter there shall be filed with the Bureau a copy of the charter thus issued. Upon such filing the credit union shall cease to be a Federal credit union.

"(4) Upon ceasing to be a Federal credit union, such credit union shall no longer be subject to any of the provisions of this Act. The successor State credit union shall be vested with all of the assets and shall continue responsible for all of the obligations of the Federal credit union to the same extent as though the conversion had not taken place.

"(b) Conversion from State to Federal credit union. A 'State credit union', organized under the laws of any State, the District of Columbia, the several Territories and the several posessions of the United States, the Panama Canal Zone, or the Commonwealth of Puerto Rico, may be converted into a Federal credit union by: (1) Complying with all State requirements requisite to enabling it to convert to a Federal credit union or to cease being a State credit union; (2) filing with the Bureau proof of such compliance, satisfactory to the Director; and (3) filing with the Bureau an organization certificate as required by this Act.

"When the Director has been satisfied that all of such requirements have been

complied with, the Director shall approve the organization certificate. Upon such approval, the State credit union shall become a Federal credit union as of the date it ceases to be a State credit union. The Federal credit union shall be vested with all of the assets and shall continue responsible for all the obligations of the State credit union to the same extent as though the converison had not taken place."

Statement of purpose: To add a new section to the act, providing for conversion of a Federal credit union to a State credit union and from a State credit union to a Federal credit union.

Reason for proposal: To make specific provision for such conversion. Under certain circumstances conversion of its charter may be deemed advisable by a credit union and acceptable to the supervisory agencies involved. Special authority appears warranted which would facilitate the procedure of converting a credit union from a Federal to a State charter and vice versa without dissipation of reserves or undue disruption of normal service to the credit union members.

"ROBBERY AND INCIDENTAL CRIMES AGAINST FEDERAL CREDIT UNIONS (NEW SECTION)

"SEC. 27. *Section 2113 of title 18 of the United States Code is hereby made applicable to robbery and other crimes against Federal credit unions by amending subsection (g) of said section by inserting before the period at the end thereof ', and any "Federal credit union" as defined in section 2 of the Federal Credit Union Act.'*

Statement of purpose: To add a provision making robbery of a Federal credit union a Federal crime.

Reason from proposal: To add robbery of a Federal credit union to the current Federal statutory offenses of false entry, forgery and embezzlement. This proposed amendment would permit the Federal Bureau of Investigation to assume jurisdiction in instances of robbery, as well as the others.

"TERRITORIAL APPLICABILITY OF ACT (12 U.S.C., SEC. 1772; F.C.U. ACT, SEC. 22)

"SEC. 28. [Extension of chapter to Panama Canal Zone and Virgin Islands. The provisions of this chapter shall be extended to and include the Panama Canal Zone, and the Virgin Islands.] *The provisions of this Act shall apply to the several States, the District of Columbia, the several Territories and the several possessions of the United States, the Panama Canal Zone, and the Commonwealth of Puerto Rico."*

Statement of purpose: (a) To change section number;

(b) To provide for the establishment of Federal credit unions in the U.S. Territories and possessions hereafter created.

Reasons for proposals: (a) To make section number consistent with other sections of the act;

(b) To eliminate the need for future amendments of this type.

The Second Battle of Gettysburg

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 10, 1959

Mr. QUIGLEY. Mr. Speaker, I believe the Members, particularly those on the Senate side, will be interested in "The Second Battle of Gettysburg," which appeared in the Harrisburg (Pa.) Patriot-News of April 5, 1959. I regret that pictures cannot be reproduced in the RECORD for then the Members could see for themselves what is happening to one of our most meaningful national historic shrines.

I have spoken before on the creeping commercialism at Gettysburg, and no doubt I will speak again and again until such time as the National Park Service obtains the necessary funds to eliminate the blight from what should be our most hallowed ground.

I might point out that this excellent article does not note that although the Union lines are reasonably well preserved in Park Service hands at Gettysburg, a large portion of the land on which the Confederate Army made its most heroic achievements is the very land the Park Service wishes to acquire. For example, the field of the second day's battle where the men of Texas, Arkansas, Alabama, Mississippi, Georgia, Florida, South Carolina, and Virginia fought and died in a magnificent effort is presently marked by a line of souvenir shops, garages, beer parlors and trailer courts. I can hardly believe that this was the intent of Congress when Gettysburg was first authorized as a national park. The article follows:

COMMERCIALISM LAUNCHES SECOND BATTLE OF GETTYSBURG

(By Hans Knight)

GETTYSBURG.—Unless the United States cares enough to do something about it, the ghost of General Meade gazing out of the window of his headquarters will behold a fantasy land, fabulous, magical, wonderful make-believe, with miniature golf course.

And in a dozen other spots of the battlefield, where guns boomed and horses screamed and men bled, there will be the symbols of a more advanced civilization—neon-framed diners, gas stations, bigger and better souvenir stands, suburban development.

That is the fear of many in Gettsyburg and across the rest of the country concerned with saving the Nation's greatest battlefield from creeping commercialism.

Looking down from Roundtop upon the rolling rock-strewn hills, the battlefield still appears much as it was pictured after the carnage of July 1863.

A closer scrutiny shatters the illusion.

Driving along the Harrisburg Road, the visitor suddenly is confronted with a battery of signs informing him that he is entering a country of service stations, snackbars, bakeries, hobby shops, and restaurants.

SMALLEST SIGN

One sign, however, proclaims that he is entering the Gettysburg Battlefield. It is the smallest sign.

There are other symbols of the modern age dotting the interior of the battlefield.

Yellow, red, and green signs advertising commercial establishments crest the ridge above the famed peach orchard where the Confederate troops attacked the Union lines from the west. A granite monument erected to Pennsylvania soldiers nestles against the perimeter of a restaurant parking lot.

Where gun emplacements guarded the approaches to Power's Hill, smoke from a wrecked car dump wafts lazily across the fields. A free museum and souvenir shop marks the area where General Buford's cavalry suffered 60 percent casualties in pitched battle.

SECOND BATTLE

"Attractive building lots" signs stand where Ewell's Corps assaulted the Union 11th Corps in the drive toward Wrightsville.

The land around the old Adams County Home near Route 15, north entrance, scene of much of the first day's fighting, will be up for sale to the highest bidder before the year is out.

The "second battle of Gettysburg" to preserve the shrine now is coming to a head.

The decision may come in the U.S. Senate this month.

The battle was joined when the House Appropriations Committee deleted $1,250,000 for the National Parks Service from the 1960 Interior Department budget.

Some $750,000 had been earmarked to acquire crucial sites on Gettysburg Battlefield for the Nation.

The appropriation cut was approved by House voice vote.

The backers of the appropriation then swung into action.

Pennsylvania's senate had unanimously adopted a resolution calling on the State's congressional Representatives to support any legislation and appropriations which will protect the environs of the battlefield of Gettysburg from encroachment by commercial enterprises and housing which may prevent the full and complete development of Gettysburg National Park by the National Park Service."

The park, the resolution asserted, "is seriously threatened by commercial enterprises which are stimulated by the volume of visitors."

HOUSE OK'S SLASH

When the House, despite the protests of Representative JAMES M. QUIGLEY, of Camp Hill, confirmed the appropriations slash, Quigley persuaded Senator CLARK to call for extended hearings when the issue comes before the Senate Appropriations Committee.

These hearings are to be held some time after April 15.

Said QUIGLEY, who represents the 19th District which includes Gettysburg:

"Unless the Senate can be persuaded to restore the item to the budget, we will have lost not only the second battle of Gettysburg but the whole campaign to restore Civil War battlefields before commercialism sweeps the field."

Only a truly grassroots campaign can set the necessary fire under the Senate and its appropriations committee to restore the land acquisition program, he said.

The request for money to buy up Civil War land has drawn considerable criticism.

During the House hearings, Representative MICHAEL J. KIRWAN (Democrat, Ohio) bluntly declared the proposed purchases are unnecessary.

"The Government has enough land in Gettysburg," he said. "There's no use in taking more."

Meanwhile, however, support for the appropriation has been gaining momentum.

FAVOR PRESERVATION

"We have received scores of letters from people all over the country," said James Myers, superintendent of Gettysburg National Park. "All have been in favor of preserving the battlefield the way it is. A large portion of letters have come from school children."

In all, the Government wants to buy some 600 acres of land to add to the 2,700 acres it already owns.

About 150 acres surround the old county home. The county, faced with losing money on the operation of the home, plans to sell the land this year to help finance a new home for the aged.

Other battlefield land in which the Government is interested now is owned by private interests.

As one Federal spokesman put it, "We're not anxious to tear down or buy built-up areas like housing developments. We are vitally concerned with acquiring open land on the battlefield before it is developed by commercial interests. You can't blame the county or private land owners for trying to get a good price for their tracts. We'll do our best to put in our bid. Of course—no appropriation, no bidding."

SUPPORT GROWING

Organized and individual support for preventing over-commercialization has been growing in Gettysburg itself.

A leading businessman said of the commercial encroachments:

"Those who cry for full-scale development in the name of progress and prosperity are shortsighted. What would Gettysburg be without the battlefield? A farming town like a thousand others. Look at us now. We've got two banks doing good business. We have a fine college. We've got good accommodation. We're prospering. Why? Because this battlefield draws about three-quarters of a million people a year. This means some $6 million pouring into the area annually. And that's new money. It multiplies. Take away the attraction of the battlefield by jazzing up the thing with bars and amusement parks and housing right in the field—and you're killing the goose that lays the golden eggs."

Says Walter Lane, president of the Travel Council, affiliated with the chamber of commerce:

"We're definitely for preserving the battlefield, and we hope the Government will get the money to buy more land for the public here."

Another businessman, LeRoy Smith, a past president of the council, said: "It makes good sense, esthetically and businesswise, to stop encroachment on the battleground. Naturally, you have to have some commercialism to take care of the thousands of visitors. What we're against is indiscriminate development and building that would spoil this monument to our history."

PRESS FOR RESTORATION

Dr. Harry W. Pfanz, historian at the national park and new president of the Civil War Round Table, said his group has urged 70 Round Tables throughout the country to press for restoration of the slashed appropriation in the Senate. The group also is writing to more than 700 persons who have shown interest in Civil War affairs.

Representative QUIGLEY, meanwhile, announced that Bruce Catton, noted author, and other historians have joined the fray and "we have enlisted the aid of the State Civil War Centennial Commissions."

Most of those interviewed in Gettysburg appeared to be agreed that land purchase by the Government is the best way to save the battlefield.

A number of citizens questioned whether the county commissioners were justified in offering the battle land around the county home for sale.

One professional man said, "I don't see why the commissioners should use the value of the battlefield land as a barter to get money for the county treasury. You'd think they could have raised the money for the home for the aged some other way. Suppose the Government can't offer enough to buy the land. That means, I presume, that any Tom, Dick, or Harry can get the site and put up anything he wants."

Questioned on the land issue, the three commissioners maintained a military secret attitude.

Federal spokesmen, however, pointed out that the county had agreed to hold off on any land auction until the Government has had chance to make its bid.

NEED REVENUE

One county official criticized what he called "this hullaballoo over the battlefield."

"You gotta have revenue," he said.

A prominent resident said, philosophically:

"County officials are hard-headed people. Thear job is to keep county business in the black. So, they're losing money on the county home. So, they try to sell it. They can't stop to figure who might get the land. They're more interested in taxes than history."

Is Gettysburg outliving its place in the heart of the Nation? Has it become a gimmick?

An elderly man from Wisconsin, chatting by the roadside, gave one of many possible answers.

"I was here many years ago and I promised myself I'd be back. So, here I am. It's beautiful. Let's leave it the way it is. Let's not spoil it. Let the dead sleep in peace here."

Gettysburg Revisited

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. QUIGLEY. Mr. Speaker, may I call attention of the Members, particularly those in the other Chamber, to the following excellent editorial from the Camden (N.J.) Courier-Post. Except for the small typographical error which placed Gettysburg's population increase at 2,100 when it should have been 6,100, I commend it to your reading. The editorial follows:

Many south Jerseyites are familiar with Gettysburg National Park, which covers a small fraction of the area where the great Civil War Battle of Gettysburg was fought 96 years ago.

The park was created in 1895 when a group of Gettysburg citizens donated 600 acres of ground to the Government. Since then it has quadrupled in size. Yet it still covers only a small portion of the 20,000 acres over which the armies of Lee and Meade fought and maneuvered July 1–3, 1863. For patriotic reasons, as well as to accommodate the annually growing throngs of visitors, it should include much more of the hallowed ground where Union forces thrust the Confederates back from their high-water mark, and where Lincoln made one of history's immortal addresses a few months later.

The National Park Service has been wanting to buy up 680 additional acres of ground to add to the park's present 2,773. But it has encountered obstacles from many directions, nearly all of them commercially motivated.

The acquisition would block at least two proposed real estate developments. It would doom the present tawdry string of taverns, gas stations, and motels crowded along historic Emmitsburg Road, the main highway south out of the town of Gettysburg through the battlefield and into Maryland.

Many businessmen of Gettysburg are opposed to further growth of the park. The town is a focal point for tourists, attracting 700,000 to 800,000 a year, and they bring it much business. Their numbers will certainly boom during the next few years in observances of the centennial of the Civil War.

Yet Gettysburg citizens, or many of them, feel that their town needs industry, new residents, and room to grow. They say that the town remains in the 19th century while nearby cities grow.

There is little migration to Gettysburg and little there to keep ambitious youngsters from moving away, they say. Hence, they view enlargement of the battlefield as a barricade to progress.

On the other hand, history lovers think Gettysburg belongs to the entire Nation rather than the 8,100 Pennsylvanians who happen to live there (an increase of only 2,100 in a century). They think the battlefield's important sectors should be preserved as a park and the areas added which the National Park Service wants to add.

The controversy is part of a larger struggle going on in many other areas of the Nation today. It is closely allied to commercial encroachment on another famous Civil War battlefield only 40 miles away, at Antietam, Md., which threatens to destroy all trace of Lee's first invasion of the North. It is akin to the clashes over plans to build steel mills on the unique island sand dunes of Indiana, on the south shore of Lake Michigan, and the struggle over commercialization or preservation of the natural beauties of Cape Cod, Mass.

The House has just passed a bill carrying appropriations for the national parks and forests for the coming year, but barring the $1 million to $1½ million which the National Park Service wants to enlarge the park at Gettysburg. Representative JAMES M. QUIGLEY, Congressman for the district, told his colleagues the money was necessary to prevent desecration of the battlefield by commercialism, but his plea went unheeded.

Desecration has already taken place. As a recent article about Gettysburg pointed out: "A gas station and candy shop mark the line of Confederate General Longstreet's assault on Union troops [Pickett's charge]. The scene of a fierce artillery duel is decorated by an auto graveyard and city garbage dump."

Is America so indifferent to its past and to its future as to allow such things to happen? So much the worse for us if we are.

The Courier-Post deeply regrets the failure of the House to grant the funds that would allow proper preservation of the field on which the greatest battle ever waged in North America was fought.

We sincerely hope that the Senate corrects the mistake the House has made and votes to insert in the appropriation bill the money that is needed to expand Gettysburg National Park as it should be expanded.

We think that most of our readers who have visited Gettysburg will agree.

Dynamic Union Scholar: Harry Van Arsdale, Jr.

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. HOLTZMAN. Mr. Speaker, in the New York Times of April 3 there appeared a profile of Harry Van Arsdale, Jr., who heads Local 3 of the International Brotherhood of Electrical Workers in New York City, and in addition, is president of New York City's recently merged labor council.

Mr. Van Arsdale has a tremendous capacity for work, and has obtained for the members of his own union wage and welfare benefits that are almost without equal. He has accomplished all this, however, without losing the respect and admiration of the men in the industry with whom he deals.

After reading and hearing about so many adverse reports on labor leaders, it is most refreshing to be able to say that New York has a strong union leader of whom we can be justly proud, and who sets an example that could well be followed by other unions and union leaders.

The article follows:

DYNAMIC UNION SCHOLAR: HARRY VAN ARSDALE, JR.

The chief spokesman for 1 million New York unionists is an electrician with a self-powered generator for ideas, energy and enthusiasm.

When he became president of the city's merged labor council 2 months ago, it took him 6 hours of rapid-fire talking to outline his "priority projects" for union and community betterment. "If I seem impatient, it's because I am impatient," Harry Van Arsdale, Jr. told his somewhat dazed associates in the council's executive board. That was after he had listed an activity catalogue that ranged from Brooklyn to Bangkok.

His impatience has paid impressive dividends for the 30,000 members of his own union, Local 3 of the International Brotherhood of Electrical Workers. Not only are their wages and welfare benefits among the highest of any unionized group, but their cultural opportunities include access to facilities that the country's most richly endowed university would find hard to surpass.

The newest enterprise in Mr. Van Arsdale's ceaseless campaign to expand the local's educational horizons was unveiled yesterday. It took the form of a compulsory course in major world problems for every member of the union's paid organizing staff, including himself.

This emphasis on culture for unionists whose taste in reading matter was once largely confined to comic books and racing form sheets represents as much of a departure from tradition for Mr. Van Arsdale as it does for his rank and file.

UP FROM HELL'S KITCHEN

Born in the Hell's Kitchen district of Manhattan's rowdy West Side 53 years ago, he was as tough as his neighborhood. His formal education ended in his second year of high school. When he became head of local 3 in 1933, his organizing and strike tactics drew greater inspiration from the Marquis of Queensberry than from the Ivy League.

However, responsibility exerted a swift civilizing effect on the hard-fisted young union chief. In a craft long accustomed to featherbedding practices, he laid down the principle that the workers would have to produce more if they wanted fatter pay envelopes.

This philosophy has proved so salutary for both sides that the union's 6,000 members in the skilled divisions now earn $5.40 an hour in total employer payments, and the contractors, far from feeling exploited, register their esteem for Mr. Van Arsdale by hanging his picture on their office walls.

The architect of this transformation is a stocky, gray-haired man with hazel-brown eyes and a bulldog chin. His belt buckle bears the initials "N. B." It used to belong to Naftel Bedsole, a Texas-born business agent of local 3, who died 10 years ago. From him Mr. Van Arsdale got his guiding slogan:

"Give me hills to climb and strength to climb them."

He says he needs 6 hours' sleep each night, but acknowledges he owes himself a lot of unslept hours. His aids are used to find him knocking at their doors at 6 a.m. or telephoning them long after midnight.

When he is in a real hurry, which is most of the time, he gets around town on the back seat of a motor scooter driven by the editor of the union paper, Arnold Beichman.

LIVES PLAINLY

The fancy living standards that have become fashionable among some top unionists have little appeal for him. His salary is $200 a week and he and all the union's business representatives have to buy their own cars.

He lives in the frame house in Ozone Park, Queens, that he and his father built with their own hands just after his marriage 35 years ago.

He has never lost his certainty that it is "the little fellow down below" who makes a union.

"This is not the Army, not the Navy," he has a way of saying. "You can't tell the people what to do. You have to build a union like a building, a brick at a time, one on top of another. There is no easy way."

He has two sons, both college graduates, and both members of local 3, and two daughters, plus seven grandchildren.

Good Hearing Is as Essential as Good Sight for Automobile Driving

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 13, 1959

Mr. McDONOUGH. Mr. Speaker, no one can drive an automobile in any State or Territory of the United States who suffers from any serious type of vision impairment. Thanks to the American Safety Council all motor vehicle bureaus in every State and Territory have made it mandatory that all applicants for operators' licenses submit to rigorous sight tests. Where it is found that the applicant suffers from any type of visual difficulties of a nature which might impair his own or the safety of others, he is obliged to wear corrective lenses and his need of such lenses while operating a motor vehicle is clearly imprinted upon the face of each such license.

However, up to now nothing has been done about taking into account the important fact that there are some 15 million or more Americans who suffer from hearing defects of a minor or major nature. There is no hearing test required of anyone seeking an operator's license nor is any cognizance given to applicants suffering from such deficiencies. This, in spite of the fact that deficient hearing, equally as much as poor eyesight, can endanger lives and property.

Of some 15 million Americans suffering from impaired hearing, only about 1 million use hearing aids as a corrective measure. This is due mainly to two things: first, many hard-of-hearing persons of all ages are totally unaware of such defects, and second, many who do know of it refuse to wear hearing aids because the majority of such instruments are cumbersome and conspicuous.

The reluctance of the hard-of-hearing to wear a hearing aid which draws attention to their affliction is understandable. But it does not alter the fact that a hard-of-hearing person driving an automobile can endanger lives and property.

Three men in the United States are currently doing something about this situation. They have petitioned the National Safety Council to help. They are also appealing to the legislators of every State in the Union to enact laws requiring motor vehicle bureaus to take legal steps to prevent persons with poor hearing from operating a motor vehicle unless they use an adequate hearing aid.

These men are Paul B. H. Smith, who has devoted his life to audiology and is president of one of the Nation's foremost hearing aid manufacturing companies; Dr. James A. DePew, Jr., chief audiologist of the world famous New York Eye and Ear Infirmary; and William R. Hutchins, electronics engineer, presently a key figure in the U.S. guided missiles program.

These three men are requesting that all motor vehicle bureaus require a hearing test of every applicant for a driver's license just as they now require a vision test.

Dr. DePew and Mr. Hutchins are inventors of a drastically sensitive audiometer which can accurately measure the extent of human hearing in fractions of a second.

To date, thousands of students in schools of every level throughout the Nation who had previously been labeled by their teachers as backward, indifferent, or below normal intellectually, have been subjected to audiometer tests. In a great number of cases, it was discovered that theses boys and girls were neither poor scholars nor indifferent ones, but victims of some hearing impairment. Steps were at once undertaken to provide them with corrective materiel and when this was accomplished their classroom interests became enlivened and their marks shot up, equally as good as their fellow students.

Because so many sufferers from deafness are unaware of their affliction, Dr. DePew, Paul B. H. Smith, and Mr. Hutchins are waging this campaign to make it mandatory that a hearing test be required for all applicants for drivers' licenses.

Inspired by this campaign, hundreds of leading industrial firms are arranging for their own workers in plants, offices, and factories to take audiometer tests as a measure of safety as well as to increase worker efficiency where it is discovered that employees suffer from hearing deficiencies.

In some cities across the Nation, steps are being taken to offer free audiometer tests under civic sponsorship via mobile audiology laboratories.

In the case of those who need a hearing aid, but do not want to use one because of vanity or sensitivity, hearing aids are being made available which are no longer visual to others. These can be adriotly concealed as they no longer require wires or a volume control box because they are manufactured on transistor principles.

The people of the United States are indebted to Dr. James A. DePew, Jr., Engineer William R. Hutchins, and Paul

B. H. Smith for their long and now successful fight to bring a normal way of life to persons suffering from hearing deficiencies; to safeguard life and property by campaigning for legislation which will require a hearing test for appliancts for drivers' licenses; and for directing the paths of thousands of children who are hard-of-hearing into progressive, useful, and productive channels.

Keeping the Peace in Berlin

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 10, 1959

Mr. WOLF. Mr. Speaker, with nine of my colleagues in the House of Representatives, Congressmen Carter, Clark, Meyer, Clement Miller, Porter, Reuss, George Rhodes, Byron Johnson, Rivers, and six colleagues in the British Parliament, Attlee, Davies, Foster, Henderson, Pitman, and Reeves, I have joined in a proposal which I believe is quite suggestive. Its purpose is not to foreclose thought on the Berlin issue but to open possible ways that the United Nations and the United Nations police force could be used in keeping the peace.

It should not be forgotten that the United Nations was formed to keep the peace and to help in the settlement of international disputes. This is the aim of the United Nations and we must afford it an opportunity to function in accordance with the aim that it was assigned by the sovereign states of this world.

The proposal, as released jointly on Thursday, April 9, is as follows:

1. We believe that the problem of Berlin offers another opportunity for utilizing the U.N. through the establishment of a U.N. police force.

2. A first step would be the appointment of a U.N. commander for the present Allied Kommandatura. This would require the consent of the U.S.S.R., which should be invited to resume its membership of the Kommandatura.

3. We propose that the whole of Berlin should come under U.N. responsibility and this would involve removal of the seat of government of the East German Government away from Pankow—to somewhere outside the confines of Berlin.

4. A further stage would be the gradual replacement of the units of the four occupying powers, as the new U.N. force built up around the figure of the U.N. commander. The transfer of power to U.N. could thus be a gradual process, in which all parties could see how the transfer was progressing before proceeding to the next step.

5. We consider that the U.N. force could be more effective if it is commanded and paid, and directly and individually recruited, by the U.N. from a wide range of nations. If this is not practicable, then it could, as in UNEF, be composed of national contingents, drawn from countries other than the occupying powers. In the view of the group, the system of national contingents of seconded personnel adopted in UNEF, NATO, and Warsaw Pact, have shown that there is no real integration by that method, and that national sovereignty—the right to be judge and jury in your own cause—is still unimpaired.

6. The financial requirements for the establishment and maintenance of the proposed police force should be guaranteed for at least 5 years in advance.

7. We believe the opportunity offered by Berlin for a practical experiment in building up a force acceptable to both NATO and Warsaw Pact countries in a location strategically placed between the two camps, could be not only immensely valuable as a solution for the Berlin problem but also as a contribution to the eventual coming together of East and West Germany.

The idea of use of the United Nations Police Force is not a new one. The United States and this Congress has always supported the use of a U.N. Police Force either in the form of an observer group or as an actual police force. In the past, we have taken the initiative in formulating various plans that would have the effect of fostering such developments. For example, in the fall of 1958, the United States proposed to the General Assembly, the creation of a United Nations Peace Force. President Eisenhower stated to the General Assembly on August 13, 1958, the following:

The countries of this area (the Middle East) should also be freed from armed pressure and infiltration coming across their borders. When such interference threatens, they should be able to get from the United Nations prompt and effective action to help safeguard their independence. This requires that adequate machinery be available to make the United Nations presence manifest in the area of trouble.

Therefore I believe that this Assembly should take action looking toward the creation of a standby United Nations Peace Force. The need for such a force is being clearly demonstrated by recent events involving imminent danger to the integrity of two of our members.

I understand that this subject is to be discussed at the 13th General Assembly and that our distinguished Secretary-General has taken an initiative in this matter. Recent events clearly demonstrate that this is a matter for urgent and positive action.

Elaborating on the President's proposal, Secretary of State Dulles outlined the possible structure of such force to the Assembly on September 18, 1958:

The United States suggests the following points for consideration:

1. We conceive of the peace force not as a combat force, but rather as a group that would observe and patrol, and by its very presence make visible the interest of the world community in the maintenance of tranquility. Also, we believe that members other than the permanent members of the Security Council can most usefully contribute personnel.

2. A small planning staff might be created within the Secretariat to develop standby plans for calling into being, deploying and supporting such a peace force.

3. The planning staff could develop concrete arrangements so that a United Nations decisions to employ such a peace force could be promptly implemented.

4. The costs of the standby arrangements should be kept small and that should be possible if there is no force-in-being to be maintained.

These arrangements should make it possible to bring together on short notice a United Nations group to meet a need which has become evident over recent years. That would be an important bulwark of the pacific settlement objectives of the charter.

Just before the U.N. Assembly met, the Congress had made known its support of such an initiative by the adoption on August 22 of a concurrent resolution to the effect that:

It is the sense of Congress that consideration should immediately be given by the General Assembly of the United Nations to the development within its permanent structure of such organization and procedures as will enable the United Nations promptly to employ suitable United Nations forces for such purposes as observation and patrol in situations that threaten international peace and security.

The Senate Foreign Relations Committee Report No. 1884, 85th Congress on its resolution emphasized that:

The main objective of the committee in recommending the adoption of the resolution is to underline the urgency of continuing to work on the problem of devising a military type of force which will be helpful in achieving the objectives to which members of the United Nations have subscribed.

House Committee on Foreign Affairs Report, No. 2581, 85th Congress, stated that:

The resolution reflects the desire of the Congress that the United States delegation to the United Nations support action necessary to attain the desired objective * * *.

Spokesmen for the Department of State have repeatedly emphasized United States interests in the creation of a standby force for use in troubled areas. The Assistant Secretary of State for International Organizations Affairs Francis O. Wilcox outlined the longstanding policy of the United States of strengthening "the capacity of the United Nations to carry out its important responsibilities under the charter" in testimony before the House Foreign Affairs Committee on July 25, 1958.

The United States also has given, and continues to give, full support to the United Nations Emergency Force in the Middle East. At the time this force was created, Secretary Dulles told the General Assembly that both he and President Eisenhower shared the view that the Secretary-General should be authorized to make arrangements for a U.N. force large enough to keep the borders at peace while a political settlement was being worked out. As House Resolution 367 indicates, this force did make an important contribution to international peace and stability in the Middle East. The UNEF experience has shown clearly how, under certain circumstances, such a force can serve an extremely useful purpose. For many months the frontiers between Egypt and Israel have been free from the kind of hostile incursions which formerly troubled the area.

The Department of State shares the view of this committee that a similar force, established on a permanent basis, could be an important instrument for observing and reporting, and for assisting in the maintenance of international peace and security. You will have noted, in connection with the current Middle East crisis, that our Government supported the establishment of the United Nations observer group in Lebanon. We also presented a resolution to the Security Council on July 17 requesting that the

Secretary-General consult member states with a view to making arrangements for additional measures, including contingents, to protect Lebanese integrity and independence and insure against illegal infiltration of personnel or arms into Lebanon. Unfortunately this resolution was vetoed by the Soviet Union.

I recall these examples, which I know are familiar to all of you, in order to emphasize the positive attitude of the U.S. Government toward the creation of United Nations forces in order to meet a variety of difficult situations. The State Department is also favorably inclined toward making more permanent arrangements for some type of U.N. force.

Not only have the Congress and the executive department gone on record repeatedly in favor of a U.N. force, but there are many indications of general public approval of such a force. I have certainly found this to be true in my district.

The American Institute of Public Opinion, directed by George Gallup, has frequently polled the public on its views regarding a U.N. force—with overwhelming support for such a force:

ONE HUNDRED THOUSAND STANDING ARMY FOR U.N. BACKED IN POLL—TWO OUT OF THREE IN SURVEY FAVOR FORCE SUFFICIENT TO PUT OUT BRUSH FIRE

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N.J., March 11.—American public opinion is solidly in favor of a standing United Nations army large enough to deal with any brush-fire wars around the globe.

Such a proposal, which some observers see as revolutionizing present military planning, is supported by two out of three adults questioned in the latest institute survey.

As regards the actual size of such a permanent U.N. emergency force, the vote is 2 to 1 that it should be increased to at least 100,000 men. The present U.N. emergency force serving along the Isreali-Egyptian border is considerably smaller in number.

SUPPORTED SINCE AIRLIFT

Actually, Americans have supported the general idea of such a force for 10 years now. It was in the spring of 1948—at the height of the Berlin airlift—that the institute first recorded a substantial international police force.

Observers claim that the establishment of such an international army might well mean a substantial reduction in the number of troops maintained by each nation at present—including the United States—to take care of such brush-fire conflicts as the Korean war.

In the most recent survey, the question was posed as follows:

"A proposal has been made to build up the United Nations emergency force to a size great enough to deal with brush-fire or small wars throughout the world. Does this sound like a good idea or a poor one to you?"

The vote was as follows: Good idea, 66 percent; poor idea, 15 percent, and no opinion, 19 percent.

The second question dealt with the size of such an international force:

"The present number of men in the U.N. emergency force is 10,000. Would you like to see it built into an army of at least 100,000 or more?"

The result was: Yes, 51 percent; no, 26 percent; and no opinion, 23 percent.

Although both proposals have the support of the rank-and-file members of both political parties, analysis reveals that they have somewhat more appeal to Democratic voters than to Republicans.

FOR PERMANENT FORCES

After 4 months of duty along the Israeli-Egyptian border by the emergency force, a survey in April of last year found the vote more than 2-to-1 that the U.N. should have its own permanent forces, including troops from the United States, which it could use to enforce U.N. decisions.

The present U.N. emergency force was proposed to the U.N. General Assembly by Canada's Lester B. Pearson who was awarded the Nobel Peace Prize in 1957.

Mr. Speaker, the people, the Congress, and the Executive have shown their support for a U.N. peace force. Its effectiveness has already been shown. I am sure that its effectiveness could be shown again in Berlin. With an interim stabilization of the area by the U.N. peace force negotiators will be better able to arrive at a general settlement in Western Europe that would alleviate tensions without destroying our interests in Western and Eastern Europe.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Moscow's Cold War Air Force

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, April 13, 1959

Mr. MAGNUSON. Mr. President, in recent weeks the Russian-provoked crisis over Berlin has again focused the attention of the West on that island of democracy behind the Iron Curtain. Though 10 years have already passed since the blockade of Berlin, we are reminded of the hastily organized but highly successful Berlin airlift. From the end of June 1948, to the 12th of May 1949, when the blockade was lifted, more than 2 million tons of foodstuff, coal, and other goods were airlifted into West Berlin in approximately 200,000 flights.

It was a magnificent achievement by the men and the planes of the immediate postwar era—before the advent of the jet age, when there was no question of America's air supremacy over Soviet Russia.

Today, however, we are faced with a new cold-war threat from Russia. Quite apart from their military aspirations, we see the Soviets using the jet plane as an economic and propaganda weapon in the growing commercial battle for jet age supremacy.

My distinguished colleague, Senator BARTLETT, of Alaska, and a member of the Senate Interstate and Foreign Commerce Committee, recently spoke of this threat in a speech before the Queens County Committee of the American Legion, in Jamaica, N.Y. I ask unanimous consent that his well-documented talk on "Moscow's Cold War Air Force" be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MOSCOW'S COLD WAR AIR FORCE

For the past several years, our newspapers and our radio and television broadcasts have carried in great detail the latest developments in the international arms race between our Nation and the U.S.S.R.

In recent months, this struggle for world supremacy has even been carried beyond the limits of our atmosphere into the void of space.

Aside from the military significance of these fantastic developments, the news of about them is in itself important. The word of progress on the part of either great competitor reaches every enlightened corner of the world. Each success or failure affects the prestige of the nation concerned, and prestige is an extremely important factor in influencing the peoples of the world who waver between espousal of the democratic or the communistic way of life.

To you opinion leaders, who I am sure have followed closely each of these new developments in defense, I can offer nothing new on the subject of our defense posture vis-a-vis the Soviet Union. Instead I would like to talk tonight about another area of competition between the United States and the Soviets. It is one which has not been so widely publicized, but one which rivals de-defense progress in the international prestige battle. It is also highly important to the relative economic status of the two nations.

This is the field of civil air transportation, an area in which I have a dual interest both as member of the Senate Interstate and Foreign Commerce Committee, which studies closely our national air commerce, and as a representative of the people of the State of Alaska.

We are figuratively fighting a cold war with our Russian competitors in this field of commercial air transportation, and I regret to report that it is one more area where, at the moment, we are behind them.

Our American jets started actual airline flying just 5 months ago, but the Soviets have been carrying passengers in jet airliners for almost 3 years. Only one American airline is flying our jets beyond our own borders. Its Boeing planes have made limited appearances in four European capitals, and only since last October.

The Russian jets, on the other hand have been flying to a great many European cities for more than 2 years and they are also flying regularly to the Middle East and to Asia. The Soviets are planning further extension of their jet routes to Africa and the Far East, in particular to Japan.

In addition, they are building new and even more modern airliners and will in a very short time have in service a giant prop-jet passenger plane which can carry 170 passengers 5,000 miles nonstop at a speed about equal to that of our jets, although we can match neither that range nor passenger capacity. This massive airplane has an elevator, a sky-restaurant which can seat 48 and even a motion picture theater.

The Soviets have stated publicly that they are planning a large-scale expansion of their civil air operations, in terms of added aircraft and a great extension of their already tremendous air route system. They are, of course, less interested in developing air commerce beyond their boundaries, but they are equally interested in parading their aircraft showpieces before the peoples of other nations for prestige purposes.

They are, for instance, currently negotiating for landing rights in Ghana, the newly independent republic in Africa. Whether the traffic potential justifies such a route is a moot point, but unquestionably the Soviet Union can chalk up some prestige points by showing off their jets to this Nation which has not yet seen an American jet transport. The Soviets are shrewdly aware of the propaganda value of such a handsome piece of modern machinery as a jet airplane, and they are masters at exploiting it.

Let me tell you something about the Soviet civil air organization which is conducting this facet of the cold war. It is called Aeroflot, or Air Fleet. It is considerably more than an airline as we know airlines. It is in effect a cold war civil aviation force and its operating heads are two marshals of the Red air force.

Aeroflot embraces all aviation in the Soviet Union that is not military. It operates a large scale air ambulance service, which flies doctors to isolated areas and evacuates emergency cases to hospitals.

It operates an agricultural service for aerial crop dusting and seeding, pest control in swamplands, geologic surveys, and fire control.

It has its own very modern weather service.

It provides other miscellaneous services, which show that the Soviets are fully aware of the potential of aviation in their national economy. For instance, Aeroflot operates helicopters and aircraft in conjunction with the Russian fishing fleets. These planes fly out ahead of the fishing boats in search of schools of fish and radio back the best locations.

Aeroflot also has airborne cowboys, who herd cattle in the central plains by light aircraft or helicopter. From their aerial lookout posts, the "coyboys" spot the best grazing grounds for the herds, then push the cattle in those directions by "buzzing" them with the airplanes.

These are, of course, internal services which are not of particular relevance in the cold war. I mention them because I feel they illustrate how energetically the Soviets exploit all their resources to better their economy, and their overall economic status is very important to us, since their leaders have frequently challenged us to do battle in this area, rather than with weapons.

The transport operations of Aeroflot are of more importance, both from the economic and diplomatic standpoints.

A few months ago, the Soviets issued a massive document with the title "Targets for the Soviet Economy." It was a résumé of economic and production goals of the 7-year plan for 1959 through 1965.

Newsweek magazine called this report "the most comprehensive blueprint ever compiled for the destruction of capitalism and the overthrow of the United States in a global economic war."

Premier Khrushchev stated that the 7-year plan called for a sixfold increase in air transportation. Air Chief Marshal Pavel Zhigarev, who heads Aeroflot, added some of the details of the proposed economic penetration in the field of aviation. They included:

An increase of almost one-third annually in the number of passengers carried and the number of ton miles flown;

A tremendous construction and expansion program for air facilities on the ground, with 90 major airports scheduled for construction or rebuilding and annual expenditures for improvement of service of three times what they are today;

Addition of thousands of miles of new routes, a great portion of this expansion to come outside the Soviet Union.

The marshal predicted that by 1964 the annual traffic increase would be as great as the total traffic in 1958. This means an expansion of truly staggering proportions in Soviet civil air operations—and we have learned in the last year or so that they are not given to idle boasting.

To handle this traffic growth, the Soviet aircraft industry is turning out numbers of modern turbine aircraft. This reequipment program started long before the formation of the new 7-year economic campaign. Although the Soviets do not provide too many details, it appears that their first jet transport was flying in 1955.

Named the Tupolev 104 after its designer, this plane was first shown to the Western

World when it made a surprise visit to London in March 1956. It is a 70-passenger plane with speed only slightly less than that of our new jets.

The Russians used a short-cut approach to developing this jet, by using the basic design of a tested bomber. In so doing, they skipped the intermediate step of development—the four-engine propeller-driven transport.

The Tupolev 104 was placed in scheduled service in September of 1956, when our first jet was still in an early test stage. For the following 2 years, the Soviets had the only airline jet service.

During that period, the Soviets developed and started flying three other turbine planes of the propjet variety.

Today, they are readying for service two much more impressive aircraft.

One is the Tupolev 110, a big brother to the Tupolev 104. It has four jet engines instead of the earlier version's two and can carry 100 passengers.

The giant showpiece I mentioned earlier is the Tupolev 114, also called the Roossia. It is a propjet, with four of the largest turboprop engines ever built anywhere. In addition to the extras such as the elevators and the restaurant, it has its own telephone system and private cabins for deluxe service.

This fleet of modern planes will make ideal propaganda equipment for the Reds, for each plane is a symbol of the technological capacity of the building nation.

Now, although we can do nothing about the time we have lost in this area of the prestigial battlefront, our own situation is looking up. We already have in airline service three turbine types of aircraft, the Boeings I spoke of and two propjets built by Lockheed and Fairchild.

Two more jet transports, built by Douglas and Convair, are now being test flown. They will be in airline service this year and in 1960.

Our American turbine planes are being built by the hundreds and they are scheduled for service all over the world. Under the banners of our own American-flag carriers, they will be flying into a great many foreign cities in a year or two. In addition, these American-built planes have been ordered by almost 40 foreign airlines.

Although we know that the Soviets have made some effort to interest airlines outside their boundaries in their aircraft, they have as yet made no penetration.

There is another plus on our side of the ledger. In general, our turbine planes are much bigger and faster than their Russian counterparts, with the single exception of the king-size Roossia. As symbols of American industrial capacity, they will stand up well in comparison with Soviet airline equipment.

From the economic standpoint, our airplanes are attractive to foreign buyers because they are designed and built with an eye toward making a profit for the operator. The Soviets, in their haste to develop new transports, were not able to achieve economy of operation. Their Tupolev 104, for instance, is a fuel gobbler and carries only slightly more than half as many passengers as our Boeing 707.

In their later planes, however, it appears that they have concentrated on this factor, and we cannot overlook the fact that they may become competitors for aircraft sales.

Our manufacturers of airliners employ hundreds of thousands of people and have more than 5,000 small companies supplying parts and equipment. This represents a substantial portion of our national economy and we must watch closely any Soviet attempt to influence it.

So, after a late start, we are catching up and may surpass the Soviets in this area of economic and aero-diplomatic competition. What is of concern is the next step.

Remember, the economic health of our airlines dictates the speed at which we can put new aircraft in service. These planes are not developed and bought by the Government, as is the case in the Soviet Union.

It took our airlines a long period of gradual transition from two-engine to four-engine propeller planes before they were ready for jets. They had to build up passenger volume over many years before they could afford these planes, which cost more than $5 million each.

The Soviets were able to leapfrog the intermediate steps because development and operating costs of the planes were not a factor under communistic economy.

The next step is the passenger-carrying transport which flies faster than sound, probably two or three times as fast, or between 1,300 and 2,000 miles per hour.

Fantastic as that might seem, our engineers say that we have the technological capacity to start work on such planes right now. We do not, however, have the economic capacity.

Our airlines are investing close to $3 billion in these new jets. Obviously, it will take a long period of time to pay for these aircraft, and another period before the airlines can accrue the necessary backlog to think of even faster equipment. There are so many problems connected with the introduction of our current jets, airline officials don't even want to think of tomorrow.

The Soviets are hampered by no such economic restrictions. When the designers say that such planes can be built, more than likely they will get the government go-ahead.

I need not dwell on the economic and propaganda effect of such a development. The effect on the impressionable layman, to whom our current jets are fantastic machines, would be almost as devastating to our national prestige as was the first sputnik.

In the interim, our American airlines with their jets will be carrying abroad demonstrations of the type of product a free economy can produce. They cannot fail to impress. As American civil cold war ambassadors, these free enterprise airlines with their free-enterprise planes deserve all the support we can give them.

The High Courage and Valor of the Seven Young Americans Who Will Probe the Realm of Outer Space

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 13, 1959

Mr. NEUBERGER. Mr. President, it has become almost trite to despair of America's youth, to deplore widespread juvenile delinquency, to yearn for the good old days.

I have never despaired of our young people. I think they measure up splendidly—perhaps better than we did in our own days of youth.

In the New York Times of April 12, 1959, the able journalist, Mr. James Reston, has written an inspiring column in tribute to the seven youthful Americans who will be our first spacemen.

Imagine the scope of this adventure—off into the wild blue yonder, far beyond the limit of earth's atmosphere. Surely such an exploit compares in daring and magnitude with that of Captains Lewis and Clark probing the wilderness of the Rockies and the Oregon country, with that of Peary challenging the North Pole, and Scott and Shackleton and Amundsen facing the South Pole, with that of Lindbergh crossing the Atlantic, and Admiral Byrd off on his epic flights.

Mr. Reston's imaginative article assures us that American youth is all right, and with him I agree wholeheartedly. After all, these seven spacemen are all married, they are between the ages of 32 and 37, and they are ready to risk their lives on the ultimate frontier—the frontier of distant outer space. Does this add up to decadent youth? In my estimation, it adds up to high courage and admirable valor.

I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD the article from the New York Times of April 12, by James Reston, entitled "The Sky's No Longer the Limit."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SKY'S NO LONGER THE LIMIT

(By James Reston)

WASHINGTON, April 11.—Those gloomy students of the American character who think we've lost the hop on our fast ball should have been around here this week when seven young American men dropped into Washington on their way to outer space.

Somehow they had all managed to survive the imagined terrors of our affluent society, our waist-high culture, our hidden persuaders, power elite, and organization men; and here they were, aged 32 to 37 and all married, in the last stages of training for the first manned rocket flights into space.

We have had a lot of fancy visitors around here this year making the best speeches money can buy, but nobody as exciting as these intelligent, plain-speaking, smalltown fliers.

What made them so exciting was not that they said anything new but that they said all the old things with such fierce conviction. They talked of the heavens the way the old explorers talked of the unknown seas. They wanted to see what was "on the other side." They spoke of duty and faith and country like Walt Whitman's pioneers.

PERSONAL TESTIMONY

Capt. Donald Kent Slayton, Air Force: "My hometown is Sparta, Wis. My age is 35. I feel that this is the future of not only my country but the world. We have gone about as far as we can on this globe and we have to start looking around a bit."

Capt. Virgil Ivan Grissom, Air Force: "I am Virgil I. Grissom, from Mitchell, Ind. I'm 33. My career has been serving my country, and here is another opportunity where they need my talents. I'm just grateful for the opportunity."

Col. John Herschel Glenn, Jr.: "I am John Glenn from New Concord, Ohio. I'm the lonesome marine in this outfit. I'm 37. In answer to this same question [Why did you volunteer for space experiments?] I said, jokingly of course, that I got in on this project because it probably would be the nearest to Heaven I'll ever get and I wanted to make the most of it."

"My feelings are that * * * it's like the Wright brothers, who stood at Kitty Hawk about 50 years ago with Orville and Wilbur pitching a coin to see who was going to shove the other one off the hill."

Lt. Malcolm Scott Carpenter, 32, Boulder, Colo., a Navy pilot, said "it is a chance to

serve the country in a noble cause." Another Navy flier, Lt. Comdr. Walter Marty Schirra, Jr., of Hackensack, N.J., said he was just carrying on the tradition of his father, who was one of the very early airplane pilots.

Navy Comdr. Alan Bartlett Shepard, Jr., 35, of East Derry, N.H., said he was convinced we were on the threshold of space travel and wanted to be in on it, and Capt. Leroy Gordon Cooper, Jr., 32, of Carbondale, Colo., added: "I am a career officer, career pilot, and this is something new and very interesting."

All have children, all expressed the hope that they'd be shot into space, all said their wives had agreed to let them volunteer, all confessed to a religious conviction that they would come back.

Colonel Glenn, the marine from New Concord, Ohio, put it this way: "I was brought up believing that you are placed on earth here more or less on a sort of 50-50 proposition, and this is what I still believe. I think there is a power greater than I am that will certainly see that I'm taken care of if I do my part of the bargain."

DREAMERS AND CHANCE TAKERS

This is a pretty cynical town, highly allergic to corn, but nobody went away from these young men scoffing at their courage and idealism.

Under the responsibilities of world affairs, officials here have become highly conscious of the limitations of power and policy, and were almost startled to hear, not only the ancient American cry that "the sky's the limit," but that it is just the beginning.

Maybe the sociologists are right about the pawky conformity of our big-town, big-business, big-union society, but there are a lot of dreamers and chance takers left.

Last year there were 150,268 new business incorporations in the United States—the largest number in our history. In the heyday of the 1929 boom, before the advent of the welfare state, there were 3,029,000 individual businesses in the country; now there are 4,323,000; so there must be some steam in the old boiler yet.

Address by the Honorable Fred A. Seaton, Secretary of the Interior, at Gettysburg College Convocation

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 13, 1959

Mr. AVERY. Mr. Speaker, the following is a very outstanding address given by the Honorable Fred A. Seaton, Secretary of the Interior, Gettysburg College convocation, Gettysburg, Pa., Friday, April 3, 1959.

I highly recommend that each Member of Congress read Mr. Seaton's remarks:

ADDRESS BY THE HONORABLE FRED A. SEATON, SECRETARY OF THE INTERIOR, GETTYSBURG COLLEGE CONVOCATION, GETTYSBURG, PA., APRIL 3, 1959

It is a rare honor for me to speak tonight of the liberal arts, of education, and of history here at Gettysburg—the scene of a historic battle between the North and the South, the site of an immortal address, and the home of a great President of the United States.

What more fitting place can there be to do this, than here in the chapel of a college, founded 127 years ago—Gettysburg College—whose very name encompasses that battle, the presidential speech of dedication and the home address of President Eisenhower?

More than a century ago Daniel Webster said of his beloved Dartmouth College, up in the New Hampshire wilderness, "It is little, yet there are those who love it."

How fortunate we are that, by and large, liberal arts colleges all over the United States still enjoy such loyalty from their trustees, alumni, other supporters, and from their undergraduates.

That is not to say the future of independent colleges and universities is assured. There are many people, and they include some prominent names in education, who fear that the days of many small, independent colleges are numbered.

They see ahead an ascending curve of costs and of enrollments which give them doubt that tuition fees and private gifts can be increased enough to insure financial solvency. In short, they believe altogether too many of the Nation's independent educational institutions either will be eventually forced to close their doors, thus losing their very existence, or necessarily turn to State or Federal Governments for money, thus losing their independence.

I do not concur in such a prophecy. On the contrary, I believe there are valid reasons why these sincere and well-meant doubters will prove to be wrong.

For an example, in February the Council for Financial Aid to Education reported that nongovernmental contributions to educational and general income of American colleges and universities had risen from a World War II level of 41 percent to a current level of 51 percent of the total. In other words, despite massive increases in Federal grants for research, nongovernmental sources of financial aid had produced so much more as to take the lead.

It is important to note there is no apparent reason to question in the foreseeable future a continuance of this rising curve of support.

This is welcome encouragement to all believers, as I am emphatically am, in the national necessity of keeping one sector of American higher education, and a large and most influential sector, vigorously independent of any form of governmental direction.

Admittedly, an encouragement in itself is not an automatic guarantee, and we must confess much remains to be done to make it so.

For one thing, the council estimates that in just a decade, American colleges of whatever description will need for all purposes, for current operations, plant, and equipment, and endowment, about $9 billion a year, or twice the amount they now have.

Right there, some will say: "How can you expect gifts, tuition, and fees to go up enough to do the job while governmental support of all kinds goes up as well?"

That is a good question, but in answer, I think you can properly remind them that, in the past decade, tuition and fees have already gone up almost 130 percent and private gifts and grants 247 percent, while Government help has increased by 63 percent.

On the evidence, I believe this: We can accomplish the task before us if we do three things—positively inform the American people of the importance of the educational job to be done, plainly tell them the cost of that job, and emphasize the necessity of refusing to permit any source, including the Federal Government, to acquire a monopoly over American education.

I sincerely believe one of the greatest services each of us can render to our colleges, our country, and our fellow citizens is to rouse up more active support for privately financed education.

There's a second job which is inextricably entwined with this first one, and that is to help make certain that the American dollar retains its power to buy.

All our educational institutions, of whatever description, have a life and death interest in that.

To illustrate, here are some sad but true fiscal facts.

In 1929–30, the total current income of American colleges and universities was $555 million; by 1953–54 it was nearly $3 billion, almost 5½ times as much. Now, on the face of it, that seems wonderful, but a particularly vicious and stealthy thief, inflation, was at work. That thief stole away so much of the value of the dollar that by 1954 it was worth only 62 cents. Simply put, that meant for every dollar the universities and colleges gained in income, they lost 38 cents to price increases.

You cannot get away from the fact that inflation hurt these institutions. And specifically it hurt their faculty members.

While it is true that in the past 20 years the dollar tag on teachers' salaries has indeed been going up, it is just as true that all the while the purchasing power of those salaries has been going down.

Universities and colleges can hardly be expected to put escalator clauses into their administrative and teaching contracts. That's because nobody can guarantee them escalator clauses in their incomes. Professors can't dodge inflation simply because universities and colleges can't either.

What they can do, and I hope they will, is to join with those of us who are working with all our might for fiscal integrity in government, whether it is local, State or Federal.

In that connection, we have only to recall to mind one widely publicized situation as proof that such an endeavor should be our common cause.

In Michigan, a political force under a professedly liberal banner has for a decade avoided the hard realities of the management of the State's finances and relied heavily on deficit financing. As a result, the Governor of Michigan is presently known far and wide as a dealer in deficits.

Today, after 10 years, the people of Michigan have finally found out that there is no such thing as a free lunch: Sooner or later somebody has to pick up the check, with interest charges added.

As of today, Michigan has a $7 million lag in old age and children's aid funds. It is $27 million short on payments to its public schools. It is $15 million behind in payments to its three leading State universities.

As a result, Michigan State University and the University of Michigan have had to go to banks to get money to meet their payrolls.

No wonder some of the best faculty members are looking elsewhere for jobs.

What has really happened in Michigan is that for too long the present was allowed to cannibalize the future.

Now, I ask you, is a governmental policy which leads to such a deplorable state of affairs a truly liberal one? Or is it only openhanded to the extent that everybody's pockets finally get emptied?

Certainly, as citizens, without regard to politics, we have every reason to abhor the preemption, the narrowing, and the twisting of the word liberal by men who, on their own record, have traded away any legitimate title to it.

Once trained to define and divide, a process which Aristole considered central to the pursuit of knowledge, you should be able, I believe to distinguish liberalism from prodigality.

You should be equipped to see through the self-styled liberal whose liberalism largely consists of advocating more and more public spending and who thus simultaneously undermines, in the end, even governments' power to borrow money to carry on the very programs he espouses.

And you should be able to penetrate the disguise of those who oppose all progress by resisting every demand the Government enter into new fields or accentuate its share of responsibility in old fields by crying "Socialism." Those people, left to their own devices, would have us mentally replant our feet in the 19th century and resist every attempt to move us forward to the present.

What I am saying is that there is a sensible and sane middle ground between the two schools of political and economic thought and it is our solemn obligation to search it out.

Finally, you should be capable of detecting the inconsistency of the self-styled intellectual who cries out that politicians are never the leaders of thought in a society and simultaneously calls for an administration in Washington to produce new ideas.

Here in Gettysburg, as a result of living, working, and studying in the midst of historical surroundings, all of you—young and old—should surely be able and ready to help make our country's future in every way worthy of its glorious past.

Here, despite Lincoln's modest disclaimer, the Gettysburg Address and the deeds of brave men, living and dead, northern and southern all together, have consecrated Cemetery Ridge and Little Round Top and the Wheatfield. This is indeed hallowed ground, and here, to rich and poor, and young and old; patriotism, virtue, honor, and freedom all have, in Shakespeare's phrase, a "local habitation and a name."

Ever since Biblical times, when the author of "Ecclesiasticus" said, "Let us now praise famous men," peoples have found in their honored heritage from the past a guide and an inspiration for the performance of their duty in the present and in the future.

Gettysburg is indeed a place of such praise. You and I will agree that it must always be so, and further you and I agree that together we can keep it so.

When the question is asked, "What is the importance of all such shrines and monuments and parks?" to answer "Manifold" is not to be in error. Surely, many of us have had the same experience as the young soldier in the U.S. Army who wrote to John D. Rockefeller, Jr., that he had never seen "the greatness of this country with more force and clearness" than when he had walked the red brick sidewalks of the Duke of Gloucester Street in Williamsburg.

The monuments which visitors come to see are in themselves clues to a pattern of events which Sir Winston Churchill has woven into the "History of All English-Speaking Peoples." Moreover, our history is also becoming a part of that of many other peoples and races—some speaking such strange tongues as Hindi and Bahasa-Indonesia and Urdu, living in faraway lands, worshiping in vastly different ways.

On the other side of the world, the President of Indonesia, Sukarno, professes almost a veneration for Abraham Lincoln and Thomas Jefferson. The American town of Concord, Mass., and nearby Walden Pond are, through Mahatma Ghandi's admiration for Henry David Thoreau, part—and an almost central part—of the history of modern India. Our monuments—and the human feelings they have awakened in distant, different peoples beyond the seas—indeed, remind us again and again that no man is an island, any more than a nation is an isolated citadel.

Do you recall the words of Carl Sandburg on February 12 of this year, when he addressed a joint session of Congress in honor of the 150th anniversary of the birth of Abraham Lincoln? "The people of many other countries take Lincoln now for their own," Mr Sandburg said. "He belongs to them. He stands for decency, honest dealing, plain talk, and funny stories. Look where he came from—don't he know all us strugglers and wasn't he a kind of tough struggler all his life up to the finish?"

Surely, in a time when the United States is trying to advance the cause of understanding and mutual aid with people all over the free world—all kinds of people, a good many of them strugglers—isn't it only practical for us to praise the famous men of our history, to share their example of deeds and devotion to the cause of liberty?

Abraham Lincoln, George Washington, Thomas Jefferson—few countries have anybody like them. Surely, we should be lacking in humility and be unwise in the extreme to forget them or our other great men and places, and the examples and lessons they have taught us.

Theodore Roosevelt once said, "There is nothing more practical in the end than the preservation of beauty." Agreeing, we can add: "There is also nothing more practical than the preservation of those places which cause us to remember the great days and great men in our history and which help show people all over the world what we as a nation really are."

It is to those ends that historians and scholars study the past. And it is to those ends that, in Lincoln's own words, we preserve the honored battlefield and the marble monument along with the well assured and more enduring one in the heart.

To study the past, to act in the present, to consider carefully the future—and to do all three with wisdom and magnanimity—those are the continuing obligations of every educated man and woman.

In our time, not only the searching for but the finding of the correct answers to these problems is more important than it has ever been before. That is so, you see, because the atomic and hyrdogen age neither brooks delay nor allows mistake, lest man perish by his own hand and his own works.

As we are gathered here, we can be sure all mankind cries out in its heart for peace, no matter what some mad men may say or do.

How else, I ask you, can we sustain such a state of world affairs, if we do not, in the Apostle Paul's own words, "follow after the things which make for peace"?

You students here at Gettysburg College, a Christian educational institution, are being trained to meet this great challenge as are your fellows everywhere. Your collegt is doing its best for you. It now remains for you to do your best for it, for yourselves, and for your country in the years ahead.

Seventy-fifth Anniversary of the Orford Soap Co.

EXTENSION OF REMARKS

OF

HON. THOMAS J. DODD

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, April 13, 1959

Mr. DODD. Mr. President, on April 7, 1959, the Manchester Chamber of Commerce celebrated the 75th anniversary of the establishment of the Orford Soap Co., makers of Bon Ami products.

I wish to join in extending congratulations to this Connecticut concern; and I ask unanimous consent to have a statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ONE OF AMERICA'S MOST FAMOUS PRODUCTS CELEBRATES DIAMOND JUBILEE

A pioneering cleanser and a tiny chick, hatched 75 years ago in Glastonbury, Conn., celebrate Bon Ami's diamond jubilee throughout this year.

The world famous trademark, with its familiar slogan "hasn't scratched yet," made Bon Ami a household word before the turn of the century.

The original Bon Ami cake that has "kept America clean" for 75 years and is still on the market, with a longer record than any other brand cleanser, has sold close to one-half billion cakes, while its companion product in powder form, Bon Ami cleanser, introduced in 1913, is close to its two billionth sale.

The first product had a humble beginning during a decade which heralded many new inventions that are now a vital part of the national life. The birth of Bon Ami, in a New England farm kitchen, occurred in a 10-year span during which Edison invented the electric light, phonograph, and kinetoscope; Eastman brought out his first Kodak; Burroughs, the adding machine; Waterman, the fountain pen, and Bell, the telephone. This decade saw the introduction of the early automobile, the gasoline engine, the linotype machine, and the bicycle.

In a Glastonbury, Conn., farmhouse, just three-quarters of a century ago, J. T. Robertson took over the family kitchen and there made, molded, and wrapped by hand the first lot of his own-devised cake cleanser. Then he peddled it in a market basket from door to door. At first he called it Robertson's mineral soap. This was the original of what was soon to be named Bon Ami.

Robertson's do-it-yourself, one-man business flourished mostly on the enthusiastic recommendations of housewives who bought it plus his own Yankee perseverance. Soon, he had to expand and moved to the neighboring village of Manchester, where Bon Ami products are manufactured to this day. His product and his sales won over a group of local Connecticut businessmen who in 1891 formed the J. T. Robertson Co. There were 7 stockholders with Robertson receiving 80 shares, the largest holding in the group.

The company acquired Robertson's formulas, trademarks, and good will for $500. One stockholder at the organization meeting expressed doubt that the investment would ever earn profits. How wrong he could be was proved in 1920 when the Childs family which then owned control of Bon Ami turned down an offer of $3 million for the trademark.

In January 1898, the company was incorporated as the Bon Ami Co. in New Jersey. Later this corporation was dissolved and the assets acquired by William H., Mary S., and Eversley Childs. A new corporation, also known as the Bon Ami Co. was chartered in Delaware in 1909. In November 1915, a new Delaware-chartered corporation, still the Bon Ami Co. was formed, acquiring all the assets of the 1909 corporation and this is the company which is in existence today. During this period Bon Ami also established manufacturing and distribution in Canada and Australia. These operations, also highly successful, continue to this day.

Members of the Childs family retained an interest in Bon Ami Co. until 1954. Last year, a group of businessmen, headed by R. Paul Weesner, acquired control of Bon Ami and adopted a dynamic new policy which is bearing fruit in this anniversary year with the launching of new products and a full-scale international promotion of Bon Ami, around the current calendar year.

Reactor Decision Was Farsighted

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, April 13, 1959

Mr. MAGNUSON. Mr. President, as my colleague, Senator JACKSON, can testify, our effort to obtain both authorization and funds for location of a dual reactor at the Hanford atomic energy works has been long, hard—but successful.

Our satisfaction in this victory is shared by the community in which this dual-purpose reactor will function.

As an indication of the community reaction I would ask the unanimous consent that the editorial of the Tri-City Herald of Sunday, April 5, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REACTOR DECISION WAS FARSIGHTED

We don't know what prompted the Atomic Energy Commission decision to make the new Hanford reactor a dual-purpose one. But it is wise in at least two important ways:

1. The reactor will help conserve other fast-diminishing fuels, and 2. It will provide knowledge and experience needed for that day when nuclear energy must be used.

America's future depends largely on how well we solve the problem of adequate energy supplies. Ultimately the nation that controls the most energy will dominate the world.

Looking ahead 50 or 100 years, a relatively short time in the life of a great nation, the available supplies of the fossil fuels—oil, coal, and natural gas—will be exhausted, or nearly so. They are finite, and the best estimates today are they will be gone by the year 2000, at the earliest, or 2050, at the latest.

Fossil fuels now supply about 93 percent of the world's energy, water power 1 percent and the remainder comes from human and animal labor. Fossil fuels were made by the sun millions of years ago. They are not renewable.

More fossil fuels have been consumed in the past 50 years than in all the time before that. Consumption is increasing even faster than the population which in the United States, if the present pace is maintained, will equal India's (392 million) in 50 years and that of present-day China (628 million) in 80 years.

The rapidity of our growth has given us little time to adjust our thinking and the problem is upon us before we're ready to meet it.

The one practical answer to the coming power crisis is nuclear energy. Our present known reserves of fissionable materials are many times as great as those of coal and it seems certain that in this century, perhaps even within the next 25 years, fossil fuel costs will have risen enough to make nuclear fuels economically competitive. Before that time comes we must have the scientific knowledge and the engineering skills necessary to build and operate the nuclear powerplants which may have to furnish a major part of our energy needs.

By going ahead now we may be able to achieve the requisite engineering and scientific knowledge before our fossil fuel reserves give out. However, there is no time to spare—the margin of safety is not a comfortable one.

Resolution of Connecticut Chiefs of Police Association Expressing Their Support of the FBI and J. Edgar Hoover

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, April 13, 1959

Mr. DODD. Mr. President, on March 19, 1959, the Connecticut Chiefs of Police Association unanimously adopted a resolution expressing the support of their organization for the Federal Bureau of Investigation and for its chief, J. Edgar Hoover.

It has been fashionable in certain quarters and in some publications to criticize the FBI and Mr. Hoover. In fact, there seems to be an organized attempt to undermine public confidence in this great institution and its leader.

I believe that under the direction of J. Edgar Hoover the FBI has become the world's greatest security and law-enforcement agency; and, more important, it has done so while observing the highest standards of due process of law and without threatening fundamental American freedoms.

I therefore take pleasure in asking unanimous consent to have the resolution printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

Whereas the leadership in coordinating the effort of all law enforcement in the country and the high ideals and standards for law enforcement as expressed and practiced by the Honorable J. Edgar Hoover, Director, Federal Bureau of Investigation; and

Whereas J. Edgar Hoover and the agents of the FBI under his direction have constantly strived to raise the standards of law enforcement to a professional level; and

Whereas recently there has been an insidious smear campaign attacking the good name and character of J. Edgar Hoover by those who would tear asunder the high principles of law enforcement exercised by J. Edgar Hoover in our great democracy: Be it

Resolved, That we, the members of the Connecticut Chiefs of Police, assembled at this meeting at Berlin, Conn., March 19, 1959, express to Mr. Hoover our continued appreciation and support of his high ideals established for law enforcement; for his efforts in developing police standards and to express the high esteem in which he is held as a man of great utmost personal integrity; be it further

Resolved, That a copy of this resolution be forwarded to J. Edgar Hoover.

National Cultural Center: One Step Closer to a Reality

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, April 13, 1959

Mr. WILEY. From his weekend headquarters in Augusta, Ga., President Eisenhower last Saturday took another significant action which brings us one step closer to the realization of the National Cultural Center here in our Nation's Capital. His naming of the 34-member Advisory Committee on the Arts now gives the green light to actual construction of this international cultural beacon which, as I have previously remarked, will be commensurate with our leadership in world affairs.

SPONSORSHIP OF LEGISLATION

As I have previously mentioned to my colleagues, there was a long and sometimes discouraging battle fought by many dedicated Members in both Houses of the Congress that resulted in enactment of S. 3335 of the 85th Congress, which bill I was happy to cosponsor, and finally in Public Law 874. Many courageous and determined public-spirited citizens maintained the courage of their convictions that here was a project which would enrich countless numbers of lives through expansion of cultural horizons. They realized that this was an absolute necessity in order for our Capital City to fulfill its role of importance as a tourist center from which local and foreign visitors derive their knowledge and lasting impressions of the United States. A splendid example of how Members from both sides of the aisle can work together in harmony for the cultural advancement and mutual benefit of our great country was shown in the commendable bipartisan spirit which marked enactment of this legislation. Enactment of S. 3335 was specifically requested by President Eisenhower and endorsed by the Department of the Interior, the Bureau of the Budget, the Board of Commissioners of the District of Columbia, and the Commission on Fine Arts.

NAMING OF ADVISORY COMMITTEE

The Advisory Committee on the Arts will serve as a program committee to establish objectives and policies of the National Cultural Center and will make recommendations to the Board regarding cultural activities to be carried on in the center. I believe that the naming by the President of Mr. Robert W. Dowling, president of the American National Theater and Academy, as the head of the Committee, is an extremely wise choice, since Mr. Dowling is well known for his outstanding contributions to the arts and has capably demonstrated his qualifications for such a post through his active cooperation with the State Department in our International Cultural Exchange program.

I am particularly pleased that Dr. Howard Mitchell, the distinguished conductor of our own National Symphony Orchestra here in Washington, has been named as one of the leading members of the Advisory Committee. Dr. Mitchell has been deservedly accorded international acclaim as one of the most competent of American conductors and has been lauded by the press on many occasions; including words of praise by the New York Times and the New York Herald Tribune. Other outstanding local citizens who are well known for their activity in many worthwhile civic and national projects are Rabbi Norman Gerstenfeld, of the Washington Hebrew

Congregation; Paul Callaway, of the Washington Cathedral; Dr. Edward Elson, of the National Presbyterian Church; Father Gilbert Hartke, of Catholic University; Mrs. Marjorie Merriweather Post May, philanthropist; Warner Lawson, of Howard University; the Very Reverend Francis B. Sayre, of Washington Cathedral; and Mrs. James H. Douglas, Jr. Many additional names of national fame are also on the list, including Helen Hayes, Marian Anderson, Fred Waring, George Murphy, Reginald Allen, and Richard Rodgers.

COOPERATION WITH BOARD OF TRUSTEES

These members will work in close cooperation with the 15 Federal officials named in Public Law 874 and the 15 general trustees appointed by the President last January who are responsible for supervising and overseeing the construction of the center with funds contributed through popular donation. In this connection, I wish to state that I have been very pleased to receive many letters from these distinguished citizens, including the Honorable L. Corrin Strong, Thomas Emery, F. H. Ricketson, John Nicholas Brown, Robert L. Wood, Ralph J. Bunche, Henry Clay Hofheimer II, Daniel W. Bell, Ralph E. Becker, and Mrs. George Garrett; all of whom have unanimously pledged their continued support toward construction of this center.

As I have previously emphasized, however, the National Cultural Center will belong to every citizen of the United States; not just the District of Columbia, and we shall need the help and support of all the people. Sufficient funds will be needed within 5 years from the time of enactment of the act in order for Public Law 874 to be effective and it will therefore be vitally necessary that every effort be exerted to accomplish the necessary collection of funds. By providing a suitable building for the presentation of music, opera, drama, dance, and poetry deserving of recognition as a part of the great heritage of our civilization, this national cultural establishment will develop a greater knowledge, understanding, and appreciation of the fine arts; and their presentation and standards of execution will be raised to an ever-higher level of achievement.

Mr. President, yesterday, April 12, there was presented over radio station WGMS an extremely significant and timely statement by Mr. Patrick Hayes, a local impressario of considerable repute. In this statement, Mr. Hayes wisely pointed out that the time has now come for full and fast action to bring the dream of a cultural center into reality. I feel that his comments regarding the qualifications and appropriateness of selection of the various individuals were well stated; as were his suggestions as to how the average citizen can help along the movement for the center. I ask unanimous consent that Mr. Hayes' statement be printed in the RECORD.

There being no objection the statement was ordered to be printed in the RECORD, as follows:

BROADCAST BY PATRICK HAYES, WGMS, APRIL 12, 1959

Good afternoon. If we were to learn that one of the great dramas of our times had just been written and would be produced sometime during the next 4 years, our curiosity would be intense to learn the name of the playwright, who would produce and direct the cast of characters, the set and lighting designers, and especially we would want to know how soon the curtain would go up on this great work.

The emergence on the Washington cultural horizon during the next 4 years of a grand cultural center is a dramatic development in our times, and our interest and curiosity are indeed intense. The cast of characters is now complete, with the President's announcement yesterday at Augusta, Ga., of the 34 members who will compose the advisory committee called for in the Cultural Center bill which he signed last September 2 at Newport. The architect and the general administrator are yet to be selected, and the money raised. But the time has now come for full and fast action to bring the dream of a cultural center into reality.

Full authority for the project rests with the board of trustees, appointed earlier by the President, with Arthur Flemming as chairman, and L. Corrin Strong as vice chairman. Mr. Flemming has to administer the Department of Health, Education, and Welfare, and it has fallen to Mr. Strong to be, in effect, an executive vice chairman, and this is a most fortunate development; few men in the country are better qualified by experience, organizing ability, diplomatic skill, and a sense of dedication to such a cause. Fortunately Mr. Strong has the time as well as a keen personal interest in the project. He and Mr. Flemming are 2 of the 15 public members, who serve with the 15 members from the Government side, a total of 30 trustees.

The 34 appointed yesterday are members of the advisory committee, whose strength will lie in the merit of the ideas and suggestions it offers to the board of trustees. How to plan the center and its future use; how to present the story to the Nation; how to raise and administer the funds; recommendations on the selection of the top administrative personnel. For the moment the only matters that are settled are the geographical location of the building or buildings along the Potomac, just up from the Lincoln Memorial; and the membership of the two bodies, the Board itself, and the advisory committee.

In an earlier commentary, I expressed the opinion that the board of trustees represented a solid group of citizens of wealth and reputation, as qualified as any group that could be brought together for such a purpose. I noted then, as now, the presence of Mr. Strong and David Finley on the board. Mr. Finley is the man who saw the National Gallery of Art through from start to finish, and then became its Director for many years. His experience and wisdom are invaluable to the Cultural Center project.

With this in mind, the appointment yesterday of Reginald Allen, of New York City, is a most important one. Mr. Allen is former manager of the Philadelphia Orchestra, former senior assistant manager of the Metropolitan Opera Association, and currently director of operations for the Lincoln Center for the Performing Arts in New York City. He is the David Finley of the Lincoln Center project, living daily with the problems of land, buildings, future use, financing. With the Lincoln Center project well beyond the planning stage, Mr. Allen is already in a position to report the right, and perhaps some wrong, avenues of approach. All of the other 33, and hundreds of others besides, know in a general way what is needed, and why, and will have ideas on how to use a Cultural Center when it arrives, but the current experience of Mr. Allen is an invaluable file of reference for the board of trustees during the next months and few years.

Nine Washingtonians are among the 34: Paul Callaway, conductor of the Opera Society of Washington; Mrs. James Henderson Douglas, president of the Opera Society here; Rev. Edward L. R. Elson, pastor of the National Presbyterian Church; Rabbi Norman Gerstenfeld, spiritual head of the Washington Hebrew congregation; Rev. Gilbert V. Hartke, the well known head of the speech and drama department at Catholic University; Dean Warner Lawson, dean of the school of music at Howard University; Mrs. Marjorie Merriweather Post May, patron of music extraordinary; Dr. Howard Mitchell, conductor of the NSO; the Very Reverend Francis B. Sayre, Jr., dean of the Washington Cathedral.

Mr. Callaway and Dr. Mitchell are more than well informed on the problems of producing and presenting music to the public, especially Mr. Callaway in the field of grand opera. Mrs. Douglas is close to the opera production problems also. Father Hartke is an expert on staging, and has a staff of experts, including Leo Brady and James Waring, to advise him. Mrs. May graces any board or committee on which she sits, and she will lend prestige and strength to the Advisory Committee. The clergy represent the broad sweep of the community, and each is a recognized leader in his own name. Dean Lawson represents an educational institution, and he has also demonstrated a capacity for administration in his work at Howard University. Each of these nine have the acquaintance of others in the city, and consultations will undoubtedly go beyond the committee meetings themselves. I note especially that a majority of the nine Washingtonians are daily aware of the pressing need of a Cultural Center here, at the earliest possible moment.

Robert Dowling, of New York City, is chairman of the advisory committee, 1 of the 25 others named from throughout the Nation. They represent a good cross section geographically, and in their fields of endeavor. Some are famous—like Marian Anderson, Helen Hayes, and Katherine Cornell. Others are well-known leaders, like John Brownlee, president of AGMA, Herman Kenin, president of the AFM, and Fred Waring. Actors Robert Montgomery and George Murphy are on the list, as is Richard Rodgers, the composer.

At this point in time, there is an answer to a question that has been asked for years: What can I do about the problem? How can I, as one citizen, help along the movement for a Cultural Center? Now that there are duly constituted trustees and members of an advisory committee, appointed by the President of the United States for the purpose, communicate with one or more of them. Express your ideas if you have any; express your willingness to work under their direction; express your willingness to give money, and ask where to send it, and how the check is made payable.

I have one simple suggestion now: I would like to see the first meeting of the new group, perhaps jointly with the board of trustees, held on the stage of Lisner Auditorium or of Loew's Capitol Theater, followed by a complete tour of the backstage area from floor to floor. Nothing would fix in their minds the fundamental problem of an adequate stage and backstage area so well—no end of talk or written reports. The stage is the key point in what is proposed, once they come to the plans for the building. Most people regard a new building concept in total, and look at it, even in their mind's eye, from the outside. The view from the beginning, should be from the stage out in planning the Cultural Center. And without consulting Mr. Callaway here and Mr. Allen in New York, I know with certainty that this is their view.

Thus, the cast of characters is complete, and now, on with plans for the show.

Establishment of National Park on Padre Island, Tex.

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, April 13, 1959

Mr. YARBOROUGH. Mr. President, Conrad L. Wirth, Director of the National Park Service, has said:

One of our greatest recreation resources—the seashore—is rapidly vanishing from public use. Nearly everyone seems to know this fact, but few do anything to halt the trend.

In 1935, the National Park Service made a survey of the Atlantic and gulf coasts and found plenty of unspoiled seashore areas available for public recreation. It recommended 12 major strips, with 437 miles of beach, be preserved as national parks. Only 1 of the 12 was actually acquired as a national seashore.

Today, just two decades later, all the other areas which the National Park Service recommended have gone into private development except one.

If we delay longer, Padre Island will be taken up.

Our Nation's public shoreline is rapidly vanishing. Some of it must be preserved for the enjoyment of all Americans.

I have introduced a bill to preserve one area of historic and scenic value—the measure would establish a national park on Padre Island off the coast of Texas in the Gulf of Mexico. It is rich in scenic beauty and historical significance. In addition, it is valuable today as a game preserve and as a fine winter playground for the Nation.

The Texas Legislature is now considering a proposal to assist in the acquisition of land for this park.

Mr. President, in support of Padre Island National Park, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution and memorandum from the Texas Ornithological Society, dated February 10, 1959.

A letter and resolution from the Outdoor Nature Club of Houston, Tex., dated March 17, 1959, which was sent to members of the Texas Legislature concerning the State proposal, and also to Members of Congress.

A resolution from the Houston Federation of Garden Clubs, representing more than 6,000 members.

A resolution from the Garden Club of Houston, a member of the Garden Clubs of America, dated March 19, 1959.

A resolution from the St. Marks Methodist Chapter in Houston, of the Methodist man's organization, dated March 22, 1959.

A resolution from the Bunker Hill Garden Club of Houston, dated March 24, 1959.

An editorial from the Wichita Falls (Tex.) Times of Sunday, April 5, 1959, under the heading "Legislature Should Act To Preserve Padre Island."

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

RESOLUTION TO MAKE PADRE ISLAND A NATIONAL PARK

Whereas Padre Island contains a wealth of vegetation and wildlife in substantially the same condition as when this sunny region was first discovered by de Pineda in 1519 and boasts a superb sand beach 30 miles in length along a gulf coast shoreline admirably suited for safe swimming and wading; and

Whereas commercial development has gained two footholds on Padre Island and threatens rapidly to ruin its natural beauty; and

Whereas Padre Island is unique in scenery, climate, ecology, and geology and fulfills in every way the standards for a national park; and

Whereas the establishment of Padre Island as a national park would permanently preserve natural treasures of Padre Island for the benefit of the public: Therefore it is

Resolved, That the undersigned organization hereby urges the adoption of the bill (S. 4) to provide the establishment of Padre Island as a national park.

Passed this 10th day of February 1959.

A. EARL JOURDE,
President, Texas Ornithological Society.

PADRE ISLAND, THE STATE'S MOST MAGNIFICENT BEACH

(Memorandum, Texas Ornithological Society)

The 95 miles of Padre Island that is still undeveloped should be permanently preserved in public ownership as a recreational area. Preferably as a national park or national seashore recreation area, this island would offer to present and future generations a small portion of Texas still with its natural grandeur virtually untouched by man. Because of current real estate developments in this area, to wait beyond the present legislative session may be disastrous. The National Park Service in its seashore recreational area survey of 1955 stated that Padre Island is among the areas judged to be of highest priority for acquisition and conservation by a public agency. Excerpts from this survey in specific reference to Padre Island follow:

Padre Island: "The 98-mile stretch of undeveloped beach on Padre Island presents an opportunity for beach recreation of a type unmatched by any other area along the Atlantic or gulf coasts. * * * Its great size and remote character, endless sweep of broad beach, grass-topped dunes and windswept sand formations have great appeal. Its natural resources, historical and biological values should be preserved in public ownership. * * * Padre Island contains the longest stretch of undeveloped seashore remaining in the United States. * * * It is the longest island, or barrier beach, of the Atlantic or gulf coasts. * * * It is one of the best places along the entire coast line where the complex processes which create and reform barrier beaches can be studied. * * * It has a long history highlighted by many colorful events. * * * The sheltered bays, marsh lands, and island along Padre Island are especially attractive to all forms of bird life, providing both breeding and nesting grounds."

Padre Island is under the surveyor's ax at this moment and the end of 1959 may see another 10, 20, or 30 miles further subdivided unless portions are preserved in national ownership. Our entire Texas coast may soon resemble the Atlantic coast where American families drive mile after mile in search of access to the seashore without success. There, children living a short distance from the coast have never observed the immensity of marine waters, nor been inspired by the roar of breakers as the foamy crest of one wave crashes into the trough of another, even the refreshing smell of the sea is foreign to them. Were you to find access to the seashore, you are due to be disappointed for you will find homes and private property everywhere; none of the animal life which thrill our children and are our heritage.

This is the future Texans may expect, unless we take action now.

OUTDOOR NATURE CLUB OF HOUSTON,
Houston, Tex., March 17, 1959.

Subject: Club endorsement of House bill 469, The Padre Island Park bill.

MEMBERS OF THE TEXAS LEGISLATURE,
The Capitol Building,
Austin, Tex.

GENTLEMEN: As fellow Texans we feel certain you and your families, children and friends have often gone to the seashore for recreation, relaxation, and inspiration. Texans love the outdoors and for many generations Texans have made their beaches their greatest outlet for recreation.

Until recently, access to the many miles of our beaches had always been easy, however, because of recent Texas Supreme Court decisions in the Luttes case many property owners have built fences to the waters edge denying all access to the public. Selfish as these property owners and developers are it is inevitable that unless large seashore areas are permanently preserved as park sites thousands of Texas children whose constant dream and desire is to go to the seashore will have to be crowded in tiny county parks in the not too distant future. The mass of humanity on the crowded New England beaches where umbrella almost touches umbrella is the handwriting on the wall for all Texans to see.

Although the Luttes case decisions by the Texas Supreme Court are ridiculous, nevertheless they become the law of the land and their effect is disastrous to future enjoyment of this great Texas natural resource. Unless specific legislation such as House bill 469 becomes law more and more of our beaches shall become inaccessible and we shall suddenly find ourselves in a position of too little and too late.

House bill 469 which will make Padre Island a public recreational area, will in the years to come probably be considered the most significant piece of legislation the legislature had to consider at this session. From its economic value to the State as a National Park passage of this bill is highly important and in fact for this reason alone merits passage.

Texas has many outstanding features that make it attractive as a tourist mecca but there is no greater attraction in our great State than our Texas seashore of which Padre Island is its most magnificent example.

At a regular meeting of our organization the following resolution was adopted unanimously:

"The Outdoor Nature Club of Houston with an active membership of approximately 500, endorses House bill 469 of the Texas Legislature which would establish Padre Island as a national park or public recreational area. In conformance with the club objective of striving for the permanent establishment of natural areas so that posterity can better perceive the pattern of virgin America and citing the following:

"(1) That there is an urgent need for the permanent establishment of a seashore recreational area on the gulf coast not particularly for ourselves but for the millions yet unborn that will have great need of such areas;

"(2) that the many unique features of Padre Island such as its being the longest barrier island in the world, its being the longest unspoiled natural beach still in existence in the United States, its having such a great variety of fish, bird, and seashore life that it will provide wholesome recreation for millions of Americans, its having such a varied and unusual history;

"(3) and that because of this urgent need for a public recreational area along the gulf coast and because of its many unique features the National Park Service considers Padre Island of highest priority for acquisition as a public recreational area,

"the Outdoor Nature Club here resolves that it will fully support all efforts to establish Padre Island as a national park or public recreational area, specifically endorsing House bill 469 in the Texas Legislature."

This resolution is a reaffirmation of the club resolution of September 1956, in which it was proposed to encourage the acquisition of Padre Island as a public recreational area which resolution was also endorsed by many other conservation organizations in the State.

Yours in conservation,

M. A. YRAMATEGUI,
Chairman, Conservation Committee.

The Houston Federation of Garden Clubs unanimously endorses proposed legislation that would make Padre Island a national park and urges that State and Federal legislators do all in their power to preserve the island for posterity.

The federation takes this action because it recognizes that wilderness areas, where man can get close to nature, are essential to the health and well-being of a nation's people. It recognizes, also, that Padre Island is ideal for preservation as a national park.

Because it is the longest and one of the few remaining natural, largely undeveloped seashore areas along the combined Atlantic and gulf coasts;

Because the islands' broad sand beaches, magnificent dunes, and saltgrass marshes afford excellent opportunities for the observation, enjoyment, and study of birds, marine life, plant life, and plant ecology;

And especially because it offers relaxation and healthful recreation for man's leisure hours now and in a more crowded tomorrow, if it can be preserved in its natural state.

Mrs. G. G. ORR,
President, Houston Federation of Garden Clubs.

THE GARDEN CLUB OF HOUSTON,
Houston, Tex., March 19, 1959.

The Honorable Senator YARBOROUGH,
Senate Office Building,
Washington, D.C.

DEAR SIR: Our organization passed this resolution regarding Padre Island and we would like to bring it to your attention.

"Resolved, That the Garden Club of Houston take whatever action seems advisable to support proposed legislation to make Padre Island a national park."

The club takes this action because:

1. Far too small a percentage of our national seashore areas has been preserved for public recreation and relaxation and Padre Island is the only large, as yet undeveloped seashore area on the combined Atlantic and gulf coasts.

2. The National Parks survey has shown Padre Island to be highly desirable for preservation as a national park because of its scenic beauty, its historic and scientific interest, and its great potential as a recreational area.

Very truly yours,

Mrs. WILLIAM S. COCHRAN, Jr.,
Conservation Chairman.

ST. MARKS METHODIST CHURCH,
Houston, Tex., March 22, 1959.

Senator RALPH YARBOROUGH,
Senate Office Building,
Washington, D.C.

DEAR SENATOR YARBOROUGH: The St. Marks Methodist Houston Chapter of Methodist Men realizes that far too little of our natural seashore has been preserved for posterity, and that Padre Island on the lower Texas coast is the only large undeveloped seashore area along the combined Atlantic and gulf coasts.

It recognizes that the island has excellent potentialities for public recreation and relaxation, and it offers much to anyone interested in scenic beauty, birds, plantlife, and marine life.

Resolved, therefore, That this organization requests the Congress and State legislature to support the proposed legislation to make Padre Island into a national park.

Sincerely,

LEE THOMPSON,
President, Methodist Men.

RESOLUTION ADOPTED BY BUNKER HILL GARDEN CLUB OF HOUSTON, TEX., MARCH 24, 1959

Whereas Padre Island is ideal for relaxation and the enjoyment of nature, for surf fishing, swimming, picnicking, camping, and many forms of recreation that only the seashore can provide; and

Whereas Padre Island is by far the longest and most desirable of the few remaining beach areas along the Atlantic and gulf coasts, and is still largely in the same state as it was when the Karankawa Indians lived there in the 16th century; and

Whereas our organization realizes that practically all beach areas that are readily accessible by car on both coasts have already been lost to the public and that Padre Island will also be forever lost to the public if immediate action is not taken to preserve it: Therefore be it

Resolved, That the Bunker Hill Garden Club endorses proposed legislation that would preserve Padre Island as a national park; and be it further

Resolved, That our State and Federal legislators be advised of our wishes and be urged to support any legislation that will insure preservation of the island.

Passed March 24, 1959.

Mrs. M. K. NOLAN,
Corresponding Secretary.

[From the Wichita Falls (Tex.) Times, Apr. 5, 1959]

LEGISLATURE SHOULD ACT TO PRESERVE PADRE ISLAND

Ocean shorelines in the United States to which the public has free and unlimited access have been vanishing rapidly in the last few years. A survey by the National Park Service midway in the current decade revealed the extent to which private development and commercialization have made inroads upon stretches of beaches and scenic areas bordering the Atlantic Ocean particularly, although the Pacific Ocean and the Gulf of Mexico are not unaffected.

The fact is that few areas remain available for preservation and dedication to public use in their natural state, and Texans may be surprised to learn that one of these unspoiled strips where gulf waters meet the shoreline is currently endangered. It is the approximately 95 miles of Padre Island which could be preserved as the longest public beach in America and typical of the wide open spaces for which Texas is known throughout the world.

The National Park Service in its survey in 1955 included Padre Island and found its stretch of undeveloped beach "unmatched by any other area along the Atlantic or gulf coasts. * * * Its great size and remote character, endless sweep of broad beach, grass-topped dunes, and wind-swept sand formations have great appeal. Its natural resources, historical and biological values should be preserved in public ownership."

A movement that began in the gulf coast area of the State immediately following the survey to secure and dedicate this longest stretch of undeveloped seashore remaining in the United States will reach a climax Monday night at Austin when the appropriate house committee will hold its first hearing on a bill which has as its purpose the conversion of Padre Island into a national park or national seashore recreational area.

The proposal copies the procedure which led to the inclusion of Big Bend National Park into the National Park System in 1944, a move which has been a source of pride to Texans and of great benefit to the recreational facilities of the State.

Favorable committee action, followed by enactment of the proposal, is particularly urgent in the current session of the legislature because Padre Island is now under survey and within a few months as much as 30 miles of the beach may be lost to public use and its natural grandeur despoiled.

Here is an opportunity for the present generation of Texans to act with the same foresightedness that led to the preservation of the first national park, Yellowstone, in 1872. Another national park in the State on Padre Island is a move which the Times heartily endorses.

International Refugee Year Calls for Humanitarian Action by the United States

---

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 13, 1959

Mr. NEUBERGER. Mr. President, once more we are called upon not to substitute the word for the deed. International Refugee Year begins July 1. What are we in the United States going to do for wretched, homeless men and women who have fought against Communist tyranny and now are consigned to dreary refugee camps?

The Zellerbach Commission, headed by Harold L. Zellerbach, of the Crown Zellerbach Paper Corp., has urged that our country admit some 50,000 of the 200,000 refugees still in European camps. This is only 25,000 refugees a year. Surely our vast and wealthy Nation can make such a contribution to humanitarianism, to liberty, and to human dignity.

The Washington Post and Times Herald for April 12, 1959, voiced such a plea with eloquence and firmness, and I ask unanimous consent that this editorial, entitled "Action on Refugees," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ACTION ON REFUGEES

If American participation in the International Refugee Year, which begins July 1, is to be more than a gesture, Congress will have to allow additional refugees to enter the country. At present refugees can come to the United States only if they qualify under regular immigration quotas. It has been reported, however, that President Eisenhower will request Congress to set up modest but permanent annual refugee quotas. Enactment of such legislation would be a welcome indication of the awareness of the United States that refugees have become a permanent problem in a world beset by tyranny.

The plan under consideration would help to empty the European refugee camps where 200,000 persons still are forced to live. An annual refugee quota would also make it easier for the United States to act in situations such as the Hungarian revolt of 1956, when tens of thousands of refugees streamed into Austria. The Zellerbach Commission, a private American group headed by San Francisco businessman Harold Zellerbach, recommended recently that the United States admit over a 2-year period 50,000 of the 200,000 persons still in European camps. The United States surely can absorb 25,000 refugees annually.

Building International Good Will Through Sports

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 13, 1959

Mr. KEATING. Mr. President, one of the great common denominators among all peoples of the world is the love of athletics. For example, the opening of the major league baseball season here in Washington, last Thursday, was followed eagerly by baseball fans in every corner of the globe.

It has long been my feeling that this country can, and should, do more to build international good will through exchanges of athletic teams, the provision of equipment to needy youngsters in other lands, and supplying instruction in our games to other peoples of the world. The people-to-people sports program, with President Eisenhower's strong support, is doing a tremendous job along these lines. And the U.S. Information Agency, through its channels, and the Voice of America are also exploiting this means for cementing friendship with our world neighbors.

A recent article in the New York Times points up the manner in which a State Department official is helping strengthen the bonds between America and the Congo Republic, through teaching young men the game of baseball. The article emphasizes the great potential for increasing international good will through sports. I ask unanimous consent that the article by Milton Bracker be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. CONSUL BRINGS BASEBALL TO CONGO REPUBLIC—PLAYERS IN SIX-TEAM LEAGUE PICK BANKS, OF CUBS, AS HERO

(By Milton Bracker)

BRAZZAVILLE, CONGO REPUBLIC, February 9.—There is a young "moyen champ" here named Albert Ondongo, and he would like nothing better than to be like another moyen champ whom he has never seen.

The other fellow is named Ernie Banks, of the Chicago Cubs. It will probably be news to Banks, the most valuable player in the National League last year, that he is a moyen champ et al.

The term means shortstop (literally "middle field") in the modified French used here in the first baseball league in West Africa.

The league has six teams. They play on Saturdays on a somewhat informal diamond hemmed in by tropical grass that grows a lot faster and taller than it does at the Stadium or Wrigley Field. The remarkable thing is that they play at all and that the teenage Africans are making such progress.

The man behind the league is Frank Magliozzi, from Massachusetts, whose full-time job is running the U.S. consulate here.

CONSULATE OPEN A MONTH
